"Well, today at the club Mary Yancey read one of her stories that the editor sent back. She called it The Uses of Adversity. But she missed adversity about as far as a shooting star misses this planet. The heroine was only the painted paper-doll of her imagination. She could never have breathed the breath of life without sneezing. Yet Mary went on to tell in a brocaded silk style how, although she had been the spoiled darling of fortune, she behaved herself when poverty overtook her people, wore a simple white muslin, married a millionaire at last and lived in extravagance ever afterward. Now, Elbert, adversity has been the only sweetheart poor Mary ever had. And what I'm saying is, if she'd just written out what a faithful lover he's been, instead of telling romantic lies on him, that would have been a good story. She can't get rid of him to marry anybody else. If she could have written out how it feels for a woman to miss happiness and get her little hopes from a fortune teller, instead of out of life, I reckon the editor would have taken it."

Amy drifted into silence. She was thinking of how many times Mary Yancey had confided in her about visits she made to camps of vagabond gipsies to have her fortune told. Being blind, Amy was the unconsciously appointed receiver of secrets in Ruckersville. Thus she knew that for years the angular old maid had lived a pathetically double existence, one as the grim and industrious mistress of the old Yancey house, where she and her sister kept an occasional boarder, and the other as the tall heroine of a fortune-told romance.

Meanwhile, Elbert had been relieved to know that some one else was engaging the energies of Amy's dangerously direct mind, and had fallen asleep. His whole body sagged to one side, his head lay upon the uptilting shoulder, and at this moment from his open mouth came a deep snore. Instantly he was awake, startled, cocked and primed with the denial he knew he would have to make.

"Elbert," said Amy, "you are asleep."

"I am awake and about to serve supper," he retorted, rising and shuffling toward the door that opened into another room.

"You will bring the notebook when you return from the office tonight?" Her mind was still upon that.

"I will, Amy Light!" This was a term of endearment with which he often extolled her.

An hour later she lay dreaming in her bed; and Elbert was sitting in Bilfire's saloon with Captain Martin and Clark Story, before a plain deal table upon which the latter had spread his specimens.

(TO BE CONTINUED)

"Here's One in the Corner!"

An Open Break

One ball in—and good position! It looks like a run, but the slightest inaccuracy will change the entire situation and give the other man his chance.

Billiards and Pool are good, clean, wholesome games for the whole family—games that inspire keen, friendly rivalry. You can play them now without frequenting a public poolroom. You can have in your own home

BURROWES

Billiard and Pool Table

and play while you are paying for it. No special room is needed. The Burrowes Table can be set on your dining-room or library table or mounted on its own legs or compactly folding stand. Only a moment is required to set it up or to take it down and set it out of the way. Sizes range up to 4½ x 9 feet (standard). Complete Playing equipment of balls, cues, etc., free with each Table.

Burrowes Tables are used for home practice by some of the foremost professionals. Every Table of whatever size is scientifically accurate in proportions to the smallest detail and adapted to the most expert play. The most delicate shots, calling for skill of the highest type, can be executed with the utmost precision.

$1.00 DOWN

Prices are $6, $15, $25, $35, $45, $55, $75, etc., on terms of $1 or more down and a small amount each month.

FREE TRIAL—NO RED TAPE

On receipt of first installment we will ship Table. Try it one week. If unsatisfactory return it, and on its receipt we will refund your deposit. This restores you a free trial. Write today for illustrated catalog, giving prices, terms, etc.

Three-Quarters Actual Size

A New Business Book Free to Business Men

One Manufacturer says, "This book stands in a class by itself. It has been as interesting to me as any book that I have ever read. I am going to read it again."

The Manager of a branch office writes, "It is simply immense."

An Insurance Official writes, "If every man in the United States could have a copy great good would result from it."

The Advertising Manager of a nationally known manufacturing company writes, "It is an addition to the business literature of the time. It has given us ideas and stimulus for our work."

A Banker known in two continents writes, "I am very much pleased with this book."

Orders are being received for this book at the rate of nearly 3000 per day. Within two days after our first announcement appeared, orders from over 200 different kinds of businesses were received, including

Auto Dealers
Art Stores
Bakers
Barbers
Bankers
Blank Books
Bottlers
Builders
Butchers
Brokers
Cafes and Hotels
Caterers
Cleaners
Clothiers
Cigar Stores
Commission Houses
Coal Dealers
Confectioners
Department Stores
Druggists
Dry Goods Stores
Dress Makers
Dairy Stores
Electrical Stores
Express Companies
Engine Manufacturers
Foundries
Furniture and Furnishings
Furriers
Feed and Grain Stores
General Stores
Grocers
Gold Platers
Haberdashers
Hatters

A Strange Catastrophe

THIS tree had stood in City Hall Park, New York, for nearly a hundred years. It showed no signs of decay. One day while the park was crowded with persons hurrying to their homes all unconscious of danger, with no apparent cause and without warning it fell and injured a score of persons—three seriously.

Just as sudden and unexpected are most of the accidents which occur daily. No mind can foresee them. No amount of caution can prevent them.

Amid such unseen dangers the only sensible thing is to carry a policy of accident insurance. Such a policy provides for the cost of injury by loss of time and in case of death takes care of the family. You have escaped the accidents of yesterday. To-morrow is yet to come. To-day is the time to act.

We paid last year 15,719 personal accident claims with benefits amounting to $1,713,046. MORAL: Insure in the TRAVELERS.

The Travelers Insurance Company

Utica Pliers

if you owned a pair

If we told you a Utica Plier is more useful than any other six tools combined, you would not believe it unless you had one. You'd be helpless trying to do things without fingers on your hand, wouldn't you? Well, a Utica Plier does everything the fingers will do and holds the relative position among tools that the hand does to the body.

How many times have you used a hair brush, flat-iron, stove poker, hatchet, can opener, scissors, hair pin or some other unsuitable thing when what you needed was a Utica Plier? Ask any plumber, electrician, jeweler, autoist, milliner, wire worker, farmer, tinner, lineman, householder or anybody who has used a Utica Plier and they will tell you how indispensable they are.

For sale at hardware stores or electrical supply dealers. If they don't handle them, don't take a substitute. Send to us and we will supply you. Get your money's worth.

UTICA DROP FORGE & TOOL CO., Utica, N.Y.

For Midnight Lunch

If you are going to have guests in the evening, prepare your coffee, tea or cocoa in advance and serve it piping hot from a Thermos Carafe without loss of time. A beautiful ornament for sideboard or serving table. Most convenient for keeping ice water or drinkables in the day time or for the sleeping room at night. Keeps liquids ice cold 72 hours and piping hot 24 hours.

THERMOS

Over 100 leading hotels and clubs have installed Thermos Carafes in all of their sleeping rooms. Among them are Knickerbocker, New York; Vanderbilt, New York; La Salle, Chicago; Pontchartrain, Detroit, and Marlborough-Blenheim, Atlantic City.

Thermos Carafe $5

At all first class dealers

Be sure "Thermos" is stamped on bottom of each article you buy. If your dealer will not sell you genuine Thermos, we will supply you direct. Express charges prepaid. Write for Thermos book describing and illustrating all Thermos specialties.

Sense and Nonsense

A Retired Sea Captain

Cured of Ancestors

W. BLEEKER FORBES, one of Pensacola's foremost merchants, bears also the distinction of being Florida's best wing-shot. Quail are Mr. Forbes' specialty, and to indulge himself in the sport he maintains a kennel of high-class pointers, a pack of such size as to require the services of a special attendant. A recent incumbent of the place was an Old Dominion darky, whom for the purposes of this narrative we will call Piney.

Hailing from V'ginny, Piney naturally lorded it over the resident colored population, the members of which he addressed usually as "You trash there," or "You lowdown," and so on. Should the remark be resented, Piney's retort was invariably Homeric. "G'wan! who is you, pusson? Why, you ain't even know who owned your grandpa!" In other words, Piney boasted a lineage that he could trace back through three generations of slave-owners.

Eventually Mr. Forbes heard of Piney's claim, and meeting him at the kennel, remarked casually: "What's this I hear, that you can trace back through three generations, Piney? They say you have ancestors."

For a long moment Piney stared at him in bewilderment. "Ancestrors? Ancestrors?" he repeated, when suddenly a look of comprehension sprang into his face. "No, sah! No, sah! Dat ain't me had ancestrors, Marse Bleek; dat my brother. Only he worked in a drug store and he done got rid of 'em!"

The Net Results

WHEN Ollie James, new junior United States Senator from Kentucky, first broke into politics in his native county of Crittenden he had occasion to try a case before a rural magistrate. When the trial was ended the magistrate invited the young lawyer to go home to dinner with him. As they sat down at the table the old man said:

"Ollie, it pains me mightily to see you messin' in with politics."

"Why so?" inquired James.

"Ollie, my son," said the magistrate, "politics ain't a fittin' pursuit for any young man. Look at me! I started in politics when I was young and hopeful, jest like you are now. I have held all the positions of trust in the gift of the people of my home district—I have been school trustee, road supervisor and constable and justice of the peace. But now, as an old man, all I've got to show for my years of ceaseless political activity is a lot of warm enemies and cold friends!"

Something in It

GOVERNOR BERYL CARROLL, of Iowa, has an amusing story of a state senator whose burly appearance might possibly lead one to mistake him for a laboring man, but who is as sensitive as a woman to all unpleasant circumstances.

"This man," said Governor Carroll, "happened to be standing outside a Des Moines undertaking establishment, conversing with a friend on political matters, when one of the employees came out of the shop and said:

"'Say, will you give us a lift with a casket?'

"The senator shuddered and replied hesitatingly:

"'I-Is there—is there—anything—in it?'

"'Sure,' came the hearty reply, 'there's a couple of drinks in it!'"

A Striking Difference

THERE used to be a negro orator in Birmingham, Alabama, who was a power among the voters of his own race. He came North as a delegate to a Republican national convention and, being pleased with the manners and habits of the Northern people, decided to settle in Cincinnati.

A year later Congressman Oscar Underwood met him on a Cincinnati street. His gladsome raiment and his air of prosperity were gone. He looked shabby—indeed, he looked almost hungry.

Recognizing Mr. Underwood, he craved the favor of a small loan.

"Well, Gabe," said Underwood as he reached into his pocket, "how do you like living in the North?"

"Well, suh, Mistah Oscar," said Gabe, "they's some things I likes about it and some things I don't like. Up here they calls you Mister—but they don't feed you."

Too Much Chair

A JURY in Virginia found a negro guilty of murder in the first degree; and the trial judge, following the time-honored form, sentenced him to die in the electric chair on such and such a date, "between the hours of sunrise and sunset."

After the condemned darky had been taken back to his cell he sent for the prosecutor.

"Boss," he said plaintively, "I knows Ise got to die sometime and it mout as well be now; and so I ain't got no fault to find with the day the jedge done specified. But, boss, I p'intedly does hate to be settin' round in that there 'lectric chair from sunrise to sunset!"

No-Rim-Cut Tires—10% Oversize

Why Men Have Used 900,000

Goodyear No-Rim-Cut tires now far outsell y other tire. The multiplying demand is sen- tional.

Yet motor car owners have only begun to prove t this patented tire.

This year, 127 leading motor car makers have contracted for Goodyear tires. And users' demands, up to this writing, are three times last year's figures.

The reason is, No-Rim-Cut tires cut tire upkeep in two. That fact, when proved, is irresistible.

Let us show how it comes about.

This is Why Tires Are Rim-Cut

is is a clincher tire—the old-type, d-base tire. It is a relic of bicycle

is, until lately, was the almost uni- type of pneumatic tire.

ose beads on the bases hook into the anges. That is how the tire is held on.

te how those curved-in flanges dig he tire. That is what cuts tires when partly deflated. When a tire runs flat, for even a few feet, it may be wrecked beyond repair.

23 Per Cent of Ruin

Statistics show that 23 per cent of all ruined clincher tires have been rim-cut.

That is the money loss. Then there is the worry—the need for instant action when a tire runs flat.

All this loss and this worry have been completely wiped out by the invention of No-Rim-Cut tires.

Why New-Type Tires Can't Rim-Cut

This is a Goodyear No-Rim-Cut tire, fitted on the same rim as the clincher.

The removable rim flanges are simply reversed—slipped from one side to the other. They curve outward then, not inward.

Note that this tire has no hooks on the base. It doesn't need to be hooked to the rim.

When this tire is wholly or partly deflated it rests on a rounded flange, and rim-cutting is made impossible.

Fits Most Rims

About 96 per cent of all rims are now made to take this No-Rim-Cut tire. All are quick-detachable—some are also demountable.

Any rim where the flanges curve outward, or can be changed to curve outward, takes this new type of tire.

We make clincher tires of the same ideal construction for rims that can't take the No-Rim-Cut.

Made 10% Oversize

Rim-Cut tires, because of their extra can be made 10 per cent over rated ithout any misfit to the rim.

give you this 10 per cent more air—) per cent added carrying capacity— at any extra charge. For No-Rim- ires now cost no more than other ard tires. They used to cost one- nore.

s oversize takes care of your extras. es the blow-outs due to overloading. 10 per cent oversize, under average ions, adds 25 per cent to the tire ge.

This added mileage, plus the saving of rim-cutting, is how No-Rim-Cut tires cut tire bills in two. Tens of thousands of men have proved that they do that.

You get in addition the final result of four 13 years spent in tire making. You get tires as near perfection as men can ever hope to get.

GOODYEAR

No-Rim-Cut Tires

With or Without Non-Skid Treads

We Control This Tire

The only way known to make a practical tire of No-Rim-Cut type is controlled by the Goodyear patents.

Vulcanized into the tire base, on either side, are three flat bands of 126 braided wires. These wires make the tire base unstretchable.

Nothing can force this tire off the rim until you remove a rim flange, as with any quick-detachable tire. So the hooks are not needed.

Other devices to make the tire base unstretchable have proved most unsatisfactory. Our Tire Book tells you why. Don't adopt an experiment, made to meet our competition. When you change to this type, get the tire of which 900,000 have been tested out—the Goodyear No-Rim-Cut tire.

Our 1912 Tire Book—based on 13 years of tire making—is filled with facts you should know. Ask us to mail it to you.

RUBBERSET
TRADE MARK
BRUSHES

Shaving Brushes
in a remarkable range of styles 25c to $7.00 at all Druggists, Hardware—Specialty and General Stores.

The Safety Tooth Brush
Styles of tufts and handles to suit all, 35c each, individually boxed. Sold by Druggists and Department Stores.

Complexion and Nail Brushes
The Finest—most unique brushes made—Individually boxed. Complexion Brushes $1.50 to $2.00 Nail Brushes $1.00 to $1.50 all Specialty—Drug and Department Stores.

Paint Brushes
Home Brushes and paint brushes for every need conceivable. The standard line of the world. To be had of dealers wherever paint brushes are sold.

RUBBERSET is a name—a discovery—a standard in brush making. Until the Rubberset idea prevailed, all bristle construction in brushes was physically short lived.

We found ways to perfection that revolutionized old principles.

RUBBERSET method of construction has changed the short lived, dilapidated shaving brush to a lifetime of usefulness. The dangerous bristle shedding tooth brush, to the *safety* tooth brush. The dissolving, bristle streaking paint brush, to the everlastingly intact paint brush. RUBBERSET has made nail brushes, complexion brushes and hair brushes enduring.

Alberite, the new material used in the handles, is sanitary, bright and lasting, an exclusive feature of RUBBERSET brushes.

All of this is guaranteed by the inimitable process of taking hold of each and every bristle and gripping it in rubber, then vulcanizing the base to the hardness and durability of flint. Nothing on earth can deprive this hard rubber base of a single bristle.

The RUBBERSET method of brush construction adds ten times the life to shaving brushes—tooth brushes—paint brushes and other brushes but not to the cost to you.

True the prices may scale higher than ordinary brushes but the quality makes the price of a RUBBERSET brush.

Therefore, when you buy a brush your protection, your own interests demand that you buy a RUBBERSET. Whatever the price you want to pay there is a Rubberset to meet it.

A splendid catalog picturing and describing the best features of the Rubberset line of all brushes, Dental Cream—Shaving Cream Soap and Powdered Shaving Soap FREE on postal request.

THE RED CROSS GIRL

By Richard Harding Davis

ILLUSTRATED BY CHASE EMERSON

"Because I'm a Coward. And That's Why I'm Crying. Haven't I the Right to Cry?"

WHEN Spencer Flagg laid the foundation stone for the new million-dollar wing he was adding to the Flagg Home for Convalescents, on the hills above Greenwich, the New York Republic sent Sam Ward to cover the story; and with him Redding to take photographs. It was a crisp, beautiful day in October, full of sunshine and the joy of living; and from the great lawn in front of the home you could see half over Connecticut and across the waters of the sound to Oyster Bay.

Upon Sam Ward, however, the beauties of Nature were wasted. When, the night previous, he had been given the assignment he had sulked, and he was still sulking. Only a year before he had graduated into New York from a small upstate college and a small upstate newspaper; but already he was a "star" man, and Hewitt, the city editor, humored him.

"What's the matter with the story?" asked the city editor. "With the speeches and lists of names, it ought to run to two columns."

"Suppose it does!" exclaimed Ward; "Anybody can collect typewritten speeches and lists of names. That's a messenger boy's job. Where's there any heart interest in a Wall Street broker like Flagg waving a silver trowel and singing, 'See what a good boy am I!' and a lot of grownup men in pinafores saying, 'This stone is well and truly laid.' Where's the story in that?"

"When I was a reporter," declared the city editor, "I used to be glad to get a day in the country."

"Because you'd never lived in the country," returned Sam. "If you'd wasted twenty-six years in the backwoods, as I've done, you'd know that every minute you spend outside of New York you're robbing yourself."

"Of what?" demanded the city editor. "There's nothing to New York except cement, iron girders, noise and zinc garbage cans. You never see the sun in New York; you never see the moon unless you stand in the middle of the street and bend backward. We never see flowers in New York except on the women's hats. We never see the women except in cages in the elevators—they spend their lives shooting up and down elevator shafts in department stores, in apartment houses, in office buildings. And we never see children in New York because the janitors won't let the women who live in elevators have children! Don't talk to me! New York's a Little Nemo nightmare. It's a joke. It's an insult!"

"How curious!" said Sam. "Now I see why they took you off the street and made you a city editor. I don't agree with anything you say. Especially are you wrong about the women. They ought to be caged in elevators, but they're not. Instead, they flash past you in the street; they shine upon you from boxes in the theater; they frown at you from the tops of buses; they smile at you from the cushions of a taxi, across restaurants under red candle shades, when you offer them a seat in the subway. They are the only thing in New York that gives me any trouble."

The city editor sighed. "How young you are!" he exclaimed. "However, tomorrow you will be free from your only trouble. There will be few women at the celebration, and they will be interested only in convalescents—and you do not look like a convalescent."

. . . . . .

Sam Ward sat at the outer edge of the crowd of overdressed females and overfed men, and, with a sardonic smile, listened to Flagg telling his assembled friends and sycophants how glad he was they were there to see him give away a million dollars.

"Aren't you going to get his speech?" asked Redding, the staff photographer.

"Get his speech!" said Sam. "They have Pinkertons all over the grounds to see that you don't escape with less than three copies of it. I'm waiting to hear the ritual they always have, and then I'm going to sprint for the first train back to the center of civilization."

"There's going to be a fine lunch," said Redding, "and we're expected. I asked the policemen if we were, and he said we were."

Sam rose, shook his trousers into place, stuck his stick under his armpit and smoothed his yellow gloves. He was very thoughtful of his clothes and always treated them with courtesy.

"You can have my share," he said. "I cannot forget that I am still fifty-five minutes from Broadway. And even if I were starving I would rather have a club sandwich in New York than a Thanksgiving turkey dinner in New Rochelle."

He nodded and with eager athletic strides started toward the iron gates; but he did not reach the iron gates, for on the instant trouble barred his way. Trouble came to him wearing the blue cambric uniform of a nursing sister, with a red cross on her arm, with a white collar turned down, white cuffs turned back, and a tiny black velvet bonnet. A bow of white lawn chucked her impudently under the chin. She had hair like goldenrod and eyes as blue as flax, and a complexion of such health and cleanliness and dewiness as blooms only on trained nurses.

She was so lovely that Redding swung his hooded camera at her as swiftly as a cowboy could have covered her with his gun.

Reporters become star reporters because they observe things that other people miss and because they do not let it appear that they have observed them. When the great man who is being interviewed blurts out that which is indiscreet but most important, the cub reporter says: "That's most interesting, sir. I'll make a note of that." And so warns the great man into silence. But the star reporter receives the indiscreet utterance as though it bored him; and so the great man does not know he has blundered until he reads of it the next morning under screaming headlines.

Other men, on being suddenly confronted by Sister Anne, which was the official title of the nursing sister, would have fallen backward, or swooned, or gazed at her with soulful, worshiping eyes; or, were they that sort of beast, would have ogled her with impertinent approval. Now Sam, because he was a star reporter, observed that the lady before him was the most beautiful young woman he had ever seen; but no one would have guessed that he observed that—least of all Sister Anne. He stood in her way and lifted his hat, and even looked into the eyes of blue as impersonally and as calmly as though she were his great-aunt—as though his heart was not beating so fast that it choked him.

"I am from the Republic," he said. "Everybody is so busy here today that I'm not able to get what I need about the Home. It seems a pity," he added disappointedly; "because it's so well done that people ought to know about it." He frowned at the big hospital buildings. It was apparent that the ignorance of the public concerning their excellence greatly annoyed him.

When again he looked at Sister Anne she was regarding him in alarm—obviously she was upon the point of instant flight.

"You are a reporter?" she said.

Some people like to place themselves in the hands of a reporter because they hope he will print their names in black letters; a few others—only reporters know how few—would as soon place themselves in the hands of a dentist.

"A reporter from the Republic," repeated Sam.

"But why ask *me*?" demanded Sister Anne.

Sam could see no reason for her question; in extenuation and explanation he glanced at her uniform.

"I thought you were at work here," he said simply. "I beg your pardon."

He stepped aside as though he meant to leave her. In giving that impression he was distinctly dishonest.

"There was no other reason," persisted Sister Anne—"I mean for speaking to me?"

The reason for speaking to her was so obvious that Sam wondered whether this could be the height of innocence or the most banal coquetry. The hostile look in the eyes of the lady proved it could not be coquetry.

Digitized by Google

"I am sorry," said Sam. "I mistook you for one of the nurses here; and, as you didn't seem busy, I thought you might give me some statistics about the Home—not really statistics, you know, but local color."

Sister Anne returned his look with one as steady as his own. Apparently she was weighing his statement. She seemed to disbelieve it. Inwardly he was asking himself what could be the dark secret in the past of this young woman that at the mere approach of a reporter—even of such a nice-looking reporter as himself—she should shake and shudder.

"If that's what you really want to know," said Sister Anne doubtfully, "I'll try and help you; but," she added, looking at him as one who issues an ultimatum, "you must not say anything about me!"

Sam knew that a woman of the self-advertising, club-organizing class will always say that to a reporter at the same time she gives him her card so that he can spell her name correctly; but Sam recognized that this young woman meant it. Besides, what was there that he could write about her? Much as he might like to do so, he could not begin his story with: "The Flagg Home for Convalescents is also the home of the most beautiful of all living women." No copy editor would let that get by him. So, as there was nothing to say that he would be allowed to say, he promised to say nothing. Sister Anne smiled; and it seemed to Sam that she smiled, not because his promise had set her mind at ease but because the promise amused her. Sam wondered why.

Sister Anne fell into step beside him and led him through the wards of the hospital. He found that it existed for and revolved entirely about one person. He found that a million dollars and some acres of buildings, containing sun-rooms and hundreds of rigid white beds, had been donated by Spencer Flagg only to provide a background for Sister Anne—only to exhibit the depth of her charity, the kindness of her heart, the unselfishness of her nature.

"Do you really scrub the floors?" he demanded—"I mean you yourself—down on your knees, with a pail and water and scrubbing brush?"

Sister Anne raised her beautiful eyebrows and laughed at him.

"We do that when we first come here," she said—"when we are probationers; is there a newer way of scrubbing floors?"

"And these awful patients," demanded Sam—"do you wait on them? Do you have to submit to their complaints and whinings and ingratitude?" He glared at the unhappy convalescents as though by that glance he would annihilate them. "It's not fair!" exclaimed Sam. "It's ridiculous. I'd like to choke them!"

"That's not exactly the object of a home for convalescents," said Sister Anne.

"You know perfectly well what I mean," said Sam. "Here are you—if you'll allow me to say so—a magnificent, splendid, healthy young person, wearing out your young life over a lot of lame ducks, failures and cripples."

"Nor is that quite the way we look at it," said Sister Anne.

"We?" demanded Sam.

Sister Anne nodded toward a group of nurses.

"I'm not the only nurse here," she said. "There are over forty."

"You are the only one here," said Sam, "who is not! That's just what I mean—I appreciate the work of a trained nurse; I understand the ministering angel part of it; but you—I'm not talking about anybody else; I'm talking about you—you are too young! Somehow you are different; you are not meant to wear yourself out fighting disease and sickness, measuring beef broth and making beds."

Trouble Came to Him
Wearing the Uniform of a Nursing Sister

Sister Anne laughed with delight.

"I beg your pardon," said Sam stiffly.

"No—pardon me," said Sister Anne; "but your ideas of the duties of a nurse are so quaint."

"No matter what the duties are," declared Sam; "you should not be here!"

Sister Anne shrugged her shoulders; they were charming shoulders—as delicate as the pinions of a bird.

"One must live," said Sister Anne.

They had passed through the last cold corridor, between the last rows of rigid white cots, and had come out into the sunshine. Below them stretched Connecticut, painted in autumn colors. Sister Anne seated herself upon the marble railing of the terrace and looked down upon the flashing waters of the Sound.

"Yes; that's it," she repeated softly—"one must live."

Sam looked at her—but, finding that to do so made speech difficult, looked hurriedly away. He admitted to himself that it was one of those occasions, only too frequent with him, when his indignant sympathy was heightened by the fact that "the woman was very fair." He conceded that. He was not going to pretend to himself that he was not prejudiced by the outrageous beauty of Sister Anne, by the assault upon his feelings made by her uniform—made by the appeal of her profession, the gentlest and most gracious of all professions. He was honestly disturbed that this young girl should devote her life to the service of selfish sick people.

"If you do it because you must live, then it can easily be arranged; for there are other ways of earning a living."

The girl looked at him quickly; but he was quite sincere—and again she smiled.

"Now what would you suggest?" she asked. "You see," she said, "I have no one to advise me—no man of my own age. I have no brothers to go to. I have a father, but it was his idea that I should come here; and so I doubt if he would approve of my changing to any other work. Your own work must make you acquainted with many women who earn their own living. Maybe you could advise me."

Sam did not at once answer. He was calculating hastily how far his salary would go toward supporting a wife. He was trying to remember which of the men in the office were married, and whether they were those whose salaries were smaller than his own. Collins, one of the copy editors, he knew was very ill paid; but Sam also knew that Collins was married, because his wife used to wait for him in the office to take her to the theater, and often Sam had thought she was extremely well dressed. Of course Sister Anne was so beautiful that what she might wear would be a matter of indifference; but then women did not always look at it that way. Sam was so long considering offering Sister Anne a life position that his silence had become significant; and to cover his real thoughts he said hurriedly:

"Take typewriting, for instance. That pays very well. The hours are not difficult."

"And manicuring?" suggested Sister Anne.

Sam exclaimed in horror.

"You!" he cried roughly—"For you! Quite impossible!"

"Why for me?" said the girl.

In the distress at the thought Sam was jabbing his stick into the gravel walk as though driving the manicuring idea into a deep grave. He did not see that the girl was smiling at him mockingly.

"You?" protested Sam—"You in a barber's shop washing men's fingers who are not fit to wash the streets you walk on! Good Lord!" His vehemence was quite honest. The girl ceased smiling. Sam was still jabbing at the gravel walk, his profile toward her—and, unobserved, she could study his face. It was an attractive face—strong, clever, almost illegally good-looking. It explained why, as he had complained to the city editor, his chief trouble in New York was with the women. With his eyes full of concern, Sam turned to her abruptly.

"How much do they give you a month?"

"Forty dollars," answered Sister Anne.

"This is what hurts me about it," said Sam. "It is that you should have to work and wait on other people when there are so many strong hulking men who would count it God's blessing to work for you, to wait on you and give their lives for you. However, probably you know that better than I do."

"No; I didn't know that," said Sister Anne.

Sam recognized that it was quite absurd that it should be so, but this statement gave him a sense of great elation, a delightful thrill of relief. There was every reason why the girl should not confide in a complete stranger—even to deceive him was quite within her rights; but, though Sam appreciated this, he preferred to be deceived.

"What an Awfully Jolly Rag!"

"I think you are working too hard," he said, smiling happily—"I think you ought to have a change. You ought to take a day off! Do they ever give you a day off?"

"Next Saturday," said Sister Anne. "Why?"

"Because," explained Sam, "if you won't think it too presumptuous, I was going to prescribe a day off for you—a day entirely away from iodoform and white enameled cots. It is what you need, a day in the city and a lunch where they have music; and a matinée, where you can laugh—or cry, if you like that better—and then, maybe, some fresh air in the park in a taxi; and after that dinner and more theater—and then I'll see you safe on the train for Greenwich. Before you answer," he added hurriedly, "I want to explain that I contemplate taking a day off myself and doing all these things with you—and that if you want to bring any of the other forty nurses along as a chaperon, I hope you will. Only, honestly, I hope you won't!"

The proposal apparently gave Sister Anne much pleasure. She did not say so, but her eyes shone and when she looked at Sam she was almost laughing with happiness.

"I think that would be quite delightful," said Sister Anne—"quite delightful! Only it would be frightfully expensive; even if I don't bring another girl, which I certainly would not, it would cost a great deal of money. I think we might cut out the taxicab—and walk in the park and feed the squirrels."

"Oh!" exclaimed Sam in disappointment—"then you know Central Park?"

Sister Anne's eyes grew quite expressionless.

"I once lived near there," she said.

"In Harlem?"

"Not exactly in Harlem, but near it. I was quite young," said Sister Anne. "Since then I have always lived in the country or in—other places."

Sam's heart was singing with pleasure.

"It's so kind of you to consent," he cried. "Indeed you are the kindest person in all the world. I thought so when I saw you bending over these sick people, and now I know."

"It is you who are kind," protested Sister Anne, "to take pity on me."

"Pity on you!" laughed Sam. "You can't pity a person who can do more with a smile than old man Flagg can do with all his millions. Now," he demanded in happy anticipation, "where are we to meet?"

"That's it," said Sister Anne. "Where are we to meet?"

"Let it be at the Grand Central Station. The day can't begin too soon," said Sam; "and before then telephone me what theater and restaurants you want and I'll reserve seats and tables. Oh," exclaimed Sam joyfully, "it will be a wonderful day—a wonderful day!"

Sister Anne looked at him curiously and, so it seemed, a little wistfully. She held out her hand.

"I must go back to my duties," she said. "Goodby."

"Not goodby," said Sam heartily—"only until Saturday—and my name's Sam Ward and my address is the city room of the Republic. What's your name?"

"Sister Anne," said the girl. "In the nursing order to which I belong we have no last names."

"So," asked Sam, "I'll call you Sister Anne?"

"No; just Sister," said the girl.

"Sister!" repeated Sam—"Sister!" He breathed the word rather than spoke it; and the way he said it and the way he looked when he said it made it carry almost the touch of a caress. It was as if he had said "Sweetheart!" or "Beloved!" "I'll not forget," said Sam.

Sister Anne gave an impatient, annoyed laugh.

"Nor I," she said.

Sam returned to New York in the smoking car, puffing feverishly at his cigar and glaring dreamily at the smoke. He was living the day over again and, in anticipation, the day off, still to come. He rehearsed their next meeting at the station; he considered whether or not he would meet her with a huge bunch of violets or would have it brought to her when they were at luncheon by the head waiter. He decided the latter way would be more of a pleasant surprise. He planned the luncheon. It was to be the most marvelous repast he could evolve; and, lest

Digitized by Google

there should be the slightest error, he would have it prepared in advance—and it should cost half his week's salary.

The place where they were to dine he would leave to her, because he had observed that women had strange ideas about clothes—some of them thinking that certain clothes must go with certain restaurants. Some of them seemed to believe that, instead of their conferring distinction upon the restaurant, the restaurant conferred distinction upon them. He was sure Sister Anne would not be so foolish, but it might be that she must always wear her nurse's uniform and that she would prefer not to be conspicuous; so he decided that the choice of where they would dine he would leave to her. He calculated that the whole day ought to cost about eighty dollars, which, as star reporter, was what he was then earning each week. That was little enough to give for a day that would be the birthday of his life! No, he contradicted—the day he had first met her must always be the birthday of his life; for never had he met one like her and he was sure there never would be one like her—she was so entirely superior to all the others, so fine, so difficult—in her manner there was something that rendered her unapproachable. Even her simple nurse's gown was worn with a difference. She might have been a princess in fancy dress. And yet, how humble she had been when he begged her to let him for one day personally conduct her over the great city! "You are so kind to take pity on me," she had said. He thought of many clever, pretty speeches he might have made. He was so annoyed he had not thought of them at the time that he kicked violently at the seat in front of him.

He wondered what her history might be; he was sure it was full of beautiful courage and self-sacrifice. It certainly was outrageous that one so glorious must work for her living, and for such a paltry living—forty dollars a month! It was worth that merely to have her sit in the flat where one could look at her; for already he had decided that, when they were married, they would live in a flat—probably in one overlooking Central Park, on Central Park West. He knew of several attractive suites there at thirty-five dollars a week—or, if she preferred the suburbs, he would forsake his beloved New York and return to the country. In his gratitude to her for being what she was, he conceded even that sacrifice.

When he reached New York, from the speculators he bought front-row seats at five dollars for the two most popular plays in town. He put them away carefully in his waistcoat pocket. Possession of them made him feel that already he had obtained an option on six hours of complete happiness.

After she left Sam, Sister Anne passed hurriedly through the hospital to the matron's room and, wrapping herself in a raccoon coat, made her way to a waiting motor car and said "Home!" to the chauffeur. He drove her to the Flagg family vault, as Flagg's envious millionaire neighbors called the pile of white marble that topped the highest hill above Greenwich, and which for years had served as a landfall to mariners on the Sound.

There were a number of people at tea when she arrived and they greeted her noisily.

"I have had a most splendid adventure!" said Sister Anne. "There were six of us, you know, dressed up as Red Cross nurses, and we gave away programs. Well, one of the New York reporters thought I was a real nurse and interviewed me about the home. Of course I knew enough about it to keep it up, and I kept it up so well that he was terribly sorry for me; and ——"

One of the tea drinkers was little Hollis Holworthy, who prided himself on knowing who's who in New York. He had met Sam Ward at first nights and prize fights. He laughed scornfully.

"Don't you believe it!" he interrupted. "That man who was talking to you was Sam Ward. He's the smartest newspaper man in New York; he was just leading you on. Do you suppose there's a reporter in America who wouldn't know you in the dark? Wait until you see the Sunday paper."

Sister Anne exclaimed indignantly:

"He did not know me!" she protested. "It quite upset him that I should be wasting my life measuring out medicines and making beds."

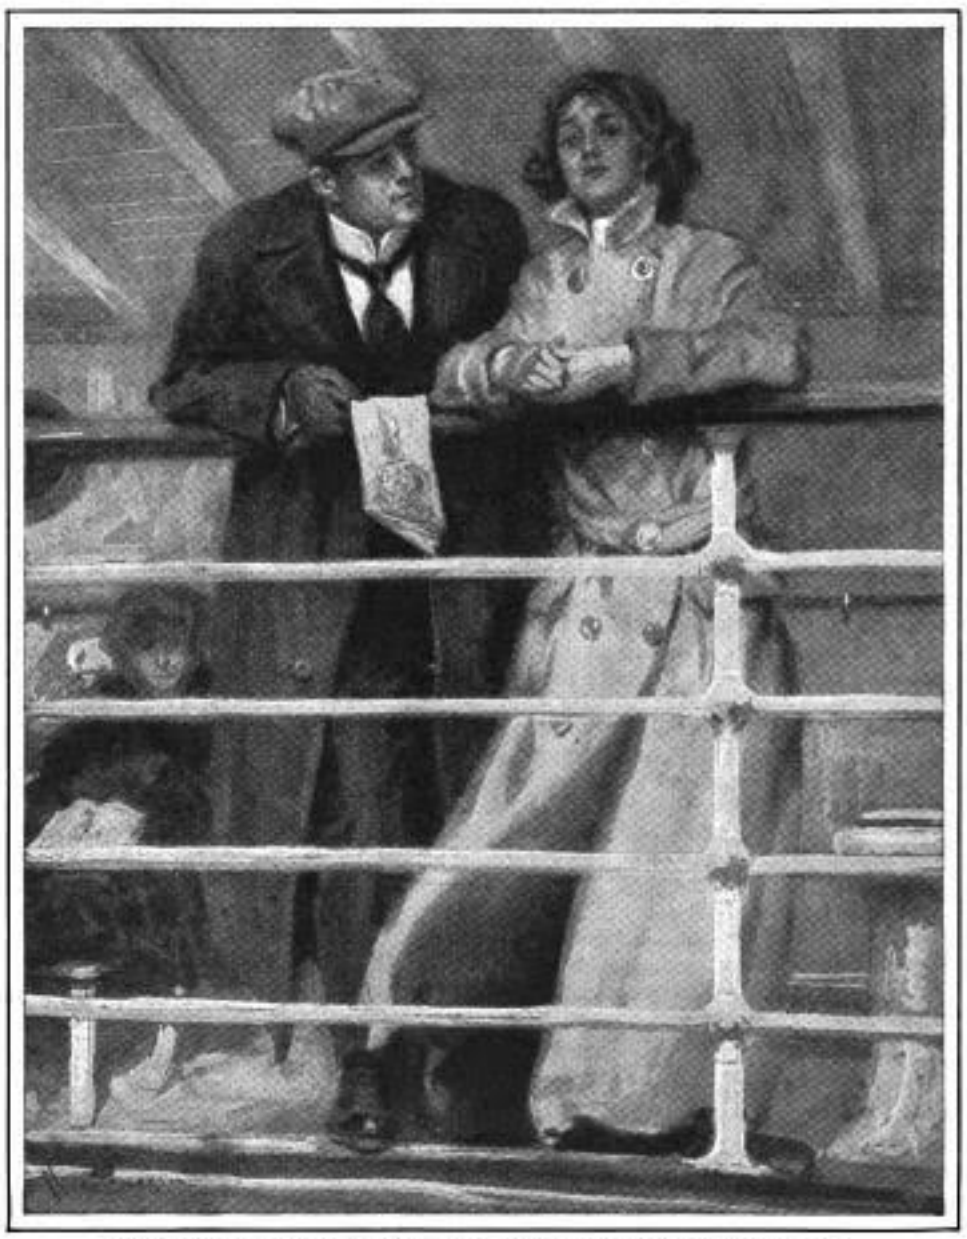
There was a shriek of disbelief and laughter. "I told him," continued Sister Anne, "that I got forty dollars a month, and he said I could make more as a typewriter; and I said I preferred to be a manicurist."

"Oh, Anita!" protested the admiring chorus.

"And he was most indignant. He absolutely refused to allow me to be a manicurist. And he asked me to take a day off with him and let him show me New York. And he offered, as attractions, moving-picture shows and a drive on a Fifth Avenue bus, and feeding peanuts to the animals in the park. And if I insisted upon a chaperon I might bring one of the nurses. We're to meet at the soda-water fountain in the Grand Central Station. He said, 'The day cannot begin too soon!'"

"Oh, Anita!" shrieked the chorus.

Lord Deptford, who as the newspapers had repeatedly informed the American public had come to the Flaggs' country place to try to marry Anita Flagg, was amused.



"What an awfully jolly rag!" he cried. "And what are you going to do about it?"

"Nothing," said Anita Flagg. "The reporters have been making me ridiculous for the last three years; now I have got back at one of them! And," she added, "that's all there is to that!"

That night, however, when the house party was making toward bed, Sister Anne stopped by the stairs and said to Lord Deptford: "I want to hear you call me Sister."

"Call you what?" exclaimed the young man. "I will tell you," he whispered, "what I'd like to call you!"

"You will not!" interrupted Anita. "Do as I tell you and say Sister once. Say it as though you meant it."

"The Day He Chose to Tell Her Was the First Day They Were at Sea"

"But I don't mean it," protested his lordship. "I've said already what I ——"

"Never mind what you've said already," commanded Miss Flagg. "I've heard that from a lot of people. Say Sister just once."

His lordship frowned in embarrassment.

"Sister!" he exclaimed. It sounded like the pop of a cork.

Anita Flagg laughed unkindly and her beautiful shoulders shivered as though she were cold.

"Not a bit like it, Deptford," she said. "Good night."

Later Helen Page, who came to her room to ask her about a horse she was to ride in the morning, found her ready for bed but standing by the open window looking out toward the great city to the south.

When she turned Miss Page saw something in her eyes that caused that young woman to shriek with amazement.

"Anita!" she exclaimed. "You crying! What in Heaven's name can make you cry?"

It was not a kind speech, nor did Miss Flagg receive it kindly. She turned upon the tactless intruder.

"Suppose," cried Anita fiercely, "a man thought you were worth forty dollars a month—honestly didn't know!—honestly believed you were poor and worked for your living, and still said your smile was worth more than all of old man Flagg's millions, not knowing they were *your* millions. Suppose he didn't ask any money of you, but just to take care of you, to slave for you—only wanted to keep your pretty hands from working, and your pretty eyes from seeing sickness and pain. Suppose you met that man among this rotten lot, what would you do? What wouldn't you do?"

"Why, Anita!" exclaimed Miss Page.

"What would you do?" demanded Anita Flagg. "This is what you'd do: You'd go down on your knees to that man and say: 'Take me away! Take me away from them, and pity me, and be sorry for me, and love me—and love me—and love me!'"

"And why don't you?" cried Helen Page.

"Because I'm as rotten as the rest of them!" cried Anita Flagg. "Because I'm a coward. And that's why I'm crying. Haven't I the right to cry?"

II

AT THE exact moment Miss Flagg was proclaiming herself a moral coward, in the local room of the Republic Collins, the copy editor, was editing Sam's story of the laying of the cornerstone. The copy editor's cigar was tilted near his left eyebrow; his blue pencil, like a guillotine ready to fall upon the guilty word or paragraph, was suspended in midair; and continually, like a hawk preparing to strike, the blue pencil swooped and circled. But page after page fell softly to the desk and the blue pencil remained inactive. As he read, the voice of Collins rose in muttered ejaculations; and, as he continued to read, these explosions grew louder and more amazed. At last he could endure no more and, swinging swiftly in his revolving chair, his glance swept the office. "In the name of Mike!" he shouted. "What is this?"

The reporters nearest him, busy with pencil and typewriters, frowned in impatient protest. Sam Ward, swinging his legs from the top of a table, was gazing at the ceiling, wrapped in dreams and tobacco smoke. Upon his clever, clean-cut features the expression was far-away and beatific. He came back to earth.

"What's what?" Sam demanded.

At that moment Elliott, the managing editor, was passing through the room, his hands filled with freshly pulled proofs. He swung toward Collins quickly and snatched up Sam's copy. The story already was late—and it was important.

"What's wrong?" he demanded.

Over the room there fell a sudden hush.

"Read the opening paragraph," protested Collins. "It's like that for a column! It's all about a girl—about a Red Cross nurse. Not a word about Flagg or Lord Deptford. No speeches! No news! It's not a news story at all. It's an editorial, and an essay, and a spring poem. I don't know what it is. And, what's worse," wailed the copy editor defiantly and to the amazement of all, "it's so darned good that you can't touch it. You've got to let it go or kill it."

The eyes of the managing editor, masked by his green paper shade, were racing over Sam's written words. He thrust the first page back at Collins.

"Is it all like that!"

"There's a column like that!"

"Run it just as it is," commanded the managing editor. "Use it for your introduction and get your story from the flimsy. And, in your head, cut out Flagg entirely. Call it The Red Cross Girl. And play it up strong, with pictures."

He turned on Sam and eyed him curiously.

"What's the idea, Ward?" he said. "This is a newspaper—not a magazine!"

The click of the typewriters was silent, the hectic rush of the pencils had ceased, and the staff, expectant, smiled cynically upon the star reporter. Sam shoved his hands into his trousers pockets and also smiled, but unhappily.

"I know it's not news, sir," he said; "but that's the way I saw the story—outside on the lawn, the band playing, and the governor and the governor's staff and the clergy burning incense to Flagg; and inside, this girl right on the job—taking care of the sick and wounded. It seemed to me that a million from a man that won't miss a million didn't stack up against what this girl was

Digitized by Google

doing—doing for these sick folks! What I wanted to say," continued Sam stoutly, "was that the moving spirit of the hospital was not in the man who signed the checks, but in these women who do the work—the nurses, like the one I wrote about; the one you called the Red Cross Girl."

Collins, strong through many years of faithful service, backed by the traditions of the profession, snorted scornfully.

"But it's not news!"

"It's not news," said Elliott doubtfully; "but it's the kind of story that made Frank O'Malley famous. It's the kind of story that drives men out of this business into the arms of what Kipling calls 'the illegitimate sister.'"

It seldom is granted to a man on the same day to give his whole heart to a girl and to be patted on the back by his managing editor; and it was this combination, and not the drinks he dispensed to the staff in return for its congratulations, that sent Sam home walking on air. He loved his business, he was proud of his business; but never before had it served him so well. It had enabled him to tell the woman he loved, and incidentally a million other people, how deeply he honored her; how clearly he appreciated her power for good. No one would know he meant Sister Anne, save two people—Sister Anne and himself; but for her and for him that was as many as should know. In his story he had used real incidents of the day; he had described her as she passed through the wards of the hospital, cheering and sympathetic; he had told of the little acts of consideration that endeared her to the sick people.

The next morning she would know that it was she of whom he had written; and between the lines she would read that the man who wrote them loved her. So he fell asleep, impatient for the morning. In the hotel at which he lived the Republic was always placed promptly outside his door; and, after many excursions into the hall, he at last found it. On the front page was his story, The Red Cross Girl. It had the place of honor—right-hand column; but more conspicuous than the headlines of his own story was one of Redding's photographs. It was the one he had taken of Sister Anne when first she had approached them, in her uniform of mercy, advancing across the lawn, walking straight into the focus of the camera. There was no mistaking her for any other living woman; but beneath the picture, in bald, staring, uncompromising type, was a strange and grotesque legend.

"Daughter of Millionaire Flagg," it read, "in a New Rôle. Miss Anita Flagg as The Red Cross Girl."

For a long time Sam looked at the picture, and then, folding the paper so that the picture was hidden, he walked

"This Man's Got a Head on His Shoulders, and He's Got the Shoulders Too"

to the open window. From below, Broadway sent up a tumultuous greeting—cable cars jangled, taxis hooted; and on the sidewalks, on their way to work, processions of shopgirls stepped out briskly. It was the street and the city and the life he had found fascinating, but now it jarred and affronted him. A girl he knew had died, had passed out of his life forever—worse than that, had never existed; and yet the city went on just as though that made no difference, or just as little difference as it would have made had Sister Anne really lived and really died.

At the same early hour, an hour far too early for the rest of the house party, Anita Flagg and Helen Page, booted and riding-habited, sat alone at the breakfast table, their tea before them; and in the hands of Anita Flagg was the Daily Republic. Miss Page had brought the paper to the table and, with affected indignation at the impertinence of the press, had pointed at the front-page photograph; but Miss Flagg was not looking at the photograph, or drinking her tea, or showing in her immediate surroundings any interest whatsoever. Instead, her lovely eyes were fastened with fascination upon the column under the heading The Red Cross Girl; and, as she read, the lovely eyes lost all trace of recent slumber, her lovely lips parted breathlessly, and on her lovely cheeks the color flowed and faded and glowed and bloomed. When she had read as far as a paragraph beginning, "When Sister Anne walked between them those who suffered raised their eyes to hers as flowers lift their faces to the rain," she dropped the paper and started for the telephone.

"Any man," cried she, to the mutual discomfort of Helen Page and the servants, "who thinks I'm like that mustn't get away! I'm not like that and I know it; but if he thinks so that's all I want. And maybe I might be like that—if any man would help."

She gave her attention to the telephone and "Information." She demanded to be instantly put into communication with the Daily Republic and Mr. Sam Ward. She turned again upon Helen Page.

(Continued on Page 44)

THE COST OF LIVING

An Interview With Senator Burton—By Roger W. Babson

RECENTLY Theodore E. Burton—senator from the good state of Ohio—invited me to lunch with him at the Capitol in Washington; and while the "great representatives of the common people" were stuffing themselves with highly seasoned meats, asparagus tips and mince pie, I was interested to see the Ohio senator content to order "half-and-half." Whereupon the waiter brought in a bowl of plain bread and milk. Knowing that the senator had delivered a lecture on reducing the cost of living on the previous day before the American Economic Association, I concluded that he was a man whom I should interview on this great practical subject that is creating such a stir throughout the world today. Most of us, when attacking the cost of living, prefer to confine our efforts to the preaching and let others do the practicing; but Senator Burton—as illustrated in a small way by the bowl of bread and milk—apparently endeavors, where possible, to take his own medicine.

However, the fact that Senator Burton eats bread and milk instead of grapefruit and venison is not my main reason for presenting his views to the readers of THE SATURDAY EVENING POST. Theodore E. Burton is known in America and Europe as an economist rather than as a senator; in fact, today he is generally recognized among the universities of America as the greatest living authority on "prices," with the possible exception of Professor Irving Fisher, of Yale University, who is gratuitously giving his time and money to urging the governments of the world to appoint a joint international commission on the cost of living.

Now the following are Senator Burton's three chief reasons for the high cost of living, other than the increase in the production of gold—about which I wrote recently:

1—The increased wants and desires of every one of us, from the richest to the poorest.

2—The increasing inequality between the development of different industries, owing partly to the fact that, though you and I receive more an hour for our labor than we ever did before, we receive less than ever in proportion to what the wealthy class now receives.

3—The fact that you and I are continually getting lazier and more wasteful. In other words, there is an "overproduction of non-producers."

Regarding the first of these reasons, Senator Burton says:

"Notwithstanding long periods of inertia and even of retrogression, the dominant note in the history of the race has been that of progress; this has been especially true in the last hundred years. Scientific progress has always been in the van, followed by material, intellectual and political progress. Science has given to mankind a constantly increasing control over Nature. Inventions and discoveries have greatly multiplied the supply of useful articles adapted to satisfy human wants. As a result, the conveniences and luxuries of one generation are regarded as necessaries in the next. One marked effect of this progress is the alleviation of the struggle for existence, with the resulting leisure or opportunity to acquire greater skill and to discover new methods of production. The requirement of less effort for obtaining the necessaries of life gives a wider scope to human enterprise and makes it possible to multiply the achievements which contribute to the betterment of the race. Nothing is more apparent than that the average per capita consumption is constantly increasing, not merely in essential food products, but in a variety of useful articles which are now available for more general use.

"It may be noted that modern means of communication, the ready transmission of news and the increasing scope of industrial and commercial operations have brought about a solidarity of interest among nations, and rendered it easy to obtain by international trade useful articles, even from the remotest parts of the earth. These same forces have promoted political progress, the assertion of popular rights and a greater equality of opportunity. One effect of this has been that wealth and the consequent increase of average consumption are no longer limited to a few. The development of a more peaceful disposition among nations has caused a great increase in both production and consumption, with more development and utilization of the world's resources. All these factors make possible a rising standard of living which increases prices unless there is equal progress in production."

It was most interesting to have a United States senator of his conservative type come out so fairly and frankly on this second great reason for the increased cost of living—namely, the fact that the cost of the necessities of life has increased in a much greater proportion than the cost of luxuries. When it is remembered that a poor man must eat as much bread and meat as Mr. Rockefeller, and that his babies must have as much milk as Mr. Rockefeller's grandchildren, the force of the second reason is self-evident. Said Senator Burton on this point:

"Progress, however, has been notably unequal in the different branches of endeavor which supply human wants. It is necessary to keep in mind the difference between a rise in the price of certain classes of products and a general rise in the price level. There is a substantial distinction between these two phenomena. New methods in industry and commerce are revolutionizing the means for supplying human wants, but their effect is far more helpful in some categories of products than in others. Whether this be the result of natural conditions or limitations upon our knowledge is not pertinent to this interview. The fact is obvious. Throughout all periods, notwithstanding changes in fashion and taste, there has existed a demand amounting to a necessity for certain essential products, such as food, clothing and shelter. It is plainly evident that science, working through inventions and improved methods, has not accomplished the same results in agriculture, especially in food supplies, as in manufacture. The revolution in industrial methods and in the utilization of capital in large-scale operations has not been accompanied by equal progress on the farm. Accordingly, as we would expect, the prices of farm products have risen much more rapidly than the prices of manufactured articles.

"In a very valuable report of the chief of the Bureau of Statistics for the Department of Agriculture for the year 1910, a comparison is made between the increase in the prices of articles purchased by farmers during the ten years from 1899 to 1909 and the increase in the value an acre of that which the farmers sell. For the articles purchased, the average increase was 12.1 per cent; while for the products sold by the farmer the average rate of increase in the value per acre was 72.7 per cent, or six times as much. The comparison is made even more emphatic when it is noted that flour and lard, which show maximum or nearly maximum increase in prices which farmers must pay, respond to the higher prices which they obtain for wheat and hogs. The rise in the prices of agricultural products in the temperate zone is well illustrated in the case of raw materials used in the manufacture of clothing. Until this present year the price of cotton has shown a steady increase. The price of middling cotton a pound in the year 1895 was 7.44 cents in the New York market; in 1903 it was 11.18 cents; in 1910, 15.11 cents, or twice as much as fifteen years before. The price of fine wool in the month of January, 1895—for most of which year there was no duty—was, in the Eastern markets, seventeen and a half cents; in 1903, thirty cents, and in 1910, thirty-six cents.

"The same general facts are true with relation to cereals and all other food products of the temperate zone.

Digitized by Google

A cause additional to the lesser degree of assistance from nvention may be found in the greater scarcity of land uitable for profitable cultivation, and in our own coun- ry especially the early cultivation of fertile areas was onducted with too much regard for immediate returns; onsequently little attention was paid to permanent pro- uctive quality. It may be added that improvements in roduction are unequal, not only as regards different classes f useful articles but also for different articles of sub- tantially the same class. This is true of various lines of anufacture, barely any two of which have been affected the same degree. The manifest effect of this inequality the ease or difficulty of production is a change in their lative value."

What pleased me most, however, was to hear Senator urton expound his third point, wherein he touched upon travagance and waste, which to my mind is the meat the whole proposition. Moreover, this is a part of the oblem that each of us can solve for himself at once. me of the other questions, such as gold supply, con- rvative tariff readjustment, and the like, will take years solve; but each one of us can begin today and spend less useless articles and throw less into the overflowing rbage pail. Said Senator Burton on this point:

"There is an inevitable tendency toward overaction, isdirected energy, waste and extravagance in every ogressive era. This tendency has its roots in the very aracteristics of human nature itself. Whenever a new ocess is invented for satisfying a human want, or a new arket is discovered, it is probable that the inviting pros- ect of gain will cause an undue amount of investment and fort in that new direction, which results in a loss of apital and an oversupply of certain articles. The tend- ncy to waste and extravagance is even more marked in e utilization of new facilities or the purchase of articles hat please the taste or fancy. A new style of house or quipage, or of dress, all of which are common in a time f increasing wealth, often leads to the discarding of that hich, under less favorable circumstances, would be egarded as sufficient and to the purchase of other articles accordance with present-day tastes or fashions. Social mbitions and the desire for luxury tend in the same irection; extravagance grows as facilities and attractive rticles multiply. Along with these factors is the desire or ease and luxury which accompanies the accumulation f wealth, a result of the fact that pleasure is more attract- ve than pain—that enjoyment is preferred to effort; hence he number of the unemployed increases and the amount f effort made for satisfying human wants diminishes."

When Pigs Fetched But Four Pence

AN IMPORTANT factor of the present situation, as affecting the high cost of living, is the rapidly growing cost of government—national, state and municipal. In case the proceeds derived from taxation are applied to essential improvements, naturally no waste would accrue; but there are, nevertheless, substantial differences between public and private enterprise. The former is managed with a less degree of care and supervision. Given a certain object, the expense of securing it by public management is usually greater than under private control.

"In addition to this, think of the enormous burden of military and naval armaments, now amounting, in the more civilized nations, to two billions a year—an economic waste which imposes an almost unendurable burden upon the world's resources. Again, in prosperous times a disposition to indulge in excess and unwise undertakings is manifest both in public and private expenditures.

"In this connection it must be stated that the inequality of the supplies of raw material requisite for human needs is a prominent factor in the situation. The lumber supply of the United States, which at one time seemed abundant and even inexhaustible, in view of the great demand for buildings, furniture, implements, and so on, has been diminished to such an extent as to threaten an early exhaustion. Perhaps the wisest policy would have suggested that the state limit the cutting of timber and require that new forests be planted. However that may be, the diminishing supply of timber in the face of unusual demand has caused a rapid increase in the price of products of the forest, the advance from 1900 to 1910 being the greatest of any single class. A comparison of the figures prepared by the Bureau of Commerce shows that between 1900 and 1910 the wholesale prices of woodenware and furniture increased about twenty per cent."

Senator Burton then told how there had always been periods of increasing prices. The following ancient history, I think, is intensely interesting, especially the dialogue given below stating the reasons for the rise of prices in 1549, which coincide so perfectly with the reasons given today:

"There have been illustrations of the increase in prices in the history of progressive countries. According to Böckh, in the time of Solon an ox in Athens cost five drachmas, or nearly 3 shillings; a sheep, one drachma; a bushel and three gallons of corn, one drachma. Two hundred years later the prices rose to five times and in many cases to ten or twenty times their former amount. The quantity of money was increased by the spoil obtained by successful military operations and by the development of mining in the islands of the Mediterranean, in Attica itself, and in Thrace and the island of Thesos. In Rome it is more difficult to trace the changes in prices of food. Corn was sometimes exacted as a tribute from conquered countries and sold by the state at less than cost, and occasionally given away. The increase of prices was particularly rapid after the concentration of the chief mining industry in the hands of the Roman government. Cattle increased in price as well as corn. About 400 B. C., sheep sold for seven pence three farthings. At the date of the Christian era the price was twenty-five shillings. After the Carthaginian Wars, the Romans acquired the valuable mines of their enemies in the western part of Africa—also in Sicily, Sardinia and the south of Spain. A few years later the mines of Greece and Asia Minor came into the possession of the Romans; still later the mines of Macedonia and Thrace. In their later conquests special effort was made to acquire supplies of the precious metals.

"In the year 1581 a dialogue was printed, attributed to one 'W. S.,' probably William Smith, entitled A Discourse of the Common Weal of This Realm of England. The participants in the dialogue are a knight or owner of land, supposed to be Mr. Thomas Hales; a doctor of divinity, who, it is conjectured, was Bishop Hugh Latimer; a husbandman; a tenant farmer; a merchant; a mercer; and a capper. An enterprising publisher in the year 1751 republished this dialogue and, basing the authorship on the initials W. S., assigned it to William Shakspere, a manifest effort to obtain a greater sale by deceit. The real date of the dialogue, as appears from more recent investigation, was the year 1549. In this old pamphlet each ascribed to the occupation of the other the responsibility for the existing situation.

"Views are expressed upon the benefits of protective tariffs against foreign products, upon the balance of trade, upon the exactions of the middleman and upon the increase in rents of agricultural land. One of the characters expresses the opinion that avarice is the cause of high prices. Another mentions the great increase in the cost of necessary articles. One of them says: 'Within these eight years you could buy the best pig or goose that I could lay my hands upon for four pence which now costs me eight pence, and a good capon for three pence or four, a chicken for a penny, a hen for two, which will now cost me double the money; and it is likewise of the great ware, as of mutton and of beef.' It was maintained in this discussion that price determined rent and not rent price. The husbandman conceded that if he were commanded to sell his wheat and other products at the old price he would have enough to pay his landlord as in times past; but he says that he must buy iron, salt, tar and pitch, all of which brought a higher price than formerly. One cause of the increase of prices which is pointed out in this dialogue is the clipping of coin, which caused the good coins to go abroad for use in foreign trade. There were, however, more universal causes than this.

"Bodin, a French political philosopher, in the last half of the sixteenth century, states as an undoubted fact that there had been a revolution in prices. He gives six reasons for it: 1—The great abundance of gold and silver, which resulted in a decrease in its purchasing power. 2—The monopolies of the guild and of the tax farmers. 3—The ease with which wine and corn—the chief products of France at that time—might be exported, thus increasing the price at home. 4—The extravagance of the court. 5—The general leisure in the community. 6—The debasement of money, a practice which was prevalent in France at that time."

The Price the People Pay

I ASKED Senator Burton: "What of the influence of the so-called trusts and the tariff on prices?" He referred to his speech of the day before wherein he said:

"It is clear that complete monopoly or preponderant control of the market in the production or sale of any particular commodity affords opportunity to increase its price. The same result is apparent when separate producers maintain an agreement or understanding as to prices. On the other hand, the superior economy and efficiency of large-scale operations materially diminish the cost of production and, even more, of distribution, and should therefore tend to decrease prices. For this reason, the concentration of industrial and commercial enterprises is a legitimate phase of business evolution. It must be said, however, with equal emphasis, that thus far the general public has not experienced in reduced prices the benefit to which it is entitled because of the increased economy and efficiency resulting from great combinations. If the people do not receive their proper share of the benefits strict control, beginning with greater publicity and ending, perhaps, with the regulation of prices, is the inevitable outcome. Certain it is that large-scale operations have come to stay. If they cannot be successfully regulated it is probable that state ownership will be adopted in preference to a return of the old régime of smaller, competing units.

"In a majority of cases the statistics of prices do not bear out the assertion that the establishment of large corporations has always caused an exceptional increase in the cost to the consumer. In many instances the higher prices are due—in part at least—to the greater expense of obtaining raw materials or to the increased labor and obsolescence charges to which all concerns of whatever magnitude are alike subjected. In the table prepared by the statistician of the Department of Agriculture, to which reference has been made, it appears that, among over eighty enumerated articles purchased by the farmer, there were only three the cost of which diminished between the years 1899 and 1909. Two of these are comparatively unimportant; the third is coal oil, which fell from 15.1 cents a gallon in 1899 to 14.2 cents in 1909. There were also substantial reductions in the prices of various forms of iron and steel in the same period; though, as already mentioned, those of practically all the agricultural products of the temperate zone increased.

"The rise in the price level cannot be wholly ascribed to tariffs any more than to the trusts, though prices of particular articles may have been increased by them. In answer to those who maintain that the tariff is responsible for the high cost of living in the United States, attention may be called to the admitted fact that the rise in the price level has been universal under free trade as well as under revenue and protective tariffs. In a single newspaper, published at Paris last September, there

How to Beat the Building Game

Choosing Your House—By Benjamin A. Howes

ILLUSTRATED BY GAYLE P. HOSKINS

ON THE shores of Long Island Sound there stands among green fields what looks at a distance like a magnificent white and shining mansion. It was built a few years ago after the plans of an all-but-famous architect at a cost which only a multi-millionaire would endure. Go nearer and you will see that the white surface is cracked and apparently moth-eaten, the charming classical decorations crumbling; the present owner will tell you that he has already spent the price of a small house in a vain attempt to repair the disintegrating outer plaster. Within, the great rooms are delightful to look upon, with their polished wood paneling and carved details. What the present owner probably does not dwell on, however, in addition to all his troubles, is that something has only to go a little wrong in the far-flung ramifications of the vast heating-plant or the complicated electric installation, and all this inner beauty will go up in an hour's conflagration.

"We Wanted to Take the Children to the Country"

Not far inland from this truly tragic spectacle you will come upon the small house of a business man on a moderate salary. You will note that the walls are apparently of solid concrete of a not very inviting color or texture, and that here, too, there are traces of cracks and of the devastating effects of water in those cracks. Interview the mistress of the house and she will tell you they had been saving for some years to build a country home, not necessarily for the rest of their lives, but—"We wanted to take the children to the country." They had read much in magazines and newspapers of "the coming concrete house" and had thought it would be just the thing for them. They had bought some stock plans and had been recommended to a contractor by the development company from which they got their land. They had had great difficulty, to be sure, in bringing him anywhere near their limit of cost; but after some rather stormy interviews, as they described it, he had consented to build them the house at a thousand or so more than they could really afford. And now it was leaking and crumbling! Their roof loggia had caved in, rain drove through their nursery; and as for their opinion of concrete—the less said the better!

Materials Not What They Seem

THE judicious reader will understand, of course, what was amiss in both these cases. In neither one had any real thought been expended on what the situation—of place and of money—demanded. In neither one had any effort been made to "choose their house." The millionaire had evidently been carried away, by the delightful design of the enormous house, into putting vast expanses of surface into a material that was bound to disintegrate, no matter how careful the work, in sea-air. Moreover, those exquisite, elaborate Greek capitals had been cast, to save trouble and expense, with a lot of plaster of Paris in the composition—and plaster of Paris melts away in wet weather like dew before the sun. It was his bad judgment and not his lack of knowledge, of course, that was responsible for risking a wooden frame within a rambling palace.

As for the other unfortunate, it was a case of that little knowledge which is a dangerous thing. The "coming concrete house" for the single builder—who is at the same time a small builder—is not economical at all, but dear in comparison with other constructions. The clerk had browbeaten his over-eager contractor, who had probably not much knowledge of concrete costs, into too low a price. The contractor had doubtless used the sand and cement and stone that came to hand, without the usual professional tests; had employed his ordinary unskilled laborers and, worst of all, had used too little of the high-priced supervision that is absolutely necessary for good concrete work. The result was the sinking of more money than the owner could afford into a type of structure which, if good of its kind, would have been beyond his needs, but, poorly built, it had become a cruel incubus.

The lesson of these two cases is the obvious one of the absolute need of complete clearness in the mind of the owner as to what he wants his house to be capable of. In these days of copious advice to intending and anxious home-builders, surprisingly little has been put forth of the relative advantages and suitability, to the financial and geographical situations of their prospective owners, of the various materials and types of construction for houses. Yet nothing is of more fundamental importance. If it was suicidal for the millionaire to build in wood it was no less so, in my opinion, for the clerk to build in concrete—real concrete; but no one has told them so. Not long ago a highly popular magazine had a graceful article on the first glimmers of taste—or words to that effect—in American domestic architecture. Not one syllable was said of any relation between a house's situation—including pretension—and its material, or between its material and its architectural type. It was apparently the feeling of the architect-author that such prosaic considerations could be ignored; in fact, the one house unreservedly praised by him as an ideal to be approached by American architects is known to be of most perishable material; and the editor of the department in which the article appeared indignantly repelled the suggestion that any judgment in regard to architecture must take some account of the type of construction.

Even if the type of construction is considered, it is usually only as a question of taste or appearance. The trouble with us Americans is, we are completely hypnotized by names. We speak of a stone or a brick house with bated breath, as of a monumental structure; or proudly of a stucco, tile or concrete house—as though we actually had any idea whatever of what kind of structure those terms denote! The brick house may be a thin veneer on a cheap wooden frame; the stucco, plaster on flimsy wood-lath; the concrete, only the poorest of substances. The real-estate advertisers are careful to leave to the imagination the true inwardness of "Modern cement houses, moisture-proof and vermin-proof!"—"Elegant two-family brick dwelling!"—"A ten-room stucco house for eight thousand dollars"—and so on. Just exactly as well one might speak of "A ten-room paint house," for paint has as much relation to the real construction of the dwelling—and to the effective protection of the surface too—as has stucco. Yet the fine brick house, of unburnable construction, and the real standard concrete house are noble and permanent structures, worthy of all respect. Let us, then, ignore the glib catchword once for all, and learn to look for the real materials of a building, inside as well as outside, and to consider their peculiar properties.

Is your house to be a modest suburban dwelling for your young family to grow up in, or the palatial mansion you dreamed of building when you made your fortune? Do you look forward to making it a family homestead for your grandchildren to come back to, or is it to be just the pretty house to which you wish to be able to ask your friends until you are ready to build "for keeps" farther away from the city when your business is less confining? And do you mean to get your family homestead for twenty thousand dollars or two hundred thousand, or to spend ten thousand or fifty thousand on your halfway house? The range of permutations and combinations between your social intentions and your appropriation is almost unlimited; and a third variable must be added for the place—whether city, suburb, country town, mountains, lakes or shore. It is of the utmost importance to your purse and your comfort, however, to fix on the type of construction most economical in your very special conditions. I cannot pretend to exhaust the subject, but I shall try to suggest the types of buildings which, for the several great groups of home seekers, are truly economical and satisfactory in the long run.

Suppose we begin with the rising salesman, who can venture to spend six to ten thousand dollars for a country home, exclusive of the land. It is a mistake, in my opinion, for such a man to feel that he must build in fireproof construction. Remember that fireproof construction means fireproof interior structure! A plaster surface and asbestos roof would doubtless protect you if a terrible prairie fire, carrying brands on its hot breath, were to sweep your green suburban fields—but not otherwise. The real fire risk, which in nine-tenths of the cases is a matter of electric wires or heating-plants or careless matches, is very small in the little house, where the electric wiring and the heat piping are confined to a small space, and where the nose of the good housewife is always attuned to the smell of smoke.

Many plans and estimates for the small house of hollow tile or concrete exterior are extant in which the floor and partitions are of wood. Needless to say, this construction may be chosen by the owner for its outside appearance or from a desire for novelty; but it should be with the full understanding that, without unburnable floors and partitions, the small hollow-tile house has little advantage over wood as regards fire. The house entirely of hollow tile, including floors, with stucco surface, is attractive, unburnable, and in the neighborhood of New York not so very much more costly than wood—say ten per cent; though in the South or far New England it may run to an increase of forty per cent. If, however, it is a question of sacrificing, say, the best plumbing and heating, extra fireplaces or service conveniences or needed dimensions, I should advise—in a small house—giving up the unburnable quality and getting the extra comforts. The vaunted "no repairing required" of stucco is, of course, advertising license—since the stucco inevitably requires attention in a few years. An acquaintance who has built, for seven thousand dollars, in a Massachusetts town, a well-equipped and roomy shingle house, twenty-five by forty feet in dimensions, assures me that for the fifteen hundred dollars saved by giving up the hollow-tile house he had originally planned on the same lines he has two extra bathrooms, a portable garage and an electric washing-machine!

Advice for the Home Builder

OF THE exterior stucco—cement plaster—on wooden lath, with wood interior, often referred to as "the concrete house," I would say to the small builder: "Stop, look and listen!" In any except the mildest, dryest climate it begins at once to disintegrate. It has no fireproof quality, of course—except against the prairie fire—and has no other advantage over good wood construction; and it is, in fact, much less lasting. It is, indeed, regrettable that, by the careless use of the terms "concrete" and "cement" for these flimsy houses, many people have invested their modest means in the expectation of getting the permanent and indestructible concrete.

The pretty wooden house, well kept up, with its large dimensions, will prove as satisfactory and as salable as any other with an expenditure of under ten thousand dollars. It fills the requirements of a suburban house that is to be lived in almost all the year round, but is not meant for a family homestead of permanence.

So much for our first set of variables! Suppose, however, you mean to spend up to ten thousand dollars in an entirely different way—say, for a camp in the Adirondacks, by the lake you loved as a boy and courted your wife on and mean to return to for the meditative angling of your declining years—a camp you don't want to have go up in smoke some January night, carrying with it your moose-heads and your fishing rods, and all your other *souvenirs de jeunesse!* Well, that camp ought to be built either of rough native stone, with concrete floors, or of rough unfinished concrete—it will be understood that concrete is used in these pages in the correct sense of the mixture of cement, sand, stone and water, cast in a mold or form. Such a structure will not be so very large, but it can be built by an experienced builder, and have good plumbing and heating, for ten thousand dollars; and if so built it will hold tight against the forest fires and winter storms of a hundred years—or more.

By the Lake You Loved as a Boy and Mean to Return To

Even if not built by an experienced builder it may serve. I have in mind the camp of a college professor who was brought up on a farm—that untouchable combination!

Digitized by Google

He planned his own house and it was partly constructed *for* him by a local carpenter who had never seen a concrete wall! He did many details himself, and I believe mixed the concrete with his own hands—"With brains, sir!" This camp, however, even though it is of an extraordinary homemadeness in appearance, has many rooms, cost considerably under ten thousand dollars, and will be a joy forever to the numerous children of the family.

To the person prepared to spend from ten thousand to twenty-five thousand dollars, my counsel will be quite otherwise. Such builders fall, on the whole, into two classes: First to be considered is the prosperous business man who expects to make a permanent home in a pretty "residence center." This man will want all the conveniences for his wife and servants: plenty of electrical devices, heat in every room, a garage near by. He will collect good books, will run to old mahogany, will expect to plant his affections in the garden and by the fireside. To such a man, entire permanence of material and all but complete fire protection will be a necessity. To him I should say, build a house of brick exterior in the new soft textures—or, if in a convenient locality, of the picturesque native stone—with hollow-tile interior structure and asbestos shingle or tile roof. A semi-fireproof possibility would be one story of concrete, with concrete floors, with wood above, and a tile roof. When hollow-tile interior structure is referred to, the use of the usual so-called "combination floor" of hollow tile in reënforced concrete is always to be understood; in fact there is no economical way of building an unburnable floor without reënforced concrete; and this "combination floor" is the most practical for any unburnable house that is not of reënforced concrete throughout.

Fires Start Mostly in the Kitchen and in Closets, and Mount in the Hollow Walls

Such a house, of the soft-texture brick, thirty by fifty feet in dimensions, was lately built in a good Long Island suburb for fifteen thousand dollars. It has a veranda and a roof loggia, with a fireplace, a small reception room, living room, dining room and kitchen on the first floor; four bedrooms, library and a bath on the second floor; and one bedroom and bath, with an attic and place for another servant's room, on the third. The owner has strong views on devices for easy living and the house is arranged so that the work for four persons may be done by one servant. *Terrazzo* floors, requiring no attention, are laid over the "combination"; the trim is hardwood—oak, cherry and birch—varnished in a dull finish—no cleaning of paint! There is a clothes chute from the top floor to the laundry in the basement, where there are two set tubs and a washing-machine and wringer, run by electric motor, in the place of the usual third tub. A combination gas-and-coal range and electric irons complete a very satisfactory equipment for saving labor.

Stucco, Concrete and Cement

A THOROUGHLY permanent fireproof house of this kind, of approximately forty by fifty feet in dimensions, ought to be built, including all domestic equipment, in the neighborhood of New York, for twenty thousand dollars. It should be said that all the figures I have given include all those necessary items of equipment which in a previous article I advised including in the building specifications.

In the second great group, with an appropriation of ten thousand to twenty-five thousand dollars, should be put both the man who is setting up, more or less consciously, the halfway house in his upward career, and the man of wealth who is building a dainty country house for temporary occupation. These regard the expenditure less as a permanent investment than as an outlay to be largely absorbed and justified by the pleasure they get out of the house during occupancy. Such houses are in no need of the most expensive and permanent construction, though they should be reasonably protected from fire. For the country house—the play house pure and simple—plenty of bedroom space, large and airy rooms and general freshness of aspect, with little fire risk, are the essentials. Probably the greatest dimensions involving these essentials can be secured for a given sum in a structure of exterior stucco on metal lath and interior plaster on metal lath, care being taken that the wooden frame be more substantial than is customary, and that the plaster be one that conserves the metal and contains no disintegrating elements.

An example of this type, whose owner will occupy it only a part of the year for a few weeks at a time with a gay party of young people, was built not far from New York. It was of stucco on metal lath—exterior and interior—of irregular shape, but covering about three thousand square feet, and cost twenty-five thousand dollars. It had a den and laundry on the first floor in addition to the usual living and service rooms; seven bedrooms and three bathrooms on the second floor, and four servants' rooms, with bath, on the third floor. In New England it could have been built for about twenty-two thousand dollars, and in some parts of the South, where no cellar and little heating is required, for seventeen thousand dollars.

The owner was anxious that the fire-stops be carefully looked to, though he did not wish to go to the expense of entirely unburnable construction. The insurance companies tell us that fires start mostly in the kitchen and in closets, and mount in the hollow walls. Therefore the hollow space behind every baseboard was filled a foot deep with cinders mixed with a little cement and water in the proportion of ten to one—just enough to keep the cinders from sifting through. Sand mixed with cement in the same way, or mineral wool, would have done as well. This was to prevent the upward rush of flames. Besides this, the cellar ceiling and places about the heating-plant were plastered with Portland-cement mortar on metal lath, and all electric-light wires were run in metal conduits, with standard outlet boxes. As a finishing touch a fading slate roof was added as an additional precaution.

The exterior stucco was carefully painted. Experimental tests have lately established that if the stucco is rich enough in cement to keep water from rusting the metal lath it is of a consistency that inevitably expands and contracts in changes of weather—and cracks; though if "lean" enough not to crack water drives straight through it—that is, no matter how good the workmanship, stucco on metal lath cannot stand bad weather unless kept protected by a coat of paint; sometimes by a paint made of Portland cement, which cracks, indeed—but all over, infinitesimally—so that water is kept out. With such protection, such a house as I have described will do very well for a term of years—for a good-sized home, which is to represent expenditure, not permanent investment.

The halfway house owner, though not intending to build for all time, will make his house a home while he lives in it, and will require complete safety for his Lares and Penates. He will probably get the most for his money, under the circumstances, in an exterior of stucco on hollow tile or cheap brick, with a hollow-tile interior. In the neighborhood of New York an entire hollow-tile house, forty-five by fifty feet, can be built for a little over twenty thousand dollars—that is, under ordinary conditions the owner can reckon that he will pay nine dollars a square foot of ground dimensions for this construction, including all equipment. The aspect of these houses is very fresh and attractive for some years, though it should be understood that stucco comes off of brick quite as freely as off of metal lath. Water gets in behind the stucco surface sooner or later; and, with resulting expansion, followed by contraction, augmented, of course, where frosts occur, the coating cracks and peels. The effects of dampness on stucco over brick or stone are strikingly shown in the famous cemeteries of New Orleans, as is also the case in many buildings about that city; but for houses to be enjoyed for a limited term such comparative lack of durability will not matter.

Above twenty-five thousand dollars, the problem becomes more complicated as the possibilities of construction open out. The reader may have been surprised that up to this point little has been said of reënforced concrete as a material for houses. That is because, except under unusual conditions, the economies of this material do not appear under an expenditure of twenty thousand dollars. The expert knowledge involved in the proper control of sand and cement—in the choice of proportions, in the mixing, the design of steel reënforcement, the laying of the concrete and the finish of the surface—make imperative a professional direction of the job. Professional service is too heavy a charge on a small operation, however, which is the reason why it is not at all economical to build the individual modest house of concrete. In view of this undoubted fact, it is regrettable that reputable journals continue to publish—to the hurt and disappointment of countless small homebuilders—such absurd statements as the following: "The monolithic concrete method lends itself admirably to the small house and many schemes have been devised for the speedy and economical erection of them. They are but little more expensive than a frame house."

The lack of this professional knowledge in the builder is what has occasioned most of the erroneous impressions

Let the Wealthy Owner Beware of Lining His Unburnable House With Inflammable Decorations!

about concrete. Nine-tenths of the people I meet ask me of the concrete house: "But isn't it damp—or porous—or cold in winter?" and so on. Now, first, the concrete wall needs furring—or lining—just as much as any brick or stone wall. No properly built house of brick or stone is without an air space between the wall and the surface which receives the plaster. Today this space is provided by the usual furring of hollow tile, which prevents the cold of the outer wall striking through and causing the moisture of the warm air within to condense on its surface; but the early experimenters in concrete often failed to provide this necessary lining, with the result that in very cold weather the walls appeared to be damp. The standard six-inch concrete wall, furred, is just like any other masonry wall.

Porosity, on the other hand, is a mark of poor concrete—the result either of poor cement, or of wrong proportions in the mixing, or careless laying. In New England, in New York and New Jersey are watertanks in the interior of concrete houses which contain up to five thousand gallons—and with no waterproofing. The man who feels that he must put on his concrete surface one of the so-called "waterproofing mixtures" thereby confesses that his concrete is of faulty workmanship. The fact is that concrete which is up to professional standards is completely water-tight. It may not be generally known that the National Association of Cement Users, the American Society of Civil Engineers and the American Society for Testing Materials have worked out very detailed standards of quality in cement, sand and gravel, of mixtures, and of methods of finish, which rival in exactness the engineering formulas for steel construction.

A Cured Patient Better Than a Cheap Funeral

OVER twenty-five thousand dollars, however, the professional element engaged for building sinks to a reasonable proportion of the cost, and the other great economies emerge. What is so widely published of concrete—and unfortunately also believed of stucco "cement"—that it requires no repairs, grows stronger with the years, can be flushed out with water, is a non-conductor of heat and electricity—is all true. The surface is not absolutely untouched by weather unless it is finished "exposed"—that is, with the surface cement scrubbed out to show the component of stone; but such a surface is absolutely indestructible.

Good construction in concrete, at the twenty-five-thousand to thirty-thousand-dollar level and over, costs approximately the same as good brick unburnable construction, reckoned at about ten dollars a square foot, including equipment. It is difficult to make this comparison, because the "good brick construction" of common parlance is not fireproof, but has timber frame and floors, and is, of course, not really good for a large investment. It is far better to stand the extra cost of fire protection, for "a cured patient is better than a cheap funeral."

Only let the wealthy owner beware of lining his unburnable house with inflammable decorations! In insurance

MY FRIEND TAGLIALATELA

A Study in Protection for Revenue Only

By MONTAGUE GLASS

ILLUSTRATED BY HENRY RALEIGH

MY FRIEND Fortunato C. Taglialatela, G. di Candia, a young married man by the name Annibale Gallo—which is called by good friends Cornu—and certainly also myself, make all of us together association in business that we would give protection to poor Calabrese barber shop or bootblack stand.

This Cornu is ignorant fellow, but certainly with very good ideas, like to write letter to poor Calabrese that he will please pay at earliest convenience fifty or a hundred dollars, as the case may be, otherwise look out—signed, "Yours truly, *La Mano Nera*"—signature in red ink.

My Friend Fortunato C. Taglialatela Certainly, Too, Plays Very Good Mandolin

Also my friend Fortunato C. Taglialatela is a swell dresser and certainly, too, plays very good mandolin on six mandolins, three of which are inlaid tortoise-shell of most expensive make, because my friend Taglialatela once works in music store on the street Via Toledo just near the Liceo Vittorio Emanuele, of which I am graduate Faculty of Commerce.

So my friend Fortunato C. Taglialatela goes to get hair cut or shine, as the case may be, and says to poor Calabrese: "Myself I am from Province Cosenza, and is it not a shame this Sicilian Black Hand?" and otherwise acts sympathetic, until poor Calabrese admits he is in receipt of our communication of the thirtieth ulto and contents noted. Then my friend Taglialatela says: "I know well the black hand, and do not be afraid because I and my friends will protect you; and please pay us at your earliest convenience twenty-five or fifty dollars, as the case may be, which is clear example of saving one-half."

Poor Calabrese says: "In what manner you protect me?" And then my friend Taglialatela calls in G. di Candia from waiting outside for that purpose.

G. di Candia is ignorant but honest fellow, for some time in employ of well-known cannon concern, Armstrong & Co., Bagnoli, and possesses very good health, arms, chest, and so forth. On arrival in this country two years ago he becomes prizefighter, as misguided friends so advise him, because before leaving Bagnoli he splitted with the naked hand skull of Armstrong & Co. foreman in wagon-loading department, by name Felice Barone. But if one chooses opponents an inexperienced foreman in wagon-loading department is some thing and Irish prizefighter is another, so G. di Candia makes with us association in business.

My friend Fortunato C. Taglialatela then presents to poor Calabrese this G. di Candia and says: "Have confidence that if you will pay us twenty-five or fifty dollars we will protect you, because in case otherwise this gentleman here will tear your heart out."

Poor Calabrese regards only once the physique of this G. di Candia, and he makes haste to secure our protection upon terms: Net cash, so that my friend Taglialatela, this Cornu, G. di Candia and certainly myself make division of profits weekly, one hundred to one hundred and fifty dollars, as the case may be.

For my part I am content that this is so, as it was my custom to be bookkeeper and domestic and foreign correspondent in fine oil and Italian produce establishment G. Dagnino, Negri & Co., in which Mr. Dagnino, a man of high temper, accuses me I do not come out by sixteen dollars the same like G. Dagnino, Negri & Co.'s cash register. I am making mathematical demonstration to Mr. Dagnino that this is not so, ending by Mr. Dagnino to kick me into the street.

"Why kick me, my dear Mr. Dagnino?" I protest. "Why not kick cash register?"

"A cash register is not a liar and a thief," Mr. Dagnino says to me, but Mr. Dagnino is deluded with modernism, since the amount was not sixteen dollars, but one hundred and sixteen.

Allora I become associate in business with my friend Fortunato C. Taglialatela and the others, of which I am domestic correspondent and bookkeeper, but without cash register, as between intimates like my friend Fortunato C. Taglialatela, this Cornu and me, there is no need of cash register—one deals fair with the other—and as for G. di Candia, he is accustomed to very small wages, so that there is no kick from him.

Who knows we would still be associated together, except one night last March, this Cornu, G. di Candia and certainly also myself are sitting in our rendezvous, the Ristorante Sangue di San Gennaio, when who shall enter but my friend Fortunato C. Taglialatela with best tortoise-shell inlaid mandolin.

"I invite you," he says, "to make visit to the second annual prize musical festival Circolo Salvatore Gastaldon, at the Hall of the Three Abruzzi, White Plains Road and Two Hundred and Seventy-second Street."

But Cornu shakes his head.

"Too much far away," he says. Because he has heard many times and certainly myself, too, the *repertorio* of my friend Fortunato C. Taglialatela, which it is mediumly extensive, but by repetitions we know it by the heart.

"What is the matter with you?" my friend Taglialatela asks this Cornu. "Always you are walking from Torre del Greco to the Piedi Grotto for less music than this."

"For something new, yes," this Cornu says; "but for Sea Waltz and *Musica Proibita*, no."

"This is not a *stornello popolare* I am to play there," my friend Taglialatela says, and he unpacks mandolin. "This is something American and to me quite new."

My friend Taglialatela then takes pick and strikes a big chord on the mandolin.

"Wait," says this Cornu. "Is it that you are beginning to play this American *tempo di sfraccio*—this ragtime—because ——"

Here this Cornu makes gesture with the back of the hand beneath the chin, equivalent to the word *basta*.

"Certainly not," my friend Taglialatela says. "It is a song like Addio Bella Napoli—a sad song. It is like this. It's about a fellow says it makes not difference if you are in Argentina or New York, there's no place like Province Salerno, Cosenza or Napoli, as the case may be, if you come from one of these places. Also you would be living here in a swell hotel, and over in the old country you was living in a rotten little place like Poggiomarino or Boscotrecase, yet you are more stuck on them two holes like you are on New York."

This Cornu Makes Trial of His Abilities in Interviewing Poor Calabrese

"You bet my life!" G. di Candia says, and strikes his chest.

"And what is the name of this song?" says this Cornu.

"Home Sick Home," says Taglialatela.

"Go ahead and let us have it," says this Cornu, and right away my friend Taglialatela plays this Home Sick Home, which is to person of my experienced taste a melody ordinary enough, and I am free to confess finds me without emotion. But this Cornu and G. di Candia are ignorant fellows, and on the contrary from me they weep. Doubtless if my friend Taglialatela makes explanation that this Home Sick Home is a fellow saying how slick is America and how rotten is Province Salerno, Cosenza or Napoli, as the case may be, this Cornu and G. di Candia do not weep, but laugh; for it is splendid example of *psicologia suggestiva*, as would say my old preceptor, Dr. Oreste Novelli, who is a person of unusual sagacity, and as I at last discovered always kept his money in his upper waistcoat pocket, which the same is provided with a button for that purpose.

Once more and twice my friend Taglialatela plays this Home Sick Home, until this Cornu and G. di Candia get red eyes just for same like trachoma, and then we go up to Three Abruzzi Hall. When we get there the prize contest is already begun with a big fellow called Annibale Bove plays a selection Star of the Sea Waltz, by G. Pina, which I am forced to say he does in an artistic way and superior to my friend Fortunato C. Taglialatela. It is done also amid the great applause of a large audience and much to the satisfaction of the judge of the contest, Professor Donato Esposito, late first contrabassist of the Teatro Bellini. But after my friend Taglialatela finishes this Home Sick Home, although G. di Candia and this Cornu weep, they do not forget to make certain gestures, which to person of timid disposition such as Professor Donato Esposito has significance to penetrate left intercostal muscles with knife or stiletto, as the case may be.

Every Once in a While He Gives Him the End of the Stiletto

So my friend Fortunato C. Taglialatela is in receipt of first prize, a gold badge in shape of a mandolin, which Professor Donato Esposito pins on to him.

"Wear it with honor," the professor says, looking at G. di Candia, who still makes gestures above denoted. "I have got wife and six little children in Mount Vernon."

And then he walks down fire-escape to avoid this Annibale Bove and friends, who wait patiently at front door. Ourselves we are not afraid because with G. di Candia they would not fool, so we are going back to Ristorante Sangue di San Gennaio just for celebrating the victory.

"And where do you learn this melody?" G. di Candia asks.

"It is taught to me," my friend Taglialatela answers, "by young lady with the name Giovannina Ralli."

"Ralli!" this Cornu says. "Is it that she is by chances relation to Generoso Ralli the *Sorrentino?*"

"Perhaps," says my friend Taglialatela. "Why not?"

Then he blushes, which it is modestly because Generoso Ralli the *Sorrentino* is so rich that to be a friend to his relation is not without its honor or advantages.

Howsoever, a week later my friend Fortunato C. Taglialatela is suspicious by his absence, he not being at our rendezvous for two days, in which consequence myself I am obliged to make visit to certain poor Calabrese bootblack stand with resulting violence to myself. Nor is it any use I am signaling G. di Candia to my assistance, as he recognizes poor Calabrese bootblack to be Gaetano Pisciotta, alias Young Hartigan, and so G. di Candia lets on he don't know me by kicking me in the legs. This he afterward explains becomes very necessary, as Gaetano Pisciotta is of powerful build and medium-weight champion of East Morrisania.

Digitized by Google

So I am feeling certainly very sore at my friend Taglialatela, and especially as two weeks goes by and he is not showed up yet. In the meantime this Cornu makes trial of his abilities in interviewing poor Calabrese, but he does not possess stylish appearance or quality of *benignità* the same like my friend Taglialatela. He comes to the point too quickly, so that at first attempt poor Calabrese barber and wife fall upon him, and despite that he summons G. di Candia the latter is not available, explaining afterward that he does not war on women. Subsequently this Cornu has confidence shaken by poor Calabrese in fruit business, who pulls gun from bag of potatoes, while this Cornu signals, but in vain, to G. di Candia. And from such contretemps G. di Candia also gets a little *sospettoso* and not to be relied upon emergently.

This Cornu and G. di Candia are Ignorant Fellows, and on the Contrary from Me They Weep

Allora business is at standstill and sixes and sevens, we having searched low and high for my friend Taglialatela, but no success, when comes to our rendezvous this Annibale Bove, who fails of the prize in the musical contest Circolo S. Gastaldon.

"Out of compassion for you," he says, "I ask you a question."

"Speak," says this Cornu.

"I ask you," Bove continues, "do you love more your skins or a false friend, a *denunziatore* like Fortunato C. Taglialatela?"

No one makes answer to the question rhetorical, as would say my old preceptor, Dr. Oreste Novelli, except that G. di Candia becomes white in the face.

"Because," Bove further continues, "even now, who knows, the police already seek you."

"The police!" G. di Candia cries in exclamation. He commences to perspire and certainly myself also, but this Cornu only smiles.

"Which is more cowardly," Cornu asks, "to frighten children or to traduce the absent?"

"I am no traducer," Bove says.

"And I am no child," remarks G. di Candia; "but this man looks like he is saying the truth."

"I am saying the truth and I can prove it," says Bove. "I can prove that your friend Taglialatela is betrothed to the daughter of a policeman."

Cornu slaps the table with his hand.

"Then you are indeed a liar," he says, "because Taglialatela himself told me he is friend to Giovannina Ralli, the relative of Generoso Ralli the *Sorrentino*."

Two, three minutes goes by and Bove says nothing, then he puts back his head and opens his mouth and he laughs aloud—not a bluff laugh, but a laugh that even this Cornu knows it is no fake.

"What are you laughing at?" he says.

"Oho!" he says *finalmente*. "*Che burla!* Not Ralli the *Sorrentino*, but Ralli the *Irlandese*."

"*Irlandese!*" G. di Candia says, and just now I notice for a big strong man he has small weak voice.

"Sure," replies Annibale Bove; "and right now he makes visit at the house of this Ralli, in Two Hundred and Sixty-first Street, near the *ferrovia* New York, New Haven & Hartford, which up there it is very dark and lonely." He looks at the clock on top of the bar. "And," he finishes, without looking to see how we take it, "if you start now you just got time to meet him as he comes out of the house."

"This Here is the Fourth Time in Two Weeks That the Policeman Ralli Comes Home Unexpected, and So I Will Conquer My Love"

Here he makes gesture with reference to my friend Fortunato C. Taglialatela, the same as above described, having significance to penetrate left intercostal muscles with knife or stiletto, as the case might be.

This Cornu and me we look at G. di Candia, but Di Candia he only sweats some more.

"Why do you look at me?" he says at last.

Then Cornu points to me.

"Him and me is the brains, Di Candia," he replies, "and the brains don't do the dirty work."

"Besides," I says, "Taglialatela is my friend, and what is one more to you? There is already the foreman, Felice Barone."

"That was in Italy, and this is America," G. di Candia says. "In this uncivilized country all are pigs and have no mercy, so that if one plays the man for vengeance it is the same like killing for money. They take you quick and burn you alive with electricity."

"But who is to know that you did it?" Cornu argues with him. "Our friend here tells you it is dark up there."

"Surely," Di Candia says. "And what is it to you that I wait there two hours in the cold? In Italy it is the climate for an ambush—pleasant, soft and fragrant with orange blossoms—but here in America what is it? I freeze to death before Taglialatela comes."

He shivered when he thought of it.

"Also," he says, "Taglialatela has a pistol. One slip and where am I?"

Then this Cornu he is pulling from back pocket a rattail file which is made fine and sharp and pointed at the end.

"What difference to you if you get it there or if you get it here?" he says, and taps the table with the file, for by this time also Cornu is just for same opinion like myself that G. di Candia is big *poltrone*. But even so he ain't such big *poltrone* like Annibale Bove, which he turns white similar to snow.

"No, no," he says, "what is use you make trouble here?" Because he knows when trouble comes in the Ristorante Sangue di San Gennaio is always the lights put out, and the next day it is only known who is killed, not who kills.

"Suggest then a better plan to make this coward bold," says Cornu, and G. di Candia jumps to the middle of the room.

"Who says I am coward?" he shouts, and Bove he shakes himself, so scared he at once becomes.

"My dear *cavaliere*," he says, with his hands together like he would be praying—"My dear *cavaliere*, in the name of my mother and yours, sit down, because of a surety I have good plan for you to kill Taglialatela in secret and in safety."

As for this Cornu, he taps the table some more with his rattail stiletto.

"Sit down, pig," he says smart like *sergente di bersaglieri*, and Di Candia sits down.

"Now what is your plan?" Cornu asks, and Bove swallows his throat to make answer.

"The sofa," he says.

"What sofa?" demanded Cornu.

"The sofa in the house of this Giovannina Ralli," explains Bove. "It is next to the window on the ground floor. The lamp is lighted on the table in the middle and the shade is down. Five, six nights I watch there, and always the shadows come, Taglialatela with his accursed mandolin and Miss Giovannina Ralli. They sit sometimes together, sometimes apart. Sometimes ——"

He stops and swallows some more.

"Sometimes," he says, "they kiss."

Here he looks hard at Di Candia.

"But always there are the shadows," he finishes up. "One shot through the window, *ed addio fratello mio*."

"*Specialmente* a shot from a sawed-off shotgun," Cornu says.

"And the trains on the *ferrovia* New York, New Haven and Hartford nightly they go up and down," Bove tells him. "Slow, heavy freight trains with much noise. When the engine is opposite the house you shoot and nobody hears. So by the time Giovannina comes screaming from the house you are seated between two freight cars, on your way to Boston."

"But what would I do in Boston?" G. di Candia asks.

"Fool!" Cornu shouts. "Can you not jump off in Mount Vernon?"

Then Cornu embraces Bove that he saves our lives, and goes to borrow sawed-off shotgun in order tomorrow night the business will be done.

The next day this Cornu is lending from a certain party, a friend of his, the sawed-off shotgun on excuse to kill rats in a cellar, and so far so good. But although we are sitting two, three hours in the Ristorante Sangue di San Gennaio, Di Candia he ain't showing up; so Cornu and certainly also myself we go look for Di Candia, and just as we come near his house who do we meet but Di Candia, with portmanteau in his hand.

"Where are you going with the portmanteau?" asks this Cornu, and Di Candia he gets pretty red.

"What's a matter with you?" he says. "Could I go to Boston without portmanteau?"

Well, it looks like Di Candia is just for making to run away to Italy, so this Cornu he puts his hand in coat pocket and he sticks the end of the rattail stiletto through the cloth and leans like it is an accident up against G. di Candia, which certainly G. di Candia feels the same penetrating intercostal muscles to some extent and jumps about two feet.

"Di Candia, you are a ——" says this Cornu, using an expression which even between intimate friends one friend is liable to kill the other; "and," Cornu says, "you would go *più lontano di* Boston, if you don't come right along with us."

So the rest of the day Cornu sticks close to Di Candia, and every once in a while he gives him the end of the

It Seems to Me There Never Was Such Music Like Home Sick Home

stiletto, just half an inch to three-quarters to keep his spirits up, and that night eight o'clock G. Di Candia, this Cornu and certainly also myself, we meet by appointment Annibale Bove in a *trattoria* on the White Plains Road.

This Cornu holds the sawed-off shotgun wrapped up in his overcoat, having first inserted in the muzzle some nails, some bullets and a ten-cent piece of silver with holes in it for luck. So we sit down in this little *trattoria*, and certainly we drink two glasses each strong *vino di Capri*, while Cornu tries some more to put a little heart into Di Candia.

"Listen, Di Candia," he says. "You are a young man. Your whole life is before you. Some day you would marry, you would return to Italy, for this affair of the foreman in Bagnoli will die down and you could go back in honor and without fear. But if this dog Taglialatela informs on us, what then? It will be ten years at the least before they let us out. For ten years, Di Candia, you will see not Ischia the Beautiful, not the smiling Golfo di Napoli, but the stones and iron of Singasing. Think of your mother, Di Candia, and of mine."

Di Candia is saying nothing, but cries—even myself I am affected—and so at this the appropriate moment Cornu places tenderly in Di Candia's arm the overcoat with the shotgun inside.

"Use it with honor, Di Candia, and now let us go."

As we are starting to leave, Di Candia and Bove being already in the street, the *ostessa* behind the counter looks up.

"Pay first," she says, "then go."

"Did we not pay?" Cornu asks, for in the excitement of the day he is genuinely forgetting did he pay or not. But the *ostessa* she thinks it is funny business.

"Felice!" she shouts, and comes downstairs a man as much larger than Di Candia as Di Candia is bigger than me.

"What is this?" he says in a voice to shake the windows.

"A mistake," Cornu answers and puts down the money. "We return soon and drink some more."

Then the big man laughs, and we follow Di Candia and Bove to the street, which we walk two blocks up and across a whole lot of fields under trees to the *ferrovia* New York, New Haven & Hartford.

Everything is just for same like Annibale Bove says. There stands the house and the windows on the side, and

THE TENTH COMMANDMENT

By Melville Davisson Post

ILLUSTRATED BY GAYLE P. HOSKINS

THE afternoon sun was hot, and when the drove began to descend the long wooded hill we could hardly keep them out of the timber. We were bringing in our stock cattle. We had been on the road since daybreak and the cattle were tired. Abner was behind the drove and I was riding the line of the wood. The mare under me knew as much about driving cattle as I did, and between us we managed to keep the steers in the road; but finally a bullock broke away and plunged down into the deep wood. Abner called to me to turn all the cattle into the grove on the upper side of the road and let them rest in the shade while we got the runaway steer out of the underbrush. I turned the drove in among the open oak trees, left my mare to watch them and went on foot down through the underbrush. The long hill descending to the river was unfenced wood grown up with thickets. I was perhaps three hundred yards below the road when I lost sight of the steer, and got up on a stump to look.

I did not see the steer, but in a thicket beyond me I saw a thing that caught my eye. The bushes had been cut out, the leaves trampled, and there was a dogwood fork driven into the ground. About fifty feet away there was a steep bank and below it a horse path ran through the wood.

The thing savored of mystery. All round was a dense tangle of thicket, and here, hidden at a point commanding the horse path, was this cleared spot with the leaves trampled and the forked limb of a dogwood driven into the ground. I was so absorbed that I did not know that Abner had ridden down the hill behind me until I turned and saw him sitting there on his great chestnut gelding, looking over the dense bushes into the thicket.

He got down out of his saddle, parted the bushes carefully and entered the thicket. There was a hollow log lying beyond the dogwood fork. Abner put his hand into the log and drew out a gun. It was a bright, new, one-barreled fowling-piece—a muzzle-loader, for there were no breech-loaders in that country then. Abner turned the gun about and looked it over carefully. The gun was evidently loaded, because I could see the cap shining under the hammer. Abner opened the brass plate on the stock, but it contained only a bit of new tow and the implement, like a corkscrew, which fitted to the ramrod and held the tow when one wished to clean the gun. It was at this moment that I caught sight of the steer moving in the bushes and I leaped down and ran to head him off, leaving Abner standing with the gun in his hands.

When I got the steer out and across the road into the drove Abner had come up out of the wood. He was in the saddle, his clenched hand lay on the pommel.

I was afraid to ask Abner questions when he looked like that, but my curiosity overcame me.

"What did you do with the gun, Uncle Abner?"

"I put it back where it was," he said.

"Do you know who the owner is?"

"I do not know who he is," replied Abner without looking in my direction, "but I know what he is—he is a coward!"

The afternoon drew on. The sun moved toward the far-off chain of mountains. Silence lay on the world. Only the tiny creatures of the air moved with the hum of a distant spinner, and the companies of yellow butterflies, swarming on the road, maneuvered like an army. The cattle rested in the shade of the oak trees and we waited. Abner's chestnut stood like a horse of bronze and I dozed in the saddle.

Shadows were entering the world through the gaps and passes of the mountains when I heard a horse. I stood up in my stirrups and looked.

The horse was traveling the path running through the wood below us. I could see the rider through the trees. He was a grazer whose lands lay westward beyond the wood. In the deep, utter silence I could hear the creak of his saddle-leather. Then suddenly as he rode there was the roar of a gun, and a cloud of powder smoke blotted him out of sight.

In that portentous instant of time I realized the meaning of the things that I had seen there in the thicket. It was an ambush to kill this man! The fork in the ground was to hold the gun-barrel so the assassin could not miss his mark.

And with this understanding came an appalling sense of my Uncle Abner's negligence. He must have known all this when he stood there in the thicket, and when he knew it, why had he left that gun there? Why had he put it back into its hiding-place? Why had he gone his way thus unconcernedly and left this assassin to accomplish his murder? Moreover, this man riding there through the wood was a man whom Abner knew. His house was the very house at which Abner expected to stop this night. We were on our way there!

It was in one of those vast spaces of time that a second sometimes stretches over that I put these things together and jerked my head toward Abner, but he sat there without the tremor of a muscle.

The next second I saw the frightened horse plunging in the path and I looked to see its saddle empty, or the rider reeling with the blood creeping through his coat, or some ghastly thing that clutched and swayed. But I did not see it. The rider sat firmly in his saddle, pulled up the horse, and, looking idly about him, rode on. He believed the gun had been fired by some hunter shooting squirrels.

"Oh," I cried, "he missed!"

But Abner did not reply. He was standing in his stirrups searching the wood.

"How could he miss, Uncle Abner," I said, "when he was so near to the path and had that fork to rest his gun-barrel in? Did you see him?"

It was some time before Abner answered, and then his reply was to my final query.

I Saw the Frightened Horse Plunging in the Path

The Gun Was Loaded, Because I Could See the Cap Shining Under the Hammer

"I did not see him," he said deliberately. "He somehow must have slipped away through the thicket."

That was all he said, and for a good while he was silent, drumming with his fingers on the pommel of his saddle and looking out over the distant treetops.

The sun was touching the mountains before Abner began to move the drove. We got the cattle out of the wood and started the line down the long hill. The road forked at the bottom of the hill—one branch of it, the main road, went on to the house of the grazer with whom we had expected to spend the night and the other turned off through the wood.

I was astonished when Abner turned the drove into this other road, but I said nothing, for I presently understood the reason for this change of plans. One could hardly accept the hospitality of a man when he had negligently stood by to see him murdered.

In half a mile the road came out into the open. There was a big new house on a bit of rising land and, below, fields and meadows. I did not know the crossroad, but I knew this place. The man, Dillworth, who lived here had been sometime the clerk of the county court. He had got this land, it was said, by taking advantage of a defective record, and he had now a suit in chancery against the neighboring grazers for the land about him. He had built this great new house, in pride boasting that it would sit in the center of the estate that he would gain. I had heard this talked about—this boasting, and how one of the grazers had sworn before the courthouse that he would kill Dillworth on the day that the decree was entered. I knew in what esteem Abner held this man and I wondered that he should choose him to stay the night with.

When we first entered the house and while we ate our supper Abner had very little to say, but after that, when we had gone with the man out on to the great porch that overlooked the country, Abner changed—I think it was when he picked up the county newspaper from the table. Something in this paper seized on his attention and he examined it with care. It was a court notice of the sale of lands for delinquent taxes, but the paper had been torn and only half of the article was there. Abner called our host's attention to it.

"Dillworth," he said, "what lands are included in this notice?"

"Are they not there?" replied the man.

"No," said Abner, "a portion of the newspaper is gone. It is torn off at a description of the Jenkins' tract"—and he put his finger on the line and showed the paper to the man——"What lands follow after that?"

"I do not remember the several tracts," Dillworth answered, "but you can easily get another copy of the newspaper. Are you interested in these lands?"

"No," said Abner, "but I am interested in this notice."

Then he laid the newspaper on the table and sat down in a chair. And then it was that his silence left him and he began to talk.

Abner looked out over the country.

"This is fine pasture land," he said.

Digitized by Google

Dillworth moved forward in his chair. He was a big man with a bushy chestnut beard, little glimmering eyes and a huge body.

"Why, Abner," he said, "it is the very best land that a beef steer ever cropped the grass on."

"It is a corner of the lands that Daniel Davisson got in a grant from George the Third," Abner continued. "I don't know what service he rendered the crown, but the pay was princely—a man would do king's work for an estate like this."

"King's work he would do," said Dillworth, "or hell's work. Why, Abner, the earth is rich for a yard down. I saw old Hezekiah Davisson buried in it, and the shovels full of earth that the negroes threw on him were as black as their faces, and the sod over that land is as clean as a woman's hair. I was a lad then, but I promised myself that I would one day possess these lands."

"It is a dangerous thing to covet the possessions of another," said Abner. "King David tried it and he had to do—what did you call it, Dillworth?—'hell's work.'"

"And why not," replied Dillworth, "if you get the things you want by it?"

"There are several reasons," said Abner, "and one is that it requires a certain courage. Hell's work is heavy work, Dillworth, and the weakling who goes about it is apt to fail."

Dillworth laughed. "King David didn't fail, did he?"

"He did not," replied Abner; "but David, the son of Jesse, was not a coward."

"Well," said Dillworth, "I shall not fail either. My hands are not trained to war like his, but they are trained to lawsuits."

"You got this wedge of land on which your house is built by a lawsuit, did you not?" said Abner.

"I did," replied Dillworth; "but if men do not exercise ordinary care they must suffer for that negligence."

"Well," said Abner, "the little farmer who lived here on this wedge suffered enough for his. When you dispossessed him he hanged himself in his stable with a halter."

"Abner," cried Dillworth, "I have heard enough about that. I did not take the man's life. I took what the law gave me. If a man will buy land and not look up the title it is his own fault."

"He bought at a judicial sale," said Abner, "and he believed the court would not sell him a defective title. He was an honest man, and he thought the world was honest."

"He thought wrong," said Dillworth.

"He did," said Abner.

"Well," cried Dillworth, "am I to blame because there is a fool the less? Will the people never learn that the court does not warrant the title to the lands that it sells in a suit in chancery? The man who buys before the courthouse door buys a pig in a poke, and it is not the court's fault if the poke is empty. The judge could not look up the title to every tract of land that comes into his court, nor could the title to every tract be judicially determined in every suit that involves it. To do that, every suit over land would have to be a suit to determine title and every claimant would have to be a party."

"What you say may be the truth," said Abner, "but the people do not always know it."

"They could know it if they would inquire," answered Dillworth; "why did not this man go before the judge?"

"Well," replied Abner, "he has gone before a greater Judge." Abner leaned back in his chair and his fingers rapped on the table.

"The law is not always justice," he said. "Is it not the law that a man may buy a tract of land and pay down the price in gold and enter into the possession of it, and yet, if by inadvertence the justice of the peace omits to write certain words into the acknowledgment of the deed, the purchaser takes no title and may be dispossessed of his lands?"

"That is the law," said Dillworth emphatically; "it is the very point in my suit against these grazers. Old Squire Randolph could not find his copy of Mayo's Guide on the day that the deeds were drawn and so he wrote from memory."

Abner was silent for a moment.

"It is the law," he said, "but is it justice, Dillworth?"

"Abner," replied Dillworth, "how shall we know what justice is unless the law defines it?"

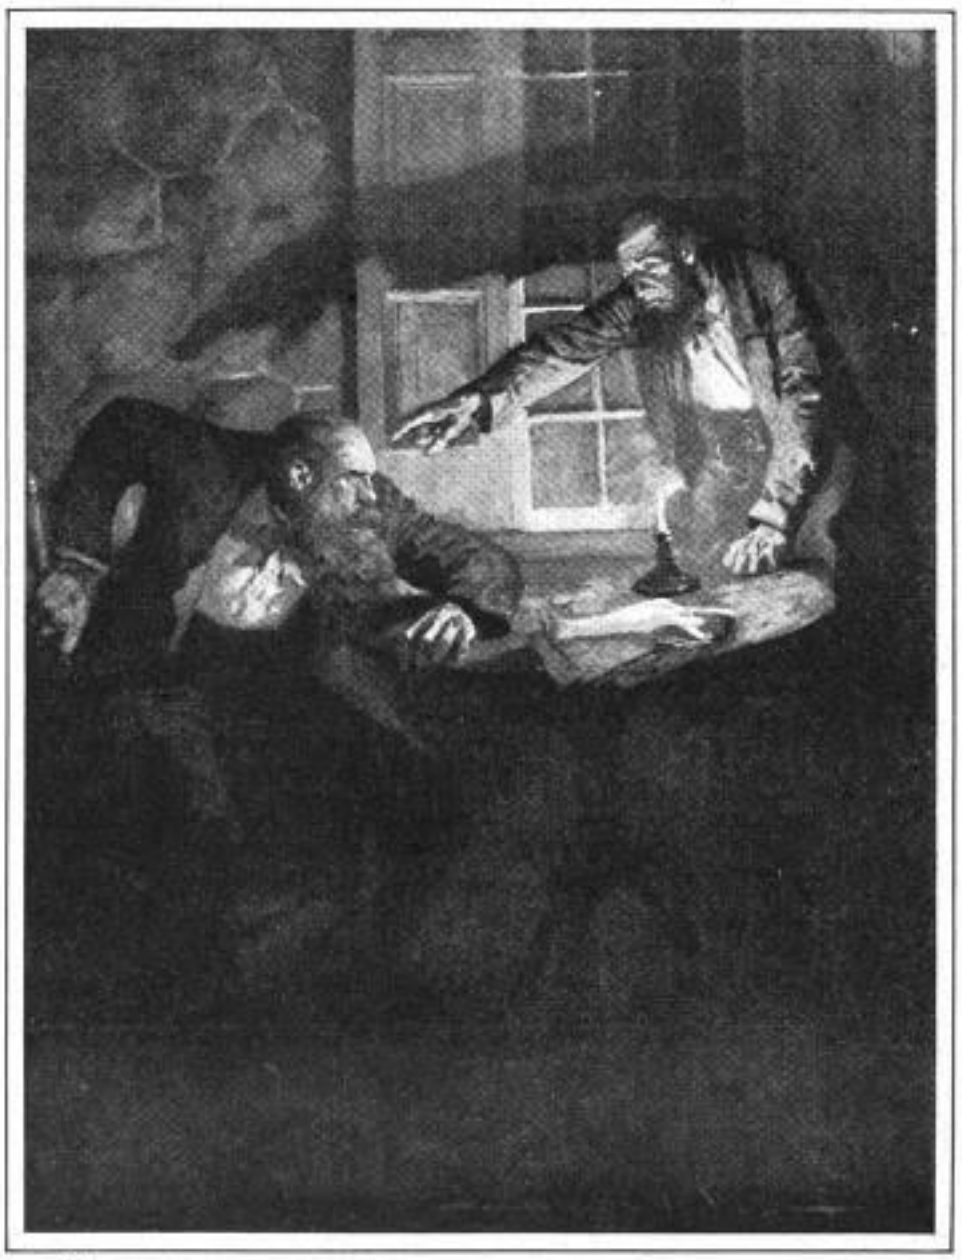
"I think every man knows what it is," said Abner.

"And shall every man set up a standard of his own," said Dillworth, "and disregard the standard that the law sets up? That would be the end of justice."

"It would be the beginning of justice," said Abner, "if every man followed the standard that God gives him."

"But, Abner," replied Dillworth, "is there a court that could administer justice if there were no arbitrary standard and every man followed his own?"

"I think there is such a court," said Abner.



Dillworth laughed.

"If there is such a court it does not sit in Virginia."

Then he settled his huge body in his chair and spoke like a lawyer who sums up his case.

"I know what you have in mind, Abner, but it is a fantastic notion. You would saddle every man with the thing you call a conscience, and let that ride him. Well, I would unsaddle him from that. What is right? What is wrong? These are vexed questions. I would leave them to the law. Look what a burden is on every man if he must decide the justice of every act as it comes up. Now the law would lift that burden from his shoulders, and I would let the law bear it."

"But under the law," replied Abner, "the weak and the ignorant suffer for their weakness and for this ignorance, and the shrewd and the cunning profit by their shrewdness and by their cunning. How would you help that?"

"You Said That You Would Take What the Law Gives You; Well, So Shall I"

"Now, Abner," said Dillworth, "to help that you would have to make the world over from the very beginning."

Again Abner was silent for a while.

"Well," he said, "perhaps it could be done if every man put his shoulder to the wheel."

"But why should it be done?" replied Dillworth. "Does Nature do it? Look with what indifference she kills off the weakling. Is there any pity in her or any of your little soft concerns? I tell you these things are not to be found anywhere in Nature—they are certainly man-made."

"Or God-made," said Abner.

"Call it what you like," replied Dillworth, "it will be equally fantastic, and the law would be fantastic to follow after it. As for myself, Abner, I would avoid these troublesome refinements. Since the law will undertake to say what is right and what is wrong I shall leave her to say it and let myself go free. What she requires me to give I shall give, and what she permits me to take I shall take, and there shall be an end of it."

"It is an easy standard," replied Abner, "and it simplifies a thing that I have come to see you about."

"And what have you come to see me about?" said Dillworth; "I knew that it was for something you came."

And he laughed a little, dry, nervous laugh.

I had observed this laugh breaking now and then into his talk and I had observed his uneasy manner ever since we came. There was something below the surface in this man that made him nervous and it was from that under thing that this laugh broke out.

"It is about your lawsuit," said Abner.

"And what about it?"

"This," said Abner: "That your suit has reached the point where you are not the man to have charge of it."

"Abner," cried Dillworth, "what do you mean?"

"I will tell you," said Abner. "I have followed the progress of this suit, and you have won it. On any day that you call it up the judge will enter a decree, and yet for a year it has stood there on the docket and you have not called it up. Why?"

Dillworth did not reply, but again that dry, nervous laugh broke out.

"I will answer for you, Dillworth," said Abner—"you are afraid!"

Abner extended his arm and pointed out over the pasture lands, growing dimmer in the gathering twilight, across the river, across the wood to where lights moved and twinkled.

"Yonder," said Abner, "lives Lemuel Arnold; he is the only man who is a defendant in your suit, the others are women and children. I know Lemuel Arnold. I intended to stop this night with him until I thought of you. I know the stock he comes from. When Hamilton was buying scalps on the Ohio, and haggling with the Indians over the price to be paid for those of the women and the children, old Hiram Arnold walked into the conference: 'Scalp-buyer,' he said, 'buy my scalps; there are no little ones among them,' and he emptied out on to the table a bagful of scalps of the king's soldiers. That man was Lemuel Arnold's grandfather and that is the blood he has. You would call him violent and dangerous, Dillworth, and you would be right. He is violent and he is dangerous. I know what he told you before the courthouse door. And, Dillworth, you are afraid of that. And so you sit here looking out over these rich lands and coveting them in your heart—and are afraid to take them."

The night was descending, and I sat on a step of the great porch, in the shadow, forgotten by these two men. Dillworth did not move, and Abner went on.

"That is bad for you, Dillworth, to sit here and brood over a thing like this. Plans will come to you that include 'hell's work'; this is no thing for you to handle. Put it into my hands."

The man cleared his throat with that bit of nervous laugh.

"How do you mean—into your hands?" he said.

"Sell me the lawsuit," replied Abner.

Dillworth sat back in his chair at that and covered his jaw with his hand, and for a good while he was silent.

"But it is these lands I want, Abner, not the money for them."

"I know what you want," said Abner, "and I will agree to give you a proportion of all the lands that I recover in the suit."

"It ought to be a large proportion, then, for the suit is won."

"As large as you like," said Abner.

Dillworth got up at that and walked about the porch. One could tell the two things that were moving in his mind: That Abner was, in truth, the man to carry the thing through—he stood well before the courts and he was not afraid; and the other thing—How great a proportion of the lands could he demand? Finally he came back and stood before the table.

"Seven-eighths then. Is it a bargain?"

"It is," said Abner. "Write out the contract."

A negro brought foolscap paper, ink, pens and a candle and set them on the table. Dillworth wrote, and when he had finished he signed the paper and made his seal with a flourish of the pen after his signature. Then he handed the contract to Abner across the table.

Abner read it aloud, weighing each legal term and every lawyer's phrase in it. Dillworth had knowledge of such things and he wrote with skill. Abner folded the contract carefully and put it into his pocket, then he got a

THE PLAY BUSINESS

What it Costs to Bet on the Public—By H. B. Harris

THERE is a popular superstition that the manager's troubles begin with the rehearsals of a new play. As a matter of fact they begin away in advance of that event. The first trouble is to get the play. It is notorious that there is no rule by which the box-office quality of a play may be judged. The manager has nothing to guide him—not even timeliness. The historical play, the war play, the high-finance play are as good now as ever if they have in them the element of "draw." One can define this element till he is exhausted, yet the most astute cannot recognize it in the play—on the reading. Curiously one sees a play very differently when he is trying to visualize it in the reading from when he sees it in rehearsal. But even in rehearsal he does not see it right. Nothing but being one of a bona-fide audience can give him the proper mental attitude—due to the hypnotism of the crowd, or what not—with which to judge such a work. And this is the one supreme test.

Clearly then there's nothing left for the manager to do but "buy a pig in a poke." However, he seeks to reduce the element of risk as much as possible. He insists that the play must be, above all, entertaining. But here again we're up against a stone wall. What pleases one may bore somebody else. I learned this expensive lesson some years ago. I made it a practice to set aside a percentage of my profits up to a certain amount and to devote this money to the production of a play selected for its artistic quality alone, with the full faith that I should not only gratify my love for that sort of thing but some day hit the public plumb in the eye with it.

But the best work I have ever done—artistically, scenically and technically—the best efforts of my career have been failures. The public would not accept them. I produced Pilgrim's Progress under the title of The Christian Pilgrim at a cost of one hundred thousand dollars. The costumes and scenery of the play were made in Vienna. There were a hundred and forty persons on the stage at different times, and we played to an average business of one hundred and fifty dollars the performance—that's twelve hundred dollars a week. When one considers that the cost of maintenance of the Hudson Theater—regardless of players—is three thousand dollars a week, he will see just where my profits came in.

Frosts and Failures of the Footlights

ANOTHER failure, The Struggle Everlasting, was the best thing I ever did. It was Milton Royle's masterpiece. Compared with his Squaw Man it was a gold dollar to a penny. The production cost fifty thousand dollars. It had the backing of all the club organizations that are pledged to support meritorious productions, and yet there were performances when we played to as little as eighty-three dollars. At that time I really did expect these plays to go, but I shouldn't now. On the other hand I made a fortune out of The Lion and the Mouse—a play that was technically and logically wrong, that failed utterly under analysis, that would not stand adverse criticism for five consecutive minutes.

Fortunately a successful drama will pay the losses on eight ordinary plays or perhaps three musical comedies. The musical comedy, be it understood, sometimes costs sixty thousand dollars, whereas the ordinary drama may cost from five to fifteen thousand before it is sent back to the storehouse—a failure. The Lion and the Mouse would compensate for twenty ordinary failures.

We are constantly arguing in a vicious circle in this business—we must decide that the play is good before we put it on, yet the only way to determine its quality is to produce it. Notwithstanding the guesswork my percentage has been about fifty to fifty on successes and failures. Obviously then I have something to devote to artistic failures.

PHOTO. BY MATZENE, CHICAGO

Mr. Henry B. Harris

To reduce the risk the manager turns to the successful playwright for material. But here again he finds small comfort. Klein's greatest success, The Lion and the Mouse, was followed immediately by two abysmal failures—The Daughters of Men and The Step-Sister. His next play, The Third Degree, was a hit, and the one following, The Next of Kin, was a frost. This is the experience of almost all successful playwrights.

A playwright's reputation, therefore, is no guaranty to a manager—and this is largely why the producer hesitates to order, even from a man of proven ability, plays written from a scenario. When such an order is given and money is paid in advance for the work the manager gambles first that the author may, on account of death, sickness or some other cause, fail to deliver the goods; second, that if he does deliver them the play may not be satisfactory to the manager; and third, the constant gamble that it may not hit the public.

Strongheart was written on this plan. Robert Edeson advanced the idea of a college-bred Indian for a play and I suggested the football interest that was in it. I set William C. DeMille to work on the scheme, paying him in advance for a year's work. Within a twelvemonth the play was handed in. But it was rewritten seven times—in fact two years' additional work was put on it, before it was ready for production. I have advanced many thousands of dollars to young writers in order to interest them in working out their ideas, but have got little worth producing in this way. Yet should one of their efforts have proved a "gem" I should have realized a very handsome profit on all the money that I have devoted to this purpose.

On different occasions I have bought the dramatic rights to books and have turned the stories over to promising young men to be made into plays. But this is rarely successful. In fact I had five different men, one after another, working on The Conjurer's House, advancing them something like four thousand dollars—and in the end had to hand it to George Broadhurst, an experienced playwright, who turned it into The Call of the North.

Motifs and Motives of Would-Be Playwrights

NO WONDER then that the manager eagerly scrutinizes any completed manuscript that is sent in to him rather than experiment with scenarios or books. There is no dearth of manuscripts, as every one knows; but the vast percentage of these is worthless. I believe laziness is back of it. Too few persons who write plays take the pains to determine what the theater requires. They constantly offer propositions that are utterly impracticable. Sometimes their ideas are good, but the vehicles wholly out of the question. We receive scenarios written on postal cards, the writers frequently demanding an acceptance by wire. Or letters are sent us by "constant theatergoers" who have "great ideas" for plays for which they demand fifty or a hundred dollars and refuse to submit their schemes until the money is paid.

Epidemics of plays are periodical and due to obvious causes. The moment some particular country becomes, for one reason or another, prominent in the daily news the office is flooded with plays about that country. Recently three manuscripts based on the war between Italy and Turkey were sent us. One of these impossible things showed the marriage of the commander-in-chief of the Italian forces to the daughter of an Arab sheik. For love of the girl the Italian proved a traitor to his country. In one week we received five dramas dealing with the Chinese question, one a morality play which, the author claimed, had been presented in China for more than a thousand years. Another was written to show that the Occidentals and not the Orientals were the barbarians. Two dramatizations of a recent murder trial were sent in within a fortnight after the arrest of the murderer; and no sooner had the Stokes case become conspicuous than we were importuned to produce a dramatization of it. Society women come to us with plays they've written, offering to put up large sums of money to have them produced. But no manager can afford to do this for the money consideration alone, since a failure means loss of prestige, which is a great part of the theater man's stock in trade. Simultaneously with the landing of Redmond, who came over to this country to get funds for the Nationalist campaign in Ireland, two Irish plays were submitted to us—but not by Redmond.

No doubt the number of good plays that are turned down vastly exceeds the number of bad plays that are accepted. For instance, The Lion and the Mouse was written to order. It was turned down and came to me quite accidentally.

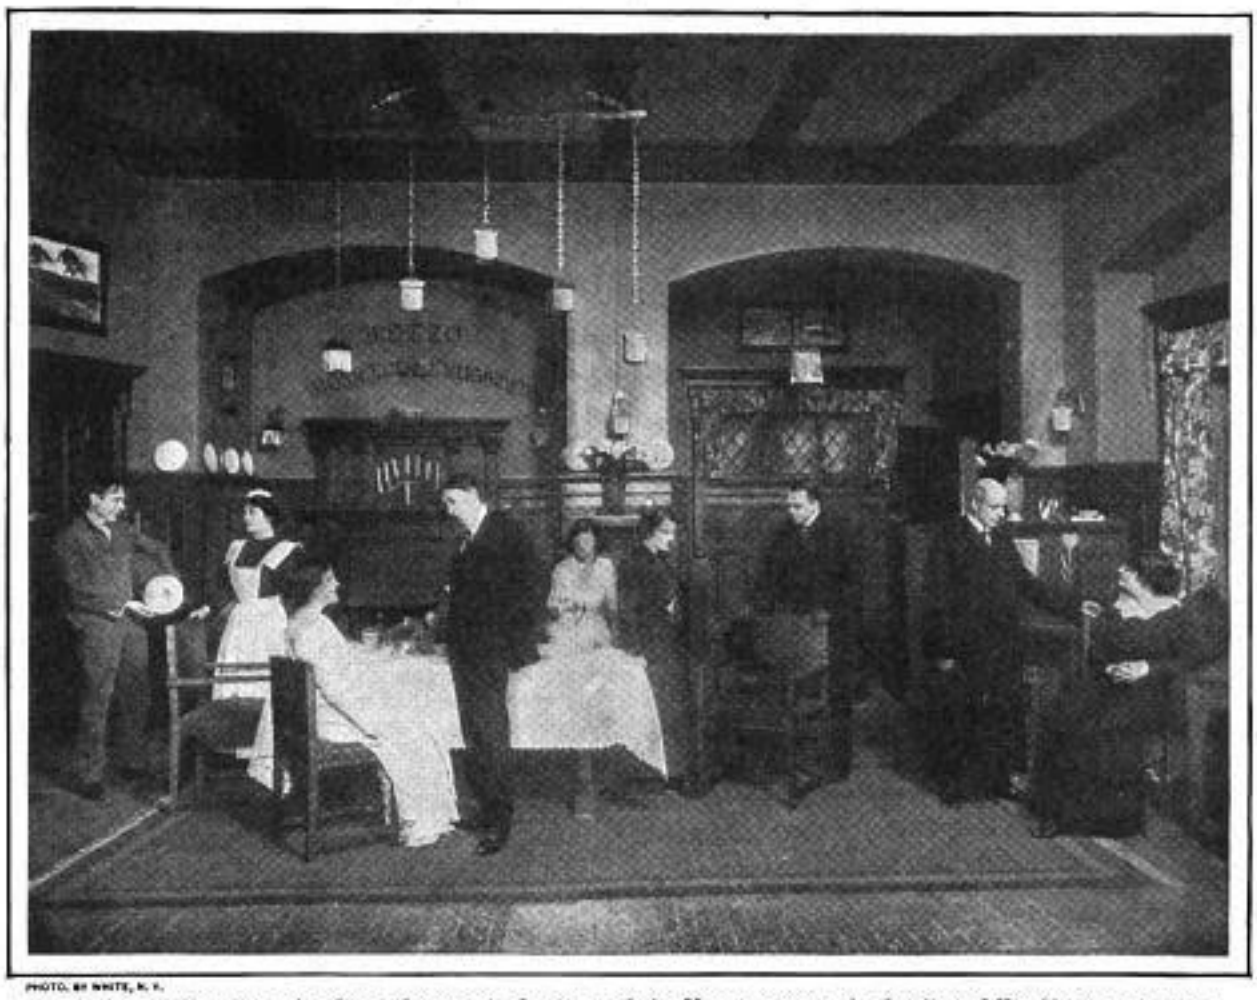
One Hundred Actors for One Job—Selecting the Chorus for Musical Comedy



Digitized by Google

The Witching Hour was refused by everybody—notwithstanding Augustus Thomas' prestige. It was put on only when the author advanced half the money for its production. Mr. Thomas cleared one hundred thousand dollars from this play the first season.

When a play is accepted the first thing to do is to have the author rewrite it. As I said, Strongheart was rewritten seven times. The first two acts of The Lion and the Mouse were originally just as they are today; the third was slightly changed, and the fourth was rewritten four times under suggestions made by my father and myself.

In The Price, by Broadhurst, we felt that the ending was too tragic, that the public would be better satisfied with a happier one—with a suggestion of hope. So Mr. Broadhurst wrote a fourth act. We put it on, played it and took it out the next day. It was inartistic and wrong. The people in the play separated, and we brought them together again happily, and the woman did not pay the price. We'd have had to change the title. We had tried to please our audiences by sacrificing the logical development of the play. Sometimes that is effective and gets us money, because the people want the real things of the theater—not the real things of life. I've lost half a million dollars finding that out.

It is not an easy thing to get a young playwright to change his work. Once I argued with a man for three weeks before he accepted my suggestion; in fact some novices are quite impossible. We took out an "an," an "a," a "the" and a semicolon from one young author's work, and he tore his hair and cried out that we were ruining his play. Another came in, took a chair near my desk, looked at me a moment and said: "Mr. Harris, do you know a lady or a gentleman when you see one?" I was astonished, but I answered: "I think I do." "Do you know an actor when you see one?" "I think I do," said I. Then he said, "I don't think so," and walked out.

The Crucial Moment—the Actor Awaits the Decision of the Manager as to the Quality of His Characterization

Choosing the Cast

HE HAD written his first play and I had produced it. It ran one week and was thoroughly roasted, and the author, finding no fault in his own work, came in to lay the blame on me, claiming that I had not produced it properly. But with experienced playwrights there is practically never any trouble in the matter of change in the manuscript.

Once a play is accepted and rewritten the actual work of production begins. And now the manager, having ceased arguing with the author, may let his artistic soul soar. Most important of all is the selection of the cast. The author and myself work out an ideal cast. It may include stars that are under contract to other managers, but at least it gives us something to work on. We go after the people with personality and ability as nearly like those of the ideal cast as possible. Just now it is easy to cast a play because there are more actors idle than ever before, although we are producing more plays and have more theaters than ever. The reason is that many persons who are failures in all other lines go in for acting.

Notwithstanding this oversupply of actors salaries have remained ridiculously high. This is due to competition on the part of the managers in bidding for the services of some particular personality to fit a certain part. Other aspirants take the cue from these and talk high prices. Some of the salaries are positively fabulous, so fabulous, in fact, that the running expenses of an organization are getting to be out of proportion to the amount of business done by the house. To be sure the player puts in work at rehearsals that he's not paid for, and also runs the risk that the play may fail. But on the other hand he only works two or three hours a day. Some actors get from three hundred to one thousand dollars a week. Even in the matter of smaller parts salaries are excessive. The other day I sent for a man who had been working for me for seventy-five dollars a week and offered him a hundred dollars in a new play; but he stated that this year his salary would be one hundred and fifty dollars, so I let him go.

When casting a play, if we can't get the distinct personality we require we look for ability, which is the next best thing. But by shopping about we usually get the ideal man. Or, perhaps, the personality of the actor who applies to us may change our ideal a bit—a sort of compromise, as it were. When the part is a very big one we sometimes have to take the best man we can get and educate him into it. We are a school of acting on the stage.

During my school days I held, I think, every position in the theater except that of musical director. I even played the banjo once in the old Howard Athenæum in Boston, when the leader of the orchestra conceived the idea of a trick overture, which consisted of singing, banjo and mandolin playing. I never had any desire to be an actor, but I've saved many a performance in emergencies arising from accident, where I jumped in and played parts just to keep the curtain up. How well I succeeded in these performances I do not know. Once I played a part in The Widow Jones when May Irwin was starring in that piece, and I took two or three different parts in The Climbers during the run of the Amelia Bingham company at the Bijou. The parts were small, to be sure, but important. On another occasion I had an organization of my own out—White Heather—with Rose Coghlan as star. One of the gentlemen had to leave hurriedly and I played his part for a month—on the stage one minute, then in the box office counting up, then rushing back and putting on my clothes for the scene I acted in, then out in front again, the calm, debonair manager. All this experience has been of great help to me in dealing with actors. Particularly has this alternating between box office and stage during a performance taught me how to aid an actor in projecting a part over the footlights.

There are not many actors who are students. Too many of them simply memorize the words of the part and do the stage director's bidding, without injecting into their work the personality of the character that the author has created. The American actor, as a rule, is too independent to be taught; and the foreigner, even if he has studied the part, is not apt to assert his conception of it or to "stand up" to a dogmatic stage manager.

The actor above all things is temperamental—which is as it should be. But, nevertheless, this quality is a thorn in the flesh of the methodical manager. An actor will sometimes rehearse three or four days, feel dissatisfied with his part, throw it down and walk out. Perhaps I warn him that he is not doing so well as he should; sometimes he makes a struggle and does better. I have had as many as seven or eight men in one part before the play was produced—changing every day or so. This is very trying not only to the manager but to the other members of the cast, who must constantly adapt themselves to the work of new persons.

The trouble with experienced actresses who have never been stars is the ever-present desire to get out of line and stand in front. One of our greatest actresses will not do team work. She always makes herself prominent, which throws the whole scene out of focus. Though she is successful in her particular part she is hurting the play. This actress has been a star and cannot resign herself to being eclipsed by some one else. I have been obliged, again and again, to dismiss valuable actresses because of this very fault. The temperamental quality of the actor keeps the manager always on the alert, always apprehensive. The other Saturday morning I got a wire from a young lady in one of my companies a thousand miles away stating that she was going to quit that night. There was no one to take her place and it required some hustling to get a suitable successor in New York, but we managed to do it. Players often quarrel among themselves, petty jealousies arise, one or both threaten to resign, and the manager becomes a board of arbitration—which is not the lightest of his troubles.

One hears much complaining by actors that they are sometimes left stranded; but, owing to the commercialization of the theater, this sort of thing rarely happens nowadays with reputable companies. One hears of the hardship that the actor suffers where the manager gives him his two weeks' notice—as per contract. But one rarely hears of the times that the actor leaves the manager in the lurch, regardless of contract. In fulfilling his obligations the manager must contend with the temperament of the actor, his irascibility, his impulsiveness, his ignorance of business conditions and, to a great extent, his selfishness. When the actor quits on a day's notice, he does not stop to consider that his act may throw the whole thing out of gear. If the manager does not play a house as agreed he must pay damages to the theater owner. These are based on the cost of advertising, opening the house, engaging help for the night, and an approximate estimate of what the theater's share of the receipts would have been, gauged by similar attractions under like conditions. Usually the contracts stipulate the measure of damages.

Soldiers of Fortune

NOR does the actor consider, when he talks of the risk he runs of losing the time given to rehearsal, that the manager gambles much more heavily. He gambles against the weather. If it storm on the first night the sale of seats is apt to fall off fifty per cent. He gambles against local conditions, sickness, financial depression and the like, and against rival attractions that may be old favorites in some town in which his play is new.

The cast having been selected the work of getting the production together begins. This goes on during rehearsal. By production we mean scenery, properties, lighting and all physical and mechanical necessaries. In order economically to put on a play the manager, in addition to being familiar with the abilities of actors and the like, must know the theater proper from box office to wings and from footlights to rigging loft. There are a thousand and one leakages that he can stop—and it is the minute leakages that sap the strength of the business. Peculiarly the production of a play has never been reduced to the exact science that marks the turning out of a new machine in a great shop. We never can tell exactly how a thing is going to look until it's put up—and here is where experience comes in.

In one of my first ventures as a producing manager we put on Soldiers of Fortune with Robert Edeson as the star. We had made it a two-carload production, not knowing just where we were going to play. I finally secured the Savoy Theater, the stage of which was entirely too small for our scenery. Mr. Augustus Thomas, who had dramatized Richard Harding Davis' book, said: "We shall have to get in an expert to put on that production." I agreed and said I would be the expert. I went into the theater Saturday evening at eleven o'clock and never left the building or even had my clothes off until five o'clock on Monday evening, when I went home to prepare for the opening performance. There wasn't a moment when I wasn't at work, carefully gauging, measuring, cutting and fitting that production. My experience on this occasion

CONSIDER THE LIVER

By Woods Hutchinson, A.M., M.D.

ILLUSTRATED BY PETER NEWELL

OF ALL the flowers born to blush unseen the liver is the most eminent. If it were only as conspicuous as the brain we should probably be just as proud of it. As it is it excels the brain in weight and is an even more desirable citizen and sturdier pillar of society. Yet we loftily ignore the liver's existence and never speak of it except when it is "out of order," though, as its mere size would indicate, it is one of the most important, most hardworked and overstrained as well as most delicately adjusted and exquisitely efficient structures in the body. It plays whatever tune it will upon the keyboard of the brain cortex and colors the visions of the mind as a spotlight does the draperies of the ballet.

Yet most of us do not even know where this power behind the throne sits in darkness. We refer pains in the left side of it to the heart, in the middle of it to the stomach and call the remainder of its disturbances pains in the chest or stitches in the side.

If we knew half as much chemistry as the liver has known these five million years past, the secrets of the universe would lie before us like an open book. Even today it is the most wonderful and resourceful chemical laboratory in the world. Nothing can equal it—even in Germany.

We think we have done wonders in discovering a poison that will kill or neutralize the toxins of a single germ—such as mercury, or the diphtheria antitoxin; but one little six-sided, sallow-looking lozenge of a liver cell—no larger than the head of a pin—not only can neutralize and destroy any one of forty different toxins and poisons that are brought to it by the blood but can split them up so ingeniously as actually to turn one part of them into sugar fuel, another into starch or fat, and another into harmless bile waste.

It is the most wonderful poison sponge and toxin filter that has ever been invented or discovered. And the moment it is put out of commission the body goes down in a heap—choked by its own breath, as it were; poisoned by its own wastestuffs. It is no wonder that the question "to be or not to be"—the problem of whether life be worth living—emphatically depends upon the metabolic integrity of our hepatic cytoplasm, to put it learnedly. When a man's "gall stops wukkin," as our African brethren picturesquely say, then nothing else much matters.

The Chief Asset of the Soothsayers

THE liver has one, at least, of the characteristics of great genius. It has always been misunderstood and estimated at far below its real worth and dignity. For centuries after it was introduced to our attention by the delicacy of its flavor when eaten raw or broiled on a forked stick over a campfire, it was regarded simply as the *alter ego* of bacon and one of the autocrats of the primitive breakfast table. It was even held in such lowly esteem as to enter into the vernacular synonym for abject poverty—"three in a bed and liver for breakfast." In the quaint phrase of the old saw, "Ef a man wuz born in a stable thet doesn't make him a horse." The liver was born of and from the foodtube; but, like Wesley, it has taken all the world for its parish, and a powerful preacher of righteousness and clean living it has been. When a man says he has a clear conscience he usually means that his liver is working well.

Until within recent years our knowledge of the liver was of the vaguest and most curious sort. Its first introduction to our official notice was at the hands of those quaint old mountebanks, the Roman augurs, or *haruspices*, who, in their temples and shrines, were accustomed to foretell the future and give advice in times of war and uncertainty by examining the internal organs of freshly killed animals—much as their doddering lineal descendants today tell fortunes by reading the lines of the palm or interpreting the grounds in a coffee-cup.

Little, Insignificant, Gumdrop-Looking Cells in Our Body Can Do Things With One Hand Tied Behind Them

The liver was one of the augurs' highest trump cards in this kind of hocus-pocus, chiefly on account of its size and striking appearance, and also probably from the fact that it showed more changes which even their ignorant eyes could appreciate, as a result of the attack of different diseases or from the use of different kinds of foods, than almost any other readily discoverable organ in the body.

Nobody but an expert pathologist can make much out of the changes in the heart, even when it has been the site of fatal disease. The only readily obvious changes in the stomach are in its size, which even the limited intelligence of the augurs soon led them to discover depended solely upon the amount of food it contained. And the lungs are merely more or less reddened and solidified "lights" to the general eye. The liver, however, which weighs three pounds and is the size of a Rugby football to begin with, may, if fatty or hypertrophic, swell up to six, seven or eight pounds, and turn from dull purplish red to light golden brown in the process. In some diseases it may shrink down into a wrinkled and twisted three-quarter-pound slab of scar tissue no bigger than a slipper, when it is called atrophic—or, if knobby and sole-like, it is called "hob-nailed."

Such changes as these are fit to conjure with; they give the imagination something to work on and furnish an excellent groundwork for prophecy—far more than most prophecies have in fact.

When to these striking and dramatic changes, which the mass of the organ itself is capable of, are added additional variations and color contrasts furnished by the changes in size, color, shape and thickness of the wall of the pear-shaped, dark green gall-bladder, contrasting so vividly with the liver's dull purplish red background, one can readily see what a superb asset in their primitive flimflam games the old augurs had in the liver. In their little game it was not hearts that were trumps but livers.

Grotesque old harlequins and conjurers as they were, they were the harbingers and, indeed, the forefathers not only of religion but of medicine. Out of their vague and rambling conjectures grew up our whole theory of psychology—the three faculties of the mind, for instance: the head, or intellect; the heart, or will; and the liver and bowels, or emotions. These, carried over into the realm of theology, produced such singular figures of speech as a "clean heart," "bowels of compassion," and so on.

All our psychology—and our philosophy up to thirty-five years ago—was based frankly and flatly upon the philosophy of these primitive vivisectionists.

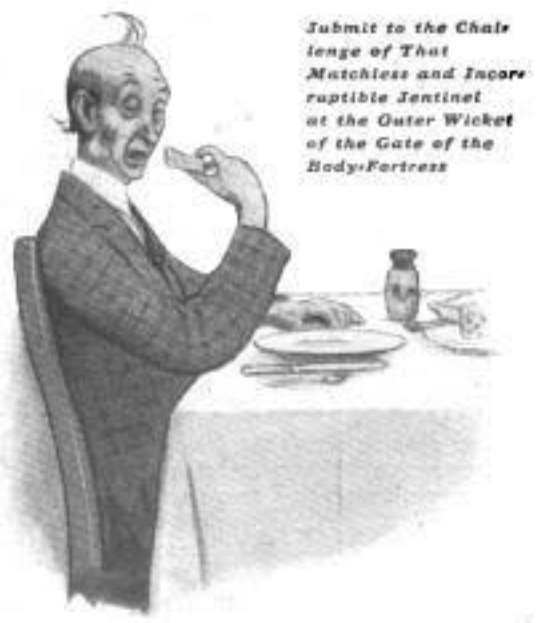
On the borderland between mind and matter, between philosophy and physics, was built up the quaint old fairy tale of the four temperaments—the bilious, the sanguine, the lymphatic and the nervous. Each kind of temperament was supposed to be due to the dominance in the body of four corresponding fluids or "humors"—the bile, produced by the liver and stored in the gall-bladder, as any child could see for himself; the sanguine, produced in the heart and contained in and symbolized by the blood; the nervous, secreted by the brain and poured out all over the body through the nerve trunks; and the lymphatic, secreted by the lymph glands or "kernels," such as can be felt in the neck and armpits and groins, and symbolized by that milky, whitish fluid, the lymph. Thus a man's "humor" literally came to mean his mental state.

Even in scientific medicine we have scarcely shaken ourselves clear of the absurd obsession of the four temperaments yet, while in popular and psychological thinking it still holds full sway. In this quaint and picturesque game of colors and fluids and symbols the liver naturally took a high rank and played a prominent part on account of its many qualifications for striking the eye and its wide range of variations in size, color and texture.

Though we laugh at the augurs' methods of divining the future and of deciding what to do in case of doubt nowadays—except when we are very badly frightened or unusually silly, which happens even to the wisest of us once in a while—primitive practice has graven the liver deep into our language in such a way that it will never be effaced. Not only has the term "livery" or "bilious" quite as much mental or emotional significance as the word physical, but we refer just as much to the condition of the liver when we say that we are simply depressed and blue, and generally discouraged and out of sorts, as we do when we actually say that we have a coated tongue or a burning stomach.

Almost half of the words we use in describing mental states, particularly of a depressed character, are drawn from the liver. For instance, we have not the remotest idea that we are borrowing anything from those quaint old medicine-men or augurs—if, indeed, we ever remember having heard of them before—when we say that we feel "melancholy"; but when we come to dissect the word we find that it simply means in Greek "black bile"—in other words, that we are under the influence of an unusually large amount of biliary secretion in our system.

To describe a more permanent mental depression we say that one of our friends has become a "hypochondriac"; and when that word is cut up it resolves itself into "under the cartilages," meaning the cartilages or gristly parts of the lower ribs under which the liver lies. When we describe ourselves as "nervous" the nerve fluid is supposed to be secreted in excess in our systems and to be overstimulating us and making us "jumpy" and excitable.



So real a thing, for instance, was this nerve fluid believed to be that even as late as the middle of the fifteenth century great and distinguished surgeons, like Ambroise Paré, when amputating limbs, used to tie off not merely the arteries to prevent the escape of blood but the nerve trunks to prevent the escape of the nervous fluid, the loss of which, it was firmly believed, would cause the patient to bleed to death just as genuinely as if an artery had been left untied. How exquisitely this tying of the nerve trunks must have added to the comfort of the unfortunate patient can be well imagined.

Our Internal Filtration Plant

MANY of our proverbial differences of point of view are due to the particular poisons which, like the eagles at Prometheus' are gnawing at our liver. The old proverb, *Tot homines, quot sententiæ*—"So many men, so many opinions"—would be nearer the truth if it read: "So many livers, so many grouches." What a man knows is a matter of his brain, but what he believes depends on his liver.

As medicine and religion have a common ancestry, which is one of the reasons why they sometimes "scrap" so cordially when they get together—it is a family fuss, and the primitive shaman or voodoo was both priest and physician—these necromantic ideas about the liver were transferred bodily into primitive medicine. From the very earliest times there has been a singular tendency to associate all depressed and melancholic or apathetic states of both mind and body with a disordered condition of the liver. And the conjecture, irrational as was its origin and grotesque as is its logic, was not far wide of the mark after all.

There is nearly always some rational basis, some kernel of truth, some shrewd guess underlying every popular impression or even superstition, grotesque as it may be in its details and absurd in the extremes to which it may be carried. The germ of truth underlying all the old melancholic conceptions of the liver was that, as we have just discovered upon definite experimental grounds within the last half-century, our mental as well as our bodily states are very largely dependent upon the poisoning of our nerves and our brains by toxins carried to them in the blood from a hundred different sources within and without the body. And as we have also discovered in the past couple of decades that the liver is the great toxin absorber and antitoxin generator for the entire body, no matter what may be the sources of the poison, it is clear that our views of existence, and whether it is worth while continuing it or not, must depend very largely upon the efficiency of our liver-filters.

Submit to the Challenge of That Matchless and Incorruptible Sentinel at the Outer Wicket of the Gate of the Body-Fortress

Digitized by Google

Of course every one knows that the liver is a digestive organ, and that its main business is to secrete the bile. It does very much more than that, however, and the manufacture of bile is one of the least important of its functions. The stock of the bile has gone steadily below par ever since it was carefully investigated and accurately studied, and it is now regarded as chiefly an excretion or waste product, poured into the alimentary canal in order to be got rid of; though Nature, with her wonderful and irrepressible economy, has contrived to utilize it on its way out for some trifling services and odd jobs, principally in the way of housecleaning.

Not only does all the blood from the walls of the active part of the foodtube go directly to the liver through the great portal vein and its branches, thus carrying every particle of the dissolved food and any of the poisons that are contained directly to the liver, but also the millrace current of blood from the great trunkline artery of the body—the aorta—is received by the liver. This means, of course, not merely that almost every scrap of our food passes through the liver before any other tissue in the body can get even a smell of it but also that, owing to the size of the artery and the vigorous pumping of the heart, all the blood is driven through the liver-filter once in twenty minutes.

When a Man's "Gall Stops Wukkin," as Our African Brethren Picturesquely Say, Then Nothing Else Much Matters

The liver, then, is a combination of quarantine station and filter—first for the food, and second for all sorts of poisons in the blood from all over the body. No organ in the body has been more maligned and none is more worthy of our highest gratitude and esteem. It has been accused from time immemorial of flooding the body with a dark green tide of its biliary secretion and producing not only that dark brown taste in the mouth but all the tortures of melancholia and biliousness, the "hip" and the "hump," out of sheer exuberance of spirit or pure cussedness. It really stands as a majestic sentinel at the main gate of the body-fortress, giving neither sleep to its eyes nor slumber to its eyelids day or night, testing with laboratory rigidity every drop of melted food before allowing it to pass on to the muscle cells and the nerve cells, challenging every poison and toxin and arresting every invading bacillus or vagrant germ.

Then when, worn out with overwork or overwhelmed by a sudden flood of poisons too powerful for it to check, it allows some toxin-invader to slip by it and play havoc with the cells of our nervous system we say we are "bilious"—and blame the liver!

Why One Man's Meat is Another Man's Poison

FOR many centuries, on account of its commanding position upon the great blood-stream that carries melted food from the alimentary canal to the heart, we supposed that the liver's chief if not only function was to deal with and bar out poisons contained in our food or resulting from its digestion and indigestion. Thus the principal causes of the liver's disturbances and diseases were supposed to be food and drink and the things that were mixed with them; but this has been found to be far too narrow a view. Indeed we are rapidly coming to the opinion that a large share if not a majority of the diseases of the liver have little or nothing to do, in their origin, with either food or drink.

We have also come to realize that many of the so-called digestive disturbances of the liver are caused, not by the food itself, either in its amount, quality or combinations, but by the bacteria or other germs or parasites with which food is contaminated and which are introduced with it, just as we have seen is the case also with dyspepsia, indigestion and the disorders of the alimentary canal in general.

The well-known "tropical" or "East Indian" liver, for instance, which is so common a cause of complaint among retired merchants, traders, military officers and government officials who have served long terms in tropical climates, absurdly supposed to be due to the eating of too much meat, fats and other "heating" foods, is now known to be due almost solely to the attack of the disease germs and parasites that swarm in hot climates. Indeed probably two-thirds if not three-fourths of "tropical liver" is due to just two of these parasites—the plasmodium of malaria and the amœba of dysentery.

Scores of attempts have been made to produce enlargement, shrinking, fatty degeneration or other diseased conditions of the liver by feeding animals upon excessive amounts of different kinds of foods, especially such as are supposed to throw most work upon the liver. It has been found utterly impossible to produce anything more than the most temporary disturbances by means of food, even when administered with a stomach-pump and utterly alien to the natural tastes and requirements of the animal; but the moment disease germs were mixed with the food then it was perfectly possible to produce, almost at will, any liver condition that might be desired. Certain animals which were unusually vigorous and healthy proved the exception, as they were able to destroy and digest even large quantities of these germs without any apparent effect upon their livers.

Diseased conditions of the liver could also be produced by mixing small amounts of mineral poisons like lead and arsenic with the food; and one or two organic poisons like chloroform and alcohol were also found to have special injurious effects upon the liver. It was found necessary, however, much to the surprise of the experimenters when endeavoring to produce the classic so-called alcoholic changes in the liver, to administer it in very large amounts—sufficient, in fact, by its direct irritating effect upon the stomach, to set up a catarrhal irritation and inflammation of the lining of the alimentary canal. Thus the relation between alcohol and diseases of the liver, including the famous hobnailed or drunkard's liver, is not so direct as we at one time supposed it to be.

In fact the action of the liver upon alcohol throws an interesting light upon its method of dealing with other poisons which, like alcohol, would be highly injurious to both nerve and muscle cells all over the body if they were permitted to get past the liver in their original form. The cells of the liver possess a remarkable and ingenious power of not merely stopping poisons as a filter might but of actually converting them into harmless substances which can be permitted to pass into the blood without injury to the body.

This it does by breaking down or, in chemical language, "splitting" their molecules; and that is probably why the liver has so little power of antagonizing or arresting simple metallic poisons like lead and arsenic—for their molecules are, in the first place, very small and simple; and, in the second place, when broken down or split up the fragments are still poisonous.

What makes the problem still more difficult and the intelligence of the liver cell even more superhuman—for the whole is not always greater than its parts except in pure mathematics, and little, insignificant, gumdrop-looking cells in our body can do things with one hand tied behind them, so to speak, which we could not do to save our lives—is that not only may all poisons except mineral ones be split into perfectly harmless compounds but also, conversely, all foods, however harmless and nutritious, may be split into poisonous compounds—and this splitting actually takes place in the process of digestion.

For instance, two of the most dangerous of known poisons—the one on account of its deadliness and the other on account of its commonness—prussic acid and alcohol, are actually produced in the human body, not merely daily but hourly and every minute, in the process of digestion. The amount of prussic acid produced, of course, is very small indeed; but the amount of alcohol is considerable, for the latest studies indicate that nearly a quart of it is formed in the body every twenty-four hours. The prussic acid is so promptly converted into something harmless, and the alcohol burnt so swiftly as fuel in the muscle-engine into simple carbonic acid and water, that these poisons have no time to do any harm to the body tissues; but if the liver were not strictly "on the job," like Doctor Wiley, day and night, think of what might happen to the body from the accidental poisons from its foodstuffs.

If, therefore, you would avoid biliousness first and foremost submit to the challenge of that matchless and incorruptible sentinel at the outer wicket of the gate of the body-fortress—the nose—every piece of food that you eat, and refuse to take into your mouth anything that smells tainted or "fishy," or musty or flat, or disagreeable in any way, or to swallow it if it tastes unpleasant. This will result in barring out, not only those spoiled foods which nobody likes but also those half-spoiled foodstuffs and drinks which most of us have carefully trained ourselves to like in defiance of our instincts—such as alcohol, tobacco, sauerkraut, Limburger and "hot stuff" generally. Though we should lose something in amusement, we should lose nothing in point of nutrition and gain much in the way of health by so doing.

Though bad foods and drinks will account for a considerable number of the milder and more short-lived attacks of biliousness and liver trouble they are very far from explaining the more permanent and lasting diseases of that organ. Indeed a conviction is steadily growing, as our study becomes more accurate and our experiences wider, that a large share if not the majority of chronic liver troubles are not due to food at all.

The liver occupies one of the most dangerous posts in the entire body, as it is the testing point, filter and garbage burner to which are brought not merely all the poisons that enter with the food, or are formed in the alimentary canal as a result of indigestion, but at least two-thirds of all the poisons, living and dead, that get into the body from other sources. It is only in recent years that we began to discover the enormous and important part the liver plays in our bodily resistance to the attacks of fevers—that is to say, of the germs of infectious diseases.

We have long known, of course, that in certain infectious diseases, especially those that were chronic or lasted for long periods of time—such as malaria—the liver became very much enlarged and would afterward be found to be in a highly diseased condition, even though the patient had survived the immediate attack of the infection for many years.

The same was true, of course, in the chronic dysentery of the tropics, in gout and in certain forms of prolonged poisoning by inorganic poisons like lead and phosphorus; but these facts did not make much impression on our minds, as we merely put them down to the fact that the liver suffered from prolonged saturation of the disease poisons just as any other organ or tissue in the body would.

The Most Loyal Organ of Our Anatomy

A DECADE or so ago, however, our attention was called to the promptness with which the liver would be attacked by certain poisons in a rather dramatic and unexpected manner. This came only when we were investigating and endeavoring to find the cause of a number of sudden deaths after the taking of chloroform for prolonged surgical operations. Much to our surprise the most striking and uniform feature in most of these cases after death was fatty degeneration of the liver. We had previously supposed that changes of that sort took weeks if not months to produce, but this discovery set the pathologists to thinking and experimenting; and it was quickly found, first, that this sudden fatty degeneration could be readily produced in animals by large single doses of chloroform and other poisons, and also, what was still more interesting, by infecting the animals with the germs of various contagious diseases.

That sent us back to the post-mortem room at once, to examine the livers of those who had died of such acute infections; and we were not long in discovering that the most profound and serious changes produced anywhere in the body of our patients by even such diseases as pneumonia, typhoid fever, scarlet fever, childbed fever, surgical fever or blood poisoning and diphtheria were often to be found in the liver. The reason why these changes had escaped us before was that they seldom made much change in either the size, or color, or appearance of the liver to the naked eye, and that it was necessary to make a microscopic examination of the liver-stuff in order to be sure of them.

This gave us a clew to a number of these cases—for instance, why jaundice should occur in fatal cases of a good many acute infections, such as typhoid fever, malaria, childbed fever, pneumonia and peritonitis or blood poisoning. It explained why, in certain exceedingly fatal forms of pneumonia, such as the dreaded "miners' pneumonia" of our Western mining camps, the liver should be found after death as a blackened and broken-down mass, so destroyed and altered that it had attracted the attention of even the mining-camp doctors and the disease had become popularly known as "black death of the liver."

In fact by piecing together all our information we came to the conclusion that the first place, so to speak, to which the germs and poisons of infectious diseases—no matter where they might have entered the body—were hurried by the blood stream was the liver; that it bore the first brunt and the heaviest shock of their attack; that so long as it was able to neutralize the poisons and arrest or destroy the germs the infection did not "take" and the

Their Doddering Lineal Descendants Today Tell Fortunes by Reading the Lines of the Palm

Digitized by Google

body, as a whole, escaped the attack of the disease—in short, that resistance to a given disease, and the question as to whether we succumbed to an infection and developed a full-grown attack or not, depended largely and fundamentally upon the liver.

Further, in cases where its first resistance had been overcome and the body had proceeded to develop a general attack of the disease, the extent to which the liver was able to half neutralize the toxins introduced by the germs all over the body would be the measure of the vigor with which we would resist the attack; and the question of recovery was largely a matter of whether the liver was able to rally its forces and gradually get the upper hand of the invaders and neutralize their poisons, or whether it sank under the attack and finally relinquished the field to the enemy. Whatever our disease a large majority of us die by liver failure, followed quickly by heart poisoning. When the heart fails in the final exitus it is because its muscle cells have been fed with unneutralized poisons instead of food by the blood.

Most forms of overgrowth or enlargement of the liver are now believed to be due to a rapid multiplication of the liver-cells under the attack of the poisons of some infectious disease.

Even in its fall the liver remains loyal to the body, for this enlargement or overgrowth, which was originally regarded as purely inflammatory, has now been discovered to be an actual increase of new and comparatively healthy liver tissue. In other words it is a genuine attempt at growth on the part of the liver in order to cope with the increased amount of poisons brought to it.

Probably a large share of these enlargements achieve their aim, conquer the poison and again disappear without ever having attracted our attention at all; but a considerable number of them are not so fortunate, and the newly formed cells begin to break down and their places are taken by fibrous or scar tissue. This as it matures hardens and shrinks, crushing within its pythonlike grasp the remaining healthy liver cells; and in the course of months or years our overgrown liver is converted into a leathery, wrinkled, scar-indented mass of fibrous tissue, with only a few islands of healthy liver cells scattered about.

Whenever these few islands get below the minimum neutralizing requirements of the body the patient dies; but if he lives long enough the process will go on until the shrinking has reduced the liver to a half or even a third of its normal size. So that whether a man dies of an enlarged or a shrunken liver depends chiefly upon the stage of the process at which his vitality gives way.

Even in the present stage of our knowledge it is probably not too much to say that if you have been fortunate enough to avoid certain of the great diseases that have a special tendency to attack the liver, such as typhoid fever, malaria, dysentery and pneumonia; or if you have been attacked by them and made a good recovery and have given yourself every possible chance in the way of judicious feeding, skillful treatment and rest to throw off their effects you need have comparatively little fear of serious disease of your liver. As there is no earthly reason why these four great diseases, together with a great many others that play a lesser part in damaging the liver, should not be wiped out entirely—and their conquest is now only a question of time, intelligence and money—it can be seen that the prospect for the liver is anything but discouraging.

Nearly a Quart of Alcohol is Formed in the Body Every Twenty-Four Hours!

As has already been intimated some permanent or chronic diseases of the liver are produced by the prolonged absorption of small amounts of inorganic poisons, such as lead, phosphorus and arsenic, usually introduced into the bodies of workers in particular trades involving the handling of these poisons. Fortunately the public conscience has now become awakened on this subject and is insisting in no uncertain tones that no individual, however successful or able, shall be allowed to poison his fellow beings for his own profit; and that any industry which cannot be conducted without ruining the health and threatening the lives of its employees shall be put out of business.

Our motto in considering diseases of the liver today emphatically is "Look for the poison." We are not only finding the poisons with accuracy and dispatch but discovering that nine-tenths of them are preventable and may be avoided by the exercise of ordinary cleanliness and intelligence.

Considering the ancient source of our beliefs about the liver, it is small wonder that many of them have little more foundation than the alleged influence of the stages of the moon on the growth of potatoes.

A good illustration is afforded by those familiar blotches of brownish or yellowish color upon the face and neck, which are known the world over as "liver spots," *Leber Flecken*, and so on. These have nothing whatever to do

(Concluded on Page 61)

Our Medieval High Schools

Shall We Educate Children for the Twelfth or the Twentieth Century?

By William Hughes Mearns

ILLUSTRATION BY B. CORY KILVERT

THE high school is at present like the child in the Solomon story—in danger of being cut into bits and handed out to various claimants. The college has for some time put up a pretty strong case for ownership and in some instances has quite decided the sort of clothes the high school shall wear and the way it shall walk and talk; particularly—when one considers the college entrance requirements in English, Latin, Greek, French and German—particularly the way it shall talk. At various times the college has Miltonized it, Chaucerized it, Virgilized it, Schillered it, physicked and chemicaled it. No wonder that at present the child shows tendencies to revolt and, here and there, is boldly making faces at its guardian!

The National Education Association is at this moment making a nation-wide canvass of the sentiment of high schools in regard to the control which the college should have over them. Dr. Benjamin A. Heydrick, of the New York High School of Commerce, is the chairman of the committee on English studies, which is communicating directly with the teachers in every high school, public and private, in the larger towns and cities; and the question at issue is the serious one of ownership. Summed up, their questionnaire asks: "Is the main function of the high school to prepare youth for college? And if that is part of its business do we serve our communities best by permitting the college to decide how we shall do it?"

A much older claimant for possession of the high school is Culture, a courtly old gentleman, with doubled stock under chin. Culture reminds us that he it was who really discovered the high school. He points to the Boston Latin School, the first secondary school in America, as the place where boys were taught the classics and mathematics to give them the education of a gentleman and, to use the culturist's own words, "to prepare them most effectively for nothing in particular!" The high school is a "finishing school," he claims, where a pupil gets abstract mental training; the mind is put through a dumbbell exercise of conjugation, declension, literal and free translation of languages excusably dead, and an Indian-club drill of higher mathematics. The theory is that a chap who stood through the ordeal, aimed confessedly at nothing practical, later could stand for anything; and for a certain portion of the population this has always been a good theory.

The culture chaps had the high schools all to themselves for a long while and still dispute the ground successfully in some places. When they had control the high school—there was commonly but one in a large community—was an institution of distinction; its "professors" were known and quoted; it competed with the college for students; and in some cases, notably the Free Academy—later City College—New York, and the Central High School, Philadelphia, granted degrees of equal standing. In the fifties it was a question in the minds of Philadelphia boys whether it was more profitable to take the course at the college department of the University of Pennsylvania or at the Central High School, one of the oldest secondary schools outside of New England; each conferred a bachelor's degree under grant from the same legislature, the faculty of one institution might bear comparison with the other, and neither the entrance requirement nor the length of the course was materially different. Until quite recent years the graduates of these schools were received directly into the professional schools of law and medicine. The remains of the culture control is found in the classical courses common to most of the older high schools and to the so-called Latin high schools of New England.

In 1875 manual training put in its plea for place. It was followed by the commercial course, which came accompanied by domestic science, *et al.* College and culture set upon these chaps as a mother would upon child-stealing gipsies. Science, in all sorts of theoretical and practical forms, had been working its way in almost insidiously, and had first been endured, then pitied and secretly embraced; but manual training, shorthand—*horribile dictu!*—bookkeeping, cookery!—there was something vulgarly practical about these; and besides, as a clincher argument, they were distressingly popular. For if there was one test of pedagogy that college and culture had agreed upon between them, it was first, that a gentleman's education should be of no use in the world—particularly in the business world; and, second, that it should not be desired by the mob. If it is what they want you don't want it; if everybody cries for it it isn't worth crying for!

The worst fact in the history of manual training is that it, too, came under the spell of culture. One still hears instructors in handwork proudly averring that there is nothing useful in *their* training. Teach a boy to chip and file the left side of a nut, but don't tell him it is a nut. There is "culture" in learning to grind a steel blade to an angle of thirty degrees, provided the youngster never guesses he can stick a wooden handle on one end and make a chisel. How the manual "trainingist" used to look askance at the trade school! The old disgust of culture for workaday was in his attitude. "My goodness!" we can hear him say. "Don't put those four mitered sticks together, boy! Don't you know that makes a picture frame?" Then he might add kindly: "If you really want to learn to make something useful the best thing you can do is to make something useless; there's nothing like it!"

"There's nothing like eating hay when you're faint," remarked the king to Alice as he munched away.

"I should think throwing cold water over you would be better," she suggested—"or some sal volatile."

"I didn't say there was nothing better," the king replied; "I said there was nothing *like* it!" Which Alice did not venture to deny.

To you who work for a living—and slowly grow through your daily experience into a bigger, more tolerant, wiser person—culture may not mean so much; but it is a terrific bugaboo in "educational circles." Suggest to a pedagogue that Latin may be made more palatable at the beginning by less grammar-grind and more reading of simple stories; or that German may be taught more easily in the lower grades by the "conversational method"; or that a boy may write a better composition by avoiding topics like The Knocking at the Gate in Macbeth or An Analysis of the Tone Values in the Vision of Sir Launfal. Suggest such matters, and you are met with: "Ah!—but what about culture?" You—practical you—would say: "If we are to read Latin let's get started; if the children should know German let them begin early—the way the natives do; if a boy hopes ever to write his own language he had better write it." That's because you are trained to go about things in a straightforward way; you know what you want when you want it and you won't be happy until you get it. And probably you haven't any culture or would feel guilty if some one found it on you. Now what is culture? Judged by the way they talk about it in educational conventions, it's something you must be born with; it's something you only acquire; it's something you strive for but never wholly achieve. Studying Latin verbs

Digitized by Google

will give it to you—though many a *Civis Romanus* never came within a *millia passuum* of it. Greek, applied three times a week for at least two years, is recommended by some. Others say chemistry is the thing, when exposed in laboratories not too practical; and most wise men agree that the higher mathematics is full of it. Jenkins got his by tutoring for his degree at Harvard; Emerson got it by loitering in the library. Sir Isaac Newton got it by observing an apple—Lincoln, by observing everything. Bruno was burned for having it and Thomson was made a peer.

Culture is an incommunicable communion with Nature; it is clean hands and a pure collar; it is the possession of great-grandparents—white, Christian preferred; it is the achievement of tolerance; it is the proper use of "shall" and "will"; it is a knowledge of Hegelian philosophy; it is Greek; it is Latin; it is a five-foot shelf of books; it is twenty thousand a year; it is a sight of truth and a draught of wisdom; it is a frock coat and pearl gloves. All A. B.'s have it—except A. B. seamen; some B. S.'s and—mooted point—an occasional Ph. B. Teachers in private academies have it; Episcopal clergymen have it; likewise college professors and the students in the "classical course." It may thrive in thatched cottages and even in Buckingham Palace. No one ever saw it; it cannot be measured or chemically analyzed; the fellow that claims it the loudest never has had it; the chap that really has it never mentions the matter; and it can be obtained only by a studious cultivation of one kind of education—my kind!

"Isn't that rather a great deal to make one word mean?" inquired Alice thoughtfully.

"When I make one word do a lot of work like that," explained Humpty Dumpty pompously, "I always pay it extra."

But remember: Culture never by any hap lurks in aught useful. There is culture in Greek until you begin to teach it to others at two dollars an hour—which explains a thing or two about some teachers of Greek. Even to the Greek, Greek was not culture, for he had to use the thing in his business. Finding the parallax of the sun is culture; but not surveying a plot for a railroad siding. So is dipping litmus paper into HNO_3; but not testing the coaltar in shellacked chocolates. So is drawing diagrams of Florentine palaces; but not building a bank. So—quite lately—is reading books on social science; but not serving as a watcher in an election booth. Archæology and the collection of uncut first editions are cultural; but there is no culture in agriculture.

Being a Person of the Better Sort

SO NOW you will understand how lately it has been unearthed and—what really was the case all along—that it is quite unimportant who discovered the high school; the material fact is that the people have taken possession of it. Some one else may have founded the institution—most good things have their rise in private philanthropy—certain "persons of the better sort," as some one somewhat snobbishly styled them, who wanted a special education for their young sons—daughters, at first, were negligible—in order that said sons, via law, medicine, letters and the church, might eventually become persons of the better sort themselves. Until about 1888 or 1890 the high school was an institution for this special group. Naturally, they had every right to make it conform to what they believed to be their needs; but at that period the people preëmpted the high school and, during the decade of 1890 to 1900, kept the school architect everlastingly busy housing their kind.

At first the people were content to take the traditional course, though they murmured. And when the first crop of people-graduates, diploma in pocket and Greek in head, started out to hunt a vulgar "job," the business men of the community began to write those sarcastic letters to the papers about the need for more R's, little Latin and less Greek. What boots it, they said, whether your graduate knows how to eliminate x and y if he is too dainty to paint a roof, or pound hot bolts, or stoke a stationary engine, or tie up a decent package? And what does he know about wool and shoddy? they asked. Can he estimate a wall-paper job? Can he tackle an accountant's problem in our bookkeeping department? Can he type a respectable business letter? Can he sell shoes? You see, the people's boy had eventually to work for his living—and four years of book education was his sole capital! No doubt he was a better fellow for his high-school training, and in the long run his equipment counted; but his adjustment to the practical was too slow for his good and in some cases, save as a preparation for professional life, his training unfitted him for any adjustment at all.

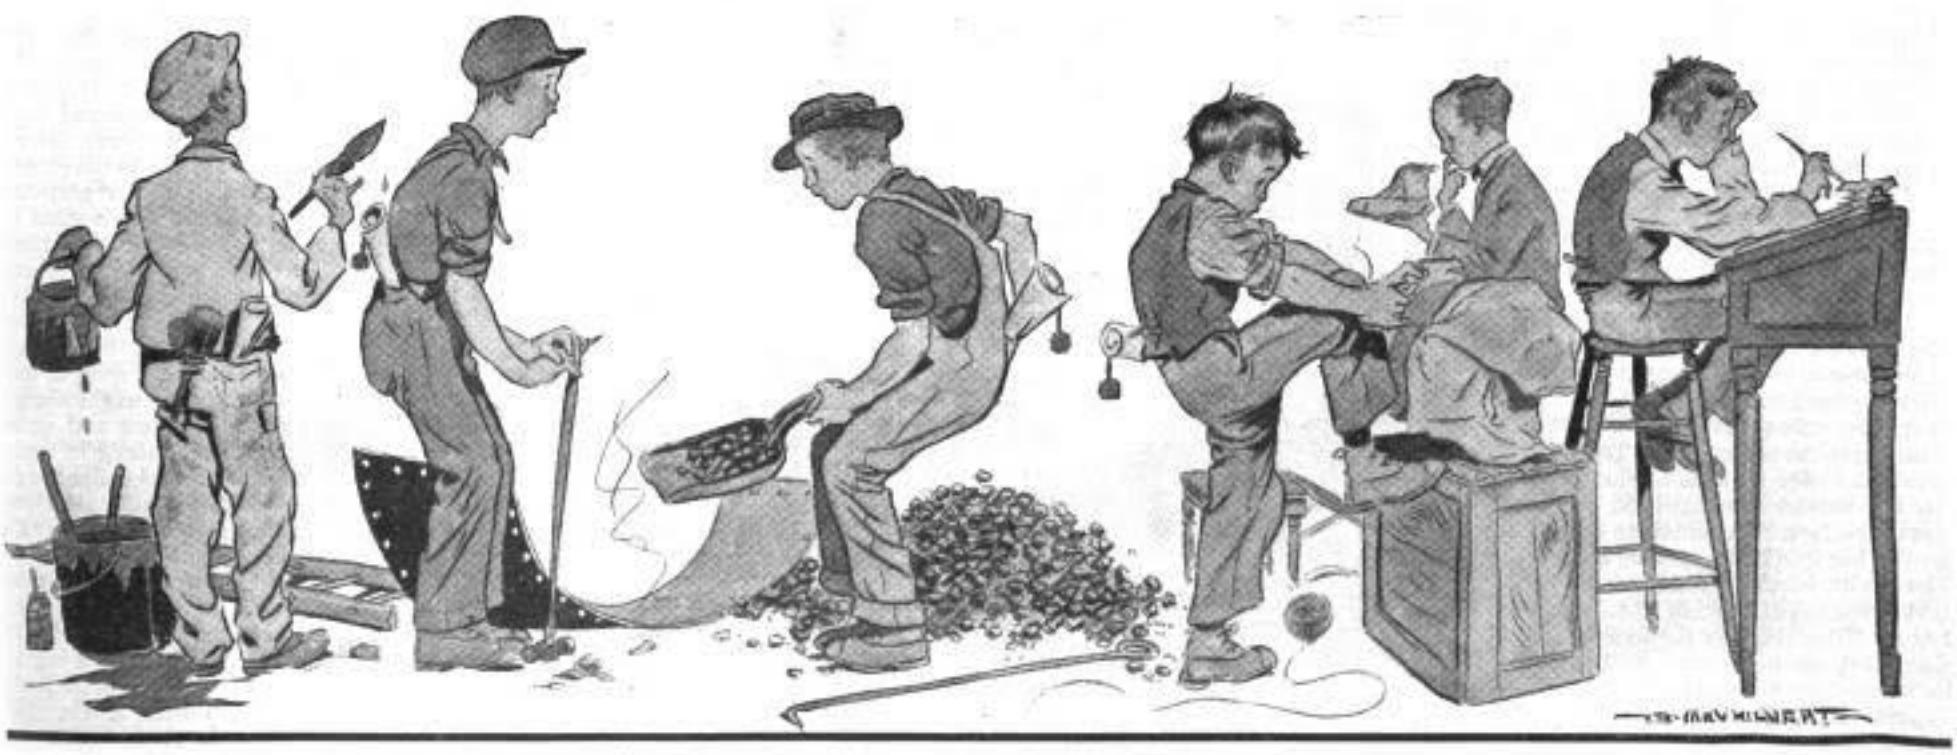
The people, however, have not discovered the high school half so thoroughly as they are destined to do in the next few years. In spite of the extraordinary rush into the secondary schools, beginning with 1890, there are hundreds of thousands of children of high-school age—many of them quite unable to take any sort of traditional course—who have a right to be fitted somehow for efficient work. The state stands ready theoretically to make better citizens out of any of these boys and girls; but until lately the educators have lacked a program.

The program is still hampered, both by the believers in culture and by the college. In a most significant report, just put into circulation by the Secondary Department of the National Education Association, an attempt is made to free the high school from its close articulation with the college, in order that it might articulate better with boy-and-girl needs. Character is given to the report by the high reputation of its signers.

The report advocates a simpler and more flexible high-school course, the certificate of which shall be accepted by the college without restriction, even though the secondary school is to permit a wide election of studies, including practical courses that prepare for business and trade. "Many students," the report explains, "do not go to college because they took those courses which were dictated by their aptitudes and needs instead of courses prescribed by the college. On the other hand, many students do not take the courses which they need because they think they may go to college."

To quote a most significant statement from this document: "It is coming to be clearly recognized that the chief characteristic of education in a democracy, as contrasted with that in a society dominated by class distinctions, is the principle of the 'open door.' The principle of the open door is part of the great idea of the conservation of human gifts. It demands that personal worth should be recognized wherever found. The college is only one of the many doors that should be kept open."

The modern notion of the open door, as applied to secondary education, has in it, therefore, no antagonism to culture or to college; but it means more than a commercial course in stenography beside a course in Latin and Greek. It signifies a study of individual needs and an attempt to fit that individual for what the best wisdom of the moment considers his welfare! In the West, particularly, this has meant a program of studies made afresh for each boy and girl—exactly as nowadays corrective physical exercises are prescribed differently for each pupil. The resolute following out of this democratic formula has created a stir—as is always the case—reminding us that, "when the chemist disclosed what was in the preservative the result was a shock to the ultra-conservative."



Most untraditional bedfellows sometimes appear. Blacksmithing may be pursued by a student who has already chosen Greek—suggesting Elihu Burritt; while a chap who needs to know more about agriculture is set to work in a field laboratory—and no one cares if he never studies French! In Massachusetts, Commissioner of Education Snedden is developing boys educationally in work that looks marvelously like landscape gardening, house-painting, furniture making; and he claims there's culture in it too! In the end, culture is bound to get you, whatever your original pedagogic position.

Culture Courses and Bread-and-Butter

FOR a while the people, who pay the bills and are therefore keen for bargains and cut rates, may seem to forget that to the ideal of preparing for life there is an ordinary interpretation and an exalted one. So one may expect to see the high schools turned topsyturvy and back several times before they settle into the normal again—which will never be quite the former normal. Still, the new owners show considerable insight. They do not care too much for out-and-out bread-and-butter courses. They give time ungrudgingly to "ornamental design" and to those marvelous four-part songs. Impracticable "organized play" is delightfully popular—the out-of-door and indoor games; the rhythmic wand drills and stately dances, revived from an older time. How it takes you when you see a half hundred skillful lads and maids "footing it featly" in motion poetry, almost Greek! And the new owners have no word of protest for the wonderful pageants and dramas that come with the new festival interest. What artistry the people's children show in the manipulation of wood and metal! And literature, as a vision of the heart of man—enjoyed, sensed, dreamed over—is richer than ever in its contribution to living and preparation for living. These new discoverers believe in vocational training, but they are too wise to ignore the avocational needs, to use George Drayton Strayer's phrase; they ask for an education to meet the hours of daily work, though they demand, not less earnestly, an education for the blessed hours of leisure. The bread-and-butter-fly that they seem to know lives too often on an impoverished diet and expires early of malnutrition—see Professor L. Carroll: Through the Looking-Glass.

The community has rediscovered the high school—the whole community, including those "persons of the better sort" who desire Greek and Latin and theoretical mathematics. The high school, as nowadays conceived, is a democratic institution that is attempting to meet every legitimate educational need of boys and girls between the ages of twelve and eighteen. Preparation for lifework is its ideal, which need not be a low one; and it bases its scheme of studies upon no traditional plan that will not bear the test of efficient service to the community about it.

It is the people's college, to describe it in the old phrase endeared by nearly seventy years of use; and, though the culturist was its original discoverer and the college its temporary captor, the whole people are absolutely its present owners. For proof, trace the source of the School Budget.

What Boots it Whether Your Graduate Knows How to Eliminate X and Y if He is Too Dainty to Paint a Roof or Pound Hot Bolts?

She Felt Queer, as if an Angel Had Just Spit in Her Face

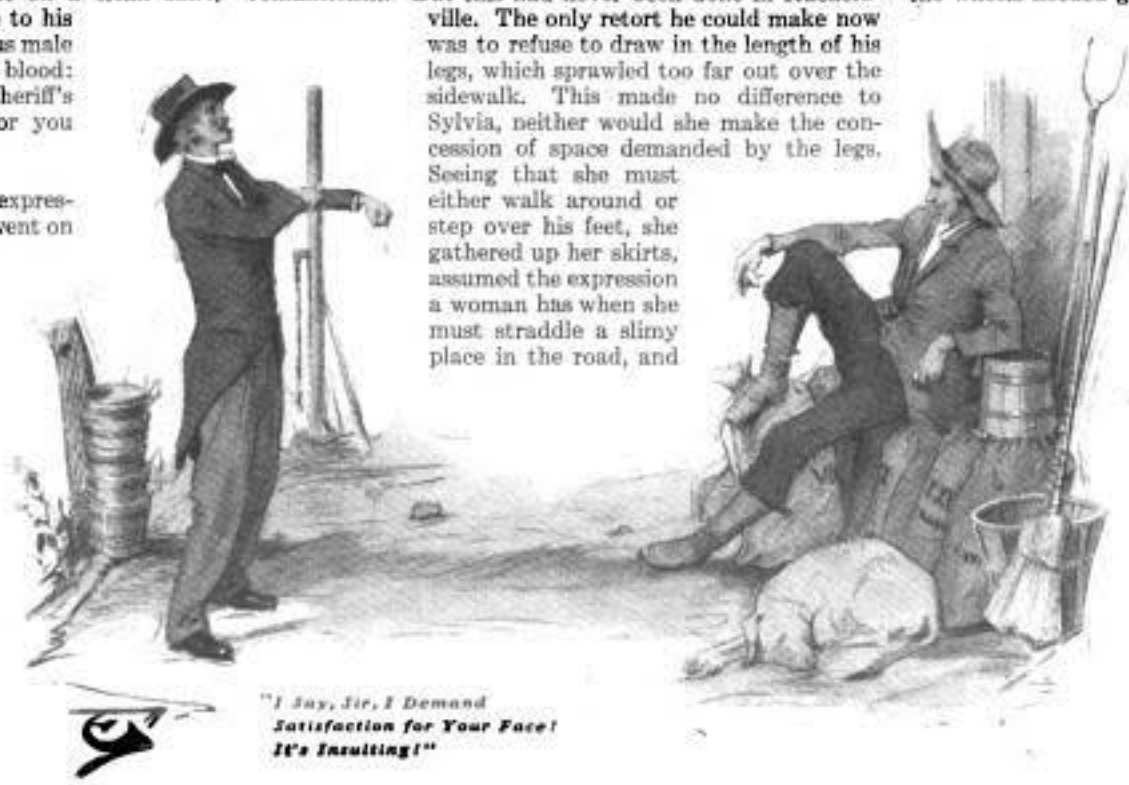
VII

THERE are bombs and bombs. Those, for example, cast honorably by a hostile army into a defenseless city, and the assassin variety, aimed by anarchists at the stomachs of respectable people, "and many others," as children say in the geography class when they are naming the products of foreign countries. But the most thrilling of all is the human bomb that drops down into a somnambulent community with its fuse burning. Jim Bone produced this effect upon the peaceful coma of Ruckersville. During the few weeks after his arrival there was a curious cleared space about him upon which no one intruded. That is to say, no one asked him how was his health, or what was his business, or how long he purposed to remain. But every one saw that his fuse was burning; and no one knew whether this meant that he would shoot the sheriff, or behave like the conventional prodigal and go up to be prayed for at the evening service in church, where the usual June revival was in progress. During the day he might be seen seated beneath the awning of Daddisman's Hotel, his chair tilted back against the wall, his long legs spread out impudently on the sidewalk, his body doubled till he sat on the small of his back, and his shirt laced up in front with a blue shoestring. He was really a wounded man suffering from the cupid fever. But no one knew this. The dog that had attached itself to him that first evening was literally the one creature who understood the situation. The dog lay always in front, hindlegs folded forward, forepaws extended and his red-brown hound's head resting upon them, while his adoring eyes never left the face of his friend except when some one passed. Then he arose, extended his tail, wagged it in expository fashion as much as to say: "This is Mr. Jim Bone, my new master. You may remember him; he left here some years ago. Nice fellow, feeds well and no bad habits."

The trouble was, nobody believed the dog. One day shortly after Bone's arrival Tony Adams, who had been sober long enough to shave and put on a clean shirt, hurried round the corner, came close to his chair and murmured in that mysterious male undertone men have when they smell blood:

"Better git up and git, Jim. The sheriff's after you. Swore out a warrant for you early this morning."

"Say, he did?"



His lethargy was the superlative expression of contempt for the sheriff. He went on whittling the stick upon which he was at that moment engaged.

Tony had become his adoring but distant satellite. He would have been a boon companion like the dog, but Mr. Bone treated him with the same reserve that he did the rest of the community. Tony had the feeling that his fate hung in the balance of that dark, inscrutable face. He sometimes followed him into Bilfire's saloon and bore with humility the insult of not being asked to drink with the hero. Tony received the impression that, not being quite a man, he was not yet entitled to the privilege of drinking with one. He felt like a fool on probation. And he resented nothing. But he desired above everything that Jim would ask a favor of him. He was merely standing afar off, publican fashion, fascinated and waiting for this direful demigod in top-boots to make up his mind as to what sacrifice and service he desired of him.

The life of the world in miniature flowed slowly, softly through the streets of the town. And the peculiar features of it appeared to fascinate Bone. He was taking a census of the situation; he was being revived from the long past. He observed the young negro lads now in the rabbit-hunting period of their development, and recalled far back the time when he was their whooping companion upon the red hills in the broom sedge. He recognized the faces of certain old tubby black mammies, and of lean old men, black and white. All drifted by like shadows that memory cast upon the golden background of his youth. No one spoke to him. He was the italics of a dark and bloody night to them, now twenty years old but still remembered. Ruckersville was not in the habit of emptying its veins upon a card table. All difficulties were carried on in a vituperating vocabulary or, in extreme excess, with bare fists. Georgians do not like to kill. They have a morality against the shedding of human blood with a knife. And they were not inclined now to welcome the man who had left four scars, varying from three to five inches in length, upon the person of Tony Adams. Tony was nobody's pet, still his veins were a sacred trust imparted to him by Nature, which had been violated by this shanky prodigal. If he went up to be prayed for, good and well. If he did not, then he was not a proper prodigal and they would have nothing to do with him. This was about the size of it.

Meanwhile Jim made no advances. He had not determined in his own mind yet whether to continue the rôle of criminal, which had shadowed his past in Ruckersville and had since made him the hero of more than one Western tour; or to yield his scalp as a lover; or to become a prominent citizen; or simply to go away with his feathers singed. The whole situation had been complicated by Sylvia Story, the woman he had seen that first day upon the porch of the old house beyond the oat field. If Sylvia had been a star-faced maiden the situation might have been simple. He could have managed to kiss her by this time and, satisfied with that commonplace victory—which men of his type rarely press farther with star-faced maidens—he might have gone on about his business. The thing that troubled him was whether he could kiss Sylvia. She was the kind of woman who excites this sort of speculation in a man without gratifying his curiosity. He had seen her once on the street, and she made no modest pretense of not seeing him.

Once he was sitting under the hotel awning when she passed, stepping with that curious muscular grace common to some women and to jungle cats. She covered him some distance off with the dark mystery of her splendid eyes. It was the serene challenge of the woman who has the upper hand and knows it. He understood and resented the insinuation. No man knows how to court such a woman. His instinct is to catch her around the waist and walk off with her without any preliminary romanticism. But this had never been done in Ruckersville. The only retort he could make now was to refuse to draw in the length of his legs, which sprawled too far out over the sidewalk. This made no difference to Sylvia, neither would she make the concession of space demanded by the legs. Seeing that she must either walk around or step over his feet, she gathered up her skirts, assumed the expression a woman has when she must straddle a slimy place in the road, and was about to step over the first one, when he capitulated and jerked both out of the way with a growl.

"I Say, Sir, I Demand Satisfaction for Your Face! It's Insulting!"

"Still," the keen sting of a smile in the tail of Sylvia's eye seemed to say as she went on, "you had to move them!"

When a woman makes a point like that a man's animal self-respect compels him to remain upon the scene until he wins. Love is not love, either in men or women. It is the instinct to subjugate, an instinct of which Nature makes excellent use. This accounts for the unhappiness that love engenders in the breasts of its victims. There were evening hours every day when Mr. Bone felt like a particularly vicious steer that has had his horns sawed off. He was not himself. He was better than himself. He was forced by this ever-renewing emotion to "freshen up," so to speak. That is another natural thing about love that looks queer. It has a grotesque way of rejuvenating a man in spite of his age and habits. This is why the old widower wears a telltale blossom in his buttonhole. He cannot help it.

Nature is a series of nets prepared to catch us, to retain us a while as we drift downward on our way back to dust. God is not nearly so particular as some preachers represent about the way He redeems a man. The gospel is much broader than the Acts of the Apostles. Every instinct is a candle buoy to life everlasting. The only way you get down at the end is because you retain the awful privilege of falling from grace—every grace, including that of love. This is really an expression of His respect for man. You have forever the right to fall. And this was what depressed our hero as he considered his present situation. He had been in love so often, had so many times experienced the transitory recreation of passion. He was one who took his salvation backward and lost it every time he went forward. That is to say, the women he had loved were the women who had ended by tiring him the most. You could not trust them to last. He did not dream how equally true the reverse of this same experience was for the women in question.

In short, his plans had gone wrong. Fate had ignored them. He had somehow been deprived of cutting the figure he meant to cut when he decided to make this brief visit to the home of his youth. He was an indifferent ranchman, who had made a fortune accidentally by staking a claim somewhere in Colorado during one of his periodical sprees.

He was returning from New York, where he had been to close the deal in which he sold his stake for an amazing sum. By a digression from the straight route back to New Mexico he could take in Ruckersville, merely as an eagle might visit an old discarded nest. Nothing had been farther from his intention than to remain there longer than it would take to "paint the old town red." But from the moment he had set foot in it he had been in a trance, a trance that he knew was ridiculous, but that he could not make up his mind to break. The fact is, his mind had been dissolved, not only by Sylvia but by the whole situation. One day a wagon loaded with shingles and drawn by a pair of black-and-white spotted oxen passed. The hubs of the wheels needed greasing and gave a groaning voice to the thing as it went by. The oxen held their heads close to the ground beneath the yoke, leaned away from each other and crept along at a snail's pace. He restrained the impulse to run out and swing on to the pole that projected behind, as he had done when he was a boy. Really he was alarmed at this recrudescence of the youth he had been. Not being a psychologist, he did not understand how some accident of a long-forgotten sight, or a song, or any little circumstance, might change the mental cylinders and cause the mind to act merely in terms of the past. He was obliged to go to Bilfire's saloon and take three drinks before he could recover his normal consciousness.

When he was not loafing in the saloon or beneath the awning of the hotel he sometimes transferred himself to a seat upon a bag of seed potatoes in front of the store of Magnis, Luster & Co. He would there be flanked upon one side by a measure of rutabaga

Digitized by Google

turnips and on the other by an open sack of dried peaches. He helped himself from each alternately, devouring both with equal relish. Turnips were the only fresh food he ate. At the hotel he persisted in demanding canned goods, mostly beef and tomatoes. This perversion of taste puzzled everybody in Ruckersville, for everybody had heard *of it*. He was the central topic of all the backbiting done in the town at this time.

"Eats like he'd been on an Arctic expedition," said Daddisman.

As a matter of fact, he had lived for years where the only food supplies were canned stuffs, such as men, when they have no women to cook for them, are very apt to resort to.

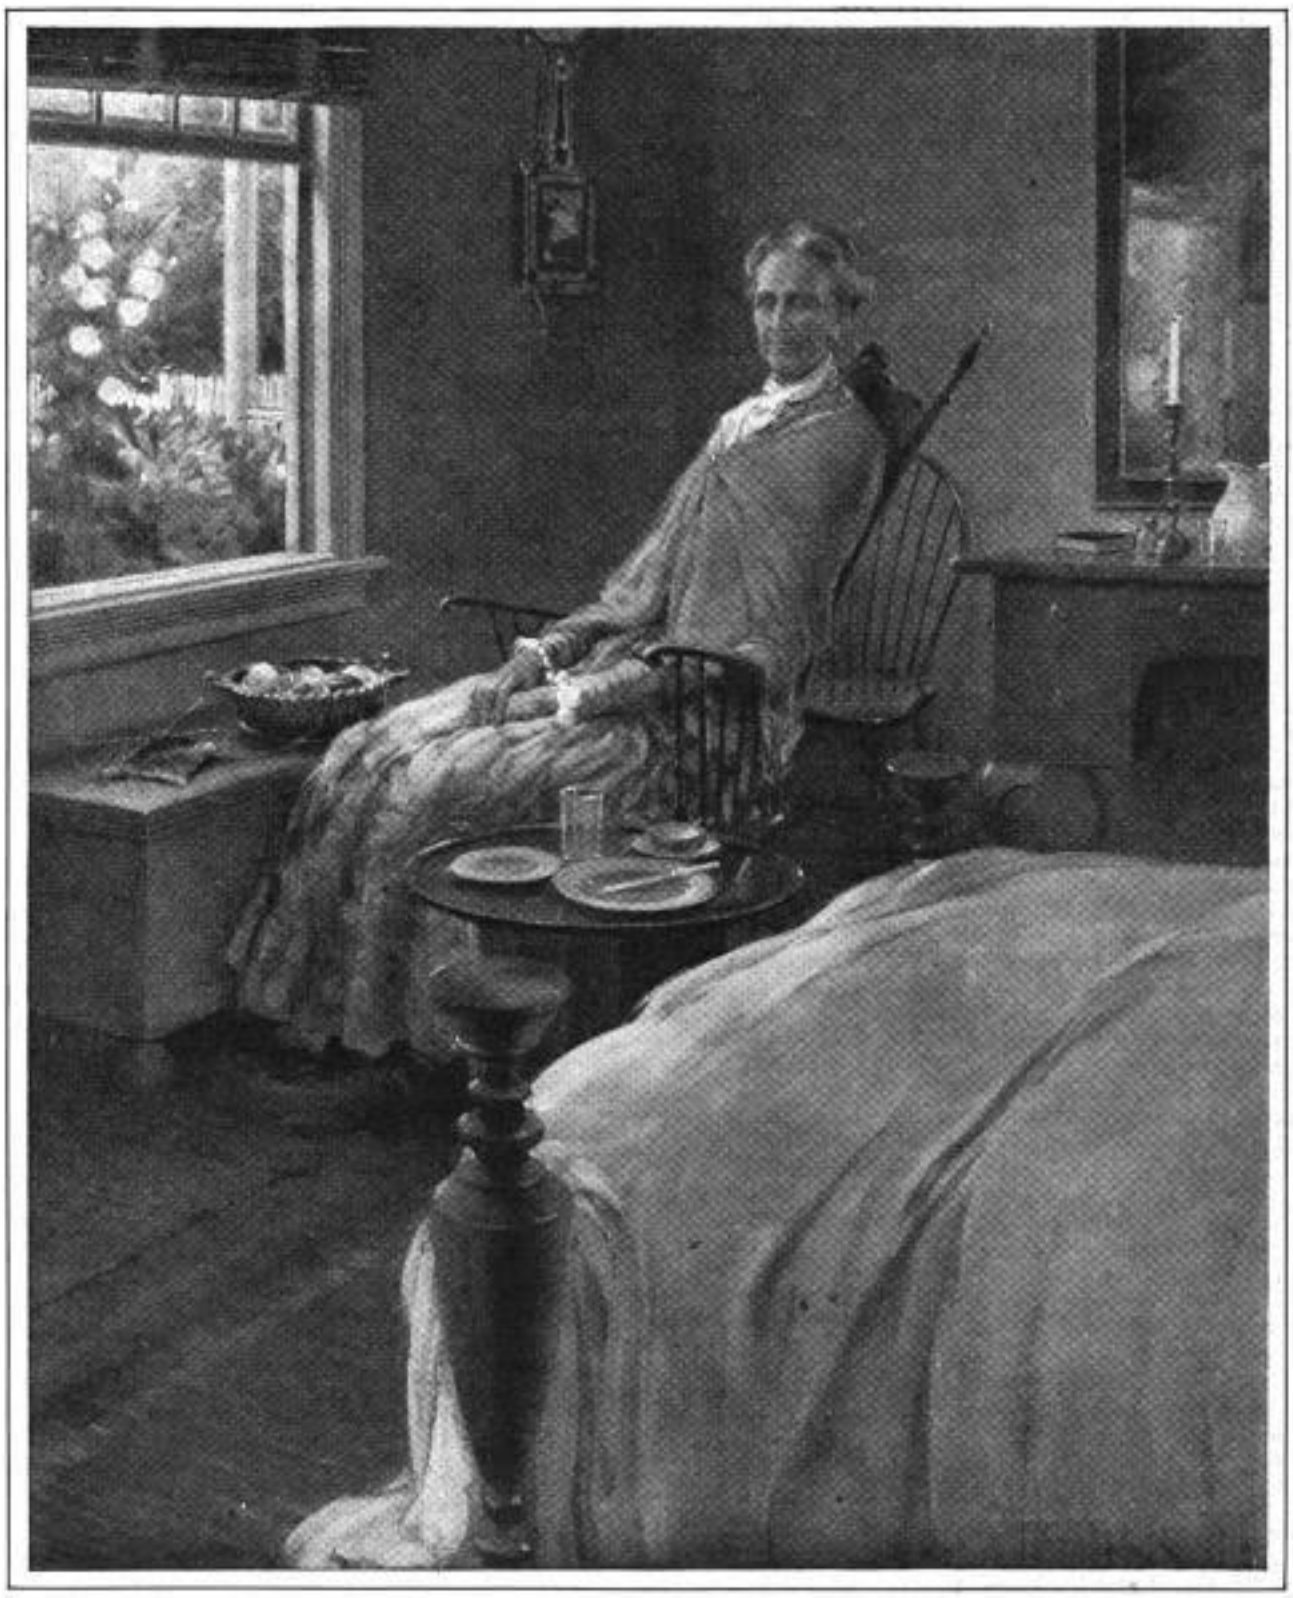
While he peeled his turnip and sliced it into his mouth, he stared at the monument raised in memory of the Confederate soldiers, which stood before him in the middle of the square and for some reason appeared to afford him amusement. The truth was, the figure of the soldier on the pedestal was of extremely short stature. This was due to the fact that the Daughters of the Confederacy, who had erected the monument, had not been able to afford the price demanded, and the skinflint sculptor shortened the legs of the hero to make up the difference. It was a sacred defect about which Ruckersville was so sensitive that it was never mentioned. No one doubts that as many men of low stature are brave as of tall stature; but the altitude of hero worship requires, if you raise a statue to the memory of a man, even if he is not over five feet high, that the thing shall be at least ten feet to produce the proper effect. Jim Bone had seen the world, particularly the world of the West, where the sense of things is gigantic. And the realistic brevity of the legs of the Confederate hero tickled him. He discovered in it that element of the grotesque that is so characteristic of the South, when it exalteth itself either in oratory or in any other form of exaggeration. The visible facts never warranted the proclamation. We are too poor in dollars and cents to evidence the greatness of our spirits.

One day as he sat contemplating the gallant pose of the duck-legged statue, with his mouth drawn back in a wedge-shaped smile and his nose tilted at the usual offensive angle above it, a sharp tenor voice interrupted his reverie:

"Sir, do you mean anything derogatory to the glory of the Confederacy by that damned grin?"

Slowly the wedge-shaped grin was turned up and fixed upon Captain Martin, who had placed himself directly, boldly, in front of the offense. It widened, increased, and it continued to mean the same thing, whatever that was.

"I say, sir, I demand satisfaction for your face! It's insulting!" He squared his poor old body, dashed at first one sleeve, then the other, to push them up, balled the skinny old hand into a fist, crooked the arm above, and grasped his biceps in the other hand with restrained emotion. His mustache bristled, his goatee worked furiously. His eyes danced with valorous frenzy.



Bone stood up, shook his loose trousers legs down, closed his clasknife with a snap, turned his back upon the captain and remarked as he walked off:

"The legs of the durn thing's too short. Glory ought always to be long in its stride."

Every day Bone devoted the kissing hour of twilight to Sylvia Story. No one suspected this, least of all Sylvia, a circumstance for which he was devoutly thankful. For he was the sworn enemy of his passion and desired to escape before it should be discovered. Nevertheless, in the late afternoon he and the dog retired to his room in the hotel, where he made an elaborate toilet. That is to say, he scrubbed thoroughly, put on a clean shirt laced with a red shoestring, exchanged his corduroy trousers for a pair of gray checked ones—which showed his symptoms only by a green thread that ran through the checks—and brushed his boots. He was with his boots as a woman is with her corset—he could not do without them. They were a part of his magnificent leg consciousness. And, no matter how hot the weather was, if he was in love he wore boots, just as Mildred Percey would have tightened the waist laces of her corset. Love is probably the first evolution in the physical history of man and the inspiration of the first bath that Adam took. You will observe that the natural primitive boy never voluntarily bathes behind his ears or shaves the back of his neck until he reaches that age of adolescence when he actually "sees a girl." Then he begins to oil his wings and perfume himself. Later he leaves off the perfume and waxes his mustache.

The dog superintended these preparations with sympathy and every appearance of masculine intelligence. He applied the test of his nose to the checked trousers and found them satisfactory. He stood in front of the poor hobbled lover and wagged his tail in unison, while the afflicted one sat down, bent double, and secretly shined his boots as far up as they could be made to shine. When they were ready to start, and the lover made sure that his hat was on sideways at the lady-killing angle, the dog leaped pleasantly upon his hindlegs and did all he could to cheer Jim Bone, for it was perfectly clear to his hound's sense of the situation that the victim resented the bondage of decking himself according to the demands of love.

The two then went out together. Mr. Bone put his hands in his pockets, smoked a cigar which sustained the same angle to his nose that a hen's tail does to her back when she sings, and meant the same thing. He strolled through the town in this style, with Bimber trotting at his heels, the dog's hindlegs about two inches farther to the right than his forelegs, and his tail held delicately at half-mast. They were observed from behind the primly starched curtains of old Mr. Percey's residence as they went by, also from behind the equally maidenly reserved curtains of the Misses Yancey's residence. But neither of them was conscious of this flattery. From sundown to dark they engaged in a leisurely, spectacular walk upon the hill and in the pasture about the old house on the edge of town, where Sylvia Story lived with her father, Mr. Clark Story. That is to say, the dog pretended to hunt in order to give his master the decent cover of an occupation. The man merely strode moodily, grandly about after Bimber, filled with indignation and disgust for himself and an unendurable longing to see Sylvia at one of the windows or out on the old hooded porch. This was denied him. She was the kind of woman a man must overtake. She would never face about and wait for him. Her experience proved that this was not necessary in her case.

"He Loves Me—He Pets Me Yet, When I am So Old," Enunciated Amy Softly, as if She Whispered a Miracle

VIII

WHEN the hour for revival services at the church arrived, the prodigal, accompanied by Tony Adams and the dog, was always to be seen, seated three benches in the rear of the congregation. Tony wore the expression of a lost boy and occupied the darkest corner. The dog sat upon the floor and had to be kicked when certain hymns were sung to keep him from adding a howling refrain. Mr. Bone covered all the remaining space. His arms were stretched as far as they could reach along the back of the bench, his legs spraddled as usual in an ungainly manner. There was nothing offensive in his expression. It was merely enigmatical, and might have resembled Satan's if he had been permitted to attend choir practice in Heaven.

Ruckersville was a church-going community. The sinners believed in God even more than the saints did. This is generally the case. As a rule, a saint gets to believe more and more in himself; but a sinner is deprived of this privilege and continues probably the dearest child of the Father in this world, being sadly conscious of his unworthiness. And it explains in terms of humanity the reasons why the publican's prayer is so much prized to this day. It is the one proper prayer ever uttered by a mere man, and for that reason it is set down in the Scriptures as a pattern.

The trouble with Ruckersville was that about a generation before the present prodigal was born the saints had got the upper hand of the situation and had created a decimated public opinion, which excluded all worldly amusements, golden ornaments, and many other things as natural for men and women to have as their hair and legs. The crop of sinners resulting from this arrangement was overwhelming. If you played cards you were lost, and

Digitized by Google

might as well go the whole hog—gamble—and have done with it. If you drank you were also lost, and might as well get drunk for the same reason. If young, male or female—but more particularly the latter—and experiencing that pastoral frivolity of the leg muscles that can only be relieved by dancing, your feet took hold on hell. You showed the evidence of a fallen nature. Virtue had gone out of you. There was not a girl or a respectable woman in Ruckersville who had ever danced a minuet or waltzed with a man's arm about her waist. It appeared that there was something contagious about either the arm or the waist. The subject was so scandalous that no one ever explained which one had the contagion. This, of course, was not the case in the old Joseph Rucker julep days of romance and king's-grant prosperity. But when your aristocrat becomes poor and religious in his pride, he is one of the narrowest-minded moral skinflints in creation. This was why there were so many well-born, bony, unmarried, chaste, poor-spirited women in the town. It also explained in part why all the men drank, played cards for money and went fox hunting in desperation. The poor creatures instinctively revolted against the lockstep of such inhuman respectability. Righteousness is a terrible thing when a conscientious fool enforces it. And if nine-tenths of us did not backslide, the world would dwindle down to a few childless ascetics on each continent and just the devil walking to and fro with all the natural instincts to tempt them back to life.

At the time of which I am writing there were but two persons in Ruckersville who had any inkling of this truth. One was Jim Bone, who was making a sort of heathen effort at comprehension as he sat behind the congregation and divided his attention between the wonderful head of Sylvia Story, who sat in the choir singing like a vestal virgin, and the general forlornness in the faces of the elder men and women, who appeared to have been saved by some kind of devastating grace.

The other person who really understood was Amy White, a blind pillar of cloud by day and of fire by night, who sat in her gorgeously flowered calico dress with some of the older women in the amen corner, dreaming her dreams and thinking up broader salvation scriptures for her little Book of Life, into which Elbert copied them from time to time. Being blind and good she could not see to divide the sheep from the goats. She was in her heart that sweet rain that falls alike upon the just and the unjust. She was forgiven by those who saw her lack of discrimination because of her limitations.

The preacher's eloquence had become fiery and concentrated since the appearance of Jim Bone in the congregation. The preacher was a good man, who firmly believed that his Heavenly Father was a severe one. His religion was a sort of spiritual penitentiary of the soul, and nothing could exceed the ardor with which he sincerely labored for the incarceration of other souls. As the prodigal sat night after night apparently unmoved, the mind of the whole congregation settled upon him. Amy felt the tension, but was unable to account for it.

One night in the midst of a poignant silence, following an invitation to sinners to come forward for prayers, she leaned over to Rachel Martin, the captain's wife, her brow sweetly puzzled with fine wrinkles, and whispered:

"Rachel, what is the matter? There must be a terrible sinner present."

It was as if she had said:

"Rachel, there must be a skunk in the house. I smell him!"

"There is!" whispered Mrs. Martin. "It's that Jim Bone, settin' yonder on the back bench as if he enjoyed damnation, makin' of himself a stumblin' block to this revival."

"I remember him years ago," returned Amy. "He wasn't a bad boy."

"No," snapped Mrs. Martin, "just bad enough to slit Tony Adams open in four places with his pocket-knife the night before he left here. And from the looks of him he hasn't improved any out West where he's been livin'."

Mrs. Martin was righteously indignant. This is the severest form of indignation known to man, because it can be indulged to any extent conscientiously. And in Ruckersville she was the very fountain of it. She was in religious circles what Mrs. Fanning-Rucker was everywhere else, the moving spirit. Rachel Martin was a stout woman, whose hats refused to become her. Her features were too drastic to harmonize with anything so feminine as a turban or a lady's bonnet. She loved the captain with all her heart, talked about her neighbors scandalously, read a leaflet at every meeting of the Woman's Missionary Society, and always prayed for "a closer walk with God." But she was not a hypocrite. She was only a spiritual ignoramus. She had the courage of her convictions, a dangerous form of valor in any kind of ignoramus. And she was now about to show it. She moved restlessly in her place beside Amy—like a setting hen so ruffled and disturbed in her nest that she has a good mind to get up, get off of it and go peck somebody. The awful absurdity of her attitude was that she believed she was being "moved by the Spirit." The silence became frightful. The preacher stood waiting. Everybody forgot that they also were sinners, and waited with him.

If the prodigal on the back bench suspected that this was his affair, he did not show it in a single lineament of his face. His repose was profound. You might have said it was gentle. He really had been moved. He had been changed; but if it had been known how changed, the preacher at least might have fainted. It is astonishing what thoughts, what strange inspirations will come to a man in church. Suddenly, as Jim sat there with the people before him, he had a sense of them, what they had suffered; the poverty and stringency of their lives touched him half humorously, half compassionately. He did not hear the exhortation nor see the sad, beseeching, mourning faces turned in his direction. He was making up his mind to redeem the place and the people from the dullness and dreariness that stupefied them. He was enjoying the sensation of a humorist and a philanthropist at the same time.

Naturally Mrs. Rachel Martin could not have known this. She arose from her place, fixed her eyes calmly, compellingly upon him, and advanced down the aisle. Nothing is more common still in many communities, especially in the South, than a church-worker who will go about in the congregation during a revival, personally exhorting particularly hardened or refractory sinners.

There was a stir in the congregation, a mere stir. No one turned his or her head any more than you would look in on a boy who is about to be spanked by his mother. Every one expected a severe struggle between Rachel and the prodigal.

Mr. Bone remained serenely unconscious. He was absorbed in the sudden unfolding of his plans for the future. He did not even observe the approach of Mrs. Martin, and it had passed out of his memory what such a visitation might signify—so long a time had elapsed since he had been in a company where one man or woman considered himself better than any other. But Tony saw and understood with the helpless alarm of a poor sheep whose transgressions have long since relegated him to the company of goats.

Mrs. Martin paused halfway down the aisle to take out her glasses and put them on. Tony took advantage of this moment of inattention to slide gently, noiselessly down out of sight. He assumed a cramped but four-legged posture very gratifying to the dog, who accepted the advent as a personal compliment and immediately made room for him.

Rachel was surprised when she got her glasses on. She thought she had seen Tony back there, but she concluded that she must have been mistaken. She went in between the benches and sat down by the prodigal, who at once recalled his attention from the plans he was elaborating and fixed it, along with his eyes, upon Mrs. Martin. He remembered her as she looked when he was a youth. She had not changed. He recalled that in those days there was an undeclared enmity between them. The nature of it had to do with a certain June-apple tree in the Rucker-Martin garden.

She sat down beside him, regarded him serenely over the top of her glasses and began:

"Jim, I knew your mother. Her grandfather was my grandfather's second cousin. She's not here to do for you as a mother would, an' I'm goin' to take her place as near as I can."

It was as if she meant:

"I owe it to the family, and cannot allow even a distant relative of mine to be damned without making a conscientious effort to save him from such a fate."

Mr. Bone understood, drew his members together, crossed his legs, furled his arms, nodded his head, and gave her a steady, disconcerting attention.

"You've been here a month now, and this meetin's been goin' on and you here every night showin' no signs of repentance. You've come home to stay, I reckon, and we want you to lay aside your wildness, make up your mind to behave yourself, get up off of this bench, and go up yonder to that altar and pray for forgiveness."

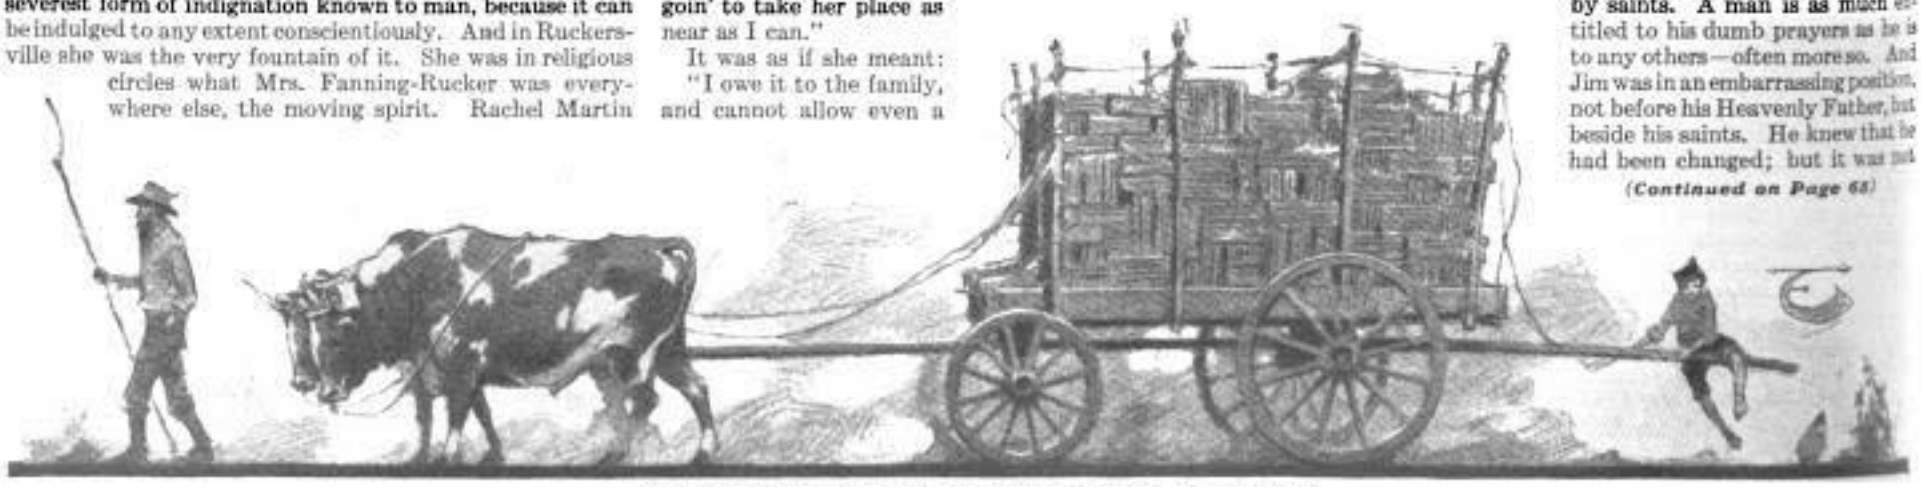
"Just as lief!" was the astonishing reply, as if he had not thought of it before. He was not repentant, being of that class of men who grow the way they are going without the pruning of public prayers. And, like many another in a similar situation, he had no compunction about acting a lie, rather than undergo the hysteria of an argument about his soul. Such a man's soul is always his spiritual $x\ y\ z$, which equals the unknown.

"Come along then!" said Rachel, rising and making way for him.

The next moment they advanced down the aisle, Mr. Bone in front, with his hands tied behind him, so to speak. He was looking straight into the eyes of Sylvia Story. If you did not understand, you might have called it a sacrilege, that queer appeal of the $x\ y\ z$ to the unknown other half of his equation. Rachel brought up the rear. You experienced a change of heart at the sight of her. The tears were streaming down her grim old face, softening it. She had done a good deed. The sod of her soul was turning green, was blossoming before your eyes. A fool may become great in the twinkling of an eye. God has arranged it so without reference to our little systems of judgment. The hypocrite is sometimes a saint for one aurora moment, and the saint does not always avoid the limelight of hypocrisy. They knelt together, side by side. It was as if Rachel wanted the Lord to see her there. We are all such children as that in the presence of Him, sometimes hiding, sometimes showing off.

On his knees the prodigal was immense. On hers, the old tartar saint was no longer absurd.

Sylvia Story was the only person who was sufficiently detached from the scene at the altar to observe what was going on in the back of the house. Slowly the head of Tony Adams reappeared. His fine, thin, blond hair was tousled. He slyly lifted himself to a sitting posture upon the bench. He wore the expression of an actor who had missed his cue and had been left in the wings on this account. It was an expression of pathetic regret. This was his fate always; and if by any chance he got the right cue he invariably went on a spree and lost it. The dog crept out in the aisle, sat down, and pointed his nose inquisitively at the kneeling figure of his master. It seemed to him that he had better remain in the background with Tony. He hoped everything would turn out for the best. Still, that was a very queer, unmasterly attitude in which he beheld his master.



Young Mr. Ellis, the minister, stood inside the altar rail, wearing that peculiar animation of the transfigured human. If he had been Peter on the Sea of Galilee and had caught one fish—a leviathan—in his net, he could not have been better satisfied. Still, he looked out over the congregation and said: "Is there not another?"

No one moved. Apparently there was not. The sea flowed by in the sweet smile of thankful faces. He lifted his hands. "Let us pray!"

That is always a majestic sentence. It brings the Maker of the heavens and the earth upon the scene. It banishes the sneers of the world; it makes an atheist look like a rotten gourd. No matter what errors of doctrine went before, or what shallow sentimentality of singing, or how many hypocrites or sinners are present, the curtain rises for a moment upon the far eternity of man, and we have a fleeting glimpse of little stars holding up their hands to shut out the too-great glory of God.

It is neither here nor there that a few younger, prayer-messenger angels may have tittered at the dumbness of the prodigal kneeling so well-flanked by saints. A man is as much entitled to his dumb prayers as he is to any others—often more so. And Jim was in an embarrassing position, not before his Heavenly Father, but beside his saints. He knew that he had been changed; but it was not

XXX

ARNOLD stood quite still for several moments. The shock seemed to deprive him of the power of speech.

"Is it my fancy," Sabatini inquired, "or is the name familiar to you?"

"The name is familiar," Arnold confessed. Sabatini for a moment appeared to be puzzled.

"Lalonde," he repeated to himself. "Why, Lalonde," he added, looking up quickly, "was the name of the young lady whom you brought with you to Bourne End. An uncommon name too."

"Her uncle," Arnold declared—"the same man beyond a doubt. The police tried to arrest him two days ago and he escaped. You might have read of it in the paper. It was spoken of as an attempt to capture an anarchist. Lalonde fired at them when he made his escape."

Sabatini sighed.

"It is a small world," he admitted. "I know all about Isaac Lalonde, but I am very sorry indeed to hear that the young lady is connected with him. She seemed—I hope you will forgive me—to speak as though she lived in straitened circumstances. Do you mind telling me whether this event is likely to prove of inconvenience to her?"

Arnold shook his head.

"I am making arrangements to find her another apartment," he said. "We have been through some very dark times together. I feel that I have the right to do everything that is necessary. I have no one else to support."

Sabatini hesitated.

"If one might be permitted——" he began with what was for him a considerable amount of diffidence.

Arnold interposed a little brusquely.

"The care of Ruth Lalonde is upon my shoulders," he insisted. "There can be no question about that. From me it is not charity, for she shared her meals with me when I was practically starving. I am going to ask you more questions."

"Proceed, by all means," Sabatini invited.

"Was Starling concerned in this Rosario affair?"

"Not directly," Sabatini admitted.

"Then why," Arnold demanded, "does he hide and behave like a frightened child?"

"A pertinent question," Sabatini agreed. "You have to take into account the man's constitutional cowardice. It is a fact, however, that he was perfectly well aware of what was going to happen, and there are circumstances connected with the affair—a document, for instance, which we know to be in the hands of the police—that account for their suspicions and would certainly tend to implicate our friend Starling. It would be quite easy to make out a very strong case against him."

"I do not understand," Arnold said after several moments' silence, "what interest Isaac Lalonde could possibly have had in killing Rosario."

Sabatini contemplated for a few moments the tip of his shoe. Then he sighed gently and lit a cigarette.

"For a young man," he remarked, "it is certain that you have a great deal of curiosity. Still you have also, I believe, discretion. Listen then. There is a certain country in the south of Europe which all those who are behind the scenes know to be on the brink of a revolution. The capital is already filled with newspaper correspondents; the thunder mutters day by day. The army is unpaid and full of discontent. For that reason it is believed that their spirit is entirely revolutionary. Every morning we who know expect to read in the papers that the royal palace has been stormed and that the king is an exile. This was the state of things until about a week ago. Did you read the papers on Tuesday morning last?"

Arnold shook his head. "Perhaps," he replied. "I saw nothing that I can remember."

"That morning," Sabatini continued—"the morning of Rosario's death—one read that the government of that country, which had vainly applied for a loan to all the bankers of Europe with a view to satisfying the claims of the army and navy, had at last succeeded in arranging one through the intervention of Rosario. The paragraph was probably inspired, but it spoke plainly. It went so far even as to say that the loan had probably averted a revolution. The man who had saved the monarchy of an ancient nation was Rosario. One of his rewards, I think, was to have been a title and a distinguished order. It was understood among us that this was the real bait. Rosario's actual reward you know of."

"But where does Isaac Lalonde come in?" Arnold demanded.

"Isaac Lalonde," Sabatini said, "is the London secretary of the revolutionary party of the country of which I have been speaking. I think," he concluded, "that your intelligence will make the rest clear."

Sabatini Paused Only to Light a Cigarette and Read the Telegram He Held Between His Fingers

With the palm of his hand Arnold struck the table on the edge of which he was sitting.

"Look here," he asked hoarsely; "if you knew all these things, if you knew that Isaac Lalonde had committed this murder, why do you go about with your lips closed? Why haven't you told the truth? An innocent man might be arrested at any time."

Sabatini smiled tolerantly.

"My dear fellow," he said, "why should I? Be reasonable! When you reach my age you will find that silence is often best. As a matter of fact, in this case my sympathies are very much involved. It is in the mind of many of those who hold the strings that when that revolution does take place it will be I who shall lead it."

Arnold was again bewildered.

"But you," he protested, "are of the ancient nobility of Europe. What place have you among a crowd of anarchists and revolutionaries?"

"You jump at conclusions, my young friend," Sabatini remarked. "The country of which we have spoken is my country, the country from which by an unjust decree I am exiled. There are among those who desire a change of government many aristocrats. It is not the democracy only whose hatred has been aroused by the selfish and brutal methods of the reigning house."

Arnold got down from his table and walked to the window. The telephone rang with some insignificant inquiry from a customer. The incident somehow relieved him. It brought him back to the world of everyday events. The reality of life once more obtruded itself upon his conscience. All the time Sabatini lounged at ease and watched Arnold, always with the faint beginning of a smile upon his lips.

"What I have told you," the latter continued after a few moments' pause, "must not during these days pass beyond the four walls of this singularly uninviting-looking apartment. I have nothing to add to or take from what I have said. The subject is closed. If you have more questions on any other subject I have still a few minutes."

"Very well, then," Arnold said, coming back to his place, "let us consider the Rosario matter disposed of. Let us go back for a moment to Starling. Tell me why you and your sister saw danger to yourselves in Starling's nervous breakdown? Tell me why, when I returned to Pelham Lodge with her that night, she found a dead man in her room, a man whose body was afterward mysteriously removed?"

"Quite a spirited number of questions," Sabatini remarked. "Well, to begin with, then, Rosario signed his death-warrant the moment he wrote his name across the parchment that guaranteed the loan. On the night when you first visited Pelham Lodge we heard the news. I believe that Lalonde and his friends would have killed him that night if they could have got at him. Lalonde, however, was a person of strange and inaccessible habits. He hated all aristocrats and he refused even to communicate with me. Speaking for myself, I was just as determined as Isaac Lalonde that Rosario should never conclude that loan. I told him so that night—Starling and I together. It was thought necessary, by those whose word I am content to accept, that what I had to say to Rosario should come through Starling. It was Starling, therefore, who told him what his position would be if he proceeded farther. I must admit that the fellow showed courage. He took a note of Starling's words, which he declared at the time should be deposited in his safe, so that if anything should happen to him some evidence might be forthcoming. The police without a doubt have been in possession of this document, and curiously enough Starling was at the Milan that day. You will perceive, therefore, that in the absence even of a reasonable alibi it might be difficult to prove his innocence. To our surprise, however—for we had some faith in the fellow—instead of taking this matter with the indifference of a brave man he has chosen to behave like a child. In his present half-maudlin state he would, I am afraid, if in serious danger of conviction, make statements likely to cause a good deal of inconvenience to myself, my sister's friends and others."

"Does he know himself who committed the murder?" Arnold asked.

Sabatini smiled.

"Perfectly well," he admitted, "but the fact helps him very little. Isaac Lalonde is rather a notable figure among European criminals. He belongs to a company of anarchists well-meaning but bloodthirsty, who hold by one another to the death. If Starling to save himself were to disclose the name of the real murderer he would simply make his exit from this life with a knife through his heart instead of the hangman's rope about his neck. These fellows, I believe, seldom commit crimes, but they are very much in earnest and very dangerous. If you ever happen to meet one of them with a red signet ring upon his fourth finger you can look out for trouble."

Arnold shivered for a moment.

"I have seen that ring," he murmured.

"You were a spectator of the tragedy, I remember," Sabatini agreed pleasantly. "Now are you quite satisfied about Starling?"

"I have heard all I want to about that," Arnold admitted.

"We come, then, to your last question," Sabatini said. "You demand to know the meaning of the unfortunate incident that occurred in my sister's boudoir. Here I think that I am really going to surprise you."

"Nothing," Arnold declared fervently, "could surprise me. However, go on."

"Neither Fenella nor myself," Sabatini asserted, "has the slightest idea as to how that man met with his death."

"But you know who he was?" Arnold asked. "You know why he was watching your house, why he seems to have broken into it?"

"I can assure you," Sabatini repeated, "that not only am I ignorant as to how the man met with his death, but I have no idea what he was doing in the house at all. The night Rosario was there it was different. They were on his track then, without a doubt, and they meant mischief. Since then, however, there has been a pronounced difference of opinion between the two branches of the revolutionary party—the one that I represent and the one that

Digitized by Google

includes Lalonde and his friends. The consequence is that although we may be said to be working for the same ends we have drawn a little apart. We have had no communications whatever with Lalonde and his friends since the murder of Rosario. Therefore, I can only repeat that I am entirely in the dark as to what that man was doing in my sister's rooms or how he met with his death. You must remember that these fellows are all more or less criminals. Lalonde, I believe, is something of an exception, but the rest of them are at war with society to the extent of enriching themselves at the expense of their wealthier neighbors on every possible occasion. It is quite likely that the night they were watching Rosario it may have occurred to them that my sister's room contained a good many valuable trifles and was easily entered, especially as they seem to have had a meeting-place close at hand. That, however, is pure surmise. You follow me?"

Arnold sighed.

"In a way I suppose I do," he admitted. "But—it isn't easy, is it?"

"These matters are not easy," Sabatini agreed. "There are motives and counter-motives to be taken note of with which at present I do not weary you. I give you the clew. It is enough."

"But the mystery of the man's body being removed——" Arnold began.

Sabatini shrugged his shoulders.

"Our knowledge ends with what I have told you," he said. "We have no idea who killed the man, and what we know about his removal we know only from what you saw."

Arnold sat thinking for several moments. The telephone rang and some one inquired for Mr. Weatherley. When he had answered it he turned once more to his visitor.

"Do you know," he remarked, "that nothing that you have yet told me throws the slightest light upon the disappearance of Mr. Weatherley?"

Sabatini smiled.

"Ah! Well," he said, "I am afraid that as yet I have not fully appreciated that incident. In France it is by no means unusual that a man should take a hurried journey from his family. I, perhaps, have not sufficiently taken into account Mr. Weatherley's exactness and probity of life. His disappearance may, indeed, have a more alarming significance than either my sister or I have been inclined to give it, but let me assure you of this, my dear Chetwode, that even if Mr. Weatherley has come to serious grief neither Fenella nor I can suggest the slightest explanation for it. She knows of no reason for his absence. Neither do I. She is, however, just as convinced as I am that he will turn up again, and before very long."

Sabatini pushed away his chair and prepared to leave. His hand fell carelessly and yet almost affectionately upon the young man's shoulder.

"Perhaps," he said quietly, "I am what you are doubtless thinking me—something of a *poseur*. Perhaps I do like making a tax upon your sober British rectitude. I will admit that the spirit of adventure is in my heart; I will admit that there is in my blood the desire to take from him who hath and give to him who hath not; but on the other hand I have my standards, and I seriously do not think that you would be risking very much if you accepted my invitation to lunch today."

Arnold held out his hand.

"If I hesitate for a single moment," he replied frankly, "it is because of my work here. However, as you say that Mrs. Weatherley will be there, I will come."

"We shall look forward to the pleasure then," Sabatini concluded. "Now I will leave you to go on with your money-coining. *Au revoir!*"

He strolled gracefully out, pausing on his way through the clerks' office to offer a courteous farewell to Mr. Jarvis. The great automobile glided away. Arnold came back from the window and sat down in front of his desk. Before his eyes was a pile of invoices, in his brain a strange medley of facts and fancies.

Mr. Jarvis came bustling in.

"About those Canadian hams, Chetwode," he began.

Arnold recognized the voice of his savior.

"We'll go into the matter at once," he declared briskly.

XXXI

IT SEEMED to Arnold that he had passed indeed into a different world as he followed Count Sabatini's austere-looking butler across the white stone hall into the cool dining room, where the little party he had come to join was already at luncheon. Outside an unexpected heat seemed to have baked the streets and drained the very life from the air. Here the blinds were closely drawn; the great height of the room with its plain, faultless decorations, its piles of sweet-smelling flowers and the faint breeze that came through the closely drawn Venetians, made it like a little oasis of coolness and repose. The luncheon party consisted of four people—Count Sabatini himself, Lady Blennington, Fenella and a young man Arnold had seen once before, who was attached to one of the Legations. Fenella held out both her hands.

"I'm afraid I am late," Arnold said.

"It is my fault for not mentioning the hour," Sabatini interposed. "We are Continental in our tastes and we like to breakfast early."

"In any case you would be forgiven," Fenella declared with a fleeting smile, "for this, as you know, is our party of reconciliation."

"What, have you two been quarreling?" Lady Blennington exclaimed. "You don't deserve to have admirers, Fenella. You always treat them badly. How is it you've never been to see me, Mr. Chetwode?"

"Not because I have forgotten your kind invitation," Arnold replied, taking the chair by Fenella's side which the butler was holding for him. "Unfortunately I am at work nearly every afternoon."

"Mr. Chetwode is my husband's secretary now, you must remember," Fenella remarked, "and during his absence he naturally finds a great deal to do."

"Well, I am sure I am only too glad," Lady Blennington said, "to hear of a young man who does any work at all nowadays. They mostly seem to do nothing but hang about looking for a job. When you told me," she continued, "that you were really in the city I wasn't at all sure that you were in earnest."

Sabatini sighed.

"I can assure you, Lady Blennington," he declared, "that so far as my sex is represented here today we are very strenuous people indeed. Signor Di Marito here carries upon his shoulders a burden just at the present moment that few of the ambassadors would care to have to deal with. Mr. Chetwode I have visited in his office, and I can assure you that so far as regards his industry there is no manner of doubt. As for myself——"

Lady Blennington interrupted gayly.

"Come," she said, "I believe it of these two others if you insist, but you are not going to ask us to believe that you, the personification of idleness, are also among the toilers!"

Sabatini looked at her reproachfully.

"One is always misunderstood," he murmured. "This morning, as a matter of fact, I have been occupied since daybreak."

"Let us hear all about it," Lady Blennington demanded.

"My energies have been directed into two channels," Sabatini announced. "I have been making preparations for a possible journey and I have been trying to find a missing man."

Arnold looked up quickly. Fenella paused with her glass raised to her lips.

"Who is the missing man?" Lady Blennington asked.

"Mr. Weatherley," Sabatini replied. "We can scarcely call him that, perhaps, but he has certainly gone off on a little expedition without leaving his address."

"Well, you amaze me!" Lady Blennington exclaimed. "I never thought that he was that sort of a husband."

"Did you make any discoveries?" Arnold asked.

Sabatini shook his head.

"None," he confessed. "As an investigator I was a failure. However, I must say that I prosecuted my inquiries in one direction only. It may interest you to know that I have come to the conclusion that Mr. Weatherley's disappearance is not connected in any way with the matters of which we spoke this morning."

"Then it remains the more mysterious," Arnold declared.

"Fenella, at any rate, is not disposed to wear widow's weeds," Lady Blennington remarked. "Cheer up, dear, he'll come back all right. Husbands always do. It is our other intimate friends who desert us."

Fenella laughed.

"I am quite sure that you are right," she admitted. "I am not really worried at all. It is a very annoying manner, however, to go away, this—a desertion most unceremonious. And now Andrea here tells me that at any moment he too may leave me."

They all looked at him. Count Sabatini inclined his head gravely.

"Nothing is decided," he said. "I have friends abroad who generally let me know when things are stirring. There is a little cloud—it may blow over or it may be the presage of a storm. In a day or two we shall know."

"You men are to be envied," Lady Blennington sighed, speaking for a moment more seriously. "You have the power always to roam. You follow the music of the world wherever you will. The drum beats, you pull up your stakes and away you go. But for us poor women, alas! there is never any pulling up of the stakes. We, too, hear the music—perhaps we hear it oftener than you—but we may not follow."

"You have compensations," Sabatini remarked.

"We have compensations, of course," Lady Blennington admitted, "but what do they amount to after all?"

"You have also a different set of instincts," Signor Di Marito interposed. "There are other things in the life of a woman than to listen always to the wander music."

"The question is as old as the hills," Fenella declared, "and it bores me. I want some more omelet. Really, Andrea, your chef is a treasure. If you get your summons I think that I shall take him over. Who will come to the theater with me tonight? I have two stalls."

"I can't," Lady Blennington remarked. "I am going to a foolish dinner party; besides which, of course, you don't want to be bothered with a woman."

"Nor can I," Sabatini echoed. "I have appointments all the evening."

"I, alas!" Signor Di Marito sighed, "must not leave my post for one single moment. These are no days for theater-going for my poor countrymen."

"Then the duty seems to devolve upon you," Fenella decided, smiling toward Arnold.

"I am sorry," he replied, "but I too seem to be unfortunate. I could not possibly get away from the city in time."

"Absurd!" Fenella answered a little sharply. "You are like a boy with a new hobby. It is I who wish you to leave when you choose."

"Apart from that," Arnold continued, "I am sorry, but I have an engagement for the evening."

She made a little grimace.

"With your invalid friend?"

Arnold assented.

"I should not like to leave her alone this evening. She has been in a great deal of trouble lately."

There was a moment's silence. A slight frown had gathered on Fenella's forehead.

"I noticed that she was dressed wholly in black," she remarked. "Perhaps she is in trouble because she has lost a relative lately?"

"She appears to have no relatives in the world," Arnold declared, "except an uncle, and he, I am afraid, is a little worse than useless to her."

Sabatini, who had been listening, leaned a little forward.

"She lives entirely alone with the uncle of whom you have spoken?" he asked.

"Up till yesterday she has done so," Arnold answered gravely. "Just at present, as you know, he has gone away. I only wish that I could find him."

"Going away, as you put it," Fenella murmured, "seems to be rather the fashion just now."

Arnold glanced up quickly, but her expression was entirely innocent. He looked across the table, however, and found that Sabatini was watching him pensively. Fenella leaned toward him. She spoke almost in a whisper, but her tone was cold, almost unfriendly.

"I think," she said, "that with regard to that young woman you carry chivalry too far."

Arnold flushed slightly. Then Sabatini with a little murmur of words changed the conversation. Once more it became entirely general, and presently the meal drew toward a pleasant termination and Fenella and Lady Blennington left together. At the moment of departure the former turned toward Arnold.

"So I cannot induce you to become my escort for tonight?" she asked.

There was appeal, half humorous, half pathetic, in her eyes. Arnold hesitated, but only for a moment.

"I am sorry," he said, "but indeed I shall not be able to leave the office until after the time for the theater."

"You will not obey my orders about the office?"

"I could not in any case leave Ruth alone this evening," he replied.

Fenella turned away from him. The little gesture with which she refused to see his hand seemed to be one of dismissal.

"Signor Di Marito, you will take us to the automobile, will you not?" she said. "Perhaps we can drop you somewhere? Goodby, Andrea, and thank you very much for your charming luncheon. If the message comes you will telephone, I know."

Arnold lingered behind while Sabatini showed his guests to the door. When he too would have left, however, his host motioned him to resume his chair.

"Sit down for a few minutes," he begged. "You have probably seen enough of me for today, but I may be called away from England at any moment and there is a question I want to ask you before I go."

Arnold nodded.

"You are really in earnest, then, about leaving?" he asked.

"Assuredly," Sabatini replied. "I cannot tell you exactly how things may go in my country, but if there is a rising against the reigning house a Sabatini will certainly be there. I have had some experience in soldiering and I have a following. It is true that I am an exile, but I feel that my place is somewhere near the frontier."

Arnold glanced enviously at the man who lounged in the chair opposite to him. Count Sabatini seemed to carry even about his person a flavor from the far-off land of adventures.

"What I want to ask you is this," Sabatini said: "A few minutes ago you declared that you were anxious to discover the whereabouts of your little friend's uncle. Tell me why."

"I will tell you with pleasure," Arnold answered. "You see she is left absolutely alone in the world. I do not grumble at the charge of her, for when I was nearly starving she was kind to me and we passed our darkest days together. On the other hand, I know that she feels it

Digitized by Google

keenly, and I think it is only right to try and find out if she has no relatives or friends who could possibly look after her."

"It is perfectly reasonable," Sabatini confessed. "I can tell you where to find Isaac Lalonde if you wish."

Arnold's little exclamation was one almost of dismay.

"You know?" he cried.

"Naturally," Sabatini admitted. "You have a tender conscience, my young friend, and a very limited knowledge of the great necessities of the world. You think that a man like Isaac Lalonde has no real place in a wholesome state of society. You have some reason in what you think, but you are not altogether right. In any case this is the truth. However much it may horrify you to know it, and notwithstanding our recent difference of opinion, communications have frequently taken place between the committee that is organizing the outbreak in Portugal, as one of which you may number me, and the extreme anarchists whom Isaac represents."

"You would not really accept aid from such!" Arnold exclaimed.

Sabatini smiled tolerantly.

"There are many unworthy materials," he said, "that go to the building of a great structure. Youth rebels at their use, but age and experience recognize their necessity. The anarchist of your halfpenny papers and police news is not always the bloodthirsty ruffian that you who read of him are led to suppose. Very often he is a man who strenuously seeks to see the light. It is not always his fault if the way that is shown him to freedom must sometimes cross the rivers of blood."

Arnold moved uneasily in his chair. His host spoke with such quiet conviction that the stock arguments that rose to his lips seemed, somehow, curiously ineffective.

"Nevertheless," he protested, "the philosophy of revolutions ——"

"We will not discuss it," Sabatini declared with a smile. "You and I need not waste our time in academic discussion. These things are beside the mark. What I had to say to you is this: If you really wish to speak with Isaac Lalonde and will give me your word to keep the knowledge of his whereabouts to yourself I can tell you where to find him."

"I do wish to speak to him for the reasons I have told you," Arnold replied. "If he were to disappear from the face of the earth, as seems extremely probable at the present moment, Ruth would be left without a friend in the world except myself."

Sabatini wrote an address upon a small slip of paper.

"You will find him there," he announced. "Go slowly, for the neighborhood is dangerous. Can I drop you anywhere?"

Arnold shook his head.

"Thank you," he said, "I must go straight back to the office. I have already been absent too long. I will take the tube from the corner."

Sabatini escorted his guest to the door. As they stood there together, looking down into the quiet street, Sabatini laid his hand upon the young man's shoulder.

"I will not say goodby," he declared, "because, although I am here waiting all the time, I do not believe that the hour has come for me to go. It will be soon, but not just yet. When we first met I thought that I should like to take you with me. I thought that the life in what will become practically a new country would appeal to you. Since then I have changed my mind. I have thought of my own career and I have seen that it is not the life or career for a young man to follow. The adventures of the worker in the cities are a little grayer, perhaps, than those that come to the man who is born a wanderer, but they lead home just as surely—perhaps more safely. *Au revoir!*" He turned away abruptly. The door was softly closed. Arnold went down the steps and set his face cityward.

XXXII

ARNOLD, as he neared the end of his journey, felt indeed that he had found his way into some alien world. The streets through which, after many directions, he had passed had all been strange to him, strange not only on account of their narrowness, their poverty, their ill flavor, but on account also of the foreign names above the shops, the street cries and the dark, unfamiliar aspects of the people. After losing his way more than once he discovered at last a short street branching out of a narrow but populous thoroughfare. There were no visible numbers, but, counting the houses on the left-hand side and finding the door of the seventh open, he made his way inside. The place was silent and seemed deserted. He climbed the stairs to the second story and knocked at the door of the front room. So far, although barely a hundred yards away was a street teeming with human beings, he had not seen a soul in the place.

His first knock remained unanswered. He tried again. This time he heard a movement or sound inside that he construed as an invitation to enter. He threw open the door and stepped inside. The blind was closely drawn, and to his eyes, unaccustomed to the gloom, there seemed to be no one in the place. Suddenly the fire of an electric torch flashed into his eyes, a familiar voice from a distant corner addressed him.

"What are you doing here?"

The light was as suddenly turned off. Arnold could see now that the man whom he had come to visit had barricaded himself behind an upturned table in the distant corner of the room.

"I want a word or two with you, Isaac," Arnold said.

"Who told you where to find me?"

"Count Sabatini."

"Have you told any one else?"

"No!"

"Are you alone?"

"Absolutely."

Isaac came slowly out into the room. His appearance, if possible, was a little more ghastly even than when Arnold had seen him last. He was unshaven and his eyes shone with the furtiveness of some hunted animal. In his hand he was holding a murderous-looking pistol.

"Say what you want—be quick—and get away," Isaac muttered. "I am not here to receive visitors—not your sort anyway. You understand that?"

"You seem to be prepared to receive some one in a most unpleasant manner," Arnold said gravely. "Is that sort of thing worth while, Isaac?"

"Worth while!"

There was a brief pause. Arnold, having asked his question, was looking at his companion half in horror, half in pity. Isaac, white with passion, seemed unable for the moment to make any intelligible reply. Then, drawing in his breath as though with an effort, he walked past Arnold and stood for a moment on the threshold of the door, listening intently. Satisfied, apparently, that there was nothing to be heard save the usual street noises, he closed the door softly and came back into the room.

"You," he said to Arnold, "are one of the clods of the earth to whom it is not given to understand. You are one of those who would fall before the carriages of the rich and hold out your hands for their alms. You are one of those who could weep and weep and watch the children die, wringing your hands, while the greedy ones of the world stuff themselves at their costly restaurants. The world is full of such as you. It is full, too, of many like myself, in whose blood the fever burns, into whose brain the knowledge of things has entered, in whose heart the iron burns."

"That's all right for Hyde Park," Arnold declared bluntly, "but do you imagine you are going to help straighten the world by this sort of thing?"

"In my way I am," Isaac snarled. "What do you know of it, you smooth-faced, healthy young animal, comfortably born, comfortably bred, falling always on your feet in comfortable fashion with the poison of comfort in your veins. You look at my pistol as an evil thing because it can spell the difference between life and death."

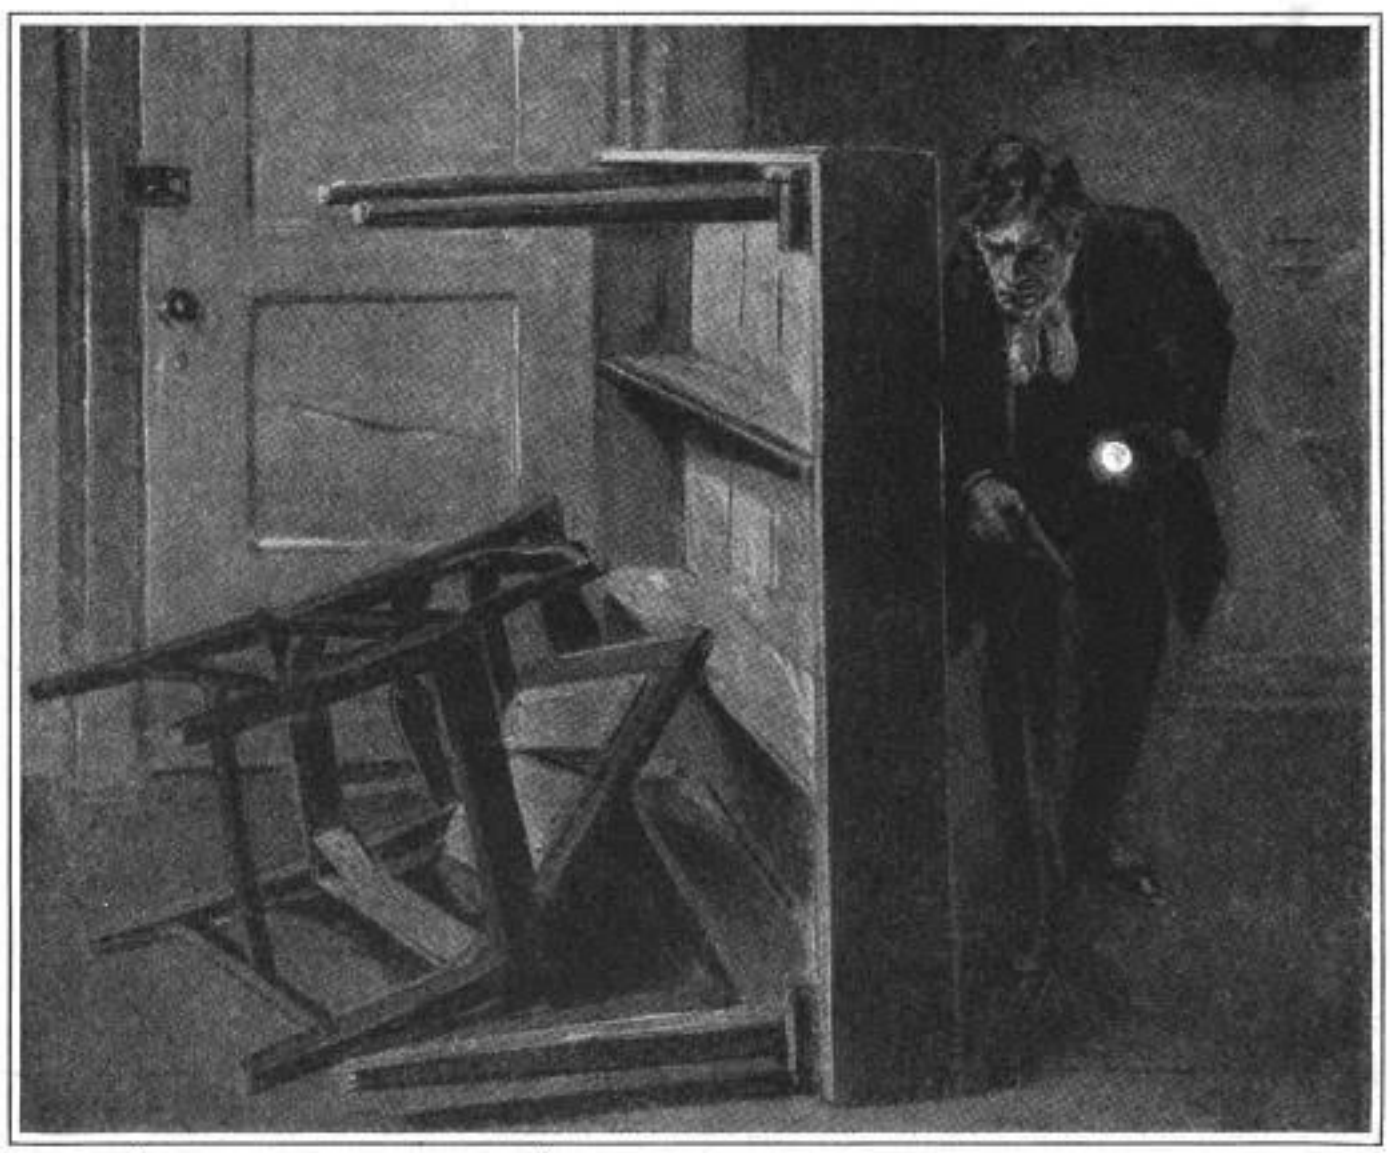
"It's the wrong method, Isaac," Arnold insisted earnestly.

Isaac threw out his hand—a little gesture half of contempt, not altogether without its touch of dignity.

"This isn't any place for words," he said, "nor is it given to you to be the champion of your class. Let me alone. Speak your errand and be gone! No one can tell when the end may come. It will be better for you, when it does, that you are not here."

"I have come on account of your niece whom you left penniless and homeless," Arnold said sternly. "With your immense sympathy for others, perhaps you can explain this little act of inattention on your part."

Isaac's start of surprise was genuine enough.



"I had forgotten her for the moment," he admitted curtly. "I saw the red fires that night and since then there has been hardly a moment to breathe or think—nothing to do but get ready for the end. I had forgotten her."

"She is safe for the present," Arnold told him. "My circumstances have improved and I have taken a small flat in which there is a room for her. This may do for the present, but Ruth, after all, is a young woman. She is morbidly sensitive. However willing I may be, and I am willing, it is not right that she should remain with me. I have always taken it for granted that save for you she has no relatives and no friends. Is this the truth? Is there no one whom she has the right to ask for a home?"

Isaac was silent. Some movements in the street below disturbed him and he walked with catlike tread to the window, peering through a hole in the blind for several moments. When he was satisfied that nothing unusual was going on he came back.

"Listen," he said hoarsely. "I am a dead man already in all but fact. I can tell you nothing of Ruth's relatives. Better that she starved on the streets than found them.

PHILADELPHIA, MARCH 2, 1912

The Craze for Commissions

FIVE years ago Congress enacted that the Department of Commerce and Labor investigate and report upon "the industrial, social, moral, educational and physical condition of woman and child workers in the United States, wherever employed."

Congress, of course, has no power to legislate concerning the social, moral and physical condition of workers outside the District of Columbia, except possibly in certain cases where the work is a part of interstate commerce. The investigation was made, however, and the report is being published in forty-five volumes at a cost said to exceed three hundred thousand dollars.

It is now proposed that Congress shall establish in the Department of Commerce and Labor a permanent Children's Bureau—"to investigate and report upon all matters pertaining to the welfare of children and child life." There are not many mundane matters that do not in some way or other pertain to the welfare of children and child life, and that consequently would be outside the jurisdiction of this bureau; but, with rare exceptions, only the states can legislate upon the matters which the bureau would investigate. Since only the states can legislate it is urged that only the states should investigate; but a state that is backward about legislating would certainly be even more backward about investigating, and a report by the Federal Government might force its hand. In short, the bureau might be a very effectual muckraker of the backward states—and that seems to be its chief recommendation.

Constitutionally speaking, any state has an unquestioned right to be as backward as it pleases in regard to child welfare or any other social matter; but the strictly constitutional view of the relations between state and Federal Government is rapidly giving way. Not only does Congress steadily gain a wider field for direct legislation, but there is a constant demand that it help—indirectly—to do what it has no power to accomplish by direct act. In other words, the United States, like the industrial companies, tends more and more to consolidate.

Disorganized Uncle Sam

THE United States tends rapidly to consolidate. The powers and activities of the central Government, as compared with those of the states, steadily expand. Instead of striving, according to the Jeffersonian formula, to have the Federal Government do as little as possible, we are striving every day to have it do as much as possible. The Supreme Court gives it an ever-widening field for direct legislation, and investigations into matters that it cannot directly legislate upon are increasingly demanded of it. The reports upon woman and child workers and the Children's Bureau Bill are examples. Evidently the time is near at hand—if it has not already arrived—when virtually every business and social relationship will be, in some degree or other, under the hand of the general Government.

However, the Government itself doesn't consolidate. Its organization is a good deal what it was under Jefferson. The recent report of the President's efficiency commission shows how little unity there is in the huge concern at Washington. Every new bureau and every new investigation goes serenely on its own way. Congress hastily tacks on an office here, a commissionership there, in response to the pressing demand of people who are interested in that particular bit of work; but real organization is quite lacking. President and Cabinet are busy also with pressing demands of the moment, usually of a political nature. There is no board of directors—no executive committee—looking over the whole machine with an eye single to its most efficient working. "Who on earth," Senator Gallinger feelingly inquired, "is going to read forty-five volumes of a report on woman and child workers?" Nobody, we fear; and nobody, it seems, had any idea there was to be a forty-five-volume report. The investigation began with a very modest appropriation, which was increased year by year. It is all done piecemeal—which means it is all done wastefully. Why not organize?

A Banking Scandal

THE banking business in the United States probably pays about seven per cent on the money invested. Dividends paid by the national banks last year amounted to six and three-quarter per cent on the combined capital and surplus of the banks; and it is seldom that stock can be bought in a bank at less than its book value, including the surplus. City bank stocks usually sell, year in and year out, decidedly higher than any other class of shares in proportion to dividends paid—at such a premium that the purchaser gets only three or four per cent on the money invested. Of course, all the hazards incident to banking fall, first of all, upon the stockholder. The purchaser of bank stock must assume the risk, in case the concern fails, not only of losing his original investment but of being assessed to pay the depositors.

The steady demand for the stock of well-established banks at a high premium by expert investors shows, of course, how remote the chance of failure is; but that alone hardly explains the preference for bank-stock investments. Banking is the most genteel of trades. It receives, by and large, greater respect than any other. The banker, by immemorial custom, is a sort of quasi-public dignitary. Which brings us round to the point that several states—to their own disgrace and to the disgrace of their bankers—still permit the scandal of absolutely unregulated, unsupervised "private" banks of deposit. Any tramp who comes along can hang out a sign advertising himself as a "bank" and, playing upon the public's confidence in banks, take in deposits. This scandal could not continue if the bankers in those states discharged their duty to the public by denouncing it. No unregulated, uninspected bank of deposit should be tolerated anywhere.

The Short Story on the Stage

A FEW years ago the standard vaudeville program was taken up with song-and-dance artists, jugglers, contortionists, monologists, trained dogs and performing seals. Nowadays the typical program will contain two or three one-act plays or "sketches"—that is, dramatized short stories. Often the short story in dramatic form takes up half or two-thirds of the total time of the performance. Probably the vaudeville managers learned this from moving-picture shows, which are admittedly the most significant theatrical development of our times, and consist largely in presenting short stories in pantomime.

It has long been recognized that, on the whole, we do much better with short stories than with novels. A great many very successful short stories are published, but not a great many very successful novels. On the one hand, with relatively few exceptions, five or six thousand words is as much as an author really has to say at a given time on a given subject. On the other hand, comparatively few readers care to listen to more than that at a stretch. The stage is getting round to it by way of the moving-picture show and the vaudeville sketch. Probably some venturesome manager will begin giving a two-hour entertainment, say, consisting of anywhere from three to five one-act plays; and if the drama should work into the short story in that way our stage would begin to give a broader, truer picture of national life. Most of the plays that fail have something to commend them. Boiled down to one act—with that something retained—they might succeed very well.

The Fathers on Recall

AS TO the tenure of office of members of Congress, the first Constitution of these United States provided, in Article V: "Delegates shall be annually appointed in such manner as the legislature of each state shall direct to meet in Congress on the first Monday in November in every year, with a power reserved to each state to recall its delegates, or any of them, at any time within the year and to send others in their stead."

Some of the ablest among the framers of the present Constitution insisted that members of the House of Representatives should stand for reëlection every year, that their constituents might retain a firm hold over them. Gerry declared the people of New England would never surrender the principle of annual election of representatives. The Fathers debated long before adopting the compromise of a two-year term. Recall, in short, is by no means the newfangled and un-American invention of Insurgents which its opponents describe it as being.

The Farmer's Wife

IF YOU wish information upon any subject of a social nature—such, say, as the prevalence of lumbago among dockwallopers, or literacy in the Fiji Islands—you will probably find, upon inquiry in the proper quarter, that there is a well-established and flourishing association or society for the very purpose of dealing with the subject you have in mind. You will find an International Dockwallopers' Lumbago Association, or an International Society for Promoting Literacy in the Fiji Islands, holding yearly congresses and publishing instructive reports that tell you all about it.

This associating and convening and deliberating has extended to nearly every conceivable human condition. Just recently it was further extended to the next-to-oldest human condition. There was, that is, a First International Congress of Farm Women—held in Colorado and attended by delegates, who were actual farm wives, from foreign countries, as well as from the United States.

We hear and speak a great deal about the farmer. We call him the foundation stone of all industry, the original creator of wealth and the backbone of the country—especially when we wish him to vote for us or to buy another threshing machine; but the truth is, with all his merits, he is second fiddle to his wife. If there is any one class that this country should get down on its knees to it's the farm women. Whatever farm men have done the women have done—and more also. They haven't been heard from very much heretofore. It is significant that the president of this almost newest of associations is from Canada, and the vice-president is from Oklahoma.

Obituary Bombast

WE WISH Congress would pass a law or adopt a rule that only good sense shall be spoken of the dead. Grown-up men recently rose in that body and emitted sounds as follows:

"When the human harps of the nations of the earth shall sing out in after years in acclaim the songs of the memory of great men of past ages, none shall be more sweetly enjoyed by the people of the American Republic than the one of the life, labors, sacrifices and good deeds of ——." "In the field of politics he was a giant and in many respects comparable to the renowned Earl of Warwick, who in English history has been styled the setter-up and puller-down of kings." "A tall cedar has fallen, and many hearts are sad!"

The deceased member of Congress in whose memory these and other similar noises were made was a person of considerable ability and of many amiable qualities. It is a shame to make him a subject for laughter. When either house of Congress gives itself over to a memorial session people who really respected the deceased must shudder.

Failures in Business

BUSINESS in the United States, year in and year out, is really more stable than many people suppose. Failures are rare. It is true that last year, when commercial mortality was slightly above the average, over twelve thousand concerns went into bankruptcy; but there were over one million six hundred thousand concerns in business; so that, roughly, only one business concern out of every hundred and thirty failed. In view of the great number of small adventurers in business—the clerk who is setting up for himself largely on credit, and so on—this shows a stable condition. Indeed, over ninety per cent of the concerns that failed were of the smallest size, employing capital of less than five thousand dollars. Among larger concerns, failure, relatively speaking, scarcely ever happens. For example, in 1911 failures among concerns with liabilities of one hundred thousand dollars or over numbered only two hundred and twenty-one.

Bradstreet's, to which we are indebted for these figures, classifies business failures according to their causes—such as incompetent management, speculation outside of the business, neglect of business, personal extravagance, lack of capital, and so on. Its conclusion is that seventy-nine per cent of the failures are due to some fault on the part of the bankrupt, while only twenty-one per cent are attributable to causes that might be considered beyond his control. We suspect that this apportionment errs on the charitable side. Our own observation is that outright, absolute failure which was really unavoidable is the extremely rare exception—not only in business but in every walk of life. Relative failure, of course, is common. The man who doesn't fail at some point and in some degree may be born once in a thousand years, but utter bankruptcy that was unavoidable hardly ever occurs.

WHO'S WHO—AND WHY

Horatius at the Bridge

THERE is nothing personal in it—nothing at all personal—when William L. Ward's friends call him Slippery Bill. It is merely a little term of affection. As one intimate puts it deliciously, and with a nice discrimination as to personal pronouns: "We call him Slippery Bill as a term of affection—not that he is really that, you know; but there always seems to be such an atmosphere of mystery about his comings and goings and his whisperings that one catches oneself indulging in entirely unwarranted suspicions as to the stability of his convictions."

The fact is, Bill uses the star trap in his comings and goings for the same reason the actors use it—to mystify the audience. You see him in the headquarters of the Republican National Committee, for example; and suddenly—pouf!—he has disappeared, vanished. You do not know whether he has gone down through the floor or up through the ceiling; but he is gone! And while you are sitting there, dazed—bing!—in he comes through the side of the wall or up he bobs from behind the desk.

Language was made to conceal thought, we have been informed, but Bill has amplified that axiom by convincing all who know him that whispering was made to conceal language. Bill is as mysterious as a story-book detective. If he wants to take you to luncheon he will call you off to a corner, see to it that all the doors and windows are closed, and ask you as confidentially as if he were telling you of a plot to run William J. Bryan for the legislature from Westchester County, New York. Naturally Bill is of great use as a Republican national committeeman. He makes everything epochal by the cloak of mystery he throws around the circumstances involved, and thus preserves the ancient political tradition that politics must be secret and secretive. It would never do, you know, to tell the people what is going on at national headquarters. Of course the people have no rights in the premises. All they are supposed to do is to put up the money and vote as the committee wants them to—and ask no questions; by virtue of which condition they will be told no lies—which is the only way they can escape being lied to, at that.

Bill, as you must know, is the Republican boss of Westchester County, which is a large and populous section of the state of New York abutting on the city of New York, where thousands of commuters spend their nights. Moreover, Bill is the really-truly lay-me-down-and-cut-me-in-twoly boss of Westchester County. If so be Bill deemed it advisable to import a few Mexicans or a few Filipinos or a few Turks, and make them delegates to the national convention, that is exactly what would be done, and nothing else. His jurisdiction extends up along the Hudson River, and he jurisdictates in some of the contiguous territory.

What it Means to be a Friend to Caesar

HE HAS been in politics for many years, has Bill, and probably he has as extensive and varied a list of political acquaintances as anybody in this country, ranging all the way from his ward handy men to presidents and near-presidents and would-be presidents of these United States. His particular long suit is being able to prognosticate what is going to happen nationally by observing—in advance of the event—what is going to happen in Westchester County. Bill never fails. If, a few weeks before election, after he has made his prognosis, Bill is convinced that all is lost he retires to the high grass and it is impossible to find him until the scheduled calamity has befallen the Grand Old Party.

It is Bill's idea that politics is essentially a game in which the desired result is the greatest good to the greatest number; and to that end all is fish that comes to his net. Those who happen to know him well have heard him denounce eminent statesmen in the choicest Westchester manner, and also have observed him with his arms round their necks and his confidential whispers percolating into their eager ears—within the hour.

Moreover, Bill has other lines of merit. It is doubtful if any managing politician has a closer and more responsive acquaintance with men of large means than Bill; and it is undeniably the fact that no man in this country or any other has a wiser conception of the proper and beneficial uses of money in politics. And whenever it is necessary for Bill to appear on the scene, backed by the flattering and unanimous indorsement of his constituents, Bill always so appears. He is a wonder in that regard.

Quite recently Bill bulged into the limelight in Washington by putting on a show of his own in connection with the committee meeting that selected Chicago as the place to nominate the next Republican candidate for president. Always a student of history, Bill chose to personate Horatius on that occasion; and it must be said for him that he provided an interesting and highly moral entertainment. You remember Horatius had a little job which the exigencies of the situation required him to do single-handed—and he did it. To be sure, Horatius had two companions—and Bill had a couple of Westchester County men along; but, to all intents and purposes, Horatius turned the trick—and so did Bill.

"As we wax hot in faction," says Macaulay, "in battle we wax cold; wherefore men fight not as they fought in the brave days of old." Macaulay, of course, though he had a good working knowledge of Horatius, never knew Bill Ward; but he had a clear conception of the present Republican National Committee when he penned those lines about waxing hot in faction and waxing cold in battle. That is exactly how those Republicans waxed—all but William Ward.

He waxed hot in faction and he kept on waxing hotter and hotter until the time came for his performance; at which moment he told the messenger from the White House, who arrived with an invitation to dine within the flattering portals of that edifice, to go and take a long, running jump! As for Bill, he intended to dine where he was; and all this talk about an invitation from the White House being a command was pifflesque and piffilarious piffle—take it from him!

The point wasn't that Bill wouldn't dine at the White House, but it centers on the reason why he wouldn't. Bill had been a party to the selection of his warm and personal friend, Vice-President James S. Sherman, as chairman of a certain convention held at Saratoga a time agone, and Mr. Taft, who extended the invitation to dinner, had been a party first to the selection and then to the de-selection of the same. Hence Bill was sore; and, though he was no sorer than any of the others, he showed his soreness and stood by his hurts. In common with most of the other committeemen, he had been lambasting Taft from the minute he landed in Washington, and before and since; and he didn't care to be the guest of the man he was deprecating.

So Bill held the bridge alone, *à la* Horatius—held it to a Westchester County fare-you-well; "and even the ranks of Tuscany"—meaning the deprecators who didn't have the courage of their conversation—"could scarce forbear to cheer." All of which entitles Bill to a medal or two when viewed from certain angles; and all of which means, also, that unless Bill is propitiated there will be about four delegates to the next Republican convention from the state of New York who will not vote for William Howard Taft, the same being those engineered and personally conducted—to say nothing of personally selected—by William Lukens Ward.

Ward is a manufacturer who indulges in politics as a diversion or a politician who indulges in manufacturing as a side line—I forget which. He is rich. His business activities have been varied and successful. Those who know him well are unable to recall any line of business to which his attention has been devoted wherein he has not gained an advantage or two—or, mayhap, three.

Mr. William L. Bill Ward may not be so prominent in the public prints as some others, except when he is putting on a show at Washington; but any person of Republican leanings who desires official and organization Republican indorsement in the state of New York—and unanimous!—will do well to cultivate him. Likewise, that "any-person" designation includes all and sundry—and goes even and goes forcibly for so powerful an any-person as William Howard Taft, whose name is not unfamiliar to our readers.

The Man Who Wouldn't Dine at the White House

Serious and Frivolous Facts About the Great and the Near Great

The Return of Tommie

NOT long ago Governor Woodrow Wilson, whose various activities have had some small mention in the newspapers and other engines of publicity recently, went down to Augusta, Georgia—where he lived when a boy and where his father was a minister for some years—for a day or two of rest.

He told his friends he just wanted to roam round the old town, revisit familiar scenes and do nothing else. In the course of his wanderings he came to the house of a dear old lady who was a pillar in his father's church. Wilson's lost first name is Thomas; and when he was a boy—and, indeed, while he was in college—he was known as Tommie Wilson.

Mr. Wilson called on the dear old lady. She was very glad to see him after he had told her his name and recalled his father's pastorate.

"Why, Tommie," she said, "how you have grown!"

"Yes," assented the governor; "I have grown some."

"Indeed you have! I remember you perfectly when you were a little bit of a boy. And I certainly hope you have prospered."

The dear old lady was genuinely interested.

"Oh, yes; I have done very well," Governor Wilson said.

"I am so glad—so very glad! By-the-way, Tommie, what are you doing now?"

Distasteful Taffy

THE late Senator Hoar, of Massachusetts, was dining at his hotel in Washington when an effusive stranger sat down near him. The stranger introduced himself to Senator Hoar and immediately launched into a eulogy of the senator in the most glowing terms. He taffied the senator for ten minutes, much to that statesman's apparent discomfort.

Finally he said:

"Why, only the other day, Senator, a man with whom I was traveling told me you are the greatest patriot and the greatest orator and the greatest statesman New England ever sent to the Senate! He was a well-informed man. I met him only the other day when he was on his way—on his way—to—odd, I can't remember—on his way to ——"

"A lunatic asylum!" snapped Hoar.

A Northern Exposure

IN THE days before the railroad reached Post, Texas, C. W. Post had a wagon train of fifty mules and thirteen wagons hauling freight ninety miles from the nearest railroad station.

During the winter "northers" sometimes came, with driving rain and snow. The freighters slept under the wagons in the regular canvas roll that was carried, no matter what the weather.

One night, when a "norther" was blowing, Post was with the outfit and was squatted over a fire trying to keep warm.

Some of the freighters had not turned in and were sitting round the fire smoking and talking. One of the huskiest of them said to Post:

"Say, boss, I've done quit sleepin' under my wagon."

"What's the matter, Jack?" asked Post. "Are you afraid the wagon will break down in the night and crush you?"

"Nope; 'tain't that. I put my roll out on the grass. It's too deuced confinin' under the wagon for me!"

FOOLS AND THEIR MONEY

The For Sale Signs Have Been Removed to Give Way to a Huge Billboard

By I. K. FRIEDMAN

ILLUSTRATED BY HAROLD M. BRETT

THERE are two classes of men who make a business of selling businesses—honest and dishonest. Statistics are not at hand for settling which class is in the majority, but fortunately common experience and common sense need no figures to prove that the former vastly outnumber the latter. Were the contrary true, the business of dealing in businesses would have come to an abrupt end long ago, for nothing is shorter lived than fraud, and the more patent the fraud the less chance it has for survival against the wits of the community made ever sharper by the constant growth in the means of publicity, education and social intercourse.

But, on the other hand, as there are tricks in every trade it would be unfair to expect that this branch of modern commerce be exempt from rascals and rogues, tricky brokers and unprincipled dealers in frauds. These, however small their numbers by comparison with their betters, are among the powers that prey, and how wary of them must be the confiding and the trustful on whom they prey, this article may prove. It may also prove that as nothing succeeds like success so nothing tends to breed dishonesty more rapidly than dishonesty, for generally speaking the man who has been swindled is corrupted by the hard process; he loses his high regard for human nature and grows cynical enough to be quite willing to fleece another in order to save himself. His faith in the golden rule gone, he would only too often do even as he has been done.

Smith, for instance, ventures practically his all in the purchase of a grocery store and finds out a few days after his name went up over the door that he has been viciously "stung"; but, instead of sitting down, wringing his hands, bemoaning his fate and wasting his time and money in consulting a lawyer, he simply laughs and says to himself: "I'll do as I was done by—and see if I can't find as thoroughgoing a sucker as I am to take my place." Straightway, invoking the power of the press to help him in his search, he inserts an advertisement to this effect:

"Owing to bad health, I must sacrifice for cash, before leaving for California on the doctor's orders, a highly profitable grocery store in a live neighborhood!"

Poor Redfern is Back at His Old Post

Willing Victims

JONES, who has just come from the country and can't wait until he finds an opening into which to drop his money, reads Smith's lament and rushes to the rescue. When he arrives on the scene to give first aid to the injured he finds poor Smith in a far corner of his shop, either hobbling round on a crutch or swathed in bandages. Smith greets Jones with a long face and then starts to inveigh against existence in terms that would have made Job seem by comparison a dilettante in pessimism.

Meanwhile Smith's faithful wife rushes to the telephone in the druggist's shop round the corner and tips it off to her own and her husband's relatives and friends that the curtain is up and the farce, A Fool and His Money, has begun. By the time she returns the procession of trade, thus artificially stimulated, has started its march on the shop to purchase a cake of stale yeast or two dried lemons or a loaf of moldy bread—all of which may be returned later on—in order to give the deserted shop the air of activity and the atmosphere of prosperity, if only by haggling over what the haggler doesn't intend to buy, or by asking questions one answer to which may satisfy as well as another.

Then the bell of Smith's own telephone chimes in to furnish a little lively music for the benefit of Jones, the impressed; and Smith limps across the floor to take a long order, which he hands over to his wife or Smith, Junior, to fill and put back—after the gentle Jones' departure—in the bins, the barrels and the boxes from which its component parts were gathered.

And between these various maneuvers he finds leisure to excoriate in vivid language the fate and the rheumatism that have conspired to snatch from him his thriving business. Jones, pretending to hide his eagerness to get possession of this valuable bit of property, keeps offering Smith more and more sympathy for his rheumatism and less and less money for his goodwill and assets. Finally they come to terms that represent a little less than Smith expected to realize and considerably more than Jones wanted to pay.

Some days later, Smith, a wiser and more sophisticated man, pulls off his bandages or throws away his crutch and travels in first-class style on Jones' money to parts unknown; and a week or two after that red-letter date Jones, regretting the cost attached to acquiring an education, sits up nights to frame an advertisement that will attract Brown, who is tired of clerking for Robinson and who wants to prove his caliber by starting out for himself.

Now in a community where there are enough Smiths, Joneses and Browns engaged in the innocent pastime of continuously fleecing one another, it would be incomprehensibly strange if somebody with a gift for organization, on surveying a field so rich in potentialities, didn't come to the conclusion that the waste inflicted by these individual operations was next to shameful. Accordingly this inevitable genius steps in and invents a scheme with such sublime simplicity to recommend it that one wonders why the invention was so belated. He starts with the assumption that the two greatest drugs on the market are real estate that won't sell and shops that are losing money. Since, save for the intervention of happy chance in the shape of a "sucker," it is difficult to sell such shops or real estate for hard cash or its equivalent, the schemer reasons it would be feasible and might prove profitable to play one against the other. Thereupon he makes it his business to ferret out lots in a vicinity where even the For Sale signs look as if they were ashamed of their presence. Next he calls on their discouraged owners and after a few minutes of eloquent dickering effects a purchase of several choice lots for something like fifty dollars, cash down, for each lot. Wanting something else besides the valueless dirt for his money, he is sure to take in each case a dummy mortgage of approximately twenty-five hundred dollars.

Armed with one of these instruments, he calls on Smith, Jones or Brown, and offers to trade him the mortgage for his grocery store and an extra cash consideration of three hundred dollars. The grocer, in bitter terms, may spurn his visitor's advances at first; but later, caught by the beguiling arguments, the grocer consents to taking a half-day's ride in the trolley in order to look at that bit of real estate located on the outer edge of the remote prairies. Over night the forlorn neighborhood in which that strip of land is located has suffered an extensive and wondrous change. The For Sale signs, with their hangdog appearance and their shamefaced expression, have been removed to give way to a huge billboard, on which is painted in brilliant white letters against a sober background of black:

PLEASANT VIEW SUBDIVISION

Extensive improvements in paving, drainage, sewage and landscape gardening to be begun immediately. Our beautiful plans may be seen on application at our office. Money loaned for the building of homes which meet with the approval of our architects. Choice lots for sale at a reasonable figure if bought at once. Only desirable parties need apply. No special assessments.

The grocer surveys the lot, looks at the sign, runs back to size up the lot once more, reads the sign again—and then reflects that, though present appearances may be slightly to the contrary, the property has a future. To purchase the mortgage, he concludes, may be a gamble; but then he is in a condition of mind where one's natural tendency is to throw good money after bad, in the desperate hope that the good may coax the erring and mistaken lucre back to the old homestead. Besides, he needs the exciting diversion of gambling to take his mind off worse trouble—and he succumbs to the temptation.

The Pussy in the Corner

PERHAPS, if he is a shrewder and more cautious Smith than the average Smith, he may admire the artistic lettering on the sign, but will realize that the less such art and business have to do with each other the better, and steadfastly refuse to make the trade. In which case the great organizer may induce him to consider another piece of property whereon there is a plaster of, say, only eighteen hundred dollars, offering to trade the mortgage, plus two hundred dollars in currency, for the grocery store. The mere mention of hard cash is an irresistible lure, and Smith reaches for it the way a falling acrobat reaches for a guy rope.

This part of the transaction being concluded, the organizer turns over his victim's staples and fixtures to the department of his three-cornered business which has special facilities for handling them and bides his time—usually no more than a day or so—for selling the goods at another generous profit to the man who replies to the advertisement:

"Forced bankruptcy sale on all kinds of up-to-date grocery supplies and fixtures at considerably less than one-third of their original cost."

So does organized effort cure sickness and do the ailing good. Possibly illness of this sort is treated as it so richly deserves; for only too often, when a man advertises that his business is for sale solely on account of bad health, it will be found on investigation that the business is what he falsely states about his health—very bad; and that his health is what he falsely states about the business—very good, indeed, thank you.

Not long ago one of the famous institutions of Chicago was a popular restaurant, established by a former waiter, that catered almost exclusively to transient trade. Farmers, stockmen and countryfolk in general used to dine there—and then go back home and entertain their neighbors with accounts of what one could make a quarter do in Chicago, if one only knew how to do it. Residents were wise enough to eat where they paid a little more and got a good deal less. The food was something no epicure would describe under any consideration—especially the meats, which, though they were treated to chemicals before they were served, should have been condemned before the stuff left the butcher's under cover of darkness.

The *restaurateur* heaped up a pretty fortune out of this questionable business; and he was adding to the wealth

Digitized by Google

so accumulated when the Government stepped in and made it impossible for him to purchase his decayed supplies from decadent sources. He was now in a quandary—if he raised his prices or cut down the size of his portions he might as well suspend business. On the other hand, if he didn't boost the figures on the right-hand side of his bill-of-fare or diminish the cuts of what he had the temerity to call his choice meats, he would be running his establishment at a big loss. He racked his brains in the hope of discovering a remedy for his financial ills, and then he was struck with the happy idea that sickness might prove his cure. Suddenly he determined that he had incipient consumption. Far from making the attempt to keep to himself the secret of his dejected appearance and the loss of his onetime professional good humor, he went out of his way to take his rural trade into his confidence. The richer his patron the more confidential he became; and to the most affluent of them all, a Michigan lumberman, he bared his tender and capacious bosom and admitted openly that the dread disease might carry him away almost any day.

That night, lying awake in his bed at the hotel, the man from Michigan reflected that the restaurant might be just the thing needed to give his oldest son a start in life—and all the more so because his own lumber business had been slowly dwindling. He stayed on in Chicago, a week longer than his affairs necessitated, to talk Colorado to the victim of tuberculosis, who always shook his head gravely and looked as if his heart were breaking whenever a salubrious climate came up as a topic for conversation. Finally, with full many a groan and sigh, the *restaurateur* let himself be convinced that his first duty to life and the nation was to care for his health.

The Part That Bookkeeping Plays

THE first battle in the campaign having been won, the lumberman started out on his second, softly dropping the hint that he might possibly find a purchaser for the restaurant if its owner would let it go at anything like a reasonable figure. Here the enemy showed considerable vitality, energy and pluck—for a consumptive. He turned face and stoutly refused to give up his gold mine under any consideration whatsoever. The mere thought of so doing made him worse and brought on a dangerous fit of coughing. He had lived for his restaurant; now he intended to die with it. Besides, if he had wanted to sell—to do which he needed but to walk round the corner—he could get whatever he cared to ask. Ever since he had shown signs of failing health his wide circle of wealthy acquaintances and his numerous business friends had proved their profound sympathy by offering to relieve him of his property for half of what it was worth.

The lumberman masked his batteries for another day; then he resumed fire with all his guns blazing at full. The *restaurateur*, slowly retreating from a stronghold he had fought so stubbornly to maintain, acknowledged himself defeated at last and offered to capitulate for one hundred thousand dollars. A long parley over the terms of surrender followed; and the victor, seeing he could do no better with his valiant foe, offered to accept the enforced conditions if the books proved the charge was not exorbitant.

Skinner Received His Visitor in His Apartment at the Hotel

His antagonist, however, parried that thrust with the false remark that he had never kept books. Indeed, since he had made twenty thousand dollars a year for a period of twenty years without books, why should he go to the trouble of keeping them? He had taken warning from the number of good men who had gone to the wall for no other reason on earth except their cumbersome systems of accounting; it soon grew to be a fad and one watched one's books more than one's business. But how could he tell what he made without the aid of books? Simple enough! The cash he took in minus the cash he paid out represented his profits. But why didn't he check through a bank? The answer to that was still more simple: The first bank through which he checked had gone into bankruptcy, and after that bitter lesson he preferred to intrust his surplus earnings to a box in the safe-deposit vault. Whenever his savings reached the sum of ten or fifteen thousand dollars he withdrew them to invest the amount in real estate or first mortgages.

The Mere Thought Made Him Worse and Brought on a Dangerous Fit of Coughing

This story, when taken into account with the obvious success, the tangible assets and the thriving trade of its relator, was quite plausible; at any rate it was plausible enough to convince the man whose eagerness to grab the prize from a possessor so seemingly reluctant to let it go blinded his long and carefully cultivated sense of caution. Up to the day the son closed the doors of that restaurant and disposed of the lease on its premises the lumberman spent most of his time in answering advertisements and explaining to advertisers the reasons why he thought the keeping of books was a superstition that sensible men should not recognize.

However, it does not invariably serve the interest of a knave to deny that he has ever kept books. On the contrary, there are specialists in the line of selling businesses who go in for bookkeeping with all the vim of which they are capable. They pay to bookkeeping homage that is religious and they reverence it as the finest of the arts. Still, as the following may illustrate, they are not in the art for the art's sake.

A popular salesman for a Western drygoods store concluded that he was worth more to himself than to his employers; and, as his employers quite agreed with him when he made known his theory of values, he concentrated his savings and assets in the form of a draft and moved eastward with it. There is a theory current to the effect that one's chances of being separated from baggage of that sort increase in direct proportion as one moves toward the rising sun.

At any rate the Gideon had not much more than left his train at Chicago—whereupon he began to avail himself of the opportunity of talking as much and as loud as he liked while in the city—when it became a bit of trade gossip that he was in the market for a modest retail drygoods shop which would prove responsive to the efforts of a gifted merchandiser and—gradually taking on extra stories—lift itself and its owner to greater prominence.

This sensational news reached a broker in businesses whom for the sake of convenience we may call Skinner; and his civic pride and devotion were at once on edge lest the young Lochinvar leave Chicago to spend his money in some other city that might speciously offer to give him more for it. The agent, moreover, thought himself in the best possible position to satisfy the drummer; for only the week before he had agreed to find a purchaser for a North Side drygoods shop that belonged to an honest but rather inefficient German. There had been only one little proviso attached to the agreement—namely, that the German's books were to be examined by the agent's own accountant. In case Skinner failed to sell the business there would be no charge at all for the job; but should success crown his efforts the shopkeeper was to meet the expert's bill of five hundred dollars.

Trailing the Gideon and finding him, Skinner awakened his interest in the drygoods shop in less than no time; and before three days had passed he had worked him up to the buying point. Then he convinced his prospective customer that he ought, for his own sake and protection, to demand a thorough audit. No shrewd, farsighted merchant ever invested in a business without first having the books overhauled; and he, as a reputable agent with a name to maintain, never permitted his clients to embark on any venture unless they delved into the bottom of the ledgers first. The Gideon not only declared that the agent was absolutely in the right but he added also that the agent deserved the highest sort of commendation for thus protecting his customers; and right then and there Skinner drew up an agreement that was just the opposite of the one concluded with the owner of the shop—if the drummer bought out the German the auditing would cost him nothing; if he refused to buy he must pay the accountant's charges. When the inventory was taken and the final statement drawn up the drummer properly concluded that he would rather defray the expenses of the examination than evade them by buying a business the balance-sheet of which showed that for every dollar in assets it had at least two in liabilities. It was a tails-I-win-heads-you-lose game for Skinner, who paid the auditor one hundred dollars for services not worth fifty and pocketed the balance.

Why Redfern Ran Amuck

ANOTHER case in point is that of Redfern, the Chicago bookkeeper, whose shoulders had grown round and his hair gray by a good thirty years of toil at the desk when he fell heir to a fortune of fifty thousand dollars. Almost before he recovered from the shock he resolved to run his own business if for nothing more than to prove his executive ability and demonstrate to his employers what a mistake they had made in chaining him to a stool. The lawyer scarcely had delivered to him his inheritance in the shape of gilt-edge securities and first-class bonds before Redfern advertised that he was ready to invest the sum of his inheritance in a substantial manufacturing enterprise.

Among the host of answers that poured in on him, one in particular fascinated his attention. It was signed by the junior member of a well-known firm engaged in manufacturing a line of popular household remedies. The letter, which merely declined to give particulars by mail and asked for a personal interview, was not written on the firm's paper, but, oddly enough, on the stationery of the Pioneers Club. It was this oddity that at once claimed the former bookkeeper's serious consideration. To him the Pioneers represented, as it did in fact, the very temple of the respectabilities; and the temple was all the more sacred in his eyes because long ago he had given up his cherished hope of ever being admitted to it. Even the engraved letterhead of the Pioneers was to him a guaranty of inviolable faith.

When he called on Nicolls, the junior member of the firm aforesaid, he found that worthy, much to his surprise, in a condition that may be described best as moribund. There was no pretense about it—the man had one foot in the grave and the other dangling over it. Neither Redfern nor anybody else could fairly doubt Nicoll's statement that ill health was the only reason for his wish to retire from business; and yet his health was no worse than ever it had been, for Nicolls was the sort of man who always looks as if he were going to die and never does until he is well into the eighties.

Glibly, plausibly, yet without waste of words or the least show of anxiety, Nicolls related to his visitor that he had fought retiring from his business, to the building up of which he had sacrificed his health and his youth, as he had fought death itself—inch by inch and sword in hand. Now that he must surrender, he would do so with good grace and for a consideration. The consideration was fifty thousand dollars cash down and fifty more to be paid out of the profits of the business during the next four years. As for Cowles, the senior member of the firm, he wouldn't

Sample of Beaver Board, and Booklet Describing its Use for Walls and Ceilings

Get ALL the Evidence

You've heard of BEAVER BOARD, of course, and know it's used for walls and ceilings, but you may not have actually seen it.

You've likely heard about its distinctive beauty of design and color, durability, sanitary and wholesome cleanliness; but not of many other advantages.

Then write today for the free book and sample that will make your knowledge complete.

BEAVER BOARD

PURE-WOOD-FIBRE
WALLS & CEILINGS

BEAVER BOARD
PURE WOOD FIBRE

This trade-mark appears on back of each panel. It identifies the only genuine pure-wood-fibre Beaver Board.

The Sample shows its beautiful, pebbled surface as no illustration can. One side is painted showing superiority to unsanitary wall-paper. Its thickness is 1-16 of an inch.

The Book gives all details, many illustrations of actual interiors, and helpful suggestions for use in all kinds of new buildings and remodeling.

BEAVER BOARD is sold by Lumber, Builders' Supply, Hardware and Paint Dealers, and Decorators, in sizes to meet all average requirements.

The BEAVER COMPANY of BUFFALO
402 Beaver Road Buffalo, N.Y., U.S.A.

The BEAVER COMPANY, LIMITED
342 Beaver Ave. Ottawa, Canada

Mr. P. R. Friedel has taken full advantage of the decorative possibilities of Beaver Board in this bungalow interior at Memphis, Tenn.

sell his half interest in the enterprise for—well, it was simply out of the question! He wouldn't sell. In fact, if Cowles' surplus capital weren't tied up in mining properties he wouldn't dream of letting half of the concern get out of the family.

In substantiation of all his statements, Mr. Nicolls turned his visitor loose on the books; and Redfern, who loved nothing more than a set of books well kept, was in Heaven. He came down to earth only when he discovered that the last year's profits of the firm showed a falling off of something like eighteen thousand dollars over the preceding three years. Nicolls explained all that in his easy, unruffled manner; the last year his health had been so much worse than ever it had been before that he couldn't give anything like the proper attention to his affairs, and Cowles had devoted so much of his energy and time to mines that the sale of medicine languished from the neglect. New blood and twelve months' concentration on the needs of the business would easily push the concern up to the pinnacle from which it had slipped back.

Then Redfern—simple soul!—made the fatal plunge and bought out Nicolls, who immediately handed over, in accordance with his previous agreement, one-half of the purchase money to Cowles. Less than a month later the new purchaser learned what he should have found out through a careful investigation in the first place—that the bottom had fallen out of the demand for the firm's once popular remedies and that, the wholesalers being overstocked with them, the stuff absolutely refused to move.

Today poor Redfern, who loves nothing better than to explain to those who will listen to him that the business and not his own ability was at fault, is back at his old post, his gray hair turned quite white and his round shoulders sadly bent.

Other men, less honest and perhaps more lucky than Redfern, have managed to creep from under their crushing difficulties by calling in some outside assistance. A salient example is that of a young inventor who sank all his earnings and the money he had accumulated from the profits of several successful patents in the manufacture of some kind of a cleaner. He was just about ready to put his machine on the market when he found himself outclassed by several other geniuses, who not only made a cleaner that was better and cheaper than his own but also had the insuperable advantage of making it first. Giving way to despair, our inventor was about to shut down his factory, sell his tools and supplies for old junk and go into bankruptcy, when one of his friends who had backed the venture recommended the services of that same Mr. Skinner whom we have met before.

The Schemes of Mr. Skinner

Skinner paid a flying visit to the factory, surveyed its now almost worthless paraphernalia with a critical eye and, after making the condition that he should get two-thirds of whatever he realized on it, took at once the preliminary measures for disposing of it. His first step was to change the name of the machine from the Majestic to the Little Giant Noiseless Cleaner. All other machines, he insisted, made too much noise. The Little Giant, therefore, must be featured as being absolutely noiseless. When the inventor protested that he could only reduce his contrivance to silence by removing the gears which made the cleaning possible, Skinner was quick to object that he didn't intend to guarantee the machine would clean but that it would run noiselessly.

The dustbag, he demonstrated to the wonder of the inventor—to whom that ingenious idea never had occurred—could be filled before the motor was started and the machine put to work on a carpet that had been beaten beforehand with a plain, old-fashioned stick.

His second step was to incorporate the company; and his third was to insert an advertisement in at least a dozen papers, declaring he had forty thousand dollars to invest in any live proposition which the state might have to offer to a gentleman moral enough to accept only eighteen per cent on his money. The answers which flooded in from every nook and corner of that commonwealth forced the mail-carrier who delivered them to Skinner to groan under his burden. One correspondent—no less a personage than the president of the Aurora Borealis Mines Corporation—faithfully promised him a two-hundred-per-cent return on his capital; and, since the highest offered by anybody else was only one hundred per cent, Skinner naturally decided to give him the preference. He telegraphed at once to the writer saying he would take the very next train and drive over to the town of Aurora Borealis to investigate the proposition for himself; and an hour after that message made the heart of its receiver quiver with delight he sent a second explaining that he had sprained his ankle on the way to the station and was obliged to keep to his room. That night, in the wilderness far-distant, a disappointed mortal vented his wrath on his long, unkempt whiskers and sought consolation from a black, wicked-looking bottle. In the morning, good sense returning with sobriety, he became fearful that, if he didn't go to Skinner, Skinner's money would go to somebody else; and accordingly he wired the broker that he would take the first train which would carry him to the broker.

With a crutch at his side, one foot carefully bandaged and half buried in the pillows that filled the seat of the chair on which it rested limply and resignedly, Skinner received his visitor in his apartment at the hotel. The president of the Aurora Borealis, pulling his sorrel whiskers condolingly and adjusting his face to the proper position, expressed more sympathy for that broken ankle than Skinner conscientiously felt would have been due him if the same accident had actually happened to his neck. His heart went out to the kind, bluff miner, and to prove it he opened a bottle that had been distilled in '63 and had gone on accumulating strength ever since the date of its birth. When his glass had been filled and emptied several times in rapid succession the president unlocked his satchel and pulled out of it a map showing the location of the seven hundred and fifty acres that belonged to the Aurora Borealis company, and pinned it on the wall. Then he cleared his throat and told in vigorous speech—to which Skinner listened with a grave face—all that Nature had done for that marvelously endowed tract of land.

Caught in His Own Net

Foreseeing that the Government would one day turn the great forests of the adjacent territory into a national reservation, and forbid steam engines to pass through it lest a spark set its magnificent trees on fire, Nature in her omniscience had created a series of magnificent waterfalls at the head of Lake Aurora Borealis in order that the company might convert their horsepower into electricity for pulling the cars on the outer edge of Uncle Sam's park. This monopoly would yield the Aurora Borealis corporation a profit of over a million and a half annually for hauling only the ores of its less fortunate competitors to the junction of the main line. An additional bagatelle of one hundred thousand dollars was to be earned by moving freight back to the mines and whirling thousands of summer tourists to the magnificent scenery at the end of the route. The tourists would stop at least over night in the Hotel Aurora Borealis—the plans for the construction of which were already complete—on top of the mountains overlooking the falls.

Ever busy falls! They were to entertain the tourist, haul the cars, supply a treatment of electrolysis to the company's eight-thousand-dollar daily output of gold and silver at an additional profit of five thousand dollars for every twenty-four hours, and turn the wheels of a huge mill to be engaged in continuously sawing up timber, purchased by contract from the Government at four dollars a thousand and sold at an annual profit of nine millions.

The president interrupted himself long enough at this point to display the highly polished samples of the woods and the rich specimens of the minerals which he drew forth from the bottom of his grip; and then he steamed on to mention casually the enormous by-products of wood-spirits, electric lights, turpentine, tar, charcoal, resin, creosoting material, paint and oil.

Nature evidently had forgotten nothing of which the president or anybody else could think.

Finally, drawing it out of the chamois-skin in which it was swathed, he produced the prize of the whole mineralogical and forestal collection—a lump of molybdenite, the rarest and most precious metal yet discovered by man. Only three mines of it in the whole world!—the largest, of course,

More Power—

Cheaper Gasoline For Motor Car Owners

The WAYNE Gasoline Storage Outfit is so well made that there is absolutely no loss of power by evaporation. There is no waste—every drop does its *full* duty. More power is generated from gasoline of such full-strength—it goes farther—it makes more miles—so it is wonderfully *cheaper*.

If you own a Motor Car you should have a WAYNE Gasoline Storage Tank Outfit in your garage. You can't well afford to be without it. It will actually save you 20% to 30% on the price of your gasoline. It will enable you to keep your gasoline in a better condition, eliminating deterioration and loss of power, caused by varying temperatures. Your fire risk will be reduced to the very minimum. You will be able to get the lowest insurance rate. The

Wayne

Gasoline Storage Outfits

—pay for themselves in one year's time. One of these storage outfits may pay for itself for you in less than a year's time—besides giving you the safest and most convenient method possible for handling your gasoline.

Each WAYNE outfit is made of the very best material obtainable. Even the smallest details of construction are carefully inspected. Each finished pump is thoroughly tested to insure accuracy and reliability. Each tank is guaranteed absolutely leak-proof and evaporation-proof. With ordinary care one of these outfits will last a lifetime—paying you big cash dividends each day after the first year's time. To buy the WAYNE storage outfit is a good, safe investment. It is a guaranteed investment—satisfaction being given or an entirely new outfit to you without cost.

We manufacture, also, a full guaranteed line of self-measuring storage outfits for gasoline, kerosene, lubricating oils, paints, oils and varnishes. Every type and size for every requirement is made by us. Large storage outfits for factory purposes are a specialty with us.

Please write us today for our special bulletin covering the kind of gasoline storage outfit you are interested in. Sales offices in all large cities.

on the property of the Aurora Borealis; the second, which was negligible, in Australia; and the third, which was owned by the government and had saved the whole country from going into bankruptcy, in Norway.

To the astounded Skinner, who asserted that he had never before heard of molybdenite, his bewhiskered visitor explained that its value arose from the fact that its properties, when combined with nickel, gave steel improved elongation and strength, and made it impervious to the shells of the enemy. Coat cartridges with it, and rapid-firing guns remained cooler than the men behind them.

Skinner, filling his guest's glass once more, toasted the Aurora Borealis—the greatest stock proposition, he was perfectly frank to confess, that ever had come to his notice. He was staggered when he paused to reflect that the mishap to his ankle had almost snatched out of his clutches the fortune he was about to grasp; and he could find no words to express his gratitude to the president, who had traveled all that distance to bring him the wealth he couldn't go to get. Two great things had happened to him in his whole business career—the Aurora Borealis Mines Corporation and the Little Giant Cleaner; but, of course, the Little Giant, which netted him only thirty-nine and one-half per cent on his investment, couldn't be compared with the Aurora. Here the president pricked up his long ears and showed even more avid interest in Skinner's modest statements concerning the Little Giant than in his bottle. Diplomatically he dropped the hint that, if it weren't for the possibly bad effect the short trip would have on his host's ankle, nothing would please him better than to inspect the factory where the Little Giant was adding so copiously to the world's wealth. Altruistically Skinner refused to let his ankle stand in the way of his visitor's pleasure. Indeed, why should he, since he could reach the works by the aid of his crutch, his chauffeur and his limousine, without putting his foot to the ground?

A Ruse That Worked Well

And when they did reach what Skinner had dignified by the name of "the works," they presented an unwonted and impressive appearance of activity, due to the fact that a number of loafers in overalls, hired especially for the occasion, had been distributed round its machinery, with instructions to look busy.

The Little Giant—so noiseless, so efficient, so cheap—captivated the fancy of the miner, and he suggested that a trade in Aurora Borealis for the cleaner stock might be effected on some basis or other; but Skinner waived aside that suggestion as absolutely unfair to the generous person from whom it emanated. Besides, he didn't believe in trades of the sort; bitter experience had taught him they usually resulted unsatisfactorily for both parties concerned. Hard cash was the one medium of exchange that left no regret, no basis for misunderstanding, no recrimination in its trail. The miner hemmed and hawed hesitatingly.

Then Skinner, rising equal to the critical demand of that psychological moment, executed his master stroke by proclaiming that he wouldn't even accept cash—nothing would induce him to do it!—unless the miner would protect himself beyond the peradventure of loss by accepting judgment notes to cover the entire amount of thirty thousand dollars which he might expend in purchasing the controlling interest of the Little Giant.

Two months after the man returned home, with a thick block of Little Giant stock wedged in his satchel between the specimens of molybdenite, gold, silver and woods, he began to show decided symptoms of worry over his bargain, for he had not received from Skinner his promised check for thirty thousand dollars to invest in Aurora Borealis. Immediately he wrote a sharp letter demanding a report on the affairs of the cleaner company; and the report that came in answer to his demand did so little to relieve the distress under which he labored that he instructed his lawyer to foreclose at once on his judgment notes, and the lawyer did foreclose—on a pile of useless machinery and a few dozen worthless Little Giants.

None the less, the miner who came to town to skin Skinner, and who was skinned by him, got at least the judgment notes for his money! Many defrauded purchasers of a business have received even less.

"I couldn't make better myself!"

YOU will say so, too, at the very first taste of this perfect soup. No home kitchen could produce better. And in fact few could produce anything as good as

Campbell's MOCK TURTLE SOUP

We pay a high premium for the finest, whitest calves' heads, used for this soup. The meat is cut into small cubes. The stock is made from choice fresh beef combined with a whole-tomato purée, and delicately flavored with celery, herbs, spices, and a fine dry Spanish sherry, which we import especially for this use.

You never tasted a soup more savory and satisfying. Better call up your grocer and order some now.

"I yell for Cornell
And for Campbell's bright label,
Those are the colors
Of men that are able."

Fry Onions then potatoes in the same Crisco The potatoes will not taste of the onions

THE fact that Crisco, the new cooking product, does not absorb odors or flavors is unusually interesting to everyone. It seems so improbable that it is difficult for people to appreciate that it is true.

All that is necessary is to fry onions in Crisco, strain the Crisco through a cloth, then fry potatoes in the same Crisco. To make the test thoroughly convincing, taste the potatoes *first*, and you cannot detect even a suggestion of the flavor of onion.

By straining Crisco you can use and re-use it. Not a drop need be thrown away. This one advantage alone makes the use of Crisco a decided economy.

You can heat Crisco very much hotter than you can lard, without causing it to burn or smoke. No distasteful "frying odor" fills your dining room and kitchen, and you will find that in addition to tasting better, the foods are the most tempting, appetizing fried foods you have ever seen—crisp and deliciously dry.

On request, we shall mail a fully illustrated booklet, showing many other advantages of Crisco.

OUT-OF-DOORS

The Weather and How to Foretell It

UNTIL he gets out into the open the city man hardly knows there is any such thing as weather; but it does not take him long to learn that it has much to do with his comfort and success in out-of-door occupations. For city men and others we maintain a somewhat expensive weather bureau, which does all it can to encourage the belief that whatever you see in the newspapers is true. In the old days, before there were any daily newspapers or weather bureaus, out-of-door men had to rely upon other methods of getting at the weather of the future. In many parts of the country there are men, such as hunters, trappers, anglers, or even farmers, necessarily much in the same condition as were the ancients, who relied upon the phenomena of Nature to help them in a forecast.

Government forecasts of the weather—in this country, at least—rest upon the general theory that there are three or four main storm paths, along which travel, with more or less regular speed, centers of low barometer, or storm centers. Round each of these centers, as it passes, the wind changes in direction like the hands of a clock. We may imagine a series of turbine wheels representing storms, passing, in broad terms, from the west and south toward the north and east, the mouth of the St. Lawrence River being a considerable clearing house for these different storm paths. Of course the bureau's predictions are made possible by means of the telegraph. It is easy to see that if it were raining three hundred miles west of you, and if that rainstorm were passing east at the rate of three hundred miles a day, you could learn by wire that it was going to rain at your place tomorrow.

No doubt, also, you have noticed that as the weather clears after a rainstorm it is apt to be a little cooler, very often with the wind coming from the northwest instead of the south or east. If it were the case that all storms advanced along given paths at regular rates of speed, and if it were true that there were no unexpected cross-currents of air breaking into their paths or their progress, weather forecasting in these days of telegraphic facilities would be a cinch. As it is, with these broad statements recognized as but approximately correct, it is not so much a cinch as it is an occupation.

In this article we have really no concern with the weather bureau other than to mark the difference between weather predictions today and those of two thousand years ago, and to inquire to what extent the old methods may be put in force today, with or without a weather bureau. There is a very curious and interesting literature on this matter which takes us back into very early days, and reminds us that the glory that was Greece and the grandeur that was Rome did not prevent men from being as anxious as they are today over the question whether or not to take an umbrella down to the office in the morning. Moreover, those old parties were as cocksure of the accuracy of their predictions as any weather chief today.

A Human Weather Vane

For instance, there was Colonel Virgil, famous for his connection with the original Troy laundry. He could write beautiful poetry; moreover, he could take a fall out of the weather with the best of them. Indeed, so good a predictor was he that it seems too bad he does not live today to help out in the presidential forecast. Virgil wrote for the farm papers in his time; and any one familiar with his Georgics must agree that he was the grandest little forecaster that ever came down the Appian Way. Yet he had only the simple machinery of the moon, the clouds, the mists, the appearance of the earth, and such other aids as the crow, the heron, the toad, the dog and other animals. With no better aids than these, he established a reputation as an out-of-door man which has kept him in the memory of anglers until today.

You may see many curious quotations from Virgil in a curious little book printed in 1807 in London, England, entitled A Concise Treatise of the Art of Angling, Confirmed by Actual Experience; Interspersed with Several New and Recent Discoveries; the Whole Forming a Complete Museum. For the Lovers of That Pleasing and Rational Recreation. The author of this book, which has long been out of print so far as known, is one Thomas Best; and his little volume, though not so well known as The Complete Angler, of Izaak Walton, is in some ways almost as interesting. With a calmness that would recommend him for Government purposes, Mr. Best remarks: "An angler should be able to form a judgment on the change of weather, on which his sport entirely depends. If he observes the following signs it will soon become familiar to him." Then he goes on with twenty pages or more of signs which are so interesting as to evoke the wish that his wisdom might be reprinted in full.

Mr. Best points out first the signs of the vapors. A white mist on a meadow usually means fair weather the next day. If a mist rolls up the sides of the hills in the morning there will be no rain. If, on the contrary, it hangs on the hills and drags along the woods, instead of overspreading the level ground, it will turn to rain. Though these weather signs are based on observations in Great Britain, they are worth trying out in this country as well.

The clouds are another factor in weather forecasting. There will be fair weather when the clouds seem to dissolve instead of to gather in denser masses. When there is going to be rain each cloud rises larger than the one before it. This is to be noted before a thunderstorm. Again, when the clouds are very white at the edges and deeply fleecelike toward the middle, with a very bright blue sky about them, they are of a "frosty coldness," and there will be snow, hail or rain.

No Doubting Thomas

When the clouds are high in air, in thin trains like locks of wool or tails of horses—what are known as mares' tails—look out for wind and very likely rain. Note now the accuracy of our author's forerunning of the weather bureau's method of tracing a storm center, with change of wind, and so on. Mr. Best says: "If the clouds as they come forward seem to diverge from a point in the horizon, a wind may be expected from that quarter or the opposite." Also, he says, it will rain before long when the sky is generally clouded, with small, dark or smoky clouds flying underneath. Old-time folks called these clouds "messengers," or "Noah's Arks." There is no surer sign of rain than two different currents of clouds.

Abundant dew on the grass after a fair day means another fair day to follow; but, says Mr. Best, if after such a fair day there is no dew upon the ground and no wind stirring, it is a sign that the vapors go upward and that there will be an accumulation above, which must terminate in rain. There is commonly either a strong dew or a mist over the ground between a red evening and a gray morning; but if a red morning follows there is no dew.

The out-of-door man must study the general look of the sky. If the earth vapors are not precipitated by the cold of night, but still remain hanging aloft, the light of the morning will be colored as it was in the evening and rain will be the consequence. It is bad to see a redness reaching too far upward from the horizon, either in the morning or in the evening. It means rain or wind—or both. If this redness reaches almost to the zenith in the evening, with very ragged clouds, look out for wind from the west or southwest, attended with rain.

One of the most certain signs of rain is a haziness aloft and a whitish, ill-defined sun. Again, if the moon and stars show dimly in the night, and if a ring or halo appears round the moon, there will be rain. This seems to be one of the oldest of the weather signs.

All boys know the appearance of the "sun sucking water" and know that it portends rain. Our old authority describes it thus:

"If the rays of the sun breaking through the clouds are visible in the air, and appear like those horns of irradiation which painters usually place upon the head of Moses,

Bailey's Rubber Massage Roller

Makes, Keeps and Restores Beauty in Nature's Own Way

For sale by all dealers, or mailed upon receipt of price, **50c**

A Jar of Face Cream GIVEN with every Roller

If you have beauty to make or beauty to keep, Wrinkles that are shallow or wrinkles that are deep, Cheeks that are hollow or neck that is spare, Here is a treatment that has made thousands fair.

Bailey's Rubber Tooth Brush

makes my teeth white and does not cause my gums to bleed.

Cleans the teeth perfectly and polishes the enamel without injury. Never irritates the gums. Can be used with any tooth wash or powder. Ideal for children's use. No bristles to come out. No. 1, 25 cts.; No. 2, 35 cts. Mailed on receipt of price.

Bailey's Rubber Shampoo Brush

It thoroughly cleanses the scalp and hair of all impurities, leaving both in a clean and healthy condition, simply by using with pure soap and water.

For Bathing It cleanses the skin of soil and oily waste, improves the circulation, builds up the muscles and smooths out the wrinkles. Ideal for softening the beard before shaving. Price, mailed, $1.00.

Bailey's Won't Slip Crutch Tip

This tip won't slip on any surface. Made in five sizes, internal diameter, No. 17, ⅜ in.; No. 18, ½ in.; No. 19, ⅝ in.; No. 20, 1 in.; No. 21, 1¼ in.

Dealers, or mailed for price, 30 cents per pair.

Better Lubrication

with Dixon's Motor Graphite

Here is how it works

¶ Dixon's Motor Graphite goes direct to the cause of friction troubles—microscopic roughness. It fills in the minute depressions, becomes pinned upon the tiny projections, forming a thin, tough veneer of marvelous smoothness, which prevents metallic contact.

¶ This means less friction and wear—no more hot or cut bearings—more power from your engine and a smoother running car. ¶ Mix it with your own choice of lubricants, or we will do it for you, as we manufacture a full line of greases containing Dixon's Motor Graphite.

Ask your dealer for Dixon's Graphite Lubricant No. 677—a highest quality mineral grease scientifically combined with Dixon's Motor Graphite. Fine for differentials and transmissions. More economical than plain oil or grease.

Send name and model of car for free book, "Lubricating the Motor."

the air is sensibly filled with vapors which reflect the rays to the sight; and those vapors will soon produce rain."

A sun that sets white or shorn of rays, or that goes down behind a bank of clouds, may be said to indicate bad weather. Again, if the moon looks pale and dim we may expect rain; whereas if red we may expect wind. If white, or of natural color, we may expect fair weather.

The moon is the great stand-by of long-distance forecasting of all ages. Our gentle angler declares that if the moon is rainy throughout her course it will clear at the next change and then in a few days begin to rain again. On the contrary, if the moon has been fair throughout, and it rains at the change, the fair weather will probably be restored about the fourth or fifth day of the moon and continue as before. Mr. Dryden, translating from the original weather chief, Virgil, gave some advice which might well be marked by Professor Moore and the United States Weather Bureau in their endeavor to predict the weather a week or more in advance:

But, four nights old—for that's the surest sign—
With sharpen'd horns, if glorious then she shine,
Next day, not only that but all the moon,
Till her revolving race be wholly run,
Are void of tempests.

That these old-time weather prophets were on the trail of what is accepted as weather science today, may further be noted in Mr. Best's observation of the winds:

"When the wind veers about uncertainly to several points of the compass rain is pretty sure to follow. . . . Some have remarked that if the wind, as it veers about, follows the course of the sun, from the east toward the west, it brings fair weather—if the contrary, foul; but there is no prognostic of rain more infallible than a whistling or howling noise of the wind."

Thus it may be seen that, though our old fisherman knew nothing of a "center of low," he did know something about the changing directions of the wind as such a center passed. As to the whistling or howling noise of the wind, each reader will have his own guess.

Clouds and Their Conduct

Our author himself was much of a compiler and not unwilling to take the advice of many friends. He sums up with a few simple rules. If the sun rises red and fiery, he says, wind and rain; if cloudy, with decreasing clouds, certain fair weather. Large clouds mean great showers; small clouds increasing, much rain—large clouds decreasing, fair weather. A dapple or "mackerel" sky generally means rain. Black clouds in the clear evening mean rain; and so do black clouds near the sun or near the moon. If clouds suddenly appear, especially to the south or west, look for hard storms. If many clouds like fleeces of wool are scattered from the east they foretell rain within three days. A general mist before the sun rises, near the full moon, means fair weather. Sudden rains are short; but when the air grows steadily thicker, and the sun, moon and stars dimmer, "it is likely to rain for six hours."

Then follows another parallel of modern science: "If it begins to rain from the south, with a high wind for two or three hours, and the wind falls but the rain continues, it is likely to rain twelve hours or more, and does usually rain till a strong north wind clears the air." We are all familiar with the old adage: "Rain before seven, clear before eleven." Mr. Best says: "If it begins to rain an hour or two before sun-rising it is likely to be fair before noon and to continue so that day; but if the rain begins an hour or two after sun-rising it is likely to rain all that day—except the rainbow be seen before it rains."

Mr. Best goes on to give a long series of shrewd observations of the clouds and their conduct; the strength, direction and duration of the winds, and so on, as observed in the British Isles. And so curiously do these follow the later developments in the science of weather forecasting that it would, doubtless, be interesting to give them in full were they as applicable to this country as no doubt they were to Great Britain.

Yet greater interest, however, attaches to some of the other phases of weather

Remember it by the *RED* Friction Plug

The Test That Startled The Dealers

This shows the famous test that has taken dealers in rubber heels by storm, all over the country.

We loosen a thin strip by cutting from the side. Then stretch this strip to *Twice the Length of the Heel.*

With ordinary heels the strip "goes dead" and breaks off with a single pull. With **"Spring-Steps"** it snaps back into place every time.

Rubber Heels That Don't DIE

You've waited a long time for a Rubber Heel that will keep its Resiliency and Drive until it *wears out.*

You've waited for a Rubber Heel that *wears out*—after long use—but doesn't "*peter out.*" A rubber heel that gives *active service* right down to the last day you use it. That doesn't "*go dead.*"

That's the big thing we've done in

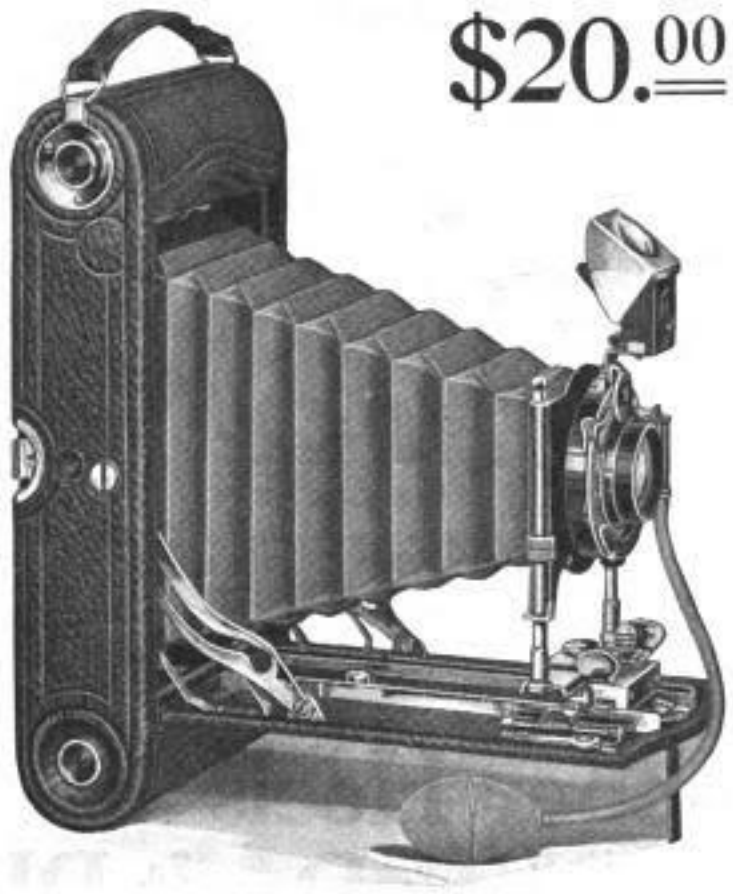
SPRING-STEP Rubber Heels

We've created a rubber heel full of snap and vigor from *first* to *last*—a heel with buoyancy plus strength—a heel that's like a thing of life under the foot.

And that ***retains*** these qualities as long as there is any rubber heel left.

We've done it with pure rubber treated by our Special Process.

And into this heel we've put our patented RED friction plug which makes slipping doubly impossible.



Go to the nearest shop and look at Spring-Steps. You can *see* the difference.

50 cents a pair, put on.
Any shoe repair shop.

$20.00

Simple enough for the beginner. Capabilities that meet the requirements of the expert.

3A Folding Pocket KODAK

The pictures are post card size (3¼ x 5½ inches). The lens is a high grade rapid rectilinear, fast enough for snap shots in a hundredth part of a second on bright days.

The Shutter is the Kodak ball-bearing, which works with remarkable smoothness and precision. The leaves are made in five segments, mounted entirely on ball bearings, and open and close in the form of a star admitting the maximum amount of light in a given time. It has automatic speeds of 1/25, 1/50 and 1/100 of a second and also operates for "bulb" and time exposures. Is automatic in action, has iris diaphragm stops and is fitted with an indicator that registers each exposure as it is made.

The camera body is made of aluminum covered with fine seal grain leather and every detail has been worked out with the utmost care. The finder is reversible, there are tripod sockets for both vertical and horizontal exposures; the focusing lock is automatic and a rising and sliding front is provided. The outside workmanship is evident by the beauty of the camera, the inside workmanship by the smoothness with which it works.

Loads in daylight with Kodak film cartridges. No dark room for any of the operations of loading the camera or finishing the pictures. Kodak simplicity and Kodak quality all the way through.

No. 3A Folding Pocket Kodak, for 3¼ x 5½ pictures, ... $20.00

Catalogue of Kodaks free at the dealers or by mail.

ROCHESTER, N. Y., *The Kodak City.*

prediction as they were understood at that time. No less a person than Lord Bacon is called into the game; and regarding him the author says: "The great Lord Bacon gives the following rules, and it is said these rules have never been known to fail: If the new moon does not appear till the fourth day it prognosticates a troubled air for the whole month. If at her first appearance, or within a few days, her lower horn is obscured or dusky or sullied it denotes foul weather before the full. If she be discolored in the middle, storms are to be expected about the full—or about the wane if her upper horn is affected in like manner. If on her fourth day she appears spotless, her horns unblunted, and neither flat nor quite erect, but betwixt both, it promises fair for the greater part of the month." We see here, perhaps, the origin of the old saying that it will not rain if the moon is slanted so the water runs out of the horns.

Lord Bacon was something of an all-round sharp—in fact, almost the household compendium of useful knowledge of his day; and he is much relied upon by Mr. Best in weather lore. Lord Bacon adduces other signs, such as the sweating of walls. He says that if walls that used to sweat are drier than usual at the beginning of winter, or if the eaves of houses drip more slowly than usual, we should expect a hard and frosty winter. A moist, cold summer portends a hard winter, according to Lord Bacon. A hot summer and autumn portend an open winter at first, colder toward the latter part. A warm and open winter portends a hot and dry summer. A serene autumn means a windy winter; a windy winter means a rainy spring; a rainy spring a serene summer—a serene summer a windy autumn. "So that the air on a balance is seldom dead or to itself; nor do the seasons succeed each other in the same tenor for two years together."

Lord Bacon was certainly a considerable prophet—next to Virgil; and, as he was an Englishman, no doubt Mr. Best thought his prophecies were better than those of anybody else, whether before or after the Christian Era. He does not fail, however, to quote from dear old Uncle Pliny. Pliny was strong for the crow as a weather prophet; and he states that it is a sign of rain when birds, especially crows, are noisy near the waters and wash themselves.

Signs of the Times

We have with us also dear old Judge Horace, who used to live round the corner in Rome, and who had a country house where, if the truth be told, he sometimes probably drank more than was good for him.

Horace also had a bet down on the crow, that wise bird of the ages. In the Seventeenth Ode of his Third Book, he remarks:

Aquæ nisi fallit augur,
. . . Annosa cornix.

Which, as any member of the Cliffdwellers' Club, of Chicago, will know, is to say:

. . . unless in vain
Croaks the old crow, presaging rain.

Regarding the same bird, Horace elsewhere remarks that it is "prophetic of impending showers."

Most of the weather observations given above have been those made in Southern Europe or in Great Britain. It might justly be said that weather produced in Great Britain ought to be good enough to go anywhere; but there are perhaps ways of forecasting weather more universally applicable than any we have yet mentioned. Our angling authority points out that the flying aloft of swallows surely means a serene sky; but if they skim along the ground or the water we judge rain is not far off—"and the observation will seldom fail." If sheep feed up the hills early in the morning the weather will gradually clear, though the day may start rainy. If the sheep hang to the lowlands rains will increase.

Dogs are sleepy and stupid before rain, and waterfowl dive and wash themselves more than usual before a rain. Even fish are affected and do not bite so well when rain is coming. Flies, on the contrary, bite better than usual. Also, toads may be seen in the paths in the evening, or in open places, where they rarely are seen except before a change in the weather. Our old weather prophet was no mean observer of animate Nature; and he goes on to say: "Before any considerable quantity of rain is to fall, most living creatures are affected

Samuel Ward Company
57-63 Franklin Street Boston, Mass.

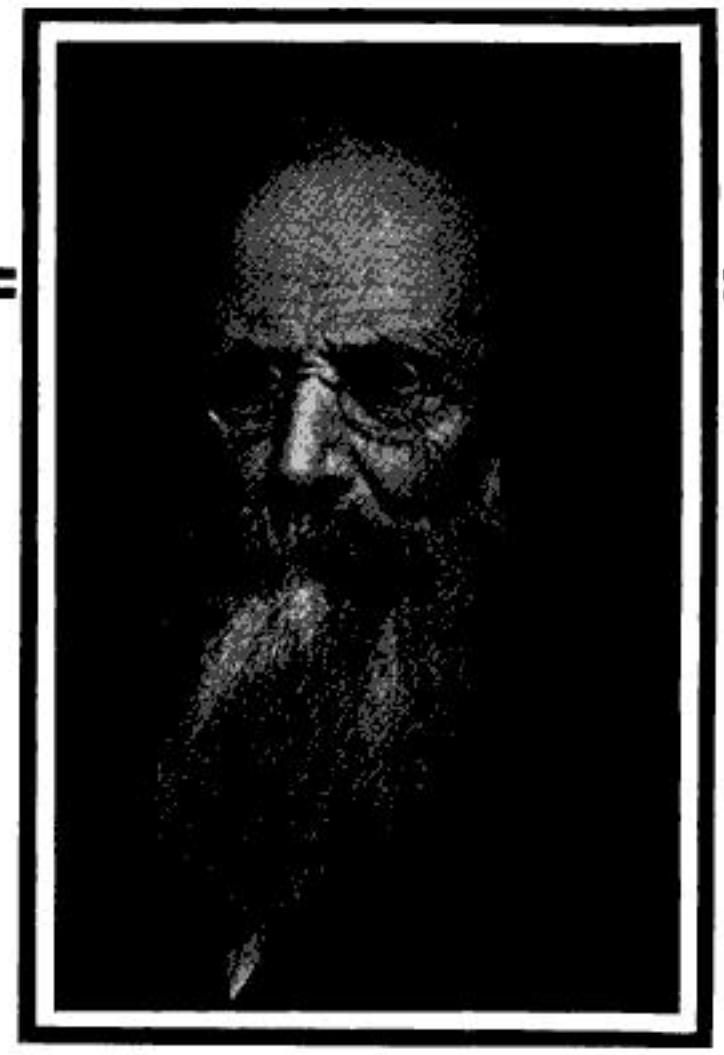
in some sort as to render them in some way sensible of its approach and of the access of something new to the surface of the earth." He points out that moles work more than usual, and also worms; that ants are busier and all insects more active just before a rain. Bees are always busier just before a rain, but get to their hives before the storm arises. Snails, frogs and toads are uneasy; birds of all sorts are in action. Crows are "more earnest after their prey," as are also swallows and other birds. Swine discover much uneasiness; and sheep, cows and oxen "appear more solicitous and eager in pasture than usual." "Even human beings themselves are not exempt from some sense of a change in their bodies."

Most vegetables expand their flowers in sunshiny weather and against rain close them. This is visible in the down of the dandelion and the flowers of the pimpernel, the opening and shutting of which form the English farmer's weather bulletin. Many glowworms at night mean fair weather. Many gnats flocking out in the open air at sunset mean heat. If they play up and down in the shade expect warm showers. You may anticipate good weather when the larks rise very high and sing for a long time. Also—and bear in mind that all this wisdom is more than a hundred years old—"In men frequently aches, wounds and corns are more troublesome, either toward rain or toward frost."

If ducks and geese pick their wings and cackle or wash themselves very much rain may be expected. They know that if, after rain, there is a cold wind there will be more rain. Again, a sputtering candle, as no less an authority than Virgil points out, means an impending storm. Or as Dryden has it:

The nightly virgin, whilst her wheel she plies,
Foresees the storm impending in the skies
When sparkling lamps their splutt'ring light advance,
And in their sockets oily bubbles dance.

Dryden's translation of Virgil's Georgics points out the whisper which "runs along the leafy wood" before a strong wind. Before a storm also,



The chaff with eddying wind is tossed about,
And dancing leaves are lifted from the ground,
And floating feathers on the water play.

The Reason in Rhymes

There is a great deal of meat in this curious little book, of which the writer never saw but one copy. Enough has been set down to show both how much and how little we have advanced in the science of weather predictions—that is to say, weather predictions without a weather bureau—in the last two or three thousand years. We may also note that the practice of rhymes and jingles in connection with weather forecasts is a very ancient one. Thus there is a very old English jingle which shows that, even before Lord Bacon flourished, men thought they could predict the weather months in advance—even as they still think in Washington:

Janiveer freeze the pot by the fire.
If the grass grow in Janiveer
It grows the worst for't all the year.
The Welshman had rather see his dam on the bier
Than see a fair Februeer.
March wind and May sun
Make clothes white and maids dun.
When April blows his horn
'Tis good both for hay and corn.
An April flood
Carries away the frog and her brood.
A cold May and windy
Makes a full barn and a findy.
A May flood never did good.
A swarm of bees in May
Is worth a load of hay;
But a swarm in July
Is not worth a fly.

There are scores of other ways of weather forecasting known to sailors, hunters, trappers and savages, men who live much or altogether in the open; and it is sometimes astonishing with what accuracy men of this description will make day-to-day forecasts. The average man of today is not a close observer of Nature or of natural phenomena; but the true sportsman, whether angler or hunter, who desires to get out of his art everything there is in it, might do worse than cultivate his faculties of observation on some such lines as those indicated above. Ancient and honored as they are, it is for us to prove whether or not they are wholly dependable and accurate in our country.

AN INVENTOR'S IDEA and what came of it

IN 1854 when your grandfather was wearing socks made by your grandmother, or by the old hand-knitter of that day, a man with an idea started to improve sock-making methods.

Today, more than 50 years later, the almost human machines he finally invented produce the largest selling mill brand of half-hose in existence.

The man was E. E. Kilbourn, whose portrait appears above, and who is still in the service of the company which exclusively operates his machines.

The record of Mr. Kilbourn's achievements runs thus:

In 1857 he perfected the first machine for making socks automatically. It revolutionized hosiery making. This type of machine became the universal standard flat *seamed* hosiery machine.

Thirty years later he invented another machine—one that would make socks *without seams.*

In 20 years more he had improved this machine so that it would *shape* the sock to fit foot and ankle without a wrinkle.

Finally, he perfected his seamless shaping machine until it equipped *every wear-point* of a sock—toe, heel, sole and ankle—with a *wear-resisting* fabric, making a *thin* sock that would *wear* as well as or better than any thick one.

Such is the story of the development of the present "Interwoven" machine. It is exclusively controlled and operated by the Interwoven Stocking Company. It knits by what is known as "The Interwoven Process." No other machine is like it. No other manufacturer can make the Interwoven sock—the *thin* sock that really *wears;* the *seamless* sock that always *fits.*

Sold direct from mill to retailer only. None sold by mail. You will find Interwoven Socks at the high-class haberdashers of practically every city or town in the United States and in many foreign countries.

All fashionable shades. All weights. Lisles at 25c, 35c, 50c the pair. Pure thread silk at 50c.

Silk-o-Lisle Socks

All the beauty of silk—all the softness, durability and wearing quality of lisle. This is what you get in Shawknit Silk-o-Lisle Socks. Silk on the outside makes these socks fine and fashionable. Lisle on the inside makes them soft, strong and durable.

And—the price is only 50c a pair.

Send us $3.00 for *six* pairs—$2.00 for *four* pairs—or $1.00 for *two* pairs. We will send them to you postpaid, just as soon as we receive your order. Better still—buy at one of the "Stores That Sell Shawknit." There you will find a full line of Shawknit Socks. You can buy a single pair or as many pairs as you like. But—whatever you buy, be sure to try at least one pair of the new Shawknit Silk-o-Lisles. You will like them. These combinations of silk over lisle give you a selection in solid colors, of Black—Navy Blue—Tan—Pearl Grey—Cream—Cardinal—and Purple.

The combinations in mixed colors are Green Silk over Cardinal lisle—Tan silk over Chocolate Brown lisle—Old Gold over Cardinal lisle—Old Gold over Black lisle—and Green silk over Black lisle.

Then—there is an "Oxford Grey" combination of Black silk over White lisle, for people who like *white next the feet.*

Shawknits Wear Evenly Darning Not Necessary

Shawknit Socks do not need darning. They are knit by the seamless process. This makes them *the natural shape of your feet.* They fit uniformly. Then—just the right amount of re-inforcement at heels and toes, results in even wear at all points and—*no clumsiness.*

We do not ask you to take our say-so about Shawknit Socks, however. We guarantee them *without limit.* Our guarantee has no strings to it. We make no conditions for you. You are the sole judge. Our aim is to please you.

Here is where we stand—if Shawknit Socks do not give *thorough and entire satisfaction*—if they do not please you *in every way*—you can have *your money back*, or we will replace the socks *free of charge.* This guarantee is *attached to every pair* of Shawknit Socks.

We make a full line of Shawknit Socks—from 25c the pair up.

Information of *all* these Socks is in our book—"Stylish Socks." Write for it. It is yours, postpaid, for the asking. Address—Shaw Stocking Co., 103 Shaw Street, Lowell, Mass.

Look for Stores That Sell—

Shawknit Socks

Dealers—The Shawknit Line includes *all* staples in moderate price socks as well as the new styles we advertise. All are sold *direct to you.* Write for our price list to-day. Address—Shaw Stocking Co., 103 Shaw Street, Lowell, Mass.

THE MONEY MARKET AND INVESTMENT PRICES

By Roger W. Babson

THE president of a large New York bank was once asked by a person having a large sum to loan: "How much is money worth?" The banker replied by asking: "How much is a horse worth?" In retort the business man immediately answered: "A horse is worth what you can get for him." "Well," said the banker, "that's what money's worth." Now this simple story is the fundamental principle underlying the money market, for in a given locality with fixed conditions and fixed collateral or credit, money rates are dependent upon the supply and demand.

Of course, readers who live in small cities or towns probably pay a fixed rate of interest year in and year out, averaging the so-called legal rate of 6 per cent. Although there are certain wealthy and conservative sections of the country where the demand for money is fairly low and the rate only 5 per cent, yet, on the other hand, there are sections in the Northwest and South where the demand greatly exceeds the supply and the normal rate is 8 or 10 per cent or probably more. In all places, however, the above rule applies; for money rates, when all other conditions are fixed, are ultimately dependent upon supply and demand. These other conditions include such features as the security offered, the credit of the borrower, general confidence, the length of time the loan is to run, and various other considerations.

The Way Banks Make Money

I make these explanations primarily in order that the reader who is paying his local bank 6 per cent or more may not be dissatisfied when he sees in the newspaper that money is being loaned in New York and other large cities at from 2 to 4 per cent. If a New York bank were to loan you money it would demand as high a rate as your local banks demand, if not a higher one. When the New York banks loan at the low rates quoted they receive collateral or security which insures that the note will be paid at the moment it matures; if it is not paid they can sell the loan to some other bank. In other words, they can obtain the money any time they wish. When, however, a merchant in a country town borrows from his local bank, that bank will not sell him out if he does not pay his notes when they mature. In other words, the loans that the average country bank makes to local customers are in a way permanent loans; and, to my mind, such banks should always receive a rate almost double what New York banks receive on collateral loans, which truly are quick assets.

As the readers of this weekly know, there are two ways in which banks can make money. The one is by paying from 2 to 4 per cent on deposits and loaning the money at from 5 to 6 per cent, thus making a small difference thereon. This is the method used by the majority of country banks today, and in it lies the explanation of the fact that so many of these banks are just struggling along, the president working for a few hundred dollars a year and the bank clerks depriving themselves in order that the bank may eke out a small dividend. It takes no brains to pay a certain per cent on deposits and loan the same money for a little more; and in any work that does not require brains there is a tremendous amount of competition.

On the other hand, there are a few banks that make money in a much more intelligent and justifiable manner. These banks are practically merchants dealing in money as a commodity, storing up money when it is cheap, as the iceman stores up ice when it is a nuisance, and then loaning out this money for the purchase of raw materials or high-grade securities when money is in great demand and merchants and manufacturers are willing to sacrifice almost anything in order to obtain it. Such banks perform a great service to the community. They perform the same function for business that the governor on an engine performs in regulating the speed of the engine.

Now the country banks simply have use for time money, and are interested simply in loaning it for as high a rate as possible at all times. It is the great city bank, operated with judgment and along the lines above indicated, that uses call rates. When money is a drug on the market these great city institutions loan it on call at a low rate, knowing that the time is coming when it will be in great demand, and that, therefore, they can best serve the business man by having the money ready for his instant use. On the other hand, when money is high and the financial situation is being cleaned up through failures and drastic liquidations, these great banks, knowing that the trouble is over, loan their money on time and obtain a handsome rate, together with special commissions for so doing.

As most of my readers are probably more familiar with the money rates of their local banks than they wish they were, I shall not dwell further on this point; but shall explain in a few words the statement of the money market as it appears each day in the large daily papers of the country, the following being clipped from a recent Boston paper:

Current quoted rates, bank clearings, and so forth, follow:

	BOSTON	NEW YORK
Call loans	4½ @ 5	5 @ 5½
Time Money:		
Sixty and ninety days	4	5½
Four and six months	4 @ 4½	5½ @ 6
Year money	4½ @ 4½	4½ @ 4½
Commercial paper	4 @ 4½	4 @ 4½
Corporation notes	5½	5½

	TODAY	YEAR AGO
Bar silver in New York	.55	.54½
Mexican dollars	.46½	.46

Sub-Treasury credit	503,726
New York banks lost on Sub-Treasury operations yesterday	1,456,000
Net loss since Friday	6,546,000

FOREIGN EXCHANGE

In the foreign exchange market today, sterling was easy and Continentals were practically unchanged. Afternoon rates, actual business between bankers, as follows: Sterling—cables, $4.8650; demand, $4.8695 @ 4.8610; sixty days, $4.8260 @ 4.8280; commercial bills, $4.8160 @ 4.8180. Francs, 5.20⅞ less 5/64; marks, 95, plus 1/64; guilders, 40⅞, plus 1/32.

Call and Time Rates

It will be noticed that the first reference is to call rates, and it will be seen that on said day call rates are a little higher in New York than in Boston. Now when a man borrows on call, he borrows with the understanding that he must either pay his loan any moment the bank desires the money, or else he must accept any change in rate that the bank desires to make at any time. That is to say, the rate on call loans may be changed by the bank any day, and the borrower must pay either the said rate or his loan. During the greater part of 1911 call rates were lower in New York than in Boston, owing to the fact that during the larger part of the year small banks all over the country had a large amount of idle money in the New York banks. Owing to the fall and Christmas business, during December these banks withdrew money from New York, which made it necessary for the New York banks to have some of their call loans paid in order to get the money to send West. To have said loans paid these banks chose the method of marking up their rates. As comparatively few country banks outside of New England carry accounts in Boston, Boston banks were not affected in this way, and therefore the Boston rate for call money was not advanced so much.

The next item refers to time rates. Time money, as all readers must know, refers to notes that are given for a definite period at a definite rate. When one borrows from a bank for sixty days, he agrees to keep the money for sixty days and the bank agrees to let the rate remain fixed for sixty days. Therefore, in the case of time money the bank cannot advance the rate during the life of the note; but, on the

other hand, the borrower cannot pay the note before it is due or have the advantage of any lower rate in case money should decline. In the case of call money, however, although the bank has the privilege of calling and advancing the rate at any time, yet the borrower also has the privilege of paying up at any time or insisting on a reduction in rate in case money becomes easier.

The first three items under time money show the rates for different periods, and illustrate very well why the country bank must have a higher rate for a permanent loan than the large city bank demands for active loans. It will also be seen that the large city bank demands about one-half of one per cent more for year money than for sixty and ninety day money. The last two items under time money refer to commercial paper and corporation notes, and suggest that corporation notes stand higher than ordinary business paper, as the banks are discounting these corporation notes at 3¾ per cent, though they are asking 4 to 4½ per cent on the business paper and collateral loans.

Another interesting feature in connection with the above statement lies in the reason why call money demands a higher rate than time money. By watching the relation between two rates one may usually ascertain how the large bankers feel as to the course of money rates. When the rate for time money is less than the rate for call money on the same collateral and in the same city, one may usually be certain that the bankers of that city feel that rates are to continue easy and therefore prefer to loan money for long periods rather than to loan on call. On the other hand, when the rate for call money is considerably less than the rate for time money, as was the case during the summer of 1911, one may rest assured that the bankers feel that the rate for time money is abnormally low, and consequently that it is better to loan on call at a low rate than to tie up funds for from four to six months at a slightly higher rate. In a later article I shall explain to the readers of THE SATURDAY EVENING POST the other items on the above clipping, including foreign exchange; but space will not permit me to do this at the present time.

Adjustments in the Money Market

What I wish to show in connection with this article is the relation between money rates and investment prices, for we find that there is a constant and intimate connection between monetary conditions and the prices of stocks and bonds. No market has continued indefinitely upward in the face of high money rates, and the only cure for strained monetary conditions is a recession in business or an area below the country's line of normal growth.

The ten high-grade investment stocks, of which I have a list extending back practically to the Civil War, sold in 1890 at an average high price of about $141 a share. At that time the percentage of loans to deposits was around 95 per cent, while the percentage of specie to loans was about 20 per cent. In the latter part of that year, however, the loans advanced to 102 per cent of deposits, while specie declined to about 18 per cent of loans. Moreover, this was accompanied—which is the point I desire to emphasize—by a decline in the average price of these stocks to $98 a share and a still further decline in 1891 to about $95 a share. Furthermore, from 1891 to 1893 almost every marked fluctuation in money conditions was reflected in stock-market prices, and in 1893 the proportion of loans to deposits rose to 109 per cent, while the ratio of specie to loans declined to 13 per cent, accompanied by a drop in the average price of our ten stocks from $135 in 1892 to $98.

This strange condition of affairs, however, was immediately corrected by an area of rest-developing below the nation's line of normal growth, and in the next year or two the proportion of loans to deposits fell to 80 per cent and specie rose to 30 per cent, while the average high price of these ten shares increased to $128.

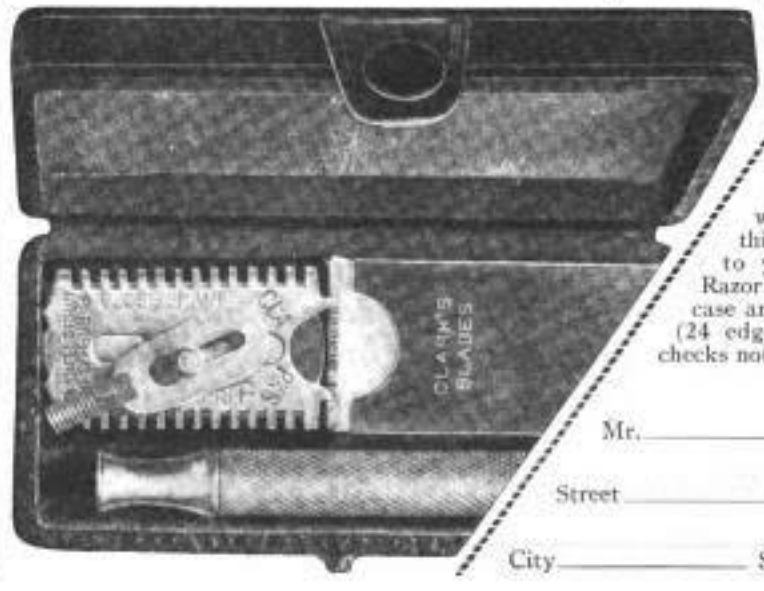
Although the situation greatly improved during the next one or two years, yet conditions were not cured. Like sick patients getting up too soon, business men unfamiliar with fundamental conditions, not being content to let the area of depression sufficiently develop and mature, forced business too hard, and in 1896 sent the proportion of loans to deposits up to 102 per cent, while the ratio of specie to deposits

We will send this $5.00 Safety Razor

with plush lined genuine leather case and 12 hollow ground double edged blades (24 edges) COMPLETE

for $1.00

Diagram showing four extra positions



CLARK'S NOX-ALL RAZOR has advantages over every other safety razor on the market. Adjustable in five positions—covering every angle possible in both the old fashioned and the safety razor. Note in large illustration that the handle is set off center, closer to the regular edge so that in shaving with either side the hand is held in the same position. **CLARK'S NOX-ALL** having no removable parts is the easiest razor to clean. Self adjusted for close or regular shave, and many other exclusive features.

We have figured that to market a safety razor in the ordinary way means an expenditure for advertising of from $500,000 to $1,000,000, covering a period of two or three years. We have decided to make our initial expenditure in thirty days. To do this we take $4.00 off the price of every razor, expecting that the many thousands who take advantage of this one-time offer will speak of **CLARK'S NOX-ALL** razor to their friends. In this way we will obtain enormous publicity. Order one to-day. If not satisfied we will return your dollar.

THIS OFFER GOOD ONLY IN THE UNITED STATES
and for thirty days from date of this issue

Our Proposition **One dollar and the attached coupon entitles you to one razor (complete outfit). One coupon must accompany the order for each and every razor. Satisfaction guaranteed, or your money refunded. The quality will speak for itself, as razor and blades are made by CLARK, well known as "THE** SAFETY RAZOR BLADE KING." This coupon can be sent direct to us, or given to your dealer, who will order the razor for you. Extra blades (24 edges) 85c per dozen.

Clark Blade and Razor Co., Newark, N. J.

Notice who Smoke Them

Great cigars, like great discoveries, sometimes just *happen*. That was the way with

La Preferencia

"30 minutes in Havana"

The biggest selling 10c Cigar in the World

Blockaded ports during the Spanish-Cuban war stopped the importation of Havana wrappers. This made necessary the use of another wrapper.

Until then nobody could say what a wonderful blend aromatic Havana fillers and old-fashioned Connecticut Broad Leaf would make.

It was an out-and-out success—nothing like the tremendous popularity of La Preferencia cigars has ever been known.

"Continue this blend!" was the enthusiastic verdict everywhere—with the result that ***La Preferencia cigars are for sale in more places in the United States than any other cigar.***

HAVANA-AMERICAN COMPANY

fell to 10 per cent. Certainly these patients were quickly sent back to bed again, for conditions were immediately checked by the crisis of 1896, when the average price of these ten investment stocks dropped to $100. After this affairs were allowed to take their natural course and the area of depression was allowed naturally to come to completion; and in July, 1898, loans were only 83 per cent of deposits, while the banks held specie to the amount of 30 per cent of deposits, and the average price of these securities followed suit by advancing from $106 to $133.

In following conditions from 1900 to 1902 we find another area of prosperity developing above the country's line of normal growth, with a corresponding increase in the proportion of loans to deposits and a decrease in the ratio of specie to loans. In September, 1902, the proportion of loans to deposits was 99 per cent and the proportion of specie to loans about 17 per cent, while our ten investment stocks reached an average high price of about $200 a share.

To the student of monetary conditions it was self-evident that this spelled trouble in capital letters, and such was the case. In 1903 we had our "rich man's panic," when these conditions were readjusted and another area of rest began to develop below the line of normal growth, accompanied by a drop in the average price of our ten stocks to about $150 a share. During this period of rest the proportion of loans to deposits was reduced to 90 per cent, while the ratio of specie to loans increased to 25 per cent, accompanied by advancing prices of securities until an average high price of over $200 a share was reached in January, 1906.

How to Prevent Panics

If we had been willing to hold things in check, keeping down loans, building up our specie reserve and being content with a normal growth, the panic of 1907 could have been avoided. But unfortunately this is not the American way of doing things. It is our nature either to have the throttle wide open and run at breakneck speed, or else to have the throttle closed tightly and to be almost at a standstill. For instance, in January, 1907, the percentage of loans to deposits had been increased to about 102 per cent, and the relation of specie to loans had been cut down to about 17 per cent, while our ten investment stocks still sold at an average high price of about $180 a share. Moreover, a large area of prosperity had been developing above the nation's line of normal growth—an area approximately equal to the preceding areas of prosperity and depression—and nothing else could happen but a drastic liquidation in order to relieve these strained monetary conditions. What happened is well known to all. Our New York banks were strained almost to the breaking point, and, in fact, several of them did break. Large commercial institutions were forced into bankruptcy and some of our great railroads were placed in the hands of receivers, while the average of our ten stocks fell to $119 a share.

Again the readjustment process began, and as an area was developed below the nation's line of normal growth the ratio of loans to deposits decreased to 95 per cent, while the ratio of specie to loans was increased to 22 per cent, accompanied by an uplift in the prices of securities, and our ten stocks sold at an average price of over $190 a share in August, 1909. Since that date loans have again been increased and today they amount to about 100 per cent of deposits, while the ratio of specie to loans has fallen to 19 per cent, and stocks have been steadily declining since August, 1909. Not very encouraging, is it, reader, when one realizes that all these foreign disturbances to business could have been avoided if we had been willing to study the money market and other fundamental factors upon which all manufacturing and commercial progress ultimately depends?

Now from the above facts certain fundamental principles can be deduced, which should be of value to the reader in diagnosing future conditions. It is very evident, for instance, that the first things to note in the bank statement, as published both by the Comptroller of the Currency five times a year, covering all national banks, and by the Clearing House of New York once a week, covering New York banks, are these two most important items: the relation of loans to deposits and the relation of specie to loans. If we find that loans are in excess

of deposits and the percentage of specie small, it is usually safe to assume that fundamentally the monetary situation is unsound.

In other words, an increase in loans and discounts with no corresponding increase in cash usually reflects unsound monetary conditions, even if the advance in loans and discounts is fully offset by deposits. There are various reasons for this, but the simplest reason is that there are two classes of deposits—namely, the real deposit and the credit deposit. When a miner in California takes gold from the earth and carries it to his bank for deposit, that man is creating a real deposit; and the same illustration applies if the man who takes iron, copper, wheat or cotton from the ground and deposits it or its equivalent. Such men are really wealth-producers and their deposits are well worthy the name. Unfortunately, however, such deposits often form a very small proportion of the total, for by far the greatest number of deposits are what are known as credit deposits. For instance, a merchant takes a piece of blank paper and makes thereon a note for $10,000. He then gives this note to the bank, discounts it for six months at 5 per cent and the bank gives him back, say, $9750. The merchant then goes to another window of the same institution and deposits this money, and the bank's deposits are immediately increased $9750, while the local board of trade of said city points to the city's increased bank deposits, forgetting all about the corresponding increased loans.

Real deposits should be welcomed, and such are the deposits that cause our nation's line of normal growth to go upward; but these credit deposits—although necessary to a certain extent—are our curse and an ultimate source of great trouble. Let us hope that the time will come when our Comptroller of the Currency will demand that these credit deposits be separated so that we may know how the bank is increasing its deposits in a given community. In the meantime let every reader look not at the deposits but at the proportion of loans to deposits, and especially at the percentage of specie, which really means cash.

Meaning of Business Depression

It will therefore be seen that the money market bears a very intimate relation to the welfare of the merchant and the business man, as well as to that of the investor and speculator; in fact, the relations could be carried on much farther than I have outlined above. The changes in the New York bank statement from week to week are scanned by many anxious faces; the surplus reserve item, which shows how much reserve the banks hold in excess of their legal requirements, is a figure especially watched.

It often happens that certain periods of the year, such as January and July, call for the use of large sums in the payment of interest, dividends and other semi-annual disbursements. The first of April and October are also important dates in the money market. As we understand the analyses further, we must allow for more and more exceptions; and as these exceptions increase the value of cast-iron rules diminishes. Such studies are somewhat like those of speculators, who figure that the prices of stocks are always high at certain seasons of the year and low at other seasons. There is nothing in such doctrines. True it is that prices have often been high early in January and July, owing to the large investment-buying at these times; but every two or three years so many people figure on this and make their purchases a month or two earlier that there is a general decline in the market in January and July.

There is, as a fact, nothing in such cast-iron rules. Nobody knows what month or year money rates will be low or high, and the man who attempts to predict by naming the month is making a pure guess. What we do know is that when money conditions are unsound, when credits are inflated and business unhealthy, and a large area of depression has developed above the nation's line of normal growth, then money will be scarce and will continue to be scarce until conditions are readjusted, loans liquidated and cash reserves strengthened—which can be accomplished only by the development of an area of rest, commonly known as a business depression. Therefore, I urge readers to study the relation of loans to deposits and the relation of specie or cash to loans.

"Join the 'Welch' Fraternity"

THERE'S good cheer in WELCH'S morning, noon or night. Before and after the game, for the quiet evening, or occasional celebration WELCH'S furnishes a zest.

It's a food-drink without being a fad-drink. Nature puts elements in the grape that help the human system — brains, blood and nerves. We keep those elements there.

Welch's
The National Drink
Grape Juice

The juice as you pour it from the bottle is just as Nature made it in the grape — full of summer's sunshine and autumn's richness.

A corking good punch is the Welch Grape Punch. You can make it in a jiffy. Juice of three lemons and one orange; small cup of sugar; pint of WELCH'S; quart of plain or charged water. Garnish with sliced fruits to suit taste and serve *cold*.

Stewards and housekeepers of Fraternity Houses and College Clubs: Write us today for our *free* book of recipes for WELCH'S drinks and desserts.

Get the Welch Habit—It's One That Won't Get You

A sample four-ounce bottle mailed for 10 cents. If you cannot get Welch's of your dealer we will send a dozen trial pints for $3, express prepaid east of Omaha.

Hands Across the SEAL

To The Man In The Street!

WHEREVER YOU SPY the circular sign of Kahn-Tailored-Clothes in a merchant's window, let your eye telegraph to your mind: *"There's the best tailor in town."*

OUR Authorized Representative is more than a nimble measure-taker — he is backed by every force and resource of our "crystal-palace" shops, often called "the greatest tailoring institution in America." *He* is *we.*

WE choose our Authorized Representative with the same probing care with which we choose our fabrics — he is sound-fibred and "all wool" with no "cotton streak." In *his* hands you're in *safe* hands — careful, cheerful, responsive to suggestion and responsible to *us* and to *you.*

GO to our Representative to-day to be measured for your Spring Clothes. Our seal, pictured below, is in his window and on our label. It guarantees our tailoring as though bond-backed.

To The Man In The Store!

WHEREVER YOU ARE you can gain the clientele of the "best-turned-out" men of your community — "the spenders" — by being the *Authorized Representative* of Kahn-Tailored-Clothes.

INDIVIDUALITY of style and integrity of tailoring — a body-gracing fit — pure-wool, new-wool fabrics — the best linings and trimmings that money can buy — deliveries that don't disappoint — these make *clients who cling.*

INDIANAPOLIS is *not* a "clothing market" — *not* the camp for an army of "ready-made operatives." We employ only custom tailors trained *our* way to do a task the *best* way — the way of the "crack" metropolitan tailor with all his niceties of drafting, draping and technique.

IN the few towns in which we are without an Authorized Representative we seek one of a character that befits the high character of our tailoring. If you are this man, write to us immediately.

Kahn Tailoring Company
of Indianapolis, Ind.

The Senator's Secretary

THERE are large numbers of noisy patriots roaming about this country verbiagerating vociferously about what they have done, are doing and intend to do to make certain the success of the Democratic party in the next presidential campaign. Also, there are hundreds of crafty politicians who have plans and specifications for that success, drawn by themselves and based on their individual ideas of procedure. When it comes to advice, instruction and admonition the Democratic party is loaded to the guards. It has within its ranks the greatest accumulation of prophets, seers, prognosticators, directors, guides, philosophers and scientific shop managers ever gathered in one political organization.

They have emerged from the high grass in all parts of the country, have roamed in from the hills, dropped from the trees, come up out of the caves; and they are all prepared to tell exactly what course to pursue in order that the principles of the late Thomas Jefferson, as modified to suit the exigencies of this occasion, shall triumph mightily at the polls, to the great glory of said principles and to the subsequent recognition of the advisers in the shapes of some sort of connections with the Federal payroll.

Some of these advisers and directors and managers, of course, haven't been in the high grass. There are old and experienced men, who have been advising and directing the Democratic party for years and years — not with any great results, to be sure, but with a persistence that shows them to have faith in themselves whether any other has faith in them or not. They are active — these old standbys — active and vocal and fluent; and they are handing it out hot and inspired twenty-four hours a day. The efforts of these regulars are ably supplemented by the Democratic editors, who, seeing a chance for a winning, have quit moaning about the iniquities of Uncle Joe Cannon and Nelson W. Aldrich, and are now engaged in telling Oscar Underwood and Champ Clark exactly how to proceed.

They are all weighted down with the burden of direction. The entire problem is up to them — each individually, to hear each tell it; and unless the Democrats do as each individual says all will be lost and the Grand Old Party — to wit, the Republicans — will remain arrogantly in power and the waiting Democratic patriots will continue without the recognition — and the salaries — that are their just dues as rewards for services performed, said services consisting of advice. Any Democratic leader can obtain an exact, illustrated, specific and annotated plan of campaign, covering every detail of policy and action, for the coming crucial months by standing in a receptive attitude in a Washington hotel lobby, or by reading his mail instead of making his secretary read it.

The Lead Horses of the Democrats

And the interesting part of it is that the has-been boys, the high-grass boys, as well as the regular, perennial advisers, think they have the correct system in mind; and think, too, that the Democrats will be wrecked unless things are attended to as the boys insist. Indeed, they are certain of it, and consider themselves the instruments whereby Mr. Taft's party will be defeated and whereby the Democrats will come into power. These fellows are impatient of the suggestion that perhaps there are some men in the party and in position who know better than they what the difficulties are, and what remedies are obtainable, and what procedure politic and possible.

Nevertheless, the men in the Democratic party who will have most to do with Democratic success or failure next fall are the leaders in the House of Representatives. This is the only branch of the Government where the Democratic party is in the majority; and the party, as a whole, will be judged in a national sense largely by what the Democratic House does and does not do. There are half a dozen men in the House who may be said to be the leaders; and of these, of course, Oscar Underwood stands first, he being not only the designated floor leader, but also the man of greatest ability and resource. Allied with him are John J. Fitzgerald, chairman of the Appropriations Committee and a Representative from Brooklyn; William Hughes, of New Jersey, who is on the Ways and Means Committee; Swagar Sherley, of Kentucky, one of the ablest men in the House, and one or two others. Champ Clark, the Speaker, is actively a candidate for the nomination for president, and he, too, is intensely concerned in having the Democratic House perform satisfactorily to the country, though his congressional attitude is not openly active in managing and directing. However, he has his say. Underwood is a candidate for the nomination also.

Laying aside the personal aspirations of these men, theirs is a real anxiety that the Democratic House shall make a good, clean, consistent, satisfactory record — and theirs is the task of seeing to it that this record is made. Also, theirs is the responsibility. The larger part of the burden is on them. If the House shall make any mistakes the great army of advisers and directors now operating on the outside will be first to emit the loud yell of consternation and denunciation. If the House makes no mistakes the said great army will have its claims in for credit before sunrise. Meantime these men have the hardest job any legislators have had in our time or theirs.

Radishes, not Radicals

The Democrats have the House for the first time in sixteen years. They couldn't do much but pass tariff legislation at the extra session; but now the first regular session of Congress is in full swing, and the Democrats, having been outside so long, are looking at the perquisites and perks from the seats of the mighty — and want theirs. Moreover, any Democrat — and that means most of them — who has any pet or radical idea for legislation that is positively needed for the future welfare and stability of the nation is totally at a loss to understand why that pet idea shall not be enacted into law, inasmuch as he is a Democrat and the Democrats are in the majority. The fooler the idea, the stronger the conviction that this is the panacea. Large numbers of these Democrats who think and assert they are radicals are in reality not radicals at all, but radishes; but there is no way of making them understand this. They rush wildly into caucuses and on the floor of the House and demand that what they propose shall be indorsed as Democratic doctrine and enacted into Democratic law.

There is no way of stopping these persons if they have industry enough to write their ideas into bills or resolutions — that is, there is no way to prevent the newspapers from printing what these particular Democrats propose. But there are methods of stopping action, and these are adopted from time to time and are the particular jobs and responsibilities of the Democratic leaders. The leaders cannot know — not being mind-readers — when a wild-eyed and breathless Democratic patriot, who has oozed into the House from some sort of a district, will slide in a resolution that may have a public appeal in it, but that would work backward in a political sense if adopted. Constructively the introduction of one of these boomerang affairs is placed to the credit of the Democratic party because a Democrat introduced it; but, likewise, its killing is also laid at the door of the party when the leaders find that murder must be done.

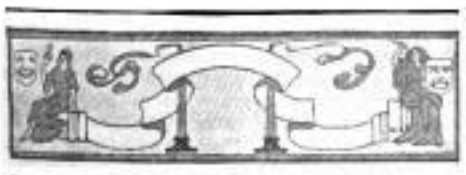
Also, there is the question of pork. The Democrats are hungry and want pork. They cry they must have it. Not a few of them have discovered there are "metropusses" of five and six thousand population in their districts where there are no Federal buildings; and many a one has demanded that some creek that meanders through his home counties shall be dredged. Added to this are wild cries for all other kinds of patronage, and wild cries for money to be spent in the district — real money from the Treasury, which, as is well known, has vault after vault literally bulging with gold and silver and bills of large denominations that might just as well be expended in Pohick and Booginville, to the great aid and comfort of the Democratic party, the communities of Pohick and Booginville, and last, but not least — to the representative who makes the demand.

The leaders know they cannot get anywhere before the country if they duplicate in size the appropriations of the former Republican Houses. They must, at least, create a semblance of economy, whether they want to or not. They have been yelling that the extravagant rascals of the

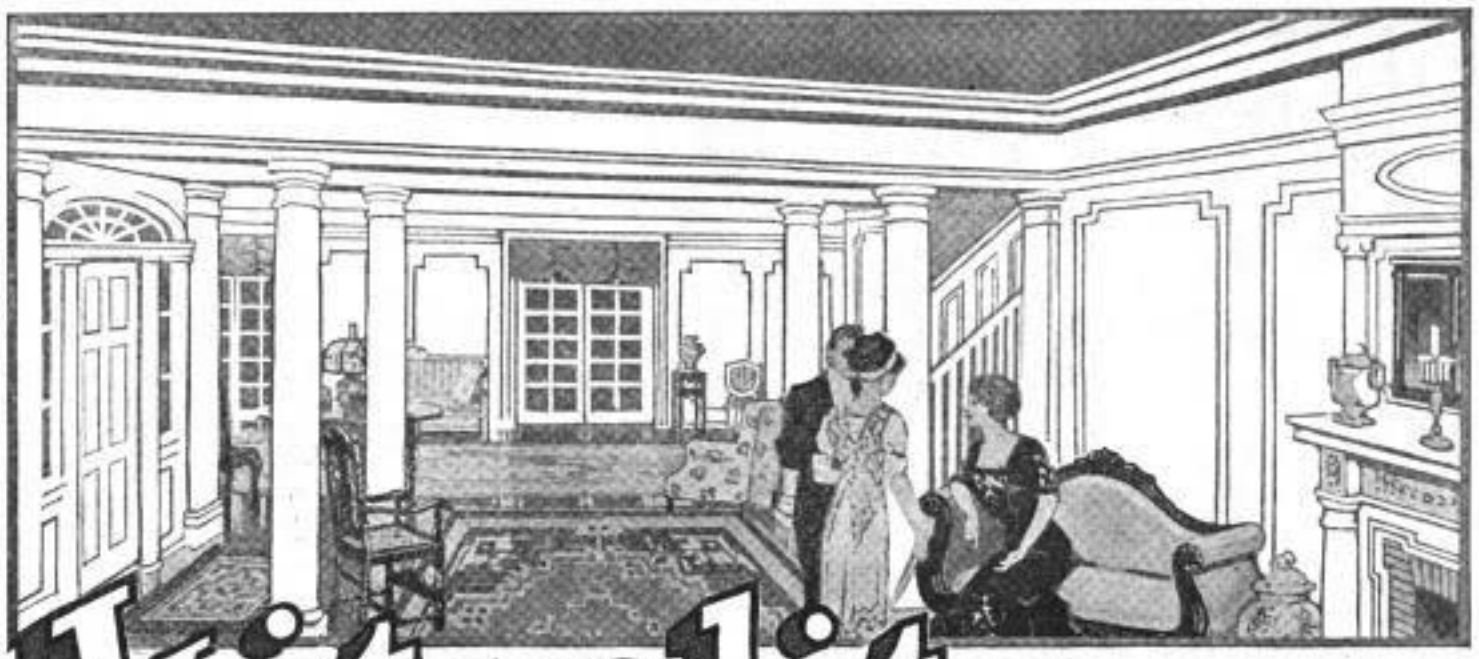
Digitized by Google

Republican party must be turned out; and they cannot become extravagant rascals themselves because they have been turned in. The leaders know all this, but the individuals who make up the Democratic majority do not. They are in power. They have the votes. The Treasury is there, waiting to be tapped; and these Democrats cannot understand why they shall not be permitted to do the tapping, especially as the Republicans jimmied the vaults open time after time and year after year, for sixteen years and more.

Economy, as a political precept, is always the slogan of the minority. It is always satisfactory and patriotic and advisable to be economical when you can't be anything else, because you have no chance to be profligate; but, when you have the money at your disposal, why not spend it, especially as it is the Government's money and not yours? Inasmuch as the leaders of the present majority in the House have decided to be economical, their first job has been to convince the hungry members of the Democratic majority that they must help. They are having a lovely time doing it. The boys want pap and pork to help them back home, to support their individual political aspirations.



They want all sorts of alleged iniquities investigated. They want all sorts of laws passed. They want anything that will give them a little advertising. They want to do things, to get action, to raise a dust; and the desire is always predicated on the individual ambition instead of on the broader party policy.



The copybooks used to tell us this world is made up of many men of many minds, and which precept is applicable for the Democratic majority in the House of Representatives. By a gigantic effort, these men were held reasonably in line during the extra session of the Congress that began in April, 1911, and ended in August of the same year; and the success of that holding in line was largely attained because the leaders insisted there should be no legislation except the tariff. Now the gates are open. This is a regular session—not a special one. The boys have free swing. They want what they want. Of course it is vastly important that a Democratic president shall be elected; but that necessity pales into insignificance beside the vastly more important one that the individual representatives must be elected.

Friends Who are Foes

The Democratic leaders gained much credit for the coherent and cohesive action of the Democrats in the extra session. They must be equally successful this time, for the people are not yet ready to give them an unqualified vote of confidence. The success of the Democratic party at the polls will be predicated largely on the record of the House now sitting. The leaders know this. They want to be sane and reasonable and Democratic and economical and businesslike; and the greatest foes they have are not in the opposition Republican minority, but in their own Democratic majority. It is doubtful if any set of men in politics ever had a greater task than these men in the Democratic House who are trying to keep the lid on, to hold things down, to keep in check their hungry colleagues—and thus help to elect a Democratic president. They must work at it night and day. They must be constantly on guard. Else, when they are not looking, some of their hungry friends on the same side of the House will start something that will inevitably spill all the beans.

CONDENSATION NOTE. An honorable legislator from West Virginia, who contributed in his autobiography to the Congressional Record that deathless sentiment concerning himself, "He is thoroughly reliable; works hard, late and early as a congressman, and is reflecting credit upon the country by his manly, conservative and wise course in Washington as a representative of all the people," has eliminated this and the half page of similar heartfelt self-appreciation that originally appeared in the directory, and now confines his autobiography to three prosaic lines.

Vitralite

The Long-Life WHITE ENAMEL

IN hall, living-room, dining-room or bed-room, Vitralite, "The Long-Life White Enamel," harmonizes with any color scheme. Its attractiveness and beauty never tire. Use Vitralite and the finish will be *permanent.* It will not turn yellow, crack, chip nor show brush marks. It gives a wonderfully smooth, fine surface—inside or outside—on wood, metal or plaster.

You may leave Vitralite a rich gloss or have it rubbed to a dull finish. The effect is that of fine porcelain. Can be tinted to any shade if desired. Vitralite is easily cleaned because it's water-proof—just the thing for bathroom or kitchen. Fine for furniture.

Send for Free Vitralite Booklet and Sample Panel

finished with Vitralite. Judge it for yourself. A copy of our **"Decorative Interior Finishing"** will prove valuable if you are interested in an attractive home. Ask for it—it's free.

Use "61" Floor Varnish on floors where you want a mar-proof, water-proof and heel-proof protective finish. It does not crack nor chip.

Send for Free Sample Panel and test it with hammer and heel. Ask for **"The Finished Floor."** It will prove interesting and instructive.

If your dealer can not supply "P & L" Varnishes, write to 83 Tonawanda Street, Buffalo, N. Y.; in Canada, 25 Courtwright St., Bridgeburg, Ontario

The Simplest and Most Agreeable Way to Keep

The Skin Soft, Smooth and Fair

is to use, morning and night, also before and after exposure to the weather

HINDS HONEY & ALMOND CREAM

We are sure there's nothing more delicate and refreshing. We have been sending it into refined homes for many years and thousands of letters have come back to us expressing appreciation of the benefit produced by Hinds Cream.

Every bottle is guaranteed absolutely pure and harmless,—free from greasy, sticky properties, or anything that can cause or aid a growth of hair. Every application of Hinds Cream will soften the skin, retard a tendency to wrinkles, relieve sore conditions and add attractiveness to the complexion.

50 cents—Sold everywhere or postpaid by us if not obtainable. Don't take a substitute, but write us at once.

Liberal Sample Bottle and Booklet Sent Free.—No Duplicating.

A. S. HINDS 89 West Street PORTLAND, MAINE

Bachelors' Friend TRADE MARK **HOSIERY**

Three grades: 6 pairs, $1.50; 6 pairs, $2.00; 6 pairs, $2.50. Wear guaranteed for six months.

This new summer weight hosiery weighs less than three-quarters of an ounce to the pair. It is the lightest, sheerest, silkiest of all summer cotton socks.

Look carefully at the graduated reinforcement of the heel—the strongly reinforced foot. They give you *wear*, even in this light, comfortable gauzy weight. The yarn used in this reinforcement costs us $1.40 a pound—four times the cost of ordinary yarn.

Consider these new features: Genuine French Welt—the best welt ever put on a seamless stocking. Reinforced at every point where wear comes. Reinforcement graduated to top of shoe. Toe looped on two-thread looping machines. Combed Sea Island cotton.

We do not sell direct. But if no dealer in your town has them, we will see that you have an introductory lot, if you will send us money order covering the amount. Charges prepaid.

Joseph Black & Sons Co. York, Pa.

No need of this since he wears Bachelors' Friend.

Electric light is necessary to bring out the reinforcement.

THE RED CROSS GIRL

(Continued from Page 6)

"I'm tired of being called a good sport," she protested, "by men who aren't half so good sports as I am. I'm tired of being talked to about money—as though I were a stockbroker. This man's got a head on his shoulders, and he's got the shoulders too; and he's got a darned good-looking head; and he thinks I'm a ministering angel and a saint; and he put me up on a pedestal and made me dizzy—and I like being made dizzy; and I'm for him! And I'm going after him!"

"Be still!" implored Helen Page. "Any one might think you meant it!" She nodded violently at the discreet backs of the men servants.

"Ye gods, Parker!" cried Anita Flagg. "Does it take three of you to pour a cup of tea? Get out of here, and tell everybody that you all three caught me in the act of proposing to an American gentleman over the telephone and that the betting is even that I'll make him marry me!"

The faithful and sorely tried domestics fled toward the door.

"And what's more," Anita hurled after them, "get your bets down quick, for after I meet him the odds will be a hundred to one!"

Had the Republic been an afternoon paper, Sam might have been at the office and might have gone to the telephone, and things might have happened differently; but, as the Republic was a morning paper, the only person in the office was the lady who scrubbed the floors and she refused to go near the telephone. So Anita Flagg said, "I'll call him up later," and went happily on her ride, with her heart warm with love for all the beautiful world; but later it was too late.

To keep himself fit, Sam Ward always walked to the office. On this particular morning Hollis Holworthy was walking uptown and they met opposite the cathedral.

"You're the very man I want," said Holworthy joyously—"you've got to decide a bet."

He turned and fell into step with Sam.

"It's one I made last night with Nita Flagg. She thinks you didn't know who she was yesterday, and I said that was ridiculous. Of course you knew. I bet her a theater party."

To Sam it seemed hardly fair that so soon, before his fresh wound had even been dressed, it should be torn open by impertinent fingers; but he had no right to take offense. How could the man, or any one else, know what Sister Anne had meant to him?

"I'm afraid you lose," he said. He halted to give Holworthy the hint to leave him, but Holworthy had no such intention.

"You don't say so!" exclaimed that young man. "Fancy one of you chaps being taken in like that! I thought you were taking her in—getting up a story for the Sunday supplement!"

Sam shook his head, nodded and again moved on; but he was not yet to escape.

"And, instead of your fooling her," exclaimed Holworthy incredulously, "she was having fun with you!"

With difficulty Sam smiled.

"So it would seem," he said.

"She certainly made an awfully funny story of it!" exclaimed Holworthy admiringly. "I thought she was making it up—she must have made some of it up. She said you asked her to take a day off in New York. That isn't so, is it?"

"Yes, that's so."

"By Jove!" cried Holworthy—"and that you invited her to see the moving-picture shows?"

Sam, conscious of the dearly bought front-row seats in his pocket, smiled pleasantly.

"Did she say I said that—or you?" he asked.

"She did."

"Well, then, I must have said it."

Holworthy roared with amusement.

"And that you invited her to feed peanuts to the monkeys at the Zoo?"

Sam avoided the little man's prying eyes.

"Yes; I said that too."

"And I thought she was making it up!" exclaimed Holworthy. "We did laugh! You must see the fun of it yourself."

Lest Sam should fail to do so he proceeded to elaborate.

"You must see the fun in a man trying to make a date with Anita Flagg—just as if she were an unknown somebody!"

"I don't think," said Sam, "that was exactly my idea." He waved his stick at a passing taxi. "I'm late," he said. He abandoned Hollis on the sidewalk, chuckling and grinning with delight, and unconscious of the mischief he had made.

An hour later at the office, when Sam was waiting for an assignment, the telephone boy hurried to him, his eyes lit with excitement.

"You're wanted on the 'phone," he commanded. His voice dropped to an awed whisper. "Miss Anita Flagg wants to speak to you!"

The blood ran leaping to Sam's heart and face. Then he remembered this was not Sister Anne who wanted to speak to him, but a woman he had never met.

"Say you can't find me," he directed.

The boy gasped, fled and returned precipitately.

"The lady says she wants your telephone number—says she must have it."

"Tell her you don't know it; tell her it's against the rules—and hang up."

Ten minutes later the telephone boy, in the strictest confidence, had informed every member of the local staff that Anita Flagg—the rich, the beautiful, the daring, the original of the Red Cross story of that morning—had twice called up Sam Ward and by that young man had been thrown down—and thrown hard!

That night Elliott, the managing editor, sent for Sam; and when Sam entered his office he found also there Walsh, the foreign editor, with whom he was acquainted only by sight.

Elliott introduced them and told Sam to be seated.

"Ward," he began abruptly, "I'm sorry to lose you, but you've got to go. It's on account of that story of this morning."

Sam made no sign, but he was deeply hurt. From a paper he had served so loyally, this seemed scurvy treatment. It struck him also that, considering the spirit in which the story had been written, it was causing him more kinds of trouble than was quite fair. The loss of position did not disturb him. In the last month too many managing editors had tried to steal him from the Republic for him to feel anxious as to the future. So he accepted his dismissal calmly, and could say without resentment: "Last night I thought you liked the story, sir?"

"I did," returned Elliott; "I liked it so much that I'm sending you to a bigger place, where you can get bigger stories. We want you to act as our special correspondent in London. Mr. Walsh will explain the work; and if you'll go you'll sail next Wednesday."

After his talk with the foreign editor Sam again walked home on air. He could not believe it was real—that it was actually to him it had happened; for hereafter he was to witness the march of great events, to come in contact with men of international interests. Instead of reporting what was of concern only from the Battery to Forty-seventh Street, he would now tell New York what was of interest in Europe and the British Empire, and so to the whole world. There was one drawback only to his happiness—there was no one with whom he might divide it. He wanted to celebrate his good fortune; he wanted to share it with some one who would understand how much it meant to him, who would really care. Had Sister Anne lived, she would have understood; and he would have laid himself and his new position at her feet and begged her to accept them—begged her to run away with him to this tremendous and terrifying capital of the world, and start the new life together.

Among all the women he knew, however, there was none to take her place. Certainly Anita Flagg could not take her place. Not because she was rich, not because she had jeered at him and made him a laughing-stock, not because his admiration—and he blushed when he remembered how openly, how ingenuously he had shown it to her—meant nothing; but because the girl he thought she was, the girl he had made dreams about and wanted to marry without a moment's notice, would have seen that what he offered, ridiculous as it was when offered to Anita Flagg, was not ridiculous when offered sincerely to a tired, nerve-worn, overworked nurse in a hospital. It was because Anita Flagg had not seen that she could not now make up to him for

Digitized by Google

e girl he had lost, even though she herself had inspired that girl and for a day ven her existence.

Had he known it, the Anita Flagg of his agining was just as unlike and as unfair the real girl as it was possible for two ople to be. His Anita Flagg he had ated out of the things he had read of her impertinent Sunday supplements and m the impression he had been given of r by the little ass, Holworthy. She was t at all like that. Ever since she had ne of age she had been beset by sycoants and flatterers, both old and young, th men and girls, and by men who nted her money and by men who wanted . And it was because she got the motives the latter two confused that she was so en hurt and said sharp, bitter things that de her appear hard and heartless.

ls a matter of fact, in approaching her the belief that he was addressing an irely different person, Sam had got rer to the real Anita Flagg than had any er man. And she knew it; but Sam not know it. And so—when on arriving he office the next morning, which was Friday, he received a telegram read-

"Arriving tomorrow nine-thirty from enwich; the day cannot begin too soon; 't forget you promised meet me. Anita gg"—he was able to reply: "Extremely y; but promise made to a different on, who unfortunately has since died!"

/hen Anita Flagg read this telegram e leaped to her lovely eyes tears that ng from self-pity and wounded feelings. turned miserably, appealingly to Helen e.

But why does he do it to me?" Her was that of the bewildered child who has ck her head against the table and from naughty table, without cause or provion, has received the devil of a bump. efore Miss Page could venture upon an anation, Anita Flagg had changed into ry angry young woman.

And what's more," she announced, "he t do it to me!"

e sent her telegram back again as it word for word, but this time it was d, "Sister Anne."

an hour the answer came: "Sister is the person to whom I refer. She is ."

m was not altogether at ease at the me of his adventure. It was not in ature to be rude—certainly not to a an, especially not to the most beautioman he had even seen. For, whether ame was Anita or Anne, about her ty there could be no argument; but sured himself that he had acted within ghts. A girl who could see in a wellit offer to be kind only a subject for le was of no interest to him. Nor did telegrams insisting upon continuing acquaintance flatter him. As he read , they showed only that she looked him as one entirely out of her world—e with whom she could do an uncononal thing and make a good story t it later, knowing that it would be ted as one of her amusing caprices.

was determined he would not lend lf to any such performance. And, es, he no longer was a foot-loose, y-go-lucky reporter. He no longer need for experiences and material to turn copy. He was now a man with a nsible position—one who soon would nferring with Cabinet Ministers and ng ambassadors at their ease. He ered if a beautiful heiress, whose was sought in marriage by the nobil- England, would understand the imnce of a London correspondent. He d some one would tell her. He liked hink of her as being considerably essed and a little unhappy.

urday night he went to the theater hich he had purchased tickets. And ent alone, for the place that Sister was to have occupied could not be by any other person. It would have sacrilege. At least, so it pleased him etend. And all through dinner, which te alone at the same restaurant to h he had intended taking her, he con- d to pretend she was with him. And e theater, where there was going for- the most popular of all musical com-, the seat next to him, which to the nce appeared wastefully empty, was m filled with her gracious presence. Sister Anne was not there—that the y romance he had woven about her nded in disaster—filled him with real t. He was glad he was leaving New . He was glad he was going where nothing would remind him of her. And then he glanced up—and looked straight into her eyes!

He was seated in the front row, directly on the aisle. The seat Sister Anne was supposed to be occupying was on his right, and a few seats farther to his right rose the stage box; and in the stage box, almost upon the stage, and with the glow of the footlights full in her face, was Anita Flagg, smiling delightedly down on him. There were others with her. He had a confused impression of bulging shirtfronts, and shining silks and diamonds, and drooping plumes upon enormous hats. He thought he recognized Lord Deptford and Holworthy; but the only person he distinguished clearly was Anita Flagg. The girl was all in black velvet, which was drawn to her figure like a wet bathing suit; round her throat was a single string of pearls; and on her hair of goldenrod was a great hat of black velvet, shaped like a bell, with the curving lips of a lily. And from beneath its brim Anita Flagg, sitting rigidly erect with her white-gloved hands resting lightly on her knee, was gazing down at him, smiling with pleasure, with surprise, with excitement.

When she saw that, in spite of her altered appearance, he recognized her she bowed so violently and bent her head so eagerly that above her head the ostrich plumes dipped and curtsied like wheat in a storm. But Sam neither bowed nor curtsied. Instead, he turned his head slowly over his left shoulder, as though he thought she was speaking not to him but to some one beyond him, across the aisle. And then his eyes returned to the stage and did not again look toward her. It was not the cut direct, but it was a cut that hurt; and in their turn the eyes of Miss Flagg quickly sought the stage. At the moment, the people in the audience happened to be laughing; and she forced a smile and then laughed with them.

Out of the corner of his eye Sam could not help seeing her profile exposed pitilessly in the glow of the footlights; saw her lips tremble like those of a child about to cry; and then saw the forced, hard smile—and heard her laugh lightly and mechanically.

"That's all she cares!" he told himself.

It seemed to him that in all he heard of her, in everything she did, she kept robbing him still further of all that was dear to him in Sister Anne.

For five minutes, conscious of the footlights, Miss Flagg maintained upon her lovely face a fixed and intent expression, and then slowly and unobtrusively drew back to a seat in the rear of the box. In its darkest recesses she found Holworthy, shut off from a view of the stage by a barrier of women's hats.

"Your friend, Mr. Ward," she began abruptly, in a whisper, "is the rudest, most ill-bred person I ever met. When I talked to him the other day I thought he was nice. He was nice. But he has behaved abominably—like a boor—like a sulky child. Has he no sense of humor? Because I played a joke on him, is that any reason why he should hurt me?"

"Hurt *you?*" exclaimed little Holworthy in amazement. "Don't be ridiculous! How could he hurt you? Why should you care how rude he is? Ward's a clever fellow, but he fancies himself. He's conceited. He's too good-looking; and a lot of silly women have made such a fuss over him that when one of them laughs at him he can't understand it. That's the trouble. I could see that when I was telling him."

"Telling him!" repeated Miss Flagg—"Telling him what?"

"About what a funny story you made of it," explained Holworthy. "About his having the nerve to ask you to feed the monkeys and to lunch with him."

Miss Flagg interrupted with a gasping intake of her breath.

"Oh!" she said softly. "So—so you told him that, did you? And—what else did you tell him?"

"Only what you told us—that he said 'the day could not begin too soon'; that he said he wouldn't let you be a manicure and wash the hands of men who weren't fit to wash the streets you walked on."

There was a pause.

"Did I tell you he said that?" breathed Anita Flagg.

"You know you did," said Holworthy.

There was another pause.

"I must have been mad!" said the girl.

There was a longer pause and Holworthy shifted uneasily.

"I'm afraid you are angry," he ventured.

"Angry!" exclaimed Miss Flagg. "I should say I was angry!—but not with you.

Whenever you catch the fragrance of violets, remember we have caught it in this soap.

Write for a sample cake. Smell it. Hold it to the light. The moment you do you will want it.

Smell Violets —then Smell this Soap

and you will find that we have succeeded in capturing the exact odor of violets. It is one of those discoveries which does happen after years of experimenting. It has made Jergens Violet Glycerine Soap wonderfully successful. Everywhere, wherever this soap has been brought out, the moment people catch its fragrance, they want it.

Smell it, hold it to the light. You will want it the minute you do.

Write for a sample cake, today

We are now prepared to send samples anywhere in the United States. Dealers everywhere now have the soap, so that your dealer can supply you when you have used your trial size cake. Send 2c today and get your cake by return mail. Address Dept. P, The Andrew Jergens Co., Cincinnati.

This shows how clear it is, you can see through it. It's a cake—3 for 25c. For sale everywhere. Look for the name "Jergens"

Jergens VIOLET Glycerine Soap

Both raised on Mellin's

Arnold Preston Bradford — Mrs. Fred W. Bradford, Concord Junction, Mass.

Both Mrs. Bradford and her boy were raised on Mellin's Food, and we think that the picture tells its own story. Read what Mrs. Bradford says about her baby and Mellin's Food:

"Mellin's Food saved my life as a baby and it certainly has done wonders for my boy, as he is a big, strong, healthy fellow, weighing 26 pounds at nine months of age. Nothing else in liquid form is satisfactory to him but Mellin's Food."

Add Mellin's Food to your baby's milk. He will show an immediate improvement and will grow strong and healthy.

Send for a free trial bottle of Mellin's Food.

MELLIN'S FOOD COMPANY — BOSTON, MASS.

I'm very much pleased with you. At the end of the act I'm going to let you take me out into the lobby."

With his arms tightly folded, Sam sat staring unhappily at the stage and seeing nothing. He was sorry for himself because Anita Flagg had destroyed his ideal of a sweet and noble woman—and he was sorry for Miss Flagg because a man had been rude to her. That he happened to be that man did not make his sorrow and indignation the less intense; and, indeed, so miserable was he and so miserable were his looks, that his friends on the stage considered sending him a note offering, if he would take himself out of the front row, to give him back his money at the box office. Sam certainly wished to take himself away; but he did not want to admit that he was miserable, that he had behaved ill, that the presence of Anita Flagg could spoil his evening—could, in the slightest degree, affect him. So he sat, completely wretched, feeling that he was in a false position; that if he were it was his own fault; that he had acted like an ass and a brute. It was not a cheerful feeling.

When the curtain fell he still remained seated. He knew before the second act there was an interminable wait; but he did not want to chance running into Holworthy in the lobby and he told himself it would be rude to abandon Sister Anne. But he now was not so conscious of the imaginary Sister Anne as of the actual box party on his near right, who were laughing and chattering volubly. He wondered whether they laughed at him—whether Miss Flagg were again entertaining them at his expense; again making his advances appear ridiculous. He was so sure of it that he flushed indignantly. He was glad he had been rude.

And then, at his elbow, there was the rustle of silk; and a beautiful figure, all in black velvet, towered above him, then crowded past him, and sank into the empty seat at his side. He was too startled to speak—and Miss Anita Flagg seemed to understand that and to wish to give him time; for, without regarding him in the least, and as though to establish the fact that she had come to stay, she began calmly and deliberately to remove the bell-like hat. This accomplished, she bent toward him, her eyes looking straight into his, her smile reproaching him. In the familiar tone of an old and dear friend she said to him gently:

"This is the day you planned for me. Don't you think you've wasted quite enough of it?"

Sam looked back into the eyes, and saw in them no trace of laughter or of mockery, but, instead, gentle reproof and appeal—and something else that, in turn, begged of him to be gentle.

For a moment, too disturbed to speak, he looked at her, miserably, remorsefully.

"It's not Anita Flagg at all," he said. "It's Sister Anne come back to life again!"

The girl shook her head.

"No; it's Anita Flagg. I'm not a bit like the girl you thought you met and I did say all the things Holworthy told you I said; but that was before I understood—before I read what you wrote about Sister Anne—about the kind of me you thought you'd met. When I read that I knew what sort of a man you were. I knew you had been really kind and gentle, and I knew you had dug out something that I did not know was there—that no one else had found. And I remembered how you called me Sister. I mean the way you said it. And I wanted to hear it again. I wanted you to say it."

She lifted her face to his. She was very near him—so near that her shoulder brushed against his arm. In the box above them her friends, scandalized and amused, were watching her with the greatest interest. Half of the people in the now half-empty house were watching them with the greatest interest. To them, between reading advertisements on the program and watching Anita Flagg making desperate love to a lucky youth in the front row, there was no question of which to choose.

The young people in the front row did not know they were observed. They were alone—as much alone as though they were seated in a biplane, sweeping above the clouds.

"Say it again," prompted Anita Flagg. "Say Sister."

"I will not!" returned the young man firmly. "But I'll say this," he whispered: "I'll say you're the most wonderful, the most beautiful and the finest woman who has ever lived!"

Anita Flagg's eyes left his quickly; and, with her head bent, she stared at the bass drum in the orchestra.

"I don't know," she said, "but that sounds just as good."

When the curtain was about to rise she told him to take her back to her box, so that he could meet her friends and go on with them to supper; but when they reached the rear of the house she halted.

"We can see this act," she said, "or—my car's in front of the theater—we might go to the park and take a turn or two—or three. Which would you prefer?"

"Don't make me laugh!" said Sam.

As they sat all together at supper with those of the box party, but paying no attention to them whatsoever, Anita Flagg sighed contentedly.

"There's only one thing," she said to Sam, "that is making me unhappy; and because it is such sad news I haven't told you. It is this: I am leaving America—I am going to spend the winter in London—I sail next Wednesday."

"My business is to gather news," said Sam, "but in all my life I never gathered such good news as that."

"Good news!" exclaimed Anita.

"Because," explained Sam, "I am leaving America—I am spending the winter in England—I am sailing on Wednesday. No, I also am unhappy, but that is not what makes me unhappy."

"Tell me," begged Anita.

"Some day," said Sam.

The day he chose to tell her was the fifth day they were at sea—as they leaned upon the rail, watching Fire Island disappear.

"This is my unhappiness," said Sam, and he pointed to a name on the passenger list. It was: "The Earl of Deptford, and valet." "And because he is on board!"

Anita Flagg gazed with interest at a pursuing seagull.

"He is not on board," she said. "He changed to another boat."

Sam felt that by a word from her a great weight might be lifted from his soul. He looked at her appealingly—hungrily.

"Why did he change?" he begged.

Anita Flagg shook her head in wonder. She smiled at him with amused despair.

"Is that all that is worrying you?" she said.

What She Came For

A NORTH CAROLINA darky was about to be hanged for murder. As a special privilege, the widow of his victim, a very large and very dark person, was permitted to witness the execution of the law.

She sat and fanned herself industriously with a large turkey-wing fan.

On the gallows, after tying up the murderer, the sheriff inquired if the darky had anything to say.

"Yas, suh," was the answer; "I has jest wants to say that I done got forgiveness frum on high fur whut I done. The foreman of the jury sent me word that he didn't bear me no grudge, and so did the jedge and the persecutin' attorney. An' now Ise ready to go straight to Heaven, but fust I'd like to git the furgiveness of the wife of that nigger I killed." He raised his voice addressing the large figure in white. "Lady," he said, "does you furgive me fur shootin' yore husband?"

There was no answer. Aunt Dilsey fanned on. Twice more he put the question, each time more pleadingly, without any result.

"Here, Jim," said the sheriff: "let me try her. Aunt Dilsey," he called out, "Jim is goin' away from here in about a minute and he won't be back. You don't want to spoil the whole day for him, I know. Say something to him—tell him you don't have any hard feelin's for him—won't you?"

The turkey-wing fan only moved a trifle faster.

"Come on, Jim, and let's get this over," said the sheriff. "You see how contrary she is. It's hot out here in this sun and I've got to be gettin' home for dinner."

"Jest one minute mo', please, suh," entreated the doomed darky. "Lemme make jest one mo' effort to reach that nigger woman's heart. Lady," he entreated, and there was all the pathos in the world in his tone, "wid my dyin' breath I asks you to please, ma'am, furgive me for shootin' your late husband six times with a forty-fo'-caliber revolver!"

Aunt Dilsey's fan halted in midair—for the first time she spoke.

"Go on, nigger!" she said. "Git it—Git hung!"

THE COST OF LIVING

(Concluded from Page 7)

were paragraphs giving accounts of meetings in many countries, some of which were attended by violence, to protest against high prices.

"It is a noticeable fact that many prices have risen in spite of reduced tariffs in our own country—as in the cases of hides and shoes. In the whole list of increases, from 1899 to March, 1910, there is no more notable illustration than that of crude rubber, on which there is no duty. The price rose from eighty cents in the former year to $1.99½ in 1910. On the other hand, raisins and prunes, upon which there is a considerable duty, have shown a material fall; and sugar has not greatly increased in price except very recently—due, it is claimed, to crop conditions. Instances might be indefinitely multiplied of the rise and fall of prices here and elsewhere irrespective of the duties levied. These illustrations show that the tariff is only one of the numerous causes affecting relative prices. It may often happen, as in the cases cited, that other causes so far outweigh the influence of the tariff that its effect cannot be discerned."

What the Senator has to say about labor is also very interesting:

"As regards the cost of labor, though a high standard of wages is maintained in the United States and there have been notable increases in the wages of many classes of employees, it cannot be said that there has been a disproportionate increase; the facts are quite the contrary, because, generally speaking, the cost of living has more than kept pace with the increase in compensation.

"As a rule, wages, as well as retail prices, do not immediately respond to changes so readily as wholesale prices, or as rent and other items which make up the ordinary expenses of living. The basic fact which should be considered is the relative proportion of personal service and of improvements accomplished by inventions or labor-saving devices in the production or distribution of any commodity."

As a conclusion to this article, I herewith give the last paragraph of Senator Burton's great speech before the American Economic Association, from which speech I have—with the Senator's permission—drawn heavily for the above quotations.

"It would be rash to predict an early return to low prices. All the great factors which I have partially portrayed depend upon new conditions that have arisen, some of which are inseparably connected with substantial benefits to the human race. If prices have increased human enjoyment has also increased.

"That which is most noticeable in the consideration of this problem is the wide variation in the changing cost of divers commodities and facilities. After making due allowance, however, for this variation, there is a manifest increase in the general price level. Great economic laws will be potent in their effect upon this condition. The enormous increase in the production of gold will be checked as this metal becomes less valuable in comparison with useful articles. Indeed, this fact is already forecast by the diminished annual increase in the years 1910 and 1911. Whether or not there be a movement 'back to the farms,' more scientific methods in agriculture will respond to the increasing prices of farm products. There may be some readjustment in population between city and country; but, whether this is so or not, the average yield an acre will no doubt increase. More intelligent and more adequate control will be exercised over great industrial and commercial organizations, so that the benefit of modern developments in industry and commerce may accrue in proper measure to those of limited means.

"The same advances that have been made in production and in the distribution of great masses of commodities will, so far as possible, be applied to the minutest details of distribution. Our natural resources, which have been wasted or too largely absorbed by the few, will be more carefully utilized, and every possible means be taken to preserve a proper share of them for the future. Thus, in this present increase of prices, as in all great economic changes, there may be reasonable assurance that the ultimate effect will bring to all substantial benefit rather than harm."

THE PLAY BUSINESS

(Continued from Page 18)

not only saved me much money and time, but assured the opening of the play on the date announced, thereby keeping faith with the public.

A manager saves much money by buying his own properties rather than delegating that work to a subordinate. I make it a point to go out and search for furniture, bric-à-brac, and so forth, in keeping with the period and character of the play. I always bear in mind the circumstances of the characters. Though the properties may be characteristic of a period the persons may be very different as to taste and condition. I sometimes have great trouble in developing scenery to suit me. We have our studios for painting, our carpenter shop and upholstering department. We ourselves make everything we use. Sometimes it is very difficult to get the idea into the space we have. There was one ceiling that it took all summer to build. When the play started we had to discard it and make another that we could put up and take down. I've developed scenes, got them all painted, decorated and on the stage, and then have had to throw them out and get something else. On one occasion a third act was an interior. It turned out to be a bad act and the author decided to rewrite it and make an exterior of it. Of course the entire scenery was wasted. To be sure we put it in our storehouse, but we may never use it again. Going over the furniture that I have in storage the other day I noticed some that was used in my first production and has never been used since; in fact I have hundreds of thousands of dollars' worth of material put away that may never be brought out. We often find that it is cheaper to build new than to remodel.

Costly Touches of Realism

In former days everything was sham; today every bit of furniture is real. In early days the floors were painted; today they are covered with carpets of fine quality. This painstaking realism makes a production cost twenty thousand dollars, where it would have cost four hundred dollars years ago.

All the arts and devices used behind the footlights, apart from the acting, are more carefully thought out than formerly. Everything must contribute to the effect desired. In the play On the Eve we had a hundred supernumeraries on the stage that were not seen at all. The realistic effect of numbers could not have been got any other way. In The Heights we worked for three months to get the snow effect. Snow was supposed to have drifted against the door and the window, and whenever the former was opened the snow came swirling into the room. We installed a blower in the cellar to force the particles from pipes all round the door. Four men were stationed above the door and window dropping it down. We used forty barrels of salt on the stage to give the effect of banked snow. This was used over and over again of course. Twenty-two workmen were required for twenty-three minutes' work, running electrical machines and handling the salt, which was dredged through a kind of sieve that we call a snow cloth. When this device was put into operation during the dress rehearsal it did not suit. I spent a day's work on it and got what I required.

The question of lighting on the stage is, I believe, in its infancy. We do our best to make the atmosphere seem real. We can copy daylight or cloudy light, but we cannot get the real thing either in black night or moonlight. Belasco has come nearer to it than anybody else. In preparing a play we spend weeks at studying and experimenting with lighting effects. In this we have to consider everything, not only the colors in the scenes but also the actor's makeup and his costume. It is necessary to prevent shadows, because the least of these will attract the attention of the audience and take the eye off what we want them to see. Even with lights coming from all directions a shadow will be cast if one is not very careful. The public is getting educated up to realistic effects and is very severe in criticising any defect.

Again weeks are spent in effects other than lighting, such as the birds whistling, horses passing by in the distance. If the characters are talking about the flowing of water outside of windows we must

The "Do-it-Now" Possibilities of the Multigraph

How it acts quickly, day or night, to take advantage of business opportunities or emergencies.

IN a thriving little city of the Middle West, there's a prosperous manufacturer who sells direct to farmers, through the mails. In 1908 his receipts had been running from $1,800 to $3,000 a day. When the panic of that year befell, they dropped off to $200 a day—and he had to count twice to make sure of that.

Small as it was, he scarcely dared to deposit that $200 a day in bank. Some banks had closed up; and others were on the ragged edge of failure.

The situation was serious. Self-interest and local pride both incited this manufacturer to grapple with the situation. Fired to fever heat, he prepared a letter to his customers. By midnight it was ready for the Multigraph. That letter came to the rescue of the local banks—to the tune of $60,000 within twenty days.

THE MULTIGRAPH
Produces real printing and form-typewriting, rapidly, economically, privately, in your own establishment

The constant readiness of the Multigraph, and the speed with which it turns out work, are often quite as important as the economies it effects. A firm of Boston commission merchants furnishes an example:

> "An additional advantage is that the Multigraph and the Universal Folding-Machine enable us to get our nightly special letter into our customers' hands before the market opens, which is of the utmost importance to us. Our record for the production of several hundred letters from the time of OK-ing proof until the entire batch was ready to insert in envelopes is twelve minutes."

And this from the proprietor of a restaurant in Atlanta:

> "Instead of having to make up our menu two or three hours before a meal is served, in order to give the printer plenty of time, we can do the work ourselves in less than one hour and get the same quality of work."

Day or night, the Multigraph is ready to serve you—to typewrite the hundreds or thousands of timely letters that will turn the psychological moment to your own advantage; to produce the system-forms that will increase the efficiency of your working-force; to replenish the stock of printed-matter that the stock-clerk allowed to run too low. And it does these things at a saving—25% to 75% less than the printer's charge.

somehow give an effect, even if invisible, that will lend color to their words.

Luck is an important factor even in the most carefully executed plans. Let a manager be never so careful in his cast and production, and still the whole thing may fall flat from lack of merit. The public decides. There is consolation in a complete, downright failure, but the maddening thing is to have some neglected detail "queer" a show. I knew of a play that was ruined on the opening night—and it is the opening night that counts—because the cleaners had failed to clean up the theater. In his rush of business the manager had overlooked it, and the women in the audience, constantly harassed by the thought that their gowns were being spoiled by the dirty seats, paid no attention to the play and it fell perfectly flat. The manager of the play has also to be very careful of the condition of the stage. A leak in the roof over the stage in a certain theater caused the failure of a play that had cost forty thousand dollars to produce. There was a constant dripping of water on some papers on a table in the big scene that was to carry the play. This trifle so distracted the attention of the audience that they lost sight of the play and the actors. When the curtain fell on this particular scene it was evident that it was a failure.

Stagehands can easily ruin a play by creating long waits. It is not an unknown thing for managers to give to the stagehands after the opening performance from one hundred to five hundred dollars. Nor is this a bad scheme. It is said that Mr. George Tyler handed the stagehands a thousand dollars after the first night of The Garden of Allah.

Criticism That Counts

Even the stage doorman may hold the balance in the manager's fortune. Especially on opening nights is this man valuable. The actors are keyed up to concert pitch; the least thing will throw them off their stride. I knew of a performance where the stage doorman was absent for a few minutes, and his substitute let a messenger boy get in with a message announcing the death of a relative of one of the principal members of the company. The actor, shocked, went through the performance in such a half-hearted manner as to throw the whole thing out of gear, greatly jeopardizing the chances of the play.

If the play "gets over" the footlights in good shape there is still the critic to call a halt on the manager's hopes. An adverse criticism, however, can only temporarily hurt a good play, and it is often more desirable to have a difference of opinion in the press, as this creates controversy and talk. Many of the biggest successes we ever had in this country—including The Lion and the Mouse—incurred a consensus of adverse press reviews. But the country is big and criticism is merely local. Plays that have been roasted in Chicago have been lauded in New York and vice versa. The opinion of the critic in Syracuse is just as good as that of the metropolitan reviewer, although the latter regards him as provincial. He is honest and independent and no whit influenced by the New York man's views. Indeed we have no criticism in New York any more. All we have is the individual opinion of a professional playgoer who often does not echo the sentiments of the audience.

In spite of the difficulties the manager has much to compensate him for his trials. The theatrical field has been commercialized—praise be to Allah! Individual theater owners who were shifty and elusive have under the new conditions become responsible business men. Much time is saved in arranging for dates. Booking a tour is simplicity itself. In former years, when I had to deal with the manager in every town where I proposed playing, it took three months to book two shows—mostly by correspondence. Now I can book thirteen companies for a season in one hour. The booking system is so perfect that it requires no more than one or two failures to disarrange the whole scheme.

It sometimes takes six or eight weeks to prove the box-office quality of a play—sometimes only a week. It sometimes happens that a play that failed outside will be a "go" in New York. But once a play has been a success in the metropolis it is practically sure of good business on the road. So if we can keep a play running here—no matter what the critics say about it—for a couple of months, we succeed in creating a demand for it throughout the country.

"Sautoir"

one of the new Simmons styles

Our designers are constantly in touch with the fashion centers of Paris, Vienna, London, New York.

SIMMONS means better workmanship and design than solid gold—as long or longer wear—one-fourth to one-fifth the cost—no useless gold hidden at the center. The outside gold will not wear through before a solid gold link has worn too thin for safety.

SIMMONS CHAINS

For men and women—chains, fobs, bracelets, chatelaine pins and lockets. Look for "SIMMONS" on each piece.

You Don't Know What a Real Bath is

Until You've Used Lifebuoy

ears, softens and beautifies the skin.

YOU can *feel* its refreshing effect on your skin, and the skin soon shows it.

Bathe with it, shampoo with it, wash your hands with it—*just once—and the Lifebuoy habit has got you.*

You can *feel* it purify and soothe and invigorate—every time it is used—producing a gloriously clear, healthy, wholesome skin.

Antiseptic—Protects you and your family

Look at your hands!

You've washed them thoroughly. They *look* clean.

Yet within half an hour after washing they have touched a dozen germ-laden things, from which there is danger of infection—car straps, money, library books, nets, countless every-day things. These invisible germs are the chief cause of sickness, of infectious ailments, and of skin disorders.

Touch what you will, work where you will—your skin will repel instead of attract germs if you use Lifebuoy regularly. The mild carbolated solution which it contains *protects* you.

Experience this protected cleanliness just once and you will never be content to go without it again. For tender or sensitive skins, the mildness and the absolute purity of Lifebuoy *insure skin comfort.*

Clears and Beautifies

Lifebuoy is made of pure cocoanut oil, pure natural red palm oil and a mild carbolated infusion (the greatest secret of the complexion specialists). It clears and beautifies the skin and deodorizes the pores. And made so pure that a $5,000 guarantee of purity *is given with every* cake.

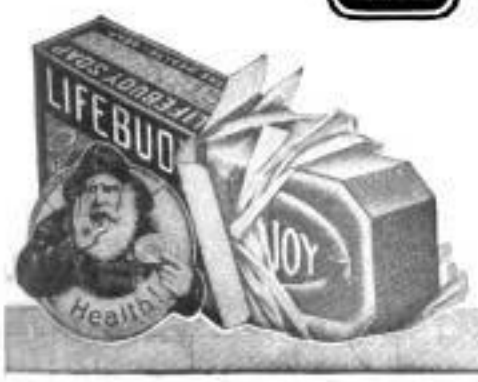
For Baby's bath. Keeps the little body sweet and healthy.

Do you work with your hands?

Are there certain kinds of dirt that you find it almost impossible to remove from your hands?

Lifebuoy will clean them instantly and thoroughly. Prevents chapped skin and protects from *infection of cuts and scratches.* Leaves the hands clean and wholesome and sound.

Lathers freely in hard water.



Keeps the scalp clean and the hair soon shows the effect.

LIFEBUOY

THE HEALTH SOAP

FOR TOILET, BATH AND SHAMPOO

The Story of Welsbach Service

Third:—Brilliance

The brilliance of a gas mantle depends upon the lighting-fluid in which the webbing is soaked.

A poorly-mixed or a weak fluid results in a poor mantle that will give a dim light.

Welsbach light fluids are always uniform because we own the mines where the monazite sand is found from which the fluid is made. And every process of manufacture, from mine to mantle, is watched over by an army of Welsbach Chemists, each one an acknowledged expert in his own particular line.

As a result the genuine Welsbach mantle may be relied upon to give a brilliant, lasting light.

Look for the "Shield of Quality" on the box.

Ask the Man Who Uses Them

THE LIGHTED WAY

(Continued from Page 38)

But there is her chance still. My mind has been filled with big things and I had forgotten it. Before we moved into Adam Street the last doctor who saw Ruth suggested an operation. He felt sure that it would be successful. It was to cost forty guineas. I have saved very nearly the whole of that money. It stands in her name at the Westminster Savings Bank. If she goes there and proves her identity she can get it. I saved that money myself!"

"Tell me the name of the doctor," Arnold asked.

"His name was Heskell and he was at the London Hospital," Isaac replied. "Now I have done with you. That is Ruth's chance—there is nothing else I can do. Be off as quickly as you can. If you give information as to my whereabouts you will probably pay for it with your life, for there are others besides myself who are hiding in this house. Now go. Do you hear?"

Arnold's anger against the man suddenly faded away. It seemed to him, as he stood there, that he was but a product of the times fashioned by the grinding wheel of circumstance, a physical wreck, a creature without love or life or hope.

"Isaac," he said, "why don't you try to escape? Get away to some other country, out on to the land somewhere. Leave the wrongs of these others to come right with time. Work for your daily bread, starve your brain by wearing out your body."

Isaac made no reply. Only his long, skinny forefinger shot out toward the door. Arnold knew that he might just as well have been talking to the most hopeless lunatic ever confined in a padded room.

"If this is to be farewell, Isaac," he continued, "let me at least tell you this before I go: You are doing Ruth a cruel wrong. I am willing enough to take charge of her, but it's none the less a brutal position for you to put her in. You have the chance, if you will, to set her free. Think what her life has been up till now. Have you ever thought of it, I wonder? Have you ever thought of the long days she has spent in that attic when you have been away, without books, with barely enough to eat, without companionship or friends? These are the things to which you have doomed her by your cursed selfishness. If she has friends who could take her away, and you refuse to speak, then all I can say is that you deserve any fate that may come to you."

Isaac remained silent for several moments. His face was dark and dogged. When he spoke it was with reluctance.

"Young man," he said, "every word that you have spoken has been in my brain while I have lain here waiting for the end. A few hours ago I slept and had a dream. When I awoke I was weak. See here."

He drew from his pocket two sheets of closely written foolscap.

"The story of Ruth's life is here," he declared. "I wrote it with a stump of pencil on the back of this table. I wrote it, but I have changed my mind. I am going to tear it up."

Arnold was light on his feet, with a great reach, and Isaac was unprepared. In a moment Isaac was on his back and the soiled sheets of foolscap were in Arnold's pocket. Isaac's fingers seemed to hover upon the trigger of his pistol as he lay there, crouched against the wall.

"Don't be a fool!" Arnold cried roughly. "You'll do no good by killing me. The girl has a right to her chance."

There were several seconds' breathless silence, during which it seemed to Arnold that Isaac had made and unmade his mind more than once. Then at last he lowered his pistol.

"We'll call it chance," he muttered. "I never meant to write the rubbish. Since you have got it, though, it is the truth. Do with it what you will. There is one thing more. You know this man Sabatini?"

"If you mean the Count Sabatini it was he who gave me your address," Arnold reminded him.

Isaac smiled grimly.

"Citizen Sabatini is all we know him by here. He knows well that to a man with his aspirations, a man who desires to use as his tools such as myself and my comrades, a title is an evil recommendation. He came to us first as a man and a brother—he, Count Sabatini, Marquis de Lossa, Chevalier de St. Jerome, Knight of the Holy Roman Empire—an aristocrat, you perceive, and one of the worst. Yet we have trusted him."

"I do not believe," Arnold exclaimed, "that Sabatini would betray any one!"

"I am not accusing him," Isaac said solemnly. "I simply hold that he is not the man to lead a great revolutionary movement. It is for that reason among others that I have rejected his advances. Sabatini as president would mean very much the same thing as a king. Will you give him a message from me?"

"Yes," Arnold answered; "I will do that."

"Tell him that if indeed he has the courage that fame has bestowed upon him, to come here and bid me farewell. I have certain things to say to him."

"I will give him your message," Arnold promised, "but I shall not advise him to come."

A look of anger flashed in Isaac's face. The pistol that had never left his grip was slowly raised, only to be lowered again.

"Do as I say," he repeated. "Tell him to come. Perhaps I may have more to say to him about that other matter than I choose to say to you."

"About Ruth?"

"About Ruth," Isaac repeated sternly.

"You would trust a stranger," Arnold exclaimed, "with information that you deny me—her friend."

Isaac waved him away.

"Be off," he said tersely. "I have queer humors sometimes lying here waiting for the end. Don't let it be your fate to excite one of them. You have had your escape."

"What do you mean?" Arnold demanded.

Isaac laughed hoarsely.

"How many nights ago was it," he asked, "that you threw up a window in the man Weatherley's house—the night Morris and I were there seeking for Rosario?"

"I never saw you!" Arnold exclaimed.

"No; but you saw Morris," Isaac continued. "What is more, you saw him again on the stairs with me that night and it very nearly cost you your life. Lucky for you, young man, that you were not at Hampstead the night when Morris went there to seek for you!"

Arnold was speechless.

"You mean that he was there that night looking for me?" he cried.

"He hated you all," Isaac muttered, "you and the woman and Sabatini, and he was a little mad—just a little mad. If he had found you all there ——"

"Well?" Arnold interposed breathlessly.

Isaac shook his head.

"Never mind!"

"But I do mind," Arnold insisted. "I want to know about that night. Was it in search of us ——"

Isaac held out his skinny hand. There was a dangerous glitter in his eyes.

"It is enough," he snarled. "I have no more to say about what is past. Send me Sabatini and he shall hear news from me."

Arnold retreated slowly toward the threshold.

"If you will take the advice of a sane man," he said, "you will throw that thing away and escape. If I can help ——"

Isaac was already creeping back to his hiding-place. He turned round with a contemptuous gesture.

"There is no escape for me," he declared. "Every day the police draw their circle closer. So much the better! When they come they will find me prepared! If you are still here in sixty seconds," he added, "I shall treat you as I shall treat them."

Arnold closed the door and made his way into the street.

XXXIII

SABATINI, already dressed for the evening, his coat upon his arm, paused only to light a cigarette and read once more the telegram he held between his fingers before he left his house to step into the automobile that was waiting outside. His servant entered the room with his silk hat.

"There is a young gentleman here, sir," the man announced. "He has just arrived."

"The young gentleman who was here before, today?" Sabatini asked.

"The same, Excellency."

Sabatini laid down his coat.

"You may show him in," he directed. "Wait for me outside."

Arnold, who had come straight from the unknown world in which he had found Isaac, was shown in immediately. Pietro

Digitized by Google

closed the door and withdrew. Sabatini looked inquiringly at his visitor.

"You have seen Isaac?" he asked.

"I have seen him," Arnold assented.

"You bring me news?"

"It is true," Arnold replied. "I bring news."

Sabatini waited patiently. Arnold remained for a moment gloomily silent.

"You will forgive my reminding you," Sabatini said quietly, "that I am on the point of starting out to keep an engagement. I would not mention it, but in one respect London hostesses are exacting. There are many liberties that are permitted here, but one must not be late for dinner."

Arnold's memory flashed back to the scene that he had just left—to Isaac, the outcast, crouched beneath his barricade of furniture, waiting in the darkness with his loaded pistol and murder in his heart. Sabatini, calm and dignified in his rigidly correct evening dress, his grace and good looks, represented with curious appositeness the other extreme of life.

"I will not keep you long," Arnold began, "but there is something that you must hear from me, and hear at once."

"Assuredly," Sabatini murmured. "It is something connected with your visit to this poor, misguided outcast. I am afraid there is nothing we can do for him."

"There is nothing any one can do for him," Arnold declared. "I went to see him because when he fled from his rooms and they were seized by the police his niece was left penniless and homeless. Fortunately the change in my own circumstances permitted me to offer her a shelter—for the moment at any rate. I have told you something of this before, but I am obliged to repeat it. You will understand presently. It is of some importance."

Sabatini bowed.

"Miss Lalonde seemed to me," he murmured, "to be a very charming and distinguished young lady."

"I am glad to hear you say so," Arnold declared. "Today I went to Isaac that he might tell me whether there were not some relatives of hers in the world to whom she could apply for help and shelter. I pointed out that he had left Ruth alone and penniless; that although the charge of her was nothing but a pleasure to me it was not fitting that I should undertake it. I insisted upon his telling me the name of one at least of her relatives, so that I might let them know of her existence and beg for a home for her."

"It was a reasonable request," Sabatini remarked. "I trust that the fellow recognized the situation."

"He had already written out Ruth's history," Arnold said, his voice shaking a little. "He had written it out in pencil on a couple of sheets of foolscap. He gave them to me to bring away with me. I read them coming up. I am here now to repeat their purport to you."

Sabatini gave a little nod of interest. His glance at the clock was apologetic. He had thrown his overcoat once more upon his arm and, with his hand resting upon the back of a chair, stood listening in an attitude of courteous ease.

"I shall be glad to hear the story," he said. "I must admit that although I only met the young lady for those few minutes at Bourne End I found myself most interested in her. I feel sure that she is charming in every way. Please go on."

"If Isaac's story is true," Arnold continued slowly, "you should indeed be interested in her."

Sabatini's eyebrows were slightly raised.

"I scarcely understand," he murmured. "I—pray go on."

"According to his story," Arnold said, "Ruth Lalonde is your daughter."

Sabatini stood perfectly motionless. The slight expression of tired attention with which he had been listening had faded from his face. In the late sunshine that still filled the room there was something almost corpselike in the pallor of his cheeks, his unnatural silence. When he spoke his words came slowly.

"Is this a jest?"

"Isaac's story is that you married her mother, who was his sister, in Paris nineteen and a half years ago. Her name was Cécile Ruth Leneveu and she was acting at one of the theaters. She was really Isaac's half sister. His father had brought him from Paris when he was only a child and married again almost at once. According to his story Ruth's mother lived with you for two years—until, in fact, you went to Chile to take command of the troops

These buildings covered with J-M Asbestos Roofing

The Cheapest Roofing

J-M Asbestos Roofing is lower in first cost than shingles, tin and slate, and cheaper than *all* other roofings when cost per year is considered.

Tin, iron and most prepared roofings are a continual trouble and expense, for they have to be painted or regravelled every few years. No paint, gravel or other protection is *ever* needed for J-M Asbestos Roofing. *Its first cost is the only cost.*

J-M ASBESTOS ROOFING

consists of layer on layer of Asbestos (rock) Felt securely cemented together with Trinidad Lake Asphalt. This makes a ready roofing that is literally a pliable stone, with the everlasting qualities of stone.

Sparks or burning brands cannot ignite it. Rain, snow, heat, cold, salt air or chemical fumes cannot injure it.

This roofing is in good condition today on many buildings after more than a quarter century of service. J-M Asbestos Roofing can be used on any type of building.

Get it from your dealer. Sold direct if he can't supply you.

Write our nearest Branch for a piece of the curious Asbestos Rock and Illustrated Book No. 1049.

GUNN FURNITURE COMPANY, 3 Victoria St., Grand Rapids, Mich.

there at the time of the revolution. When you returned she was dead. You were told that she had given birth to a daughter and that she, too, had died."

"That is true," Sabatini admitted slowly. "I came back because of her illness, but I was too late."

"The child did not die," Arnold continued. "She was brought up by Isaac in a small convent near Rouen, where she remained until two years ago, when he was forced to come to England. He brought her with him as, owing to her accident, she was unable to take the post of teacher for which she had been intended, and the convent where she was living was unexpectedly broken up. Since then she has lived a sad life with him in London. His has been simply a hand-to-mouth existence."

"But I do not understand why I was kept in ignorance," Sabatini declared. "Why did he not appeal to me for help? Why was my daughter's existence kept a secret from me?"

"Because Isaac is half a fanatic and half a madman," Arnold replied. "You represent to him the class he loathes, the class he has hated all his life and against which he has waged ceaseless war. He hated your marriage to his sister, and his feelings were the more embittered because it suited you to keep it private. He has nursed a bitter feeling against you all his life for this reason."

Sabatini turned stiffly away. He walked to the window, standing for a moment or two with his back to Arnold, looking out into the quiet street. Then he came back.

"I must go to this man at once," he said. "You can take me there?"

"I can take you," Arnold assented doubtfully, "and I have even a message from him asking you to visit him, but I warn you that he is in a dangerous mood. I found him the solitary occupant of a miserable room in the back street of a quarter of London that reminded me more than anything else of some foreign city. He has cleared the furniture from the room, reared a table up on end, and is crouching behind it with a pistol in his hand and a box of cartridges by his side. My own belief is that he is insane."

"It is of no account, that," Sabatini declared. "One moment."

He touched the bell for his servant, who entered almost immediately.

"You will take a cab to 17 Grosvenor Square, Pietro," he directed. "Present my compliments to the lady of the house and tell her that an occurrence of the deepest importance deprives me of the honor of dining with her tonight."

"Very good, your Excellency!"

Sabatini turned to Arnold.

"Come," he said simply, "my automobile is waiting. Will you direct the man?"

They started off Cityward. Sabatini for a time sat like a man in a dream, and Arnold, respecting his companion's mood, kept silent. There seemed to be something unreal about their progress. To Arnold, with this man by his side, the amazing story that he had gathered from those ill-written pages with their abrupt words and brutal cynicism still ringing in his brain, their errand seemed like some phantasmal thing. The familiar streets bore a different aspect; the faces of the people they passed struck him always with a curious note of unreality. Ruth was Sabatini's daughter! His brain refused to grasp so amazing a fact. Yet, curiously enough, as he leaned back among the cushions the likeness was there. The turn of the lips, the high forehead, the flawless delicacy of her oval face, in the light of this new knowledge, were all startlingly reminiscent of the man who sat by his side now in a grim, unbroken silence. The wonder of it all remained unabated.

Presently Sabatini began to talk, rousing himself as though with an effort and asking questions concerning Ruth, about her accident, her tastes. He heard of the days of her poverty with a little shiver. Arnold touched lightly upon these, realizing how much his companion was suffering. Their progress grew slower and slower as they passed into the heart of this strange land, down the narrow yet busy thoroughfare that seemed to be the main artery of the neighborhood. As they neared the last corner Arnold leaned out and his heart sank. In front of the house in which Isaac was hiding he could see the crowd kept back by a line of police.

"We are too late!" he exclaimed. "They have found him! They must be making the arrest even now!"

"Count the Indians on the Road!"

The Indian Motocycle

H. P. Single Cylinder Indian.
otor: bore, 3¼; stroke, 3 43-64 inches.
res: 2½ inches, detachable, studded.
heel base: 53 inches.
nish: Indian red; option, royal blue; all bright parts nickeled on copper.
ol box, contains necessary tools and repair outfit. **Price, $200.**

H. P. Twin Cylinder Indian. Specifications same as above. Free Engine utch and new Indian Armored Type agneto supplied on both these models thout extra charge. **Price,** of 7 H. P. win, **$250.**

THE motorcycle is the most fascinating and the most efficient of modern vehicles. Its use and its appeal know no limitations. Its compact size, handiness, speed, and adaptability to road and weather conditions make its range of activity boundless.

The tourist, the doctor, the country clergyman, the engineer, the farmer, the sportsman—all know and appreciate the peculiar readiness, convenience and efficiency of this modern machine.

But the keen pleasures of motorcycling can only be enjoyed in their fullest measure when you have *confidence* in your machine.

Confidence includes Reliability, Safety, Power, Speed and Ease of Control. They're all essential. For years the Indian has been progressively proving all of these factors. The Indian holds the record for practically every kind of contest held in America and Europe.

The latest and greatest Indian achievement was the winning of the great International Tourist Trophy Contest, held in England last July; a contest organized especially to demonstrate reliability in touring motorcycles. The distance was 187½ miles, and the Indian entries finished *First, Second* and *Third* out of 57 starters, including the leading motorcycles of Europe.

The winning machines were of the 1912 type, which we are now delivering through 1200 Indian dealers throughout the country. No matter where you may ride, you're always in Indian territory.

14 IMPORTANT IMPROVEMENTS

are embodied in our 1912 models, placing the Indian fully 12 months ahead of the motorcycle design and construction field. A number of these improvements are detailed on the margin of this page. Part of the secret of Indian supremacy is to be read in each paragraph.

Note these two new ideas:

1. **A highly important feature of the 1912 Indian is that with each model you get the Free Engine Clutch and New Indian Armored type Magneto without extra charge.**
2. **Increased production has enabled us to reduce our prices $50 on each model for 1912.**

SEND FOR NEW 1912 CATALOG

The Hendee Manufacturing Co., 635 State St., Springfield, Mass.

(Largest Manufacturers of Motorcycles in the World)

CHICAGO BRANCH	PACIFIC COAST BRANCH	DENVER BRANCH	LONDON DEPOT
1251 Michigan Ave.	235 Van Ness Ave., San Francisco	138 16th St.	184 Gt. Portland St.

Free Engine Clutch
This device is now fitted to all 1912 Indian machines without extra charge. Enables the rider to start from a stand-still or on a steep incline; to regulate speed without reducing engine power; to afford easy control especially in crowded streets. The 1912 7 H. P. Indians have a clutch with an increased diameter, insuring more gradual action and greater holding power.

Ignition
The new Indian Armored type Magneto is now supplied without extra charge with all 1912 Indians. This Magneto is protected from dust, dirt, oil or moisture by side plates. The terminals are also enclosed. Absence of ignition trouble and greatly increased reliability are the result of this improvement.

The Carburetor
The Carburetor now being fitted to all Indian Motocycles is the Hedstrom Carburetor with auxiliary jet, a recent ingenious improvement. This device overcomes the old difficulty of adjusting the carburetor to work efficiently at high speed, and also operate steadily at very slow speed. With this new improvement the Indian motor can be run dead slow without decreasing the engine power, and when operated in conjunction with the Free Engine Clutch, makes the Indian motor extremely "flexible" and easy to control.

The Grip Control
The Indian Grip Control, the original device of its class, is positive and instant in its action. A twist of the wrist does everything necessary for operating the machine and controlling its speed. The Indian double grip system is ingeniously simple, consisting of a flexible cloth. No wires are used. The left grip operates the throttle and the right grip controls the ignition and lifts the exhaust valve.

Valve Mechanism
Both the valves in the Indian motor are placed in a single, compact valve chamber. This is so designed that it is exposed all around to the cooling influence of the air. The valves used in the Indian motor are all of unusually large size, those for 1912 being still larger than heretofore. The Indian system of mechanical valve operation insures the positive and regular action of both valves under every possible condition of speed and power.

The Gasoline Tank
In all 1912 Indians the capacity of the gasoline tank has been increased one-half gallon, making the total capacity now 2½ gallons. This simple expedient has increased the radius of the machine 40 to 60 miles.

Mud Guards
The front mud guard has been extended forward on all 1912 Indian models. For riding over wet or muddy roads this is a distinct improvement. The neat appearance of riders has always been considered and provided for in designing the Indian Motocycle.

The Cradle Spring Fork
The Indian Cradle Spring Fork was designed with the express purpose of absorbing the shock resulting from the concussion of the front wheel against obstacles and inequalities of the road. The "C" shaped end of the Indian leaf spring has not only the result of giving greater spring length in a short space but it materially assists in eliminating the rebound of the spring itself. All shocks are transmitted backward and upward. This mechanical principle minimizes wheel shocks both to the fork and to the machine.

Brakes
On all regular models the Indian Coaster hand brake is fitted. This is a very powerful brake, and can be applied gradually or suddenly, according to the will of the rider or the need of the moment. A few application of this brake will bring the machine to a dead stop within a few lengths when operated in conjunction with the right grip—that is, by switching off the spark and utilizing the engine compression as an auxiliary brake.

MY FRIEND TAGLIALATELA

(Continued from Page 11)

after we are waiting ten, eleven minutes behind a freight wagon on one side of the railtracks, along comes my friend Taglialatela with his mandolin and knocks on the door of the house. Miss Giovannina Ralli herself she opens it, and she looks in front, behind, and kisses my friend Taglialatela, which I am obliged to confess in Province Potenza, Napoli and Salerno we are not so refined as Americans when it comes to swearing. Even this Cornu is in disgust.

"Stop it," he says to Annibale Bove. "From such *bestemmia* no luck can come."

So pretty soon Bove gets calm some more, and then when the window is lighted we four go quiet from behind the freight car and take inspection to discover certainly that my friend Taglialatela is sitting on sofa, also Miss Giovannina Ralli.

Bove is breathing hard and shakes himself like he would have fever.

"Soon the train arrives," Cornu says to console him, and we are lying flat on the ground together.

"So soon you hear far off the train whistle," Cornu tells Di Candia, "rise up and shoot." And he pricks Di Candia's leg with the rattail file so that Di Candia nods his head while everything is so quiet I can hear to tick my gold watch, gift of a poor Calabrese barber who once settled with me private on my own account when we first started this Protection Association. Before long, however, I hear also another sound, and Bove swears some more.

"——!" he says. "He is tuning up his mandolin."

And sure enough, we can hear just for same like being in the same room that my friend Taglialatela is playing some *stornello popolare di Napoli: "Ogni sera, di sotto al mio balcone."*

"Vipera!" Bove shouts, and Cornu jumps on him and clasps a hand over his mouth. Then they lie struggling, while my friend Taglialatela finishes up his tune; and at last Bove gets quiet, but no train is coming. Instead, we hear again the mandolin, and this time comes out from the house a melody solemn and sweet, and I am free to confess it sounds to me much different from the times before. Right away Miss Giovannina Ralli's head appears against the shade, and it moves to one side in profile, so it is possible to see her mouth open, and at similar time her voice joins with the mandolin, which although I am hearing many times at San Carlo or the Teatro Bellini *prime donne le molte rinomate* in all the world out in that darkness where we are lying it seems to me there never was such music like Home Sick Home.

Again comes back to me what my friend Taglialatela tells us about the song. "It makes no difference if you are in Argentina or New York, there is no place like Province Salerno, Cosenza or Napoli, as the case may be, if you come from one of these places. Also you would be living here in a swell hotel, and over in the old country you was living in a rotten little place like Poggiomarino or Boscotrecase, yet you are more stuck on them two holes like you are on New York."

At this thought in my neck comes up a big ball, and so soon as the song is finished up I cannot help myself, I am crying like a child.

As for Di Candia, his shoulders go up and down and he makes so much noise as automobile. Even Cornu is moved.

"Stop it, Di Candia," he sobs, "or I cut your heart out."

"Cut!" Di Candia weeps. "What do I care?"

Only Annibale Bove is free from emotion.

"Pazzo!" he says to Cornu. "Listen to that noise!"

We listen and there is a faint rumble.

"Quick!" Cornu hisses, and he prods Di Candia with the stiletto. "The train is coming."

"Coming!" Bove cries. "It is going. You are so busy weeping you ain't noticed it."

"Another will pass soon," Cornu says, drying his eyes, and as he turns again to Di Candia just for give him some more courage, Bove flats himself on the ground.

"Look out!" he says. "Some one is coming."

Sure enough we are seeing big man crossing the *ferroria.*

This is the blouse the boy wants—no more bothersome drawstring

NO more loose ends to dangle or troublesome knot to tie and untie. Here's a blouse that a fellow can get into or out of in a jiffy. Even the littlest chap can manage it without help.

"A policeman!" Di Candia whispers.

"A policeman, yes, but also the father," Bove says.

"No, no," Cornu denies. "Only one man comes."

"Sure," Bove agrees. "The policeman is Patrick Ralli, father of Miss Giovannina Ralli. See, he is entering the house."

At this Bove laughs.

"Why do you laugh?" Cornu asks.

The door closed behind the policeman and Bove stretches himself and gets up.

"Come," he says, "all is over for tonight."

"But why do you laugh?" Cornu asks.

"In two, three moments you will see why I laugh," Bove says, and no sooner he speaks than there comes from the house a scream, just for same like Gilda in the second act of Rigoletto. At similar time the door opens again and my friend Taglialatela comes out. After him certainly also comes the policeman Ralli, and with stupendous force he kicks my friend Taglialatela off the threshold. My friend Taglialatela then falls down, and the policeman Ralli drags him up again by the coat collar, only to rekick him violently as before, whereat my friend Taglialatela nearly falls down again, but on second thoughts he does not do so and runs very fast away from the house.

Meantimes Miss Giovannina Ralli weeps aloud in the house, and after the policeman Ralli returns and shuts the door we rise and hurry us across the *ferrovia* in direction of the White Plains Road.

"Even now if we hasten," Bove says, "we may catch up to him."

"Catch up to him?" Cornu asks. "What for do you want to catch up to him?"

"Of course the shotgun is now out of the question," Bove answers, "but you still have your rattail."

Cornu stops and faces this Annibale Bove.

"So," he says, "you think I am assassin. What? You think I am to murder my friends so you could satisfy your revenge. What?"

"Taglialatela your friend?" Bove exclaims.

"He was my friend before you poisoned my mind toward him," Cornu says, "because you knew very well that he is not on such terms with the policeman Ralli that he will inform against us. Rather are you a friend of the policeman Ralli than he."

"I a friend of the policeman Ralli!" Bove cries. "Why, the way he treats Taglialatela is nothing. A month ago that monster seizes me in his arms and throws me through the door. Then for one kilometer he kicks me down the *ferrovia*. I am still all bruises from head to foot from it."

"And yet you claim the policeman Ralli is such a person for Taglialatela to repose confidence in so as to betray us," Cornu remarks sternly, and without removing his eyes from Bove's face he says: "Di Candia, give me the gun."

At this Bove he shrieks aloud and in one second he is off like a wind.

"Quick," Cornu says, "the gun!"

He turns round to where he thinks Di Candia is standing, and certainly me I turn also, but of Di Candia and the gun we can see nothing.

"Di Candia!" Cornu shouts again, and me I light a match, but Cornu jumps at me and knocks it out of my hand. Then he drops on his hands and knees and me I do the same, and not too late, for just as I am doing so there is a noise like the Duca d'Aosta would be arriving from his yacht at the Borgo Marinaro, and all the cannons in the Castell' dell' Uovo gets shot off together.

At similar time twigs and branches of trees falls round us, and then there is silence, except we hear Di Candia runs in one direction and Bove in another.

As for me, I am not knowing if I am dead or alive, and I am shaking myself so I cannot to speak for some minutes.

"Cornu," I ask at last, "you are hurt?"

Cornu moves a little and then he says, "No." Also he says a lot more which it is impossible to put down here, among other reasons because there is no polite English equivalent for the same.

"Come," he says when he is nearly without breath, "let us get on to the *trattoria*. I need to drink something."

And so in ten minutes we once more enter the *trattoria* on the White Plains Road, and no sooner do we come in than who do we see but my friend Fortunato C. Taglialatela. Cornu grasps my arm tight,

An expert photographer might get fairly good pictures with a poor camera. But an amateur needs a camera of professional quality—*simplified* for easy use. A camera capable of producing the very finest professional photographs—simple enough for anyone to operate—positive enough to get one good picture every time it is snapped. That camera is

The Superb Ansco

It is made of fine materials, with sincere care and skill. *Its makers have made 98 per cent of all the cameras used by professional photographers in America for sixty years.* In construction, in ease of operation, and in its flexible adjustment to all the varying conditions of subject, light and color, it will stand the most exacting comparisons and tests. It is made in twenty styles, from two dollars to fifty-five dollars.

Ansco Film, perfected by the same experienced manufacturers, for use in any make of camera, gives added assurance of sharp, clear negatives, with full, rich color values. Cyko Paper, the prize winner at all photographic exhibitions, gives a finished picture of remarkable softness and permanency. Like the other Ansco products, it is sold by independent dealers everywhere.

Twenty styles of Ansco Cameras from $2 to $55 are shown in our catalog, "The Settled Fact." Elbert Hubbard has published a preachment, "Snap-Shots and Education." We shall be glad to send both to you.

Packard

¶ No! No! It was christened in 1871—and had reached sweet-toned maturity when the automobile was a baby. The price is $500—for the style FF. Terms and catalogue BB from The Packard Company, Fort Wayne, Indiana—or better dealers.

meaning for me to say nothing, and then he walks right up to my friend Taglialatela.

"Hello, Taglialatela," he cries in hearty voice, like he would be meeting in America an old friend from Italy after many years' parting. Suddenly he seems to notice for the first time that Taglialatela's nose is to bleed, one eye is closed and his swell coat and trousers is all torn and dirty. "Why," he says, "what has befallen you?"

Taglialatela looks at Cornu and afterward at me.

"Come," he says, "sit down and I will tell you everything."

This we do, and we order some more strong *vino di Capri*, which the big man called by the *ostessa* Felice, brings to us; and pretty soon my friend Taglialatela tells us that which we already know—of his visit to the house of the policeman Ralli and its disastering results as above put forth.

"But, my friend," Cornu says finally, "why is it you neglect us for so many days?"

"Because," Taglialatela replies—"because I am loving so much Miss Giovannina Ralli I am impossible to do or to think anything. But now it is over."

"You mean you no longer love her?" Cornu asks, and a tear comes out of my friend Taglialatela's eye—the one which is not swelled up tight—and falls into his wine.

"I still love her," he says, "but I am not so crazy like all that. Because this here is the fourth time in two weeks that the policeman Ralli comes home unexpected, and so I will conquer my love."

"But if you had married her," Cornu asks, "what of us?"

"Would you have betrayed us?" I says.

"Betrayed you?" my friend Taglialatela cries. "Never, I swear it. Why would I betray you? And then, too, all the more reason if I get married I must keep on with you. I must make my living, must I not? Besides, a policeman for a father-in-law would be a big advantage in our Protection Association. It would impress our clients."

Cornu nods, and at this time there draws near our table the big fellow called by the *ostessa* Felice.

"What's the matter?" he asks. "You are in a little *affare d'onore?*"

"Something of the kind," my friend Taglialatela replies.

"Then let me suggest a morsel of beefsteak," he says. "The *ostessa* will give it to you to take home. First bathe the eye with cold water and then put on the beefsteak and keep it there all night."

He puts his hand on his forehead and lifts up the hair from his temple.

"See this scar," he says. "Once I am working in Bagnoli, and I have a quarrel with a workman in the place I am employed. While I am stooping down he hits me with a block of iron. They take me away for dead, but my mother, now with the saints in Heaven, puts on my head a piece of beefsteak, and today I am as strong as ever. The only effect is that my memory is better."

"Was the place you worked the cannon factory of Armstrong?" Taglialatela asks.

"The very same," says the big man.

"Then the man that hits you was no other than Di Candia," I suggest, and the big man makes remarks ordinarily colloquial in Naples, but liable to be considered offensive among refined people in America.

"That's the fellow," he says. "Tell him Felice Barone was looking for him if you see him again."

"I don't expect I shall see him again," Cornu replies, "because my impression is he will sail for Italy tomorrow morning."

Which indeed subsequently proves to be the case. Also the next week my friend Taglialatela and this Cornu makes visit to poor Calabrese bootblack stand, with result that the following day afterward my friend Taglialatela also sails for Italy to break the news to Cornu's widow in Province Salerno.

As for myself, I am now bookkeeper in bank and passage ticket-office Grugnola, Vergani & Co., with access only to postage stamps perforated by initials G. V., and therefore of no use to me personally. It is all in a lifetime, however, as I am convinced from the experiences above set forth that sooner or later, as the case may be, honesty is the best policy.

25c Brings You the $1.00 Lucky Curve Safety Razor With Six Extra Blades

The Lucky Curve safety is the greatest one-dollar razor you ever saw; in our opinion, it is the equal or superior of any $3 or $5 razor in the world. We send it to you with six extra blades for 25 cents.

The quickest, the easiest, the most luxurious, the most economical shave since shaving began is the accomplishment of the Lucky Curve Safety Razor.

You have a month's trial—at least 30 shaves. If at the end of the month you find the Lucky Curve Safety Razor gives you the quickest, easiest, most luxurious, most economical shave you ever had, send us 75 cents and keep it. If you aren't convinced, send it back to us.

The Lucky Curve Safety Razor

is the application of a sound scientific principle. The curved handle fits the hand perfectly. The natural position is still you place the razor upon the face in the position which offers the best angle for easiest shaving. You never shave across the grain. The curved handle widens the angle and makes the blade more flexible. The Lucky Curve and six extra blades come in a handsome nickel case, easily carried in vest pocket.

Never mind references. We'll take a chance on your honesty. Enclose your address with the coupon and 25 cents and we'll give you just a month to fall in line.

THE UP-TO-DATE DEFENSE OF CY N. IDE

By J. W. FOLEY

REMARKS BY COUNSEL

TOW, may it please the Court and you,
Peers of the realm, who come to do
our highest duty in the land—
s jurymen, you understand—
utline briefly for our side
e case for Mr. Cy N. Ide—
y client here—whose whole life shows
m pure as the new-falling snows;
victim, I may say, of chance
d much confusing circumstance.

PRELIMINARY OBJECTIONS

st, then, we ask the Court to quash
e whole indictment—pray read Bosh
Bluff and Bluster, Chapter Two:
k must be black and never blue;
d if the ink used is not black
ground to send the whole case
back!"
e rule, pray please the Court, is
plain;
t here I read the law again—
uote now from authority
Blow and Buncombe—Chapter Three:
ny t shall not be crossed,
dot of any i be lost,
ese grave omissions, then, shall be
ough to set defendant free!"
here we have the law; and see—
re is a naked, uncrossed t!

COLLATERAL EXCEPTIONS

the indictment, then, is wrecked—
l of omission and defect.
ge Pinn Hedde, in his able work
Fifteen Thousand Ways to Jerk
Props from Prosecution, says:
comma, standing out of place
he indictment, may upset
very best indictment yet.
better Murder should go free
an we should have an uncrossed t!"

PARTICULAR ERROR

on these vital points I might
st upon my client's right
be set free; but there are more
which we set much greater store:
Witness Blank, when on the stand,
s sworn while raising his left hand;
l so his evidence, no doubt,
Honored Court will have thrown out.
l in support of this I read
m Shyster on the High Court's Need
Being Even More than Loath
Tolerate a Lefthand Oath!

GENERAL OBJECTIONS

is were all it were enough
set my client free—see Bluff
Half a Thousand Reasons Why
Law Loves Technicality.
, lest your Honor should refuse
claims, my client now renews
ection to the Court, its looks,
urisdiction and its books;
ection to the Evidence,
ctment—as to form and sense;
ection to the desks and chairs,
tables and State Counsel's airs—
act, my client now objects
everything; and he expects
show, by Bluff, by Crook, by Bragg,
Shyster, Petti Fogg and Snagg,
that great friend of crime, D. Lay,
Trick, by Subb Terr Fuge and Stay,
t he should be set free because
ll these loopholes in the laws.

CONSTITUTIONAL PRIVILEGES

client, Cy N. Ide, now please
Court, no technicalities
uld urge, save that they all transgress
constitutional—express,
lied, declared and specified—
rogatives of Cy N. Ide,
o stands here, making naught but one
uest—that Justice shall be done!
l we are here, as man to man,
l mean to do Her if we can!

EXPRESS RESERVATIONS

w, please the Court, we do not waive
ingle right that we can save;
l we except—some more, some less—
jurors, clerks and witnesses.

And, having made our attitude
As clear and frank as well we could,
We come now to the minor phase
Of testimony in the case.

INSANITY

First, we have shown by proof quite plain
That Cy N. Ide is hardly sane.
The eminent Doctor Ale Yay Nisst,
By reflexing my client's wrist
And tapping on his frontal bone,
Finds absence of the Moral Tone.
And Doctor Ekks Spurt finds one ear
The thousandth of an inch too near
The cheek—a symptom, as you see,
Of irresponsibility.
So, by your oaths, you should agree
To Cy N. Ide's insanity,
And so acquit him of intent
And free him that he may repent.

THE ALIBI

But we have other proofs if this
Phase of defense may seem amiss:
My client, Cy N. Ide, proves by
His witnesses an alibi.
He was, upon the fatal day
This deed was done, ten miles away;
So, if you find him sane, you're bound
To free him on this other ground,
As jurors who are sworn to do
The will of justice, good and true.
Whichever way you look you will
Find Cy N. Ide impregnable
As Truth itself—no crime can lie
With such a perfect alibi!

EVIDENCE OF SELF-DEFENSE

But, if again you are in doubt
Of how this crime has come about,
My client gives sworn evidence
The deed was done in self-defense.
The victim of this homicide
Made fierce attack on Cy N. Ide,
As he so graphically swore,
With sword and pistol—aye, and more!
And, as he shot and stabbed and tried
To end the life of Cy N. Ide,
My client, much to his dismay,
Was forced to shoot or run away;
And so he shot—the deed was done
Since he was lame and could not run!
So it is plain the evidence
Is ample proof of self-defense.
And so you must acquit, you see,
On one ground, two, or even three!

NO CORPUS DELICTI

But not alone on this defense—
This bulwark firm of evidence—
Do we rely; for we have brought
The eminent expert, Tellus Watt,
And he quite sturdily agrees
The victim died of heart disease.
In which event the case must fall,
Since there was no crime done at all.
The eminent expert, Tellus Watt,
Says, in the interval 'twixt shot
And when the bullet struck its mark,
Excitement quenched the vital spark
Within the victim's breast; and he
Died not of crime but naturally.
So, here again, my client stands
And asks acquittal at your hands.

EXCEPTIONS, REQUESTS, MOTIONS, PETITIONS AD LIBITUM

Now, please the Court, we ask the case
Dismissed—'tis now the time and place.
And, failing that, we move the Court
Instruct the jury to report
A verdict of not guilty! Should
The Court not hold our motion good,
We ask the jury to acquit
On any ground it may see fit—
Insanity, if it so please;
Or alibi or heart disease;
Or self-defense. If homicide
Is found we ask it set aside.
And, failing that, we straightway move
Another trial, that we may prove
A new defense—if 'tis denied
We ask an appeal certified.
And, failing that, we ask to be
Petitioners for clemency.
And, failing that, we ask but leave
To file petitions for reprieve.
And failing that—well, Cy N. Ide
By then will have grown old and died!

Will You Accept This Gift by Mail?

When you receive it, you'll think it a box of choicest candy, but it's something you'll like better—fourteen varieties of biscuit bonbons.

Sunshine Specialties

They are different and better than any biscuit or (candy) you ever tasted. Made as carefully as bonbons, they have distinctive flavors that can't be imitated. Unqualified purity is the rule in the Sunshine Bakeries—we believe in Dr. Wiley. Pure Food Laws, however strict, will always receive cordial welcome here.

Send Us Your Name and address and the name of your grocer, enclosing ten cents in stamps or coin to pay the postage, and you will receive this daintily packed, ribbon-tied Revelation-Box by return mail. If you prefer, send us your name on a postal and receive the Sunshine Taste-Box, containing five kinds. Sent postpaid, if you mention your grocer's name and address.

The Protection of Publicity

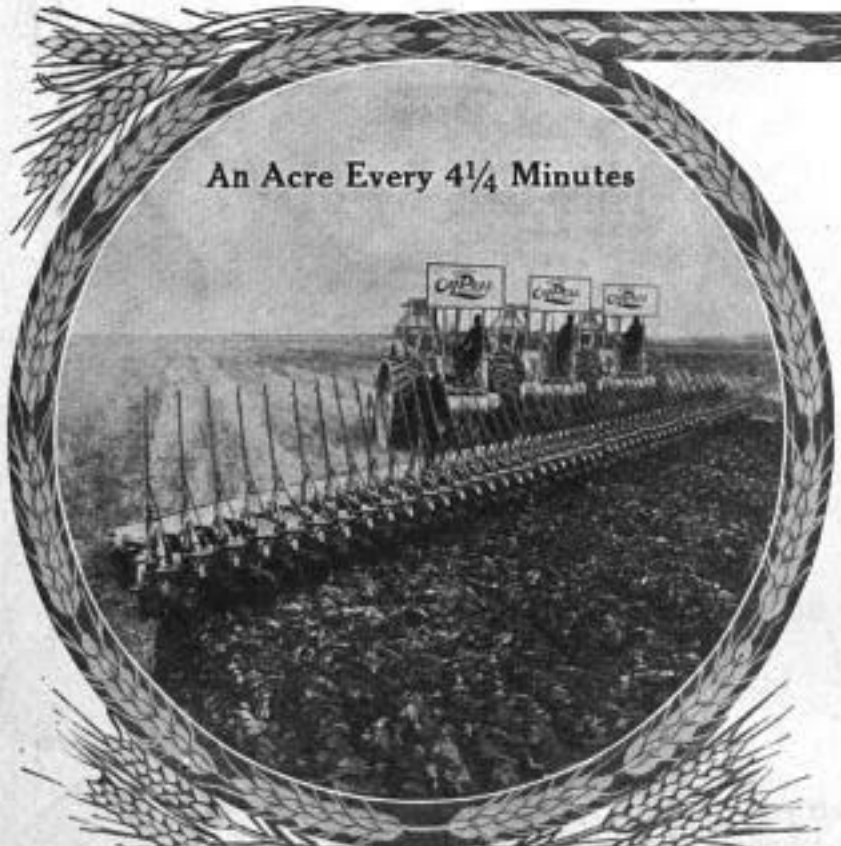
"It is the *degree of publicity*, rather than the stringency of the law, which gives to the public any real protection."
¶ Report of the Railway Securities Commission appointed by President Taft. President Arthur T. Hadley of Yale University, Chairman.

"In publicity, *complete publicity*, concerning investment issues, will be found the corrective for many present corporation ills. Nothing else can restore confidence in American constructive investment so speedily and so completely."
¶ John Grant Duer, Financial Editor, Munsey Publications.

PUBLICITY is being generally recognized by authorities as the most effective protection for the investing public. The American Real Estate Company recognized this fact nearly twenty years ago, and since 1895 has opened its books to the audit of certified public accountants and its properties to independent appraisal. The certificates of these competent authorities accompany its annual financial statement. In the extension of its real estate business, to which it is restricted by charter, its bond offerings to the public are made on a basis of established fact, and the Company voluntarily gives its investors this *full measure of publicity* now generally agreed on as necessary for the public good.

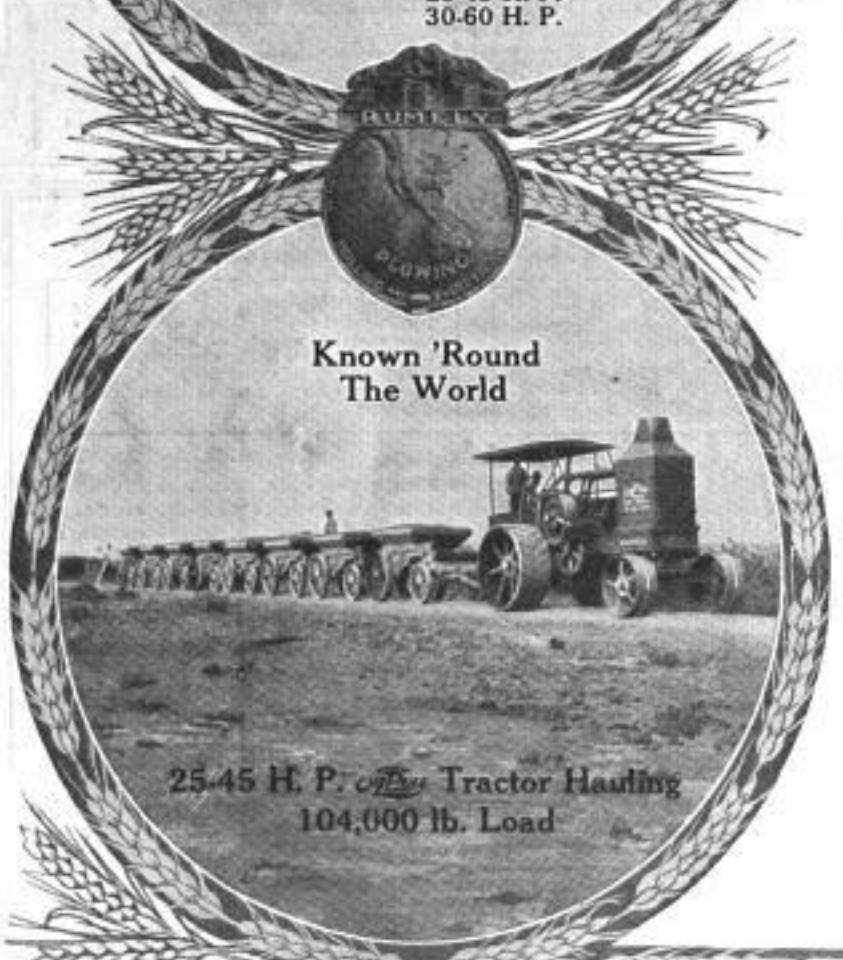
¶ The safeguard of publicity in this case proves the ample security afforded by the actual, tangible values underlying the properties on which are based its 6% Gold Bonds issued and offered in these two forms:

6% Coupon Bonds—For the direct investment of $100, $500, $1,000, and upward, earning 6% interest, payable semi-annually.



6% Accumulative Bonds—For the investment of $25 and upward annually, to mature $1,000 or more in 10, 15, or 20 years.

¶ These bonds are the direct obligations of the American Real Estate Company and based on its actual ownership of millions of dollars' worth of select New York real estate. They have paid 6% and matured principal on the stroke of the clock for 24 years, returning to investors nearly $8,000,000.



¶ Descriptive booklet, map and handsome book of views of New York City sent free on request. Write today.

Marking An Epoch in Agriculture

The world's food problem and its final answer

Back of every movement of progress is the struggle for bread. "How can I make the earth support me?" is man's eternal question, and one that mankind has always somehow answered.

Fear of crop failure—the hunger for wheat—has inspired man's genius, until comes this final achievement, with assurance of food for unborn millions—this demonstration of a giant farm power perfectly harnessed.

On October 14th, 1911, at Lafayette, Indiana, the OilPull Tractor, once and for all, settled the question of feeding the nations.

On that date, three thirty-horsepower OilPull Tractors, yoked to one giant Oliver Plow of fifty fourteen-inch bottoms, were managed successfully in a twenty-acre field, plowing fourteen acres to the hour.

Agriculture is our hope of life—plowing, the peak-load in agriculture. Man once plowed with the crooked stick and his own muscle; then with the animal and the wooden plow, the sulky, and the steel gang; finally, with wonderful efficient tractors and plows of from four to a dozen bottoms. On the 14th of October we successfully combined the largest of such units and removed all limitations to the truly great in farm-power engineering. This is only the start; soon we shall hear of 55, 60 and even 100 plows in combination. We shall soon hear of successful Tractors drawing only two plows. *We have solved the problem—its further application is simple.*

Mechanical power is swiftly reorganizing our farms. The Tractor displaces three out of every four expensively-kept work animals—saves and earns one to two thousand dollars each year—creates wealth to offset the automobile's cost of up-keep. Think what this means to the world in the way of cheaper food! Think what the future of the Tractor must be!

What the OilPull Is —and Does

The OilPull is a safe, substantial Tractor, built under the Secor-Higgins System of Oil Combustion. It burns kerosene and cheaper oils economically, under all conditions. It will plow 12 to 25 acres per day, according to the size used. It will plow, drill and harrow all at once—will seed and harvest quickly—thresh and haul the crop to market.

The OilPull Tractor is simply designed—strongly constructed. A boy can run it. It is a cheap, complete, efficient power-plant on wheels—built in sizes to fit the 160-acre farm as well as the many-thousand-acre ranch. *The OilPull Tractor cuts ten cents from the cost of producing a bushel of wheat and saves one dollar on every acre plowed.*

Besides the OilPull Tractor, we build threshers, clover and alfalfa hullers, corn huskers and shredders, grain graders, saw mills, engine plows, and steam engines for threshing and plowing—all fully described in our catalogs.

Rumely power farming machinery—"known 'round the world"—has served American farmers for three generations. If you have farming interests—***you want us to serve you.*** Our literature explains ***how*** we do it. Write us fully today, mentioning the catalog you want. Tell us where your land is and what your problems are—our farming expert will advise you Free.

M. Rumely Company

1631 Main Street **La Porte, Indiana**

Little Brother of the OilPull

The OilTurn Motor, built under the Secor-Higgins patents, meets every stationary power need. It is particularly adapted to direct-connected lighting service. The United States War Department has installed eight "Oil Turn" motors in light-houses on the Great Lakes. Yet life-saving requires no greater dependability than crop-saving. The "Oil-Turn" motor furnishes ideal power for all irrigating conditions. Ask for one of our "Oil-Turn" catalogs.

Little Brother of the OilPull

CONSIDER THE LIVER

(Concluded from Page 18)

the liver, but are a curious alteration
he amount of coloring matter or pig-
t which is present in every skin, even
whitest. They are probably due to
disturbance of the nerve twig supply-
he patch of skin affected, and usually
ar in conditions in which there is ex-
ive disturbance of the nervous system,
as certain chronic nervous diseases and
rious wasting and disorganization of
kin which occurs in old age. Their
arance need not give rise to any un-
ess, as they seldom become marked
gh even to disfigure the complexion,
never give rise to any other than
etic trouble and disappear when their
is removed.
e only reason, in fact, why these spots
ever connected with the liver, even
ame, was that, to the innocent and
like eyes of our ancestors of the Middle
, these marks bore a slight resemblance
e to the color of that one fairly common
rbance of the color of the skin which
used by the liver, the well-known
lice, or "the yellows." However, the
ency of this disturbance has been
nously exaggerated, and our ideas of
usation began, like most of our he-
beliefs, simply by our putting the cart
e the horse.
ndice is not due, as popularly be-
, to the liver working overtime and
ng more bile into the blood than the
can dispose of, but to the fact that
r that form of body waste which colors
forms the bile is being produced in
er quantities than the liver can handle,
t the tube called the bile duct, through
the liver pours bile into the intestine,
ecome blocked either by gallstones or
amatory swelling.
ong the garbage-burning and waste-
ying functions of the liver is the duty
ding care of and discharging from the
the remains of the red blood corpuscles
are broken down in the work of the
by millions and billions every day. It
e well-known red coloring matter—
globin—of these corpuscles, which
broken down causes the yellowish or
ish color of the bile. Exactly the
change can be easily seen taking
in the classic "black eye," or the
and blue—more accurately black
reen—discoloration of a severe bruise
here upon the body.

e Cause of Our Complexions

dow that makes a black mark is simply
which has ruptured one or more tiny
vessels and allowed the blood to
e into the tissues, where it quickly
goes this greenish discoloration.
happens, then, in jaundice is that, to
roughly, some poison or poisons in
ystem are breaking down the red
cells with greater rapidity than
; so that the liver is unable to filter
coloring matter out of the blood rap-
nough and the whole body becomes
a yellowish green.
at is why diseases which directly
the red cells of the blood, such as
ia, are so often accompanied by
jaundice or a yellowish discolora-
f the skin. A striking illustration is
in the dreaded yellow fever, in
, so to speak, all the blood in the
starts to melt and break down at
leaking out on the surface of the skin
rm the dreadful yellow mask, and
gh the thinner and more porous wall
stomach to produce the fatal "black
." Any of the acute infections—
a common cold—may be followed by
jaundice.
other chief way in which jaundice is
ced is by a blocking up of the bile
, so that the liver can no longer pour
ile which it has separated from the
into the bowels to be got rid of.
commonest cause of this obstructive
ice is, of course, the formation of gall-
s or inflammatory processes in the
ladder; and it can be cured by open-
he gall-bladder and either draining
e germs which are causing the inflam-
n or removing the gallstones which
structing the bile ducts.
a matter of fact, however, jaundice is
ne-fourth so common as is popularly
ved, for the reason that, having once
fied the liver and the bile with the
holic frame of mind and depressed
conditions of the system, it was instantly concluded that any one whose complexion appeared sallow or yellow, or of a greenish hue, was suffering from jaundice or an attack of liver. What really happens is this, that all human skins, even the whitest, have considerable yellowish pigment in them—people having an average complexion a good deal, and those of a brunette complexion still more. In conditions of vigorous health this yellow tint is masked or neutralized by the abundant supply of red blood in the vessels of the skin; but when either the amount of blood in the skin is diminished by a weakening of the force of the heartbeat or the color of the blood itself becomes less vivid from disease, then this natural yellow tint stands out in all its naked hideousness. That is why the majority of people, when they become pale or anemic, become yellow or sallow at the same time.

This natural pigment or coloring matter in the skin has also given rise to an absurdly old and popular superstition that persons with a brunette or dark complexion are more subject to liver trouble and more readily become bilious, the only basis for this belief being that when from any cause the rosy hue of health disappears from their skins their natural yellow or brownish color stands forth with vivid distinctness. They are not a particle more bilious than the palest and chalkiest-faced blonde. Those of us with more than a certain amount of pigment in our skins, popularly known as brunettes, turn yellow instead of white when we become pale.

"Liver-Gazing" a Necessity

Not infrequently the liver falls a victim to its own devotion from the fact that some of the numerous germs or parasites which are carried to it to be strained out of the blood manage to find a foothold and grow in its own tissues—not very frequently, fortunately, for the liver is a tough and wary old fighter; but often enough to cause the death of the body later.

One of the commonest invaders to find a foothold in the liver in this way is the tubercle bacillus. Tuberculosis of the liver is a fairly common complication—next, indeed, after that of the lungs and the bowels. The human liver, however, resists tuberculosis very well, and its attack is seldom the cause of death; but in cattle and birds, particularly domestic poultry, the liver is one of the commonest sites of tuberculosis; and the most serious changes that take place anywhere in the body occur here. In birds, for instance, it is three or four times as frequently affected as the lungs are, just reversing the usual human proportion. It is well for wary housekeepers to do a little "liver-gazing" on their own account, and to insist on seeing and carefully examining the liver of every chicken and turkey they buy.

The commonest organic disease of the liver is abscess, which again is due to the setting up of inflammation or pus formation in the liver by various disease germs—most commonly those which cause dysentery or diarrheal disturbances of the bowels, and are from that point carried to the liver. The well-known "tropical abscess" of the liver is largely due to the attack of the germs of dysentery, diarrhea or malaria.

Several of the animal parasites that infest the alimentary canal are also carried to the liver, and one group of them, the so-called hydatids, undergoes a stage of development there, producing large cysts or bladderlike growths filled with fluid and with the larvæ of the parasite. One of this group of parasites is exceedingly serious and fatal in both cattle and sheep—the famous, or rather infamous, liver fluke.

The liver also, like every other organ consisting of epithelium or secreting stuff, is subject to the attack of cancer, and in rather a high degree, being about the fourth most common site of cancer in men, only the lips, tongue, stomach and bowels ranking ahead of it—and the fifth most frequent in women. Even this, however, serious as it is, is far from the hopeless death sentence that it was fifteen or twenty years ago. Modern surgery, with its perfected methods, does not hesitate boldly to attack and remove cancer or any other growth from the very substance of the liver itself, and—if its presence can be detected early enough—with fair success.

BEECHNUT
PEANUT BUTTER

SNIFFS good, and *tastes*—oh, *so* good, because—it's *peanuts*—good old-fashioned peanuts—roasted brown, salted, and ground to creamy butter. Then put *quick* into glass jars and airless sealed, being all the roasting-oven aroma and delicious peanut taste when the jar reaches you.

Taste it on cracker, biscuit, fresh white bread, toast; in sandwiches, fudge, *cookies*; for luncheons, spreads, 'tween meal bites. And give it to the kiddies after school. It's as nourishing as it is good to taste.

But, be sure it's *Beech-Nut*. Beech-Nut Peanut Butter never comes in bulk, always in airless-sealed glass jars to keep intact the delicate aroma and delicious taste. So *insist* on Beech-Nut Brand when you get a 15c jar to try, today.

Made by the Beech-Nut Packing Co., Canajoharie, N. Y., makers of savory Beech-Nut Bacon. Taste Beech-Nut Bacon *baked*. Send 15c for special Bacon Rack. Also free copy "Beech-Nut Breakfast News."

Will You Try "COME-PACKT" SECTIONAL FURNITURE At Our Risk?

Use it in your home **for a year**—give it the test of **service**—your **money back any time you say.** THAT'S the **proof!** Only Come-Packt values make this **possible.**

Made from choicest of hardwoods—Quarter Sawn White Oak, splendidly fashioned, honestly built and handsomely finished. Exclusive designs that are simple, dignified, forever pleasing. Choice of eight finishes.

AND You Save Over Half

by buying direct from our factories the completely finished sections which can be assembled in a few minutes. Our big "Money-Back Catalog" has six money saving departments. A postcard brings it postpaid.

THE TENTH COMMANDMENT

(Concluded from Page 13)

silver dollar out of his leather wallet and flung it on to the table, for the paper read: "In consideration of one dollar cash in hand paid, the receipt of which is hereby acknowledged." The coin struck hard and spun on the oak board. "There," he said, "is your silver. It is the money that Judas was paid in and, like that first payment to Judas, it is all you'll get."

Dillworth got on his feet. "Abner," he said, "what do you drive at now?"

"This," replied Abner: "I have bought your lawsuit; I have paid you for it, and it belongs to me. The terms of that sale are written down and signed. You are to receive a portion of what I recover; but if I recover nothing you can receive nothing."

"Nothing?" Dillworth echoed.

"Nothing!" replied Abner.

Dillworth put his big hands on the table and rested his body on them; his head drooped below his shoulders, and he looked at Abner across the table.

"You mean—you mean ——"

"Yes," said Abner, "that is what I mean. I shall dismiss this suit."

"Abner," the other wailed, "this is ruin—these lands—these rich lands!" And he put out his arms, as toward something that one loves. "I have been a fool. Give me back my paper." Abner arose.

"Dillworth," he said, "you have a short memory. You said that a man ought to suffer for his lack of care, and you shall suffer for yours. You said that pity was fantastic, and I find it fantastic now. You said that you would take what the law gives you; well, so shall I."

The sniveling creature rocked his big body grotesquely in his chair.

"Abner," he whined, "why did you come here to ruin me?"

"I did not come to ruin you," said Abner. "I came to save you. But for me you would have done a murder."

"Abner," the man cried, "you are mad. Why should I do a murder?"

"Dillworth," replied Abner, "there is a certain commandment prohibited, not because of the evil in it, but because of the thing it leads to—because there follows it—I use your own name, Dillworth, 'hell's work.' This afternoon you tried to kill Lemuel Arnold from an ambush."

Terror was on the man. He ceased to rock his body. He leaned forward, staring at Abner, the muscles of his face flabby.

"Did you see me?"

"No," replied Abner, "I did not."

The man's body seemed, at that, to escape from some hideous pressure. He cried out in relief, and his voice was like air wheezing from a bellows.

"It's a lie! a lie! a lie!"

I saw Abner look hard at the man, but he could not strike a thing like that.

"It's the truth," he said, "you are the man; but when I stood in the thicket with your weapon in my hand I did not know it, and when I came here I did not know it. But I knew that this ambush was the work of a coward, and you were the only coward that I could think of.

"No," he said, "do not delude yourself—that was no proof. But it was enough to bring me here. And the proof? I found it in this house. I will show it to you. But before I do that, Dillworth, I will return to you something that is yours."

He put his hand into his pocket, took out a score of buckshot and dropped them on the table. They clattered off and rolled away on the floor.

"And that is how I saved you from murder, Dillworth. Before I put your gun back into the hollow log I drew all the charge in it except the powder."

He advanced a step nearer to the table.

"Dillworth," he said, "a little while ago I asked you a question that you could not answer. I asked you what lands were included in the notice of sale for delinquent taxes printed in that county newspaper. Half of the newspaper had been torn off, and with it the other half of that notice. And you could not answer. Do you remember that question, Dillworth? Well, when I asked it of you I had the answer in my pocket. The missing part of that notice was the wadding over the buckshot!"

He took a crumpled piece of newspaper out of his pocket and joined it to the other half lying before Dillworth on the table.

"Look," he said, "how the edges fit!"

All houses present different heating problems

—some difficult. But an intelligently selected and properly installed equipment of

THE RECORDING ANGEL

(Continued from Page 22)

an orthodox conversion, and the fruits of it were to be strange apples of discord in that community. Still, he knelt. It was all a man could do when Rachel set her heart upon it.

I have been obliged to record this scene and these circumstances because these pages are tablets taken from life. And any record of life in the South that leaves out the hornet veteran of the Civil War and the candle-lit drama of salvation in some church is not veracious. It is merely long-tailed-monkey fiction, however interesting it may be. In the South we are honestly religious. Our faith in God is so strong that it amounts to a great despair. This is the heavenly hall mark of simple souls. The fact that most of us are ignoramuses in the practice of Christianity is a stage that shall pass. When it is passed we shall still have "the mighty hopes that make us men." It is the way we are made—poor candles lighted for the glory of God, that shine a while and are blown out in this wind, to burn again somewhere else.

Your New England Yankee and your Western cowboy may trade us out of our houses and lands, but in the end we are the gallant poor in spirit who shall inherit the earth by faith, which is the only unmortgageable way of getting the earth and holding it.

IX

JIM BONE was not seen again at the revival services. He had gone to Atlanta, in fact, to make extensive arrangements that were to result in another kind of revival in Ruckersville. But he had disappeared without taking any one into his confidence. The good people were mystified, Tony Adams sank again into the insignificance of inebriation, and Bimber was disconsolate. He spent the nights baying at the moon and in keeping a dog wake in memory of his master.

We shall have our hands full when Jim comes back upon the scene. I am, therefore, taking a hurried advantage of his absence to relate another circumstance that stirred the community as nothing else had since the old days when a fresh installment of Grouped Thoughts and Scattered Fancies appeared in The Southern Literary Messenger.

Every evening, now, Elbert White sat in front of his wife with a table between them, upon which burned a kerosene lamp with a poorly trimmed wick. Scattered about were the loose pages of Amy's Book of Life. Nothing was farther from her mind than that a line of it should be printed. She was content to share the fate of other Ruckersville authors. Her story was a sort of brocade of the human heart which she left to posterity, the one publisher in whose judgment and appreciation the Ruckersville literary genius had any confidence. She dictated to Elbert queer little elegies upon life. She sketched in the characters of the men and women she knew with a literalness and veracity that was thrilling, if you knew how to estimate the difficulty of being truthful in interpreting such a natural hyperbole as man. She narrated little incidents of the day, such as that Captain Martin had gone uptown that morning with four dozen collard plants for Mrs. Luster, and that Rachel had been out all day collecting missionary dues, and how Mildred Percey had read a new poem at the Woman's Club. These were really tag sentences that led to loving scriptures set down in behalf of each person. Amy was very far from being a mere diary maker. She had the mathematical faculty of the spirit, which enabled her to reduce the people of her acquaintance to their little digit in the great common equation of life. Artlessly, without the least suspicion of what she was doing, she destroyed the ideal of each and calculated him upon the basis of his actual deeds. Nothing can be more devastating to the self-conscious importance of personality than this method. The greatest hero never does more than a dozen great deeds. Most of life is passed in insignificance. Thus the captain was shorn of his war record and appeared as an old man with a sore on his back, who was not above selling collard plants. And Rachel was a Shylock, reaping where she had not sowed dimes for the heathens. On a certain evening Amy devoted a paragraph to the Feltons' baby. It seemed that, while Mrs. Felton was pouring out her soul in a romance she was writing, Mr. Felton fed the baby on rancid black walnuts. The next day the child interrupted its mother by having convulsions. Elbert was for leaving the baby out. But Amy protested.

"The point is this, Elbert," she explained. "It is unfortunate to discover that you have any other gift after you have already the gift of a child. I mean that it is really superfluous. You can put all you know into the child; but if you put it into a story, the father has to take the mother's place while she is doing it. And a father may be a good provider, but he makes a poor mother. For one, I do not doubt that every hen bird watches the worms her mate offers their nestlings. She never can tell when he will poison one with a spider."

It is impossible to set down here the results of Amy's notes. Their insignificance was so literal of life and their value was incalculable, because probably never before had so close a record been kept of so many different men and women in the same community. You had only to add up each one's column to understand how barren existence is of the extraordinary: how unlike every man and every woman is to the impressions we receive of them in history, where only a few of their best deeds are recorded; or in fiction, where the imagination selects and augments characters to suit the emergencies of the tale. And the truth so often makes the last come first and the first come last. Thus, according to Amy, the debit column of Tony Adams was shorter than that of Rachel Martin. Tony was such a poor creature that he dared not do good in the open after the more or less brazen manner of Rachel. But Amy remembered certain days Tony spent in her garden, and she set down her hollyhocks and zinnias to his credit. She recorded of him a thousand aimless little charities to which he confessed in their hours of confidence, such as trundling old Mr. Percey—who was paralyzed—down in his back yard, and going to mill for a widow, who had the corn and the horse, but could not sit astride her own sack. He never attempted anything great in the line of goodness. He felt so unworthy of a shining mark; he desired to escape attention. Virtue, he felt, was so little characteristic of him that he exercised what he had after the manner of the best saints, without suspecting that this was the case. It was only in Amy's scriptures that he shone like a shamefaced candle in a naughty world.

But the trouble with most scriptures is that they do not come direct from the source of inspiration. They are copied by some one else, and matter foreign to the original source is thus injected. This is what happened to Amy's Book of Life. Elbert was the unscrupulous medium through which these scriptures passed. He had undertaken the writing with misgivings and merely to humor her. But almost at once he comprehended that she was making copy very different from the prevailing fashion of literature in Ruckersville. He was just enough depraved to put into her innocent records matter that fitted sins in the lives of the victims, thus rounding out the tale with a horrible veracity. He was a worm, and he was the amanuensis of a blind angel, and he was a little old fat knave who enjoyed the joke of inserting spitball comments where the effect would be most outraging to sensibilities. Sometimes when she wandered vaguely, with the curious lilting mental movement of the blind and the inspired, near the region of his own mildewed character, he would lift his old head, push back the thin aigrette of white hair at the top of his forehead and stare at her in genuine alarm. But in time he perceived his security and the nature of it. She saw every one clearly, but him she concealed with the garment of her love.

The excuse he made to himself for the sacrilege of his interpolations was that he desired to render the manuscript available for publication. And in this he succeeded beyond his most sanguine expectations. As fast as Amy produced her scriptures and he could get them into diabolical shape, he disposed of them to The Monthly Mercury, a popular magazine; and he appropriated the revenue from them without a qualm of conscience. You do not offer dividends to a blind angel.

Now on the very day of Mr. Bone's singular disappearance, the first installment of this remarkable work came out in

"That coupon gave me my start"

"It's only a little while ago that I was just where you are now. My work was unpleasant; my pay was small. I had my mother to take care of, and it was tough sledding trying to make ends meet. I hadn't had much schooling. I didn't *know enough* to fill any better job than the one I had.

"One day I saw an advertisement of the **American School.** It told how other men got better positions and bigger salaries by taking their courses. I didn't see how a correspondence school could benefit me, but as long as it didn't *cost* anything to mark the coupon I thought it was worth investigating at least. I marked the coupon and sent it in on the next mail.

"That was two years ago, and ***now I'm drawing more every week than I used to get in a month.***"

If you want a ***better position,*** if you want to get into ***congenial work,*** if you want a salary that's ***worth while*** —

Name
Address

Ford

WHAT'S BEHIND IT?

What is it that is selling 75,000 Ford cars in 1912?
What is behind this enormous demand?
Is it unusually clever advertising?

NO! Ford advertising never attempts to be "clever"—never aims at the spectacular—never dallies with the English language—merely states the facts of the case so that he who runs may read, and, reading, stop running and buy a FORD. Yet that is not the big factor.

Is it unusually clever dealers? No! Ford dealers rank at the top—are all wideawake, keen, obliging, proud of the car and the good name of firm. But there are many clever dealers trying to sell other automobiles.

WHAT IS IT?

Nothing but this—***the guarantee of accomplishment.*** What sells these 75,000 is the 100,000 Ford cars already in use (one out of every five on the street). Satisfied buyers are the backbone of the Ford success.

Ford Distributors and Branches in all the principal cities and towns in this country are at your very elbow to give you the service we maintain.

Postal Life, N.Y.

The POSTAL saves you money and safeguards your health

THOUGHTFUL people throughout the country arrange policies in the POSTAL LIFE INSURANCE COMPANY because, *first*, it supplies sound legal-reserve protection at lower net cost than any other company and, *second*, because it performs an important service in *health-conservation* for its policyholders.

Postal Life Building
35 Nassau St., New York

The Company cuts out all middlemen and agents; it deals *direct* with the public; its *policyholders* save, and may deduct from their *first* premium (monthly, quarterly, semi-annual or annual), *a guaranteed commission-dividend* (ranging up to 50% of the premium) corresponding to what *other* companies pay out the *first* year to their *agents*.

In *subsequent years*, POSTAL LIFE policyholders can deduct the *agent's renewal-commission* of 7½% of the premium as paid; also an *office-expense saving* of 2% making up the

Annual Dividend of 9½% Guaranteed in the Policy

The Company also apportions and pays the usual contingent dividends that other companies pay, ranging in the POSTAL for 1910 up to 20 per cent of the annual premium. The dividends apportioned and paid *this year* will be even larger than heretofore.

Furthermore, the Company's Health Bureau performs an important service in *health-preservation* by issuing Health-Bulletins for the benefit of its policyholders and by granting to those who desire, one medical examination each year at the expense of the Company, thus detecting incipient disease in time to check or cure it.

***Bear in mind*, POSTAL LIFE policies are binding on the Company, *wherever the insured lives*.**

By doing business through the mails—*direct*—the Company is able to effect important savings for policyholders, and also *brings* the benefits of insurance protection and health conservation to the *remotest sections of the country*, thus performing *a genuine public service* akin to rural free delivery and the proposed parcels post.

For the reasons here stated and others, the POSTAL LIFE is justly designated "The Company of Conservation"—of *money* and of *health*.

'Twill pay you to find out just what *you* can save on any standard form of policy, provided you are an acceptable risk.

Strong Postal Points

First: *Old-line, legal reserve insurance*—not fraternal or assessment.

Second: *Standard policy reserves*—now more than $10,000,000.

Third: *Standard policy provisions*, approved by the State Insurance Department.

Fourth: *High medical standards* in the selection of risks.

Fifth: Operates under *strict State requirements* and subject to the United States postal authorities.

Just write and say: *"Mail full insurance particulars as per advertisement in THE SATURDAY EVENING POST of March 2nd."*
And be certain to give your occupation and the *exact date of your birth*.

The Company will then promptly send you *(by mail only) exact figures for your age* with the amount of dividends, *guaranteed* and otherwise, now being paid.

TIRES, COASTER BRAKE rear wheels, inner tubes, lamps, cyclometers, parts, repairs and everything in the bicycle line at half usual prices.

DO NOT WAIT—but write today for our *Large Catalogue* beautifully illustrated and containing a great fund of interesting matter and useful information. It only costs a postal to get everything. Write it now.

MEAD CYCLE CO. Dept. R-55 CHICAGO, ILL.

the Mercury, under the misleading title of The Town Testament. And it was signed The Recording Angel.

This was scandalous enough if the contents had not been still more shocking. The whole composition was written in a manner so simple and so veracious as to surpass mere literary style. Literary style is always a fashion in words that costs some sort of illusion. This is what it is for. But the scriptures of men and women in Ruckersville as set forth in The Town Testament in The Monthly Mercury were clothed in no fashion of words. They were naked—not disgracefully so, you understand, but stripped to the heart of man.

The mercy and cruelty of it were inconceivable. Each sketch was a faithfully stern and tenderly delineated daguerreotype of the inside life, merely dramatized by some incident. And in every case the physical features of the victim were so dimly portrayed as to be vague and indistinct. This, of course, was due to the fact that the Amy-angel was blind and saw only the invisible. But it was a feature of the Testament that produced an effect in Ruckersville so queer that it bordered upon the ridiculous. Every man and every woman that saw themselves photographed in the little two-legged epigrams of the angel's entrances were silenced. They were like old Adams and Eves, dropping their apple cores to run around behind their fig bushes to read the thing more privately. During the year that these awful scriptures ran in The Monthly Mercury not one person in the town discussed them or even mentioned them to his neighbor. There was, of course, the telltale eye, but the eye only intimates. It has not a voice. Sometimes the captain met Clark Story immediately after a new installment of The Town Testament appeared, with an interrogative expression which, being interpreted, meant:

"Have you read that damned thing in the Mercury this month?"

And old man Story, who had long since recognized himself as the ridiculous optimistic Job of these naïvely naked scriptures, would shift his eyes about, as much as to say: "Who? Me? I never read The Monthly Mercury. I haven't the least idea what you are talking about."

As a matter of fact, Daddisman, who kept a news stand at the hotel, was probably the only man who could have told how many had taken to their fig bushes. From selling three or four copies a month he now sold about fifty.

This is what happened. On this same day after Jim Bone had signified his repentance, Rachel Martin was sitting upon her front veranda in the early afternoon, thinking of her success with the prodigal the night before and wondering what she could do for the Lord that day, seeing that Jim had disappeared. Presently, like an answer to prayer, a deep suspicion of a certain situation occurred to her. She arose, untied her apron, pinned on her hat—which never would remain straight upon her head because she had so little hair to hold the pins steady—and went over to see Amy White. She found exactly what she expected—the house in disorder, the kitchen stove full of cold ashes, a pile of soiled dishes on the table, and Amy sitting beside her bedroom window with a glass of milk in her hand and her face veiled as usual in her sweet smile.

"You are starving," Rachel Martin exclaimed, coming in and standing before her friend with one hand upon each fat hip.

"No," answered Amy, "the milk is all I need. But you will find the house in disorder. Elbert was in a hurry this morning."

"Hurry, nothing!" Rachel retorted indignantly. The illusions of the blind woman concerning this husband of hers were a sore cross to Mrs. Martin.

She faced about and walked emphatically into the kitchen. She always set her heel down as if it had a sting in it that she wished to thrust in as deep as possible. There was to be heard immediately the breaking of kindling, the scratching of matches and the banging of stove lids. Twenty minutes later she set a tray of tempting food before Amy. When she had eaten, Rachel put on her severest, most conscientious expression, armed herself with a broom and dust rag, and gave herself over body and soul to cleaning the house.

"Elbert neglects you shamefully!" Rachel asserted.

"He never does," said Amy, smiling the smile of perfect trust. "He does everything for me, who can do nothing for him."

(Continued from Page 66)

Amy was thinking more particularly of his latest grace in copying her notes in the little Book of Life she was so artlessly keeping.

"He does as little as he can for anybody," persisted the accuser, slinging the counterpane around the bed corner.

"He loves me—he pets me yet, when I am so old," enunciated Amy softly, as if she whispered a miracle.

This really silenced the old dust-rag saint. The captain would no more have dared pet her than he would have spit upon his finger and laid it upon the red-hot stove. The moment he entered his own house-door he was no longer the valiant veteran. He was a poor invalid, whom she might take a notion to put to bed any time with a plaster on his back. Her love had reduced him to that.

As Rachel was returning from her visit to Amy, she remembered that this was the day upon which the new Monthly Mercury was always put on sale at Daddisman's Hotel. She went by and purchased a copy. When she was again comfortably seated upon her veranda she put on her glasses, moistened her forefingers and began to turn the leaves. Presently this title at the top of the page attracted her attention, The Town Testament.

She had the vision in her own mind of an old worn Bible that was passed from house to house in some poor village. She began to read. She caught her breath; the pupils of her eyes dilated. It was like reading up one street and down another in Ruckersville. There was one stranger in the throng of characters whom she said she did not know. She said that over and over to herself, yet this woman in particular excited her curiosity and indignation.

"And there was a certain woman in the town who went about collecting missionary dues; and this woman's tongue was the rod she laid upon her neighbors' backs.

"And she committed no sins, but God was obliged to forgive her nearly all the good she did. For this woman did good as if she were beating the lost and undone, and as if it were a shame that good had to be done at all."

Rachel laid The Monthly Mercury in her lap and looked up. She felt queer, as if an angel had just spit in her face. She wiped it roughly with the corner of her apron. She was wounded—unaccountably wounded and angry. And she did not know what to do about it, since she supposed the captain was still downtown. If he had been at home she could have worked off her feelings by putting him to bed. She often did this.

Fortunately she was very far from recognizing him as the hero of the next verses of the Recording Angel's scriptures. The captain was the one living creature besides herself who could and did throw dust into Rachel's eyes. She knew all about his backache, but less about him than about any other man in Ruckersville.

At this moment he was seated in a secluded corner behind his beegums, also reading a copy of The Monthly Mercury. It seemed that the Recording Angel had been wandering along in his or her mind, adding up the men of Ruckersville as he came to them, putting in little stories to defend them and to illustrate the general inefficiency of men, comparing them with women, and so on, until he came upon the theory that women neither know nor can know men. Apparently this was the total of a column and a half of illustrations, all taken with startling frankness from the lives of Ruckersville benedicts. These illustrations were put together with the distinctness of a formula of experience, with the devil's tail sticking out.

One incident in particular had been culled from the captain's most private annals, which he guarded with the sacred care a man always bestows upon his vices, though his virtues may be weather-beaten from exposure. This incident had to do with a certain sum of money given the captain by Rachel, to be credited upon her own account at the bank. Unfortunately he had lost it in a game of poker before he reached the bank. The Angel seemed to pause and ponder over the curious phenomenon, that a man never became so honest that he would not steal from his wife—either her prayers, her confidence or her money. The conclusion of the whole matter was set down in one of those imitation rib verses from Ecclesiastes, and ran something like this:

A Glimpse at the Drama of History

Cleopatra Testing the Poison

The most beautiful, passionate and faithless woman of antiquity, having first infatuated, then ruthlessly destroyed the great Antony, at the moment of her downfall coolly arranges her own death rather than go to Rome in disgrace. Before taking the poison herself, she watches with keen interest its effect upon her own bodyguard. No more characteristic action could be shown. This is one of the many reproductions of learning moments in history from this set.

Beacon Lights of History

More than 1,000,000 Volumes Sold

"A vivid, accurate, authoritative pen picture of the lives, the thoughts, the passions, the deeds of the great men and women who have made the world what we see it to-day; a fascinating narrative that grips the attention, charms the imagination, inspires noble impulses, entertains as though it were a romance, fills the storehouse of the mind with the great events that have shaped the lives of men, nations and dynasties.

This historical masterpiece has become a necessity in American homes. In these volumes are described all great events from the time of Confucius to the present, fascinating, instructive and inspiring. The owner of these books possesses a world history of unexcelled importance and value; a veritable university of progress, science, art, philosophy, law, education, religion and literature.

History Made as Interesting as the Most Brilliant Fiction

To Dr. Lord every great event, every distinct advancement, has been shaped by some individual who looms far above his fellow men. Lord tells the story of these men, shows the conditions under which they labored, demonstrates what they accomplished, and how the accomplishments affected their own and succeeding generations. He gives you history, not of the ordinary dry sort, but so classified, so humanized, so infused with the life blood of a world hero or immortal heroine, that it cannot be forgotten. The world's great men and women are his "Beacon Lights."

F. W. Gunsaulus, *Pres't. Armour Institute, Chicago:* "Absolutely authentic as to historical data."

Prof. Charles Eliot Norton, *Harvard University:* "No other man of the country has done more to advance historical studies."

Hon. Hoke Smith, *U.S. Senator from Georgia:* "I prize no books in my library more than I do Dr. Lord's 'Beacon Lights of History.'"

Andrew D. White, LL.D., *Ex-Ambassador to Russia:* "Dr. Lord has inspired large numbers of thoughtful young men to historical study."

Sir James Yoxall, M.A., M.P., *England:* "Here are pages that clothe the dry bones with life and vitalize the past."

Newell Dwight Hillis, D.D., *Plymouth Church, Brooklyn:* "I have read Beacon Lights with intense interest. To ministers and students these volumes are indispensable."

Dr. Lord, than whose "Beacon Lights of History" no more faithful, accurate and dramatic story has ever been written, spent his best forty years in creating this monumental work, which, for a mere trifle, you may now be the fortunate heir to—if you act quickly. The heirs of Dr. John Lord, author of this most famous historical work, have agreed to largely reduce their royalties on this single edition. By this remarkably favorable chance there is now available, for immediate distribution, a limited edition of this magnificent work—15 matchless volumes, 6000 pages, with beautiful full-page illustrations, most of them reproductions of renowned masterpieces, richly bound—an edition that by its beauty alone will grace the choicest library—at a price so reduced, on terms so easy, that it at once becomes a question of how long the edition will hold out at the price concession now offered.

Send the coupon for a profusely illustrated booklet, containing fascinating sample pages of "Beacon Lights." Even these samples will show you many a strange bit of history. *SEND NO MONEY.* With the sample pages, we will show you how you can secure the whole 15 volumes on payment of only $1.00 and return them if you don't like them.

SELF CLEANING
LITHOLIN
COLLARS & CUFFS

Collar Wisdom

Saw-edged collars and cuffs, common complaints of the day, mean a shabby appearance and much discomfort.

The one solution of this vexed problem is the **LITHOLIN** COLLAR—*looks like linen and wears better.* You get a measure of comfort and satisfaction far and beyond the trifling initial cost.

A **LITHOLIN** COLLAR, 25 cents, (worn every day) lasts two months, and a daily rub with a damp cloth is your laundry bill. **LITHOLIN** COLLARS and CUFFS are made in the newest styles—dust and water proof—with the dull linen finish that appeals to every one—turn-downs have a "slip-easy" space for the tie.

IMPORTANT TO THE TRADE

The new **Litholin** packing is two dozen collars to the box—each box containing assorted sizes, 14 to 17½, the popular sizes predominating. The great advantage of this to both jobber and retailer is fully explained in our Selling and Distributing plan—write for it to-day. The old style packing will also be continued.

We also make a *two for a quarter* collar—particulars to the trade on request.

Buy a LITHOLIN Collar to-day and be convinced

COLLARS 25 CTS. CUFFS 50 CTS.

If not at your dealer's, send, giving style, size and number of collars wanted, with remittance, and we will mail postpaid. Booklet of styles free on request.

FIBERLOID COMPANY
7-9 WAVERLY PLACE
NEW YORK

Western Canada Wants Men

—and women—to help develop the vast empire now being opened by the Grand Trunk Pacific Railway. If you are on the alert for the "Big Opportunity," there are

10,000 Business Openings

in the "Kingdom of Wheat" for you. These openings for practically all businesses, and the lifetime opportunities, have been created by the building of the

Grand Trunk Pacific Railway

from the Atlantic to the Pacific and the subsequent establishment of

Hundreds of New Towns

In these Grand Trunk Pacific new towns, General Stores, Hardware Stores, Livery Stables, Blacksmith Shops, Hotels, Clothing Stores, Grocery Stores, Millinery Shops, Barber Shops, and so forth, are needed. You may, if you desire, purchase property direct from the Grand Trunk Pacific Railway Company on easy terms if preferred, but this is not compulsory, or even necessary; for, through their authorized agents, the Grand Trunk Pacific Railway Company will bring you in direct touch with leading wholesale houses, commercial clubs, industrial organizations and individuals who can best assist you in choosing the town or city which meets your requirements. In Western Canada, where it's

Village Yesterday—Town Today—City Tomorrow

you'll find all the advantages offered by a new country without a new country's disadvantages. You'll find modern cities, growing, going towns, excellent schools and churches, a splendid telephone system, modern transcontinental railways, a fine climate, mountains, prairies, forests, lakes, rivers. You'll find 700,000 American Farmers; you'll find twelve cities which grew 501.5 per cent in 10 years. In one Grand Trunk Pacific New Town of 500 population the merchants did $700,000 worth of business in 1910. In another, property which was purchased direct from the railway company for $325—easy terms—sold less than a year later for $1,442.50 cash. For other interesting facts, send for free, illustrated book—

"A Chain of Opportunities"

Send for it tonight. Write to us—tell us what you want to do. Give your age—tell whether married or single—in fact, give such details as you think will be of value to us in getting you located in the one best place for you. Your letter will have individual attention and its message will be held in confidence. Write tonight.

G. U. RYLEY, Land Commissioner

Grand Trunk Pacific Railway

(18) Room 315 Union Station, Winnipeg, Canada

"A man may know his wife, but no woman knoweth her husband.

"If thy husband kiss thee, count thy silver; he may have stolen a spoon.

"If he praise thee, look for Hagar in the bushes; he loveth another."

This was horrible, not because it was the truth—the captain never for a moment questioned that—but because incidents had been taken from his own life and hung like mottoes in the tale to prove it. He leaped to his feet, hissing with impotent fury. He clinched his fist and whirled this way and that in his rage.

"I will find him and shoot him, the fiend!" he swore softly, looking back to make sure his voice did not carry as far as the stout figure of Rachel, seated upon the veranda.

He was an old reed shaken in the wind, suddenly compelled to share his private character with the unknown. He was distressed, like a man who posed for his portrait in a gold-braided uniform and beheld in the negative his thin, old, naked legs.

But if others were astonished by the appearance of The Town Testament, the Woman's Club was prostrated. Mrs. Fanning-Rucker was silent, suffering and mystified. She knew that no member of the club could or would write such a thing. The blindness of Amy excluded her as a possibility from any one's mind. The Angel had not honored Mrs. Rucker with any concluding verse of scriptures. She was merely a poor dunce left sitting upon a stool, in the tale, shorn of her greatness—merely a fat old girl who had missed her lesson and was being kept in after school by the Angel. The crowning insult to this indignity was that it was apparent in every line that the writer desired neither to punish nor to caricature. It was as if a spirit had determined to tell the truth about everybody in Ruckersville, without reference to their station or their feelings. The women of the club suffered most because it seemed that the Angel had them upon his conscience in the form of a compassionate anxiety, and that he really knew what was the matter with them.

"Fill the heart of a woman, and her mind will not trip thee; but if thou leavest her loveless she will split thy hairs with arguments.

"The woman who maketh an idea and pursueth it and teaseth it into words may write a masterpiece; but she hath poisoned the milk of her babe.

"The mind of a woman dwelleth by nature upon the small point; it fitteth into the cradle and on the forefinger, but not into the hatbrim of a man."

Mildred Percey saw one of her poems in print for the first time in The Town Testament. She could not have been more astonished if she had seen it in the Old Testament. The title was Loneliness.

Oh, heart, thou wert not made
Alone to linger on;
To wander thus, through light or shade,
With none to lean upon.

To look around and see
No pulse to answer thine;
No tender eyes to smile on thee,
No lips to call thee "Mine."

The tendril of the vine
That seeks in vain to cast
Its arms around aught besides, must twine
Upon itself at last.

The heart that seeks in vain
Some answering heart to find,
Turns on itself and weaves a chain
That it cannot unbind.

She had read these lines once at the club, and she did not know it, but she had loaned Elbert White a book with a copy of this poem scribbled upon a loose sheet of paper. She had had a letter from this same magazine declining them. Now they appeared like a row of little candles in a drizzling night, flickering and going out, one by one. They were preceded by a sort of epitaph of her character, and after them came this Æsop scripture:

"Man sinneth if he leaveth the woman to abide single until the seeds of poetry ripen in her, and she bringeth forth only verses."

Mildred stared in awe that was nearly superstitious at the signature of The Recording Angel.

(TO BE CONTINUED)

Where Appearance And Cleanliness Are Factors

Where economy and durability are also a consideration, accumulators of dust and dirt are the bane of housekeepers. The keeping of rugs and carpets free from dust and germs is certainly a task. May we suggest a remedy?

We have issued a booklet giving the history of "CREX" floor coverings—from the discovery of a process for cultivating and curing that beautiful, long, jointless "Carex" or wire grass of the Northwest, to the invention of machinery which spins the smooth, round "blades" into a rope-like silky cord and then weaves it into artistic, sanitary floor coverings.

This booklet, with accompanying catalogue, giving the dimensions of "CREX" rugs, carpets, hall runners, etc.—and reproducing the products in actual colors—should be carefully read by every housekeeper. A postal request will do.

Most dealers sell "CREX" products. If you cannot find the pattern you want, write us. We will see that you are supplied. *All grass floor coverings are not "CREX." Be sure the trade mark below is on the rug.*

CONGO
NEVER LEAK ROOFING
Guaranteed Under Bond To Last Until 1922

How long will it last? That is the question you want answered when you buy roofing. Congo Roofing will last ten years—that is guaranteed.

You will find a genuine Surety Bond *in the center of every roll of Congo Roofing*. It goes into effect after you have laid Congo on your roof and returned the guarantee to us properly filled in ready for signature.

The guarantee on 2-ply and 3-ply Congo is for *ten years*.

Our primary motive in establishing the guarantee plan is to show people that we mean what we say. We want our statement to stand as a plain unvarnished fact. We don't want people to say "Ten years?—Probably they mean seven." We want people to realize that we mean ten years and hence *this positive guarantee!*

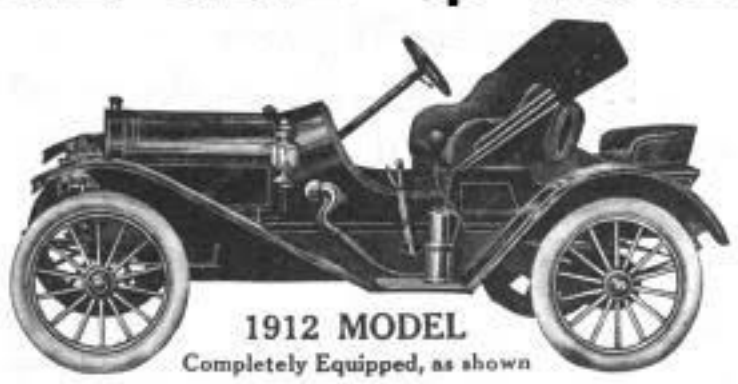
Congo is easy to lay. It comes in handy rolls of 216 square feet and is simply unrolled on the roof and nailed down. Nails, cement and galvanized rust-proof caps are supplied free of charge packed in the center of each roll.

Copy of the Guarantee Bond and a Sample of Congo and booklet will be sent free on request.

National Surety Company
CONGO ROOFING
Guarantee Bond

Fac-simile of 10 Year Bond

The only way in which a definite and enforcible guarantee could be given was by the aid of a Surety Company, and accordingly we have arranged with the National Surety Company of New York, one of the great Surety Companies of the United States with assets of $12,000,000 and over, to issue a Genuine Surety Bond with every roll of Congo Roofing.



UNITED ROOFING & MANUFACTURING COMPANY
PHILADELPHIA CHICAGO KANSAS CITY SAN FRANCISCO

MULLINS STEEL BOATS CAN'T SINK

Because they are built like Government Torpedo Boats, of tough, puncture-proof steel plates, pressed to rigid form and so securely joined together that a leak is impossible. The Mullins Steel Boats are *guaranteed* against puncture—leaking—waterlogging—warping—drying out—opening seams—and NEVER REQUIRE CALKING.
MOTORS: The Lozw-Victor 4-Cycle and Ferro 2-Cycle. Light—powerful—simple—can be operated by the beginner—start like automobile motors—one man control—never stall at any speed—exhaust silently under water.
We also manufacture a complete line of steel hunting and fishing boats—row boats—cedar canvas-covered canoes.
Our beautiful book, illustrated in colors, is free.

METZ $495

1912 MODEL
Completely Equipped, as shown

Four Cylinder 22 H. P. Water Cooled

Mr. Brisbane, in a recent editorial on automobiles, asked this question: "Who will be the FIRST to put this great industry on a sensible, economical, permanent basis—WHO will give to the people of this country a strong, reliable, sane, REALLY LOW-PRICED CAR?"

The answer is, THE METZ COMPANY; and you see pictured, above, the car itself! A complete car in every respect, standard in construction and standard in equipment, a car with a remarkable record for endurance and efficiency—for $495.00!
The METZ "Twenty-Two" develops from 5 to 50 miles per hour on the high speed. It is guaranteed to climb hills as fast as any other stock car made, regardless of its power or price, and the operating expense is less than any other car. It is easy-riding, simple in operation, and absolutely dependable under all conditions.
To Dealers.—The METZ "Twenty-Two" is the big seller for 1912. Write us for particulars.

METZ COMPANY, 100 Gore St., WALTHAM, MASS.

HOW TO BEAT THE BUILDING GAME

(Concluded from Page 9)

circles the most famous fire of the generation is that of the magnificent dwelling of a well-known man in Boston, which, at the time of building, with its stone and tile walls and floors, and reënforced concrete stairs, was supposed to be the last word in unburnable construction; but this house was then entirely lined with very elaborate and massive panelings, carvings, casings of wood, as well as wood floors. And one day between seasons, that fateful time of house opening and closing, a careless servant put an electric platewarmer, in commission, on the kitchen floor—and went out, leaving the house alone. The whole interior burned like a fiery furnace and collapsed into a total wreck!

One great point of economy is to avoid multiplying trades in a building. On a house in New Jersey, that was planned for an otherwise economical combination of brick and concrete, the bricklayers insisted that they should have the laying of the concrete. As this would have involved a labor cost for the concrete four times as great as if done by concrete men, the house was changed to all-concrete. Even without such difficulties it is not well to multiply materials. The economical way to build is to organize your gang and keep it going all the time without delays. If this cannot be done it will be found that the unit costs given, which are correct for large or small operations, will not balance because of these interfering conditions. For such reasons, local conditions, and so on, it is sometimes much cheaper to build in one material than another, even when unit costs are equal; and such conditions should be very carefully canvassed, with both the architect and the contractor, before the decision as to the material of the house is made.

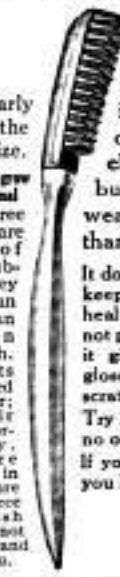
Houses That Grow Old Gracefully

The competent architect will be able to advise his client as to all these points—the suitability of climate, labor conditions and environment to the material or combination of materials he proposes. Too many owners rush blindly into the fad of the moment and drag their professional advisers after them on the penalty of losing the job. The architect who dared to advise against the "roughcast" craze of a few years ago was all too likely to be voted an old fogy. It is in just such matters, however, that the client should recognize his own ignorance and the need of expert authority.

The conservative architect will probably say that for the permanent home in a thickly built-up suburb, with few trees, a brick or native stone exterior is likely to be more harmonious with its surroundings than concrete; and today the range of delightful color in brick is so wide that no difficulty should be found in suiting the background. For the country, among trees especially, concrete should come to its own.

However, whether brick or concrete, tile or wood, the owner must decide if possible before choosing his design. Too often the procedure is quite otherwise. The owner gives the architect the general dimensions he wants and the architect draws a pleasant design. It is submitted for approximate bids, as counseled in our first paper, in concrete, brick or hollow tile. In these circumstances, the concrete bid is far the higher, because the necessities of the peculiar type of construction demand certain special forms which in such a general design are not likely to have been provided for.

The special virtues of the concrete construction, however, as regards repairs and sanitation, can be largely enjoyed with a reënforced concrete interior structure and hollow-tile partitions; and it is this interior combination, adapted to an exterior of whatever kind the environment calls for or the architectural type demands, whether cut stone, rough native stone, brick or reënforced concrete, which it is safe to recommend for every permanent house of the class costing above twenty-five thousand dollars.



Choose your material first, a material suited to the purpose and the neighborhood and you will get a good design. And, with a design suited to its material, climate and environment, your house will grow old gracefully, whether it's of mud, ice or concrete!

Rubero SANITARY TOOTH BRUSH

THESE RUBBER POINTS show nearly double the actual size.

They did not grow on an animal but in a tree—they are made of clean rubber—they keep clean and clean between the teeth. The points are webbed together; do their work thoroughly. They are not set in holes but are in one piece with brush and cannot loosen and choke you.

Is a Rubber Tooth Brush invented by a prominent and experienced dentist. It is not a **cheap** rubber brush, but a **good** one and wears many times longer than a bristle brush.

It does not cut the gums but **keeps them refreshed** and healthy. Its vigorous use is not painful to sensitive teeth—it gives them a white and glossy look and does not scratch the enamel.

Try **RUBERO** for a time and no other kind will please you. If your druggist cannot supply you let us send you one.

R-C-H "Twenty-Five"

Model S S

5-passenger touring car—110-inch wheelbase

950 Equipped with self-starter, 32 x 3½ tires, dual ignition, demountable and quick-detachable rims, gas tank, extra rim, top, windshield, 5 lamps, horn, tools, and tire repair kit, long stroke motor, 3 speeds, enclosed valves, magneto.

O. B. Detroit

You can pay $1500—but what more will you get?

'HAT'S the basis on which we'd like you to judge the R-C-H. Take any car you have in mind at 0—or more. Compare it, item by item, with the -H—equipment, specifications, special features, construction details. The results will surprise you. We're satisfied to sell the R-C-H on this basis: "Buy the car value that beats it—if you can find one." And we're satisfied to take your judgment after you've seen the car.

LONG-STROKE MOTOR

's a feature that alone places the R-C-H in a class of its own. automobile engineers long ago demonstrated that a long-ke with a relatively narrow bore developed the maximum efficiency per fuel unit; and this construction is used on the riced European cars.

C-H is the first American car to adopt it. The ratio of bore (3½ x 5) was determined after thorough study of European ion, and after exhaustive engineering tests. It is *really* long-ot merely a square motor with stroke lengthened and bore n proportion. And on the other hand, it does not carry the e idea to extremes.

a prophecy. Before another year rolls around you'll see 75 d motor-car manufacturers in a scramble to feature the long-ke.

STURDY CONSTRUCTION

n't believe there's a better built car in the world than the But we'd prefer to have you judge that for yourself.

There are 123 drop forgings in the R-C-H—more than in any other car at any price. Drop-forgings are far stronger and more durable than castings. And drop-forgings permit an absolute accuracy of machining impossible with castings. This means much greater interchangeability of parts.

The accessibility of every part of the R-C-H is another feature that makes it distinctive. We don't believe any other car approaches it in this respect—but that, too, you can judge for yourself when you see the car.

Chrome nickel steel is used throughout all shafts and gears in the transmission and rear axle; high carbon manganese steel in all parts requiring special stiffness.

OTHER FEATURES

There are too many to do more than mention a few.

Left side drive; center control, convenient to the operator and at his right hand; the roomy, graceful, beautiful English type of body, used on the highest priced European cars, but only on the R-C-H among American cars at a popular price—there are dozens of others.

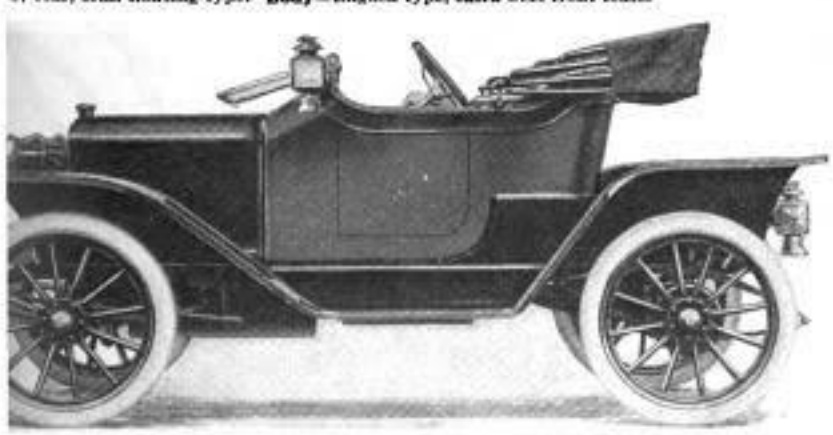
But the best way to know them is to see the car.

STANDARD MODELS

Regular equipment of top, windshield, lamps, generator, horn, tools and kit, without self-starter and other special equipment quoted above.

5-passenger Touring Car	**$850**
Touring Roadster	**800**
Roadster	**700**
(Equipped for 4 passengers)	**750**
Colonial Coupé	**1050**

CANADIAN PRICES



These are as follows, f. o. b. Windsor, duty paid, ***S S Models***—Touring Car, $1175; Touring Roadster, $1125; Roadster, $975; Roadster, 4-passenger, $1050; Coupé, $1425. ***Standard Models***—Touring Car, $1090; Touring Roadster, $1000; Roadster, $850; Roadster, 4-passenger, $925; Coupé, $1300.

The Only Competition That Hurts

Last year we spent over $50,000 on devices for maintaining and improving the quality of Kellogg's Toasted Corn Flakes which the ordinary observer *cannot even see.* We spent thousands of dollars more to insure our getting none but the hearts of the best white corn from which to make our flakes. Thousands more were spent for inspections and for other features which make for higher quality.

Our competitors, with very few exceptions, are not so careful. We could take you through factories where a dozen or more brands of corn flakes are produced—but that would hardly be necessary—a glance at the buildings alone would be enough to prove that *they haven't the facilities* to make a food like Kellogg's.

Yet these same products are marketed on the claim that they are "just as good as Kellogg's." The retailer who buys them naturally sells them on the claim the salesman made for them when he sold them to *him.*

What happens when a customer buys these flakes and finds them flavorless and unpalatable? Naturally he isn't very keen for any kind of corn flakes after that. In such a case the one sale of a competitive brand of corn flakes may cost us the entire future business of a customer who would have been satisfied if he had secured "the original."

This isn't exaggeration. It's the history of every success. And the originator's loss is equally the loss of the trade man and the customer. The one sale doesn't count for much, but the business killed by a poor product does.

We are frank to confess that this kind of competition hurts.

W. K. Kellogg

The Achievements of Dollar Diplomacy

By PHILANDER C. KNOX
Secretary of State

THE diplomacy of the Taft Administration, when not directed toward the reconciliation of the turbulent elements warring or threatening war in some of the smaller and weaker southern republics or otherwise largely occupied in conducting our foreign relations with the nations of the earth and in endeavoring to establish peace among mankind, has found opportunity to advance the commercial interests of the American people in foreign markets, to encourage the use of our abundant means in assisting less forward countries to develop their resources and to advance reforms necessary to national stability and progress in regions aspiring toward a higher civilization. These latter phases of the activities of the Department of State have been called "Dollar Diplomacy," in honor of the instrumentality employed for so much that is good; and, in view of the many disparaging things that have been said about the American dollar—especially at home—there should be a general sense of satisfaction with its present honorable association with the good work that is being done abroad.

The achievements of dollar diplomacy have been conspicuous in the acquisition of American dollars by the expansion of American trade, and in the use, for example, of American dollars by assisting to rehabilitate the weaker American republics and in advancing reforms in China. To speak first of the commercial side, the promotion of American commerce is one of the first duties of American diplomacy. There has never been a time in our history when so much attention has been given as at present to the promotion of the foreign trade of the United States.

In the tariff negotiations of 1910, which were carried on with many foreign countries for the purpose of adjusting their tariff laws and regulations so as to meet the requirements of the maximum and minimum provisions of the Payne-Aldrich Law, the Department's commercial diplomacy accomplished far-reaching and enduring results in aid of American commerce. Substantially adopting the principle of minimum for minimum as the basis of adjustment with the various countries having a dual tariff system, the Department took advanced ground in the interest of equality of commercial treatment in foreign markets for the products of the United States with the like products of competing countries. This principle of settlement was so generally recognized that at the close of the negotiations in question there remained no instance of "undue discrimination" on the part of any foreign country against American commerce.

Important Contracts Secured for American Manufacturers

THE occasions for the exercise of the same practical diplomacy by the Department of State are numerous and unending. Every time the customs officers at some foreign port so change the tariff classification of American goods as to involve the application of increased rates, the Department of State is likely to be appealed to by the American manufacturer or exporter concerned; and often the matter thus becomes the subject of diplomatic activities, provided, of course, that the complaint appears well founded. In a large majority of these instances the diplomatic interposition of the United States has been effective in obtaining prompt remedial action by foreign authorities.

It is not only by commercial diplomacy, however, that the Department of State has been able to render valuable service to American commercial interests. Both branches of the foreign service, as well as the departmental system of administration, have been organized and improved with the primary purpose in view of rendering more effective aid to American trade expansion. Every effort has been exerted to obtain from the consular and diplomatic agents of the United States reliable information of practical value in regard to commercial and industrial conditions and opport .nities for American trade development abroad. The quality of these trade reports has improved, according to the testimony of the business interests of the United States for which they are intended, and the intelligent system provided by our Government is utilized and appreciated to an extent hitherto unknown.

Aside from the influence of the Department exerted in special instances for obtaining, in behalf of American citizens, foreign concessions and contracts—estimated to have aggregated over $100,000,000 in the past two years—attention properly may be directed to the remarkable expansion of our export trade in crude and manufactured goods. Such commerce, once established, grows through force of merit and through the individual enterprise of those directly interested. Its expansion through State Department aid is fully justified, because there are opened new and permanent opportunities equally and directly helpful to American labor and capital employed in factories, forests, farms and mines. It is, perhaps, sufficient comment to point to the increase of our exports for the calendar year 1911, which, as compared with those of 1910, exceed the latter by the vast sum of $230,000,000. They exceed the exports of 1907, the year of greatest previous record, by over $163,000,000. Manufactured products for 1911 make an astonishing showing. They exceed $1,275,000,000, being in excess of similar exports for 1910 by $191,000,000, and exceeding the same class of exports for 1907 by $166,000,000. The excess of total exports over imports in 1911 was above $525,000,000. This was in excess of the showing for 1910 by $259,000,000. The balance of trade for 1911 exceeded that in 1909 by over $300,000,000, and was greater than the excess of 1907 by over $53,000,000. Domestic exports in 1911 were $2,058,413,224.

The Work of the Bureau of Trade Relations

THE activities of the Department through its Bureau of Trade Relations and its diplomatic and consular service constantly and consistently have been shaped for the promotion of such foreign trade as gave best promise of permanency. Notable among the recent accomplishments of the Department, whereby the growth of American export trade has been materially promoted, may be mentioned the following instances:

There has been obtained the recognition on the part of all importing nations of the food certificates of the United States Department of Agriculture as evidence of the purity of the products so certified under the provisions of the Pure Food and Drugs Act of June 30, 1906. Such recognition has operated to remove restrictions that previously had barred American pork products from several countries and had embarrassed our meat and lard trade in others. The gain in exports of these commodities in 1911 over 1910 exceeded $25,000,000. Our total foreign sales of pork products for 1911 amounted to over $125,000,000.

There has been brought about the adoption by various governments of regulations adequate for the improvement of sanitary and other conditions connected with the preparation and export of fruits and other vegetable products shipped to the United States. These precautionary measures are in the interest of the health of the American people.

Measures have been taken which have led to the modification on the part of various European governments of regulations and tariff measures restrictive of the importation and use of refined cotton-seed oil. This is a product almost exclusively of American origin.

Digitized by Google

The ground taken by the Department that American cottonseed oil, by reason of its excellence and purity, was entitled to the same tariff and administrative treatment as that accorded to competing edible vegetable oils, has met with recognition on the part of nearly all important importing countries.

Various suggestions offered by the Department have been adopted by foreign governments for the improvement of the international parcels-post service from the United States, and measures for the further betterment of this service are under consideration. This is obviously beneficial to American mail-order houses, to all exporters of small-package goods, and aids in the distribution of samples of merchandise.

The Department properly has encouraged enterprises looking to the establishment of direct steamship transportation service between American ports and numerous foreign ports, to the end that trans-shipment at intermediate ports may be avoided and thus the time of transit may be reduced to between fifteen and twenty days, as against the transit time of thirty to one hundred and twenty days where goods are trans-shipped en route.

There have been accomplished various instances of modifications in foreign consular regulations with respect to fees and other details which the experience of American shippers had demonstrated to be restrictive of or embarrassing to exports from the United States.

Modifications have been obtained in foreign regulations respecting Merchandise Marks Acts, which, because of their susceptibility to technical construction in certain countries, were found to be unfavorable to American exporters.

In some instances materially enlarged foreign markets have been opened to American trade by the granting, at the suggestion of the Department, of preferential duty rates applicable to considerable and important lines of American-made commodities.

Official Services to American Exporters

THE aid and influence of the Department have been extended for the inauguration of the exportation of American coal, following development work through specially detailed consular activity where markets were thought to be available.

Actual and important trade thus has been secured where little or none heretofore existed.

American diplomatic and consular officers throughout the world are responding faithfully and actively to the demands upon them—in the interest of trade extension—in the way of valuable advice and personal effort, whenever their services are sought by American exporters, whether directly or through the Department of State.

That perhaps our competitors appreciate better than we ourselves do the impetus now sought to be given our foreign trade may be illustrated by the following comment by a writer in the English Quarterly Review:

> The methods of the Foreign Office [British] in this and other respects may profitably be compared with those in practice in the United States, in order to judge how far we lag behind our cousins in such matters. Although, as has been shown, the United States Government expends less upon its consular service than the British government, it employs a far larger staff; and it secures a surprisingly beneficial result in the form of reports, general information and estimates. . . . There is in force a complete system of intelligence relating to trade matters in the United States, by means of which information is published in the form of daily reports and circulated broadcast.

The experience and observation of the Department have convinced me that we now have reached a point where Section 2 of the Tariff Act of August 5, 1909, should be so modified as to meet the contingencies that have arisen, where discrimination in tariff or administrative treatment in the minor relations of commerce and not undue as to the whole commerce of this country may be met and overcome by an application of special duty rates elastic enough to meet each case as it arises, by opening a way for fair mutual adjustment.

So frequently has the attention of the Department been directed to the unsatisfactory condition in which American cotton arrives at foreign ports and the losses incident to insufficient covering and improper baling, that a careful investigation was instituted as to the causes responsible for this condition, recognized generally as being an unfortunate one. Commercial and legislative bodies in the South have represented to the Department that the loss incident to present baling methods amounts to an exceedingly large sum, variously estimated at from twelve to twenty million dollars annually. It is thought that to a large extent this loss ultimately must fall upon the American producer. Investigations abroad have been conducted and reported upon by American consular officers in all important cotton-importing ports. These reports and the recommendations of the Department have been placed before Congress and, at the instance of the Honorable W. G. Brantley, of Georgia, a concurrent resolution has been introduced and passed by the House that will insure the wide distribution of the Department's findings throughout the cotton-producing states. I have recommended identical legislation in the interested states both for the standardization of the cotton bale as to the size and weight and for the standardization of the tare, or the weight and kind of bands and covering. Such standardization, in my opinion, would increase the relative value of American cotton and would eliminate the present losses.

Then there is this matter of Latin American trade, and in particular South American trade, in which I always have felt a special interest. I don't think our people yet appreciate our progress there. We are making headway, too, in the face of adverse conditions. Few of our people look at the map often enough to know that geographically we have no advantage over Europe on the east coast of South America, where the bulk of the trade and of the population of that continent is, and that through its subsidized ocean steamship lines Europe is far better off than we are. England was a century ahead of us in going after that trade, and Germany a quarter of a century. I don't believe in scolding our own people too severely for neglecting South American trade, because until a few years ago they felt they had a wide enough field for their energies here at home.

When they did wake up to the importance of that market they found the tremendous advantage European competitors have over us in the way of banking and transportation facilities, the ownership of railway lines and banks, the larger number of their people resident in those countries, and the value of the financial relations thus established. There was also the influence of the newspaper press. Leading European journals were known and quoted in South America, and European countries have local organs or special editions for South America. South American newspapers gave much space to European news and very intelligent editorial discussion of European affairs. Naturally all this helped to create trade currents both ways.

Now we in the United States are coming into our own. Latin America is better understood here and we are getting to be better understood there. Our commercial diplomacy has been coördinated with our national policy in reference to Latin America, which has been a policy of mutual helpfulness, sympathy and peaceful progress through the encouragement of commerce and industry.

Our total trade with South America—that is, imports and exports—last year was $291,518,644, as against $154,767,537 ten years ago. Our exports were $108,894,894, an increase of $64,494,699 in ten years. That is making some headway. We shall continue to make headway both in the east coast countries, with their great internal development, and on the west coast with the results that will come from the Panama Canal.

Let me illustrate, with a few specific instances, what dollar diplomacy has done for our export trade:

As a result of the efforts of this Department the Brazilian Budget Law, in effect during the fiscal year 1911, was extended for 1912. Flour had been given a preferential duty reduction of thirty per cent, and a considerable number of other American products have now been granted a reduction of twenty per cent from the regular duty rates.

Large purchases of arms and military supplies have been made by Cuba under a special arrangement with this Government.

As is already well known, the Argentine government placed contracts for the construction in the United States of two battleships to cost more than $20,000,000, and these contracts were closely followed by others through which that government will fill its requirements for powder and other explosives almost exclusively from the United States. Purchases of $1,000,000 worth of American-made ordnance for equipping other vessels have been made by the Argentine government. Our legation at Buenos Aires was influential in obtaining for American paper manufacturers the contract to supply annually $200,000 worth of print paper for a leading publication there. The Argentine general post-office placed an order in the United States for 120,000,000 postage stamps. The Argentine State Railroad placed orders with American firms for material exceeding $1,600,000 in value.

Salvador granted a reduction of twenty-five per cent of the duty rate on American flour, and a fifty per cent reduction in the duty on cement.

Turkish manufacturers in Smyrna have bought largely of American machinery and equipment.

Our Growing Trade With the Orient

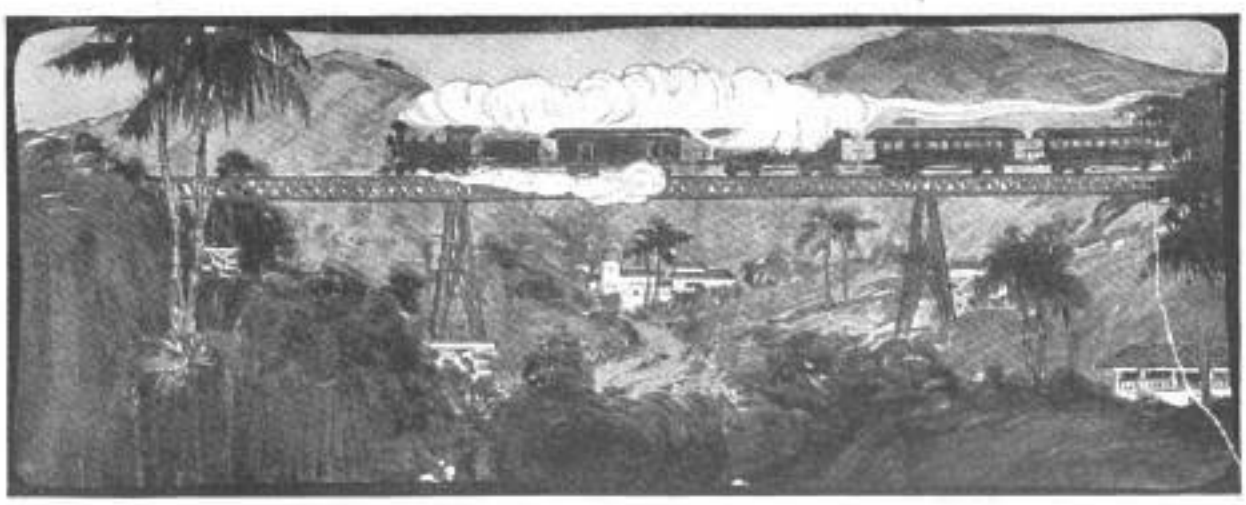
OUR exports to Japan, which in 1910 were $26,500,000, increased to $44,100,000 in 1911. The treaty recently negotiated with Japan accords the United States favored-nation treatment, and as a result American imports will enjoy the benefits of any reduction from the statutory tariff which Japan may grant to other powers.

American trade with Manchuria in tobacco and oil shows material growth.

Mining companies in Korea are importing American mining machinery on an extensive scale.

Our merchants are doing a greatly increased business with far-off India in flour and various manufactures of paper.

The $50,000,000 railway loan, recently negotiated with China by American and European financiers, will be expended largely for materials, American materials having equal preference with those of the other three countries interested in the loan. As the contract likewise provides for branches and extensions subsequently to be built on the same terms, the opportunities for American materials will reach a very considerable figure.



The loan of $50,000,000 for currency reform and industrial improvement, which has also been signed, will greatly improve the conditions upon which trade is conducted in China; and an opportunity has been created for American materials in connection with the plans of the industrial developments in Manchuria, with a prospect of larger opportunities in the future as the work of development is extended.

There are dozens of instances of orders for American goods placed as the direct result of the activities of the foreign service, which in themselves may seem insignificant, but when it is considered that three hundred consulates all over the world and fifty diplomatic missions are doing this kind of work, the aggregate of business thus obtained goes far toward accounting for the gratifying increase in our exports.

Let me now speak of dollar diplomacy as illustrated by our relations with South and Central America. The meaning of the phrase, "dollar diplomacy," has been admirably stated as follows: "It means

ON MAIN STREET

The Bogus Badness of New York

DECORATION BY JAMES M. PRESTON

CONSERVATIVE dressers wear those stop-look-and-listen waistcoats and words-and-music shirt patterns when going somewhere on railroad trains. Persons who are ordinarily included among the total abstainers put quart flasks into their valises before starting on a trip, not necessarily for imbibing purposes but as an evidence of good faith when delving after a clean collar in the sleeping-car washroom the next morning.

Gentlemen who rarely touch a drop where they live become arid, avid and ardent for the clandestine cocktail on being marooned over Sunday in a dry town. The writer once knew a man so precise he would let his dinner get cold while he corrected typographical errors in his alphabet consommé, and so polite he had been known to remove his hat and bow on passing a washline containing articles of feminine wearing apparel; but when he came East to buy fall goods the stunned and startled folks back home would be hearing Things about him for weeks.

In short, it would appear that travel begets a broad and tolerant—not to say a devil-may-carish—aspect of life in general upon the part of the traveler. And so it is, therefore, that dear little old New York—friendly little old, hospitable little old New York—with its motto of "He was a stranger and we took him in good and plenty"—good little old New York, I repeat, whither every day seventy thousand visitors repair, all greatly desiring to be shown—New York, the aforesaid, has seen fit to provide custom-made wickedness for the out-of-town trade.

Its champions are given to calling New York the most moral great city in the world. Its defamers are wont to say New York has Sodom and Gomorrah looking like twin flag stations up a branch line in a strict prohibition district. Both are perhaps right and both are undoubtedly wrong. New York, being pretty well policed and fairly well lighted after dark, is probably no better and no worse than any other great cosmopolitan community.

When Your Country Cousin Comes to Town

"WHAT," asks the returned penitent—who has been to New York and has looked it over and has then gone back to the place whence he came—"What of the haunts of sin and the dens of vice and the cesspools of corruption and the rumholes that are so thickly studded along the main streets and the contiguous thoroughfares of that city—not to mention those crime-waves that the papers tell about?" It is time, high time, that these inquiring ones should know the truth, which is that most of the show-places of wickedness in New York, if not all of them, are absolutely bogus. They are shiny counterfeits, expressly designed, organized and maintained for the benefit of those who come from elsewhere, seeking, as the cant phrase goes, to see the town.

Mind you, I'm not saying that New York isn't sufficiently and enthusiastically wicked; but the real wickedness of New York, as is ever the way with wickedness wheresoever found, keeps as much under cover as possible, or else it goes disguised as virtue; and often it takes a mighty wily witch-finder to smell it out. It's there, but you don't see it unless you know where to look for it, and how. However, the places which advertise their wickedness, so to speak—the places which are famous from coast to coast as making a specialty of toughness—are, with hardly a single exception, cheap and gaudy imitations, that are got up and kept up for the express benefit of slumming parties of natives and of sightseers from out-of-town.

It is part of the pose of the dweller in New York—and he is generally quite a busy little plastic poser and every move is a picture—to pretend a deep and thorough acquaintance with the underworld when he is away from New York. The chances greatly are that he lives the life of the average self-respecting New Yorker, which is to say that he wags back and forth between his place of residence and his place of business, with occasional excursions to the theater, and once in a while to a café for dinner. He has a wink, however, which says as plain as words that he knows every chorus girl in town by her first name, and that all the stage doorkeepers and all the barkeepers and all the all-night cabdrivers are just the same to him as lodge-brothers. He invites an admiring circle of Country Mice to come to New York to see him any old time—vaguely, like that—and promises, when they do, he will personally pry the lid off and give them a look at the real saucy doings. Some day one of the fellows from back home packs his grip and comes up to New York, and then it devolves upon the New Yorker to make good and produce the materials.

It is customary to begin a night of pleasure by going to a regular dance-hall. There are perhaps a dozen of these establishments scattered along the skirts of the Tenderloin and all of them are patterned after one model. No matter which one you may select, you will find the same set of props and the same kind of performers. There will be on the wall certain oil paintings done by artists of the circus-wagon school of applied design. There will be beer-slopped tables, and an orchestra blaring, and waiters in greasy uniforms circulating freely and urging the reluctant to drink up and have a good time. The women present will be dressed more modestly and painted less gaudily than many of the women one sees in a New York theater audience. On a creaky dancing-floor a few couples are dancing in a fashion that seems commonplace after one has been witnessing the dances that are so popular this season on the musical-comedy stage. The air is sure to be thick and hot and full of smoke and ropy with variegated smells, and there is no ventilation to speak of. Until recently women were not allowed to smoke cigarettes openly in these dance-halls. There is a story told of two women who lit cigarettes in one, whereupon the gentlemanly bouncer approached and said, "Hey! Cut that out! Where do you two think you are, anyhow—in the Blitz-Barkington?" naming a big and fashionable hotel, newly opened, where it had been announced women could smoke publicly.

It is all very cheap and very tawdry, and very dreary and very weary; and the whole thing is especially devised for exhibition purposes; but the visitor, gazing owl-eyed upon the scene, somehow is convinced that he is seeing New York, with the top thrown back.

"Look out for knock-out drops in your drink—they'll do anything to a greenhorn in this place!" tensely whispers his guide, remembering that he had read somewhere how victims are drugged and robbed; and the countryman, with fascinating little tremors permeating his being, sups suspiciously at the very small glass of beer the waiter has just deposited at his elbow—beer which is nine-tenths foam and one-tenth a mild domestic brew, but charged for at imported prices.

Up to the Standard of Edgar Allan Poe

IF HE only stopped to think, Mr. Out-of-Towner would know that in his home city, wherever it may be, there are probably just such places as this—places of which he heard all his life, but which he would never think of patronizing. If he only opened his ears and his eyes he would sense the hollow, artificial bogusness of the whole plant—the tired eyes and stupid, bleak faces; the sad blaring of the music and dragging feet of the dancers. He doesn't, however, because that would spoil everything. He is in New York, taking in the town; and the town is wide open and he is in peril any minute of being doped and robbed; and this is the Big Night, and there is a glamour of adventure and danger over everything—and altogether he feels that at last he is looking upon and actually taking a part in the gay night life of the Paris of America. Gay night life? Wow! Paris of America? Zowie!

Having seen enough of this place our two bold adventurers next go to another that is exactly like the first, and to a third exactly like the second. There is just one New York dance-hall that differs in any essential respects from all the other New York dance-halls. It was opened up a few months ago by a crafty campaigner who knew exactly how to stage-manage the production so as to produce the most thrills. He has a sense of melodramatic proportion that would make Lincoln J. Carter look like a beginner. His place is down a side street, a block or two west of where the yellow streak called Broadway burns a long, lurid hole in the night. The front is a hooded, blinded house, all dark and deserted-looking. You cannot get in that way—no, indeed!—that seemingly empty house, with its boarded-up windows, is there to fool the police. Sh-h-h—careful now! You go to a small side entrance opening into a dimly lighted alleyway and you rap in a guarded manner upon a door that is locked and barred. It's all too Edgar Allan Poeish for words—not to say Anna Katharine Greenish!

As above stated, you knock. A bolt slides back, grating harshly in the customary manner, and a husky voice wants to know what you want. You crave to enter and so announce. "Sorry, gents," says the unseen guardian; "but you can't git in without yous are members and has your admission cards. This here is a strictly private club!"

If you grow discouraged at this and turn to go away he calls you back, and if you keep on going it practically

Digitized by Google

spoils the whole evening for him; but as a general proposition you do not go away. You slip a dollar bill into his palm and beg him to use his personal influence with the manager to procure admission for self and friend to the mysterious precincts of this most delectable and exclusive of resorts. He promises to do his best, bars the door again and departs, leaving you outside.

There follows now a stage wait, dramatically spaced and well-devised. Then the boss comes—a hoarse person in a dress suit, with an under jaw like a street-car fender and a voice full of iron rust; and the boss, after looking you over carefully, decides to let you in—you look like nice "quiet gents wot won't tip the joint off to the bulls"—and he opens the door just far enough to admit your grateful forms, he meanwhile standing vigilant and ready, in case the entire detective staff of the Central Office should take advantage of this golden opportunity and come swooping round the nearest corner with drawn revolvers.

Once inside, you follow him, tiptoeing back through a maze of dim and narrow hallways to a dance-hall at the extreme rear. Except that it is feebly lighted instead of blazing with electrics, as the others are, this dance-hall is just like the rest—just as smelly, just as dirty and just as sad. There isn't the slightest prospect, moreover, of its being raided. Every policeman in the precinct knows where it is and what it is. It is a part of the stagecraft, however, for some one to be constantly warning you that this is altogether a most desperate and secret enterprise, and that it behooves you to be careful, quiet and confidential. You are urged, no matter what happens, to keep your voice down—the waiters are able to hear the slightest whisper, anyhow—and you mustn't start anything; and, of course, you will never divulge the true nature of the orgies you have this night witnessed.

Then they add an artistic, really an almost exquisite touch. The waiter taps you on the shoulder and, bending over you, whispers in a voice not any louder than his own breath that the man sitting at the second table to the left—"no, don't look yit, boss, he might ketch on"—that that man yonder is one of the most "desprit" characters in New York, the toughest guy on the whole West Side and the head of the "turrible" Hell's Kitchen gang.

"The cops is after him now for bumpin' off a guy!" confides the waiter. "See how he sets with his back to the wall and his face to the door, ready to die fightin'!"

Whereupon the self-made mankiller, who is on duty afternoons and evenings, except on his Sundays out, tries to look a little more ferocious and only succeeds in looking a little slinkier; but the stranger is thereby hypnotized into paying twice as much for beer as any of the other dance-halls in the neighborhood charges. And when finally, with more mummery and mystery, he is ushered out into the night, he comes forth convinced he has been rubbing shoulders with death and sitting face to face with violent destruction.

At about this stage of the night's unbridled dissipations it is customary for the Town Mouse to take his country cousin to a Chinese restaurant, on the principle that no evening is complete without a hearty bait of the enlivening chop-suey. So they climb the stairs to a Chinese restaurant that is located over a bird-and-animal store and next door to a place where they cure hides and pelts; and there, amid quaint oriental decorations, manufactured in Jersey City, they partake sparingly of a guessing contest in a small blue crock.

"Very interesting place, isn't it?" says the New Yorker. "Famous resort, you know! All the Bohemian set—artists and poets and writers, and everything like that—come here to eat and get inspiration and local color. It's really just the same as being in China," he adds, raising his voice above the roar of a Sixth Avenue Elevated train that is whizzing by about a foot and a half from the front window. "Isn't it?"

The visitor agrees that it is and gazes about him at the assembled Bohemians—ninety per cent of them being sightseers like himself—and sniffs appreciatively at the true Bohemian atmosphere of the establishment. It may jar him for the moment to observe a large colored person shoveling in chow-main at the next table, but he remembers that art knows not color or race. How should he know that negroes are the most constant and consistent patrons of Chinese restaurants in New York, finding in the food, which is mostly pork and chicken, something which particularly appeals to the Afro-American palate? And how should he know that chop-suey isn't a real Chinese dish at all, but an Americanized product that came originally from San Francisco, where a Mexican is said to have invented it and a Chinaman to have improved on it?

After this trip to the haunt of the real Bohemian set comes the climax of this eventful and adventurous incursion into wickedness—the host suggests that they go uptown to a certain restaurant and see the college boys fight with the waiters. The visitor assents joyously. He has heard of this restaurant. He has read of it in all the stories of gay New York life, written by persons residing at South Bend, and points West; and so they hail a half-shell hansom or a taxicab with a feverish meter that seems to give an excitable throb and jump ten cents every ten seconds, and in state they are conveyed to the establishment where the half-shot halfbacks will hurl the half portion.

What they find is a large and carefully run place, where the food is slightly better and slightly cheaper than in the average New York restaurant; where the waiters are perfectly ordinary waiters and the patrons perfectly ordinary patrons. Some of these last have come because they like the cookery, and some because it is an all-night place and they can stay as late as they please so long as they behave themselves; and some, like Mr. Country Mouse, because they have heard those tales of the nightly battles of the collegians and wish to round out the evening with a few exciting chapters of unrestrained carnage. Oh, yes; the college students are there too—we mustn't forget them—brawny, hardy college students, fresh from the business college and just bubbling up and overflowing with the real college spirit.

Once upon a time, far back in the dim and misty past, it is reported that a flying wedge of waiters did throw a son of Yale or Harvard or Elmira out of this establishment on his head. Nobody remembers just when this happened or why it happened, and further details of it are wrapped impenetrably in the enshrouding mists of antiquity; but from so slender a foundation has grown up the pleasing tradition that it occurs all over again every night. And so every night the strangers come piling in, to be present when the clubbed ketchup bottle begins to splinter upon the reënforced undergraduate skull and tables are overturned and blood is spilt, and women scream in the well-known and popular manner known as piercing.

As a matter of cold and sober fact, nothing happens here that doesn't happen in any other large all-night restaurant; in fact, rather less happens, because this particular restaurant is managed by warworn veterans of the restaurant business who, by reason of long experience, know exactly how to temper justice with mercy and mercy with the calming word and the soothing admonition. Once in a while some gentleman goes to sleep in his lobster salad

(Continued on Page 46)

THE FEATHERS OF THE SUN

By JACK LONDON

ILLUSTRATED BY ANTON OTTO FISCHER

IT WAS the island of Fitu-Iva—the last independent Polynesian stronghold in the South Seas. Three factors conduced to Fitu-Iva's independence. The first and second were its isolation and the warlikeness of its population; but these would not have saved it in the end, had it not been for the fact that Japan, France, Great Britain, Germany and the United States discovered its desirableness simultaneously. It was like gamins scrambling for a penny. They got in one another's way. The war vessels of the five Powers cluttered Fitu-Iva's one small harbor. There were rumors of war and threats of war. Over its morning toast, all the world read columns about Fitu-Iva. As a Yankee bluejacket epitomized it at the time, they all got their feet in the trough at once.

So it was that Fitu-Iva escaped even a joint protectorate; and King Tulifau, otherwise Tui Tulifau, continued to dispense the high justice and the low in the frame-house palace built for him by a Sydney trader out of California redwood. Not only was Tui Tulifau every inch a king but he was every second a king. When he had ruled fifty-eight years and five months he was only fifty-eight years and three months old—that is to say, he had ruled over five million seconds more than he had breathed, having been crowned two months before he was born.

He was a kingly king, a royal figure of a man, standing six feet and a half high, and, without being excessively fat, weighed three hundred and twenty pounds; but this was not unusual for Polynesian "chief stock." Sepeli, his queen, was six feet three inches and weighed two hundred and sixty; while her brother, Uiliami, who commanded the army in the intervals of resignation from the premiership, topped her by an inch and notched her an even half-hundredweight. Tui Tulifau was a merry soul, a great feaster and drinker. So were all his people merry souls, save in anger, when, on occasion, they could be guilty even of throwing dead pigs at those who made them wroth. Nevertheless, on occasion, they could fight like Maoris, as piratical sandalwood traders and blackbirders in the old days learned to their cost.

"Me He Fined Two Pounds and Five Pigs"

II

GRIEF'S schooner, the Cantani, had passed the Pillar Rocks at the entrance two hours before and crept up the harbor to the whispering flutters of a breeze that could not make up its mind to blow. It was a cool, starlight evening, and they lolled about the poop waiting until their snail's pace should bring them to the anchorage. Willie Smee, the supercargo, emerged from the cabin, conspicuous in his shore clothes. The mate glanced at Willie's shirt—of the finest and whitest silk—and giggled significantly.

"Dance tonight, I suppose?" Grief observed.

"No," said the mate. "It's Taitua. Willie's stuck on her."

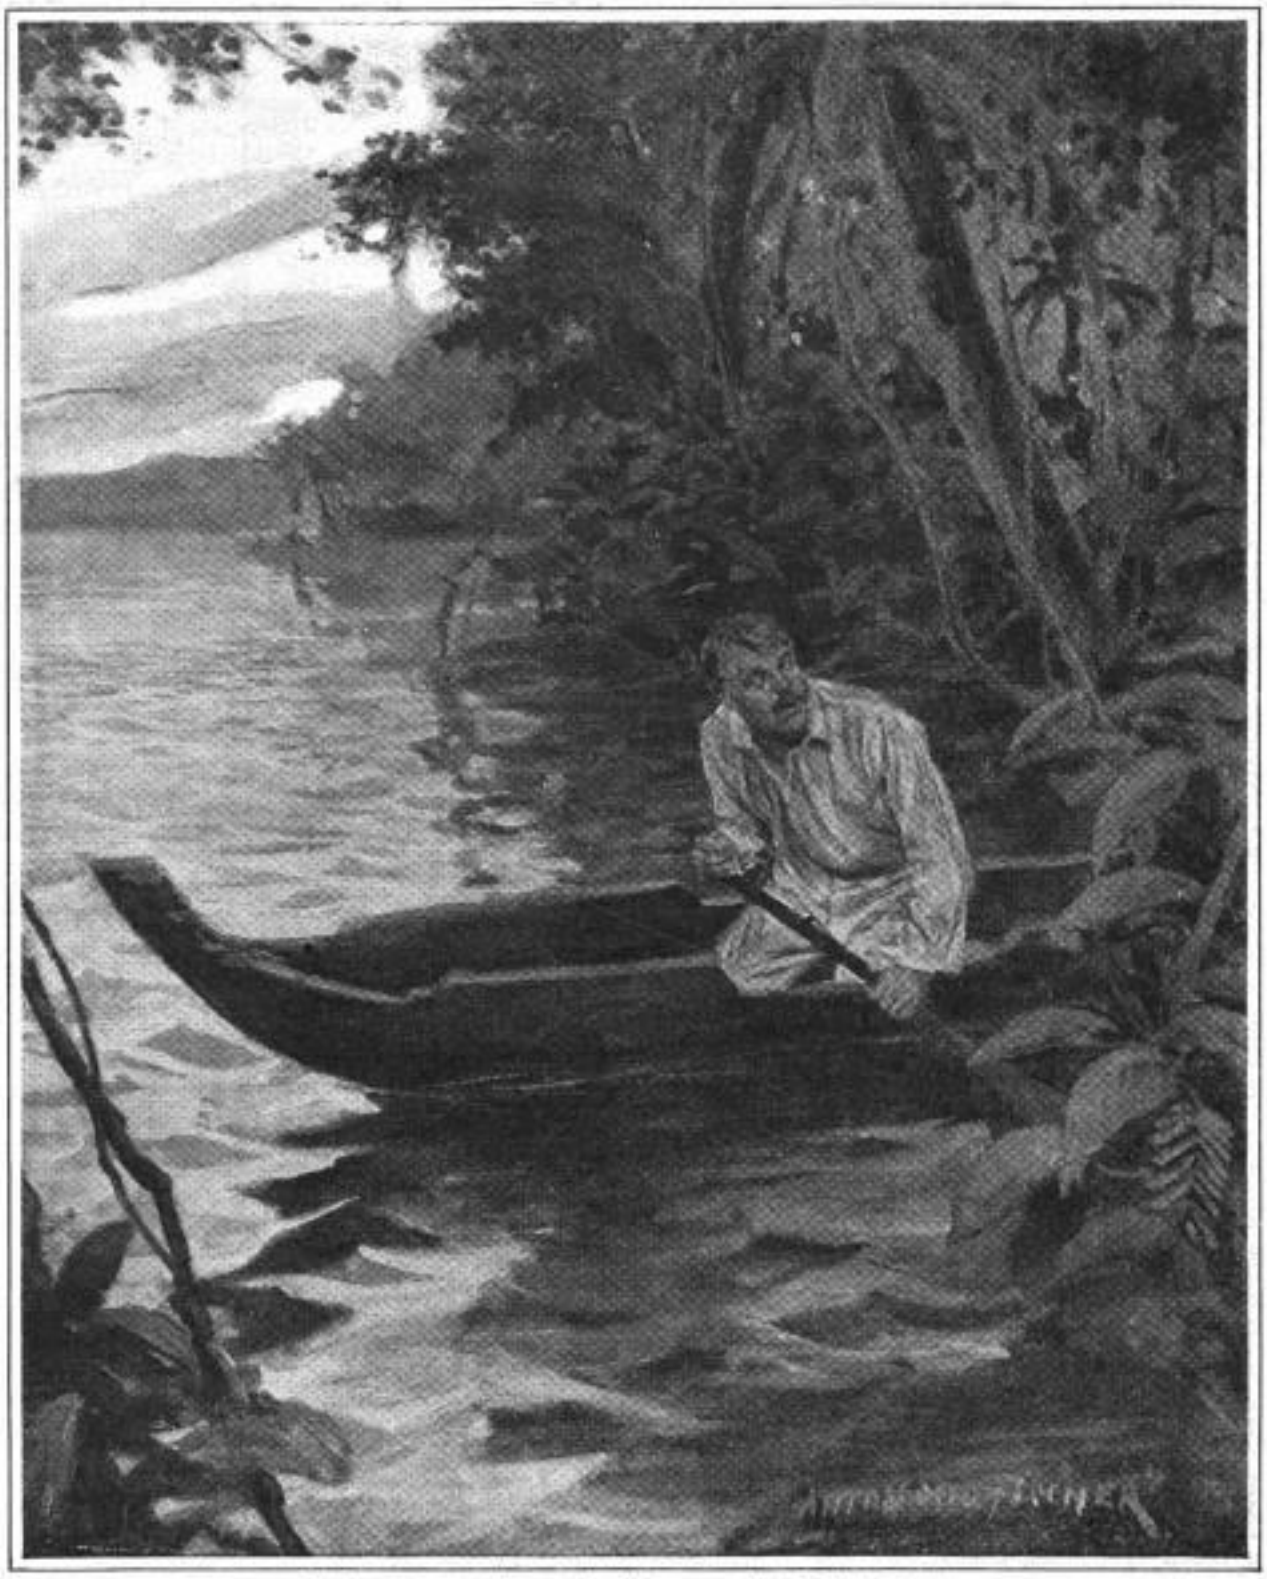
"Catch me!" the supercargo disclaimed.

"Then she's stuck on you, and it's all the same," the mate went on. "You won't be ashore half an hour before you'll have a flower behind your ear, a wreath on your head and your arm around Taitua."

"Simple jealousy," Willie Smee sniffed. "You'd like to have her yourself—only you can't."

"I can't find shirts like that—that's why. I'll bet you half a crown you won't sail from Fitu-Iva with that shirt."

"And, if Taitua doesn't get it, it's an even break Tui Tulifau does," Grief warned. "Better not let him spot that shirt or it's all day with it."



"That's right," Captain Boig agreed, turning his head from watching the houselights on the shore. "Last voyage he fined one of my Kanakas out of a fancy belt and sheath-knife." He turned to the mate. "You can let go any time, Mr. Marsh. Don't give too much slack. There's no sign of wind and in the morning we may shift around."

A moment later the anchor rumbled down. The whale-boat, already hoisted out, lay alongside

Digitized by Google

and the shore-going party dropped into it. Save for the Kanakas, who were all bent for shore, only Grief and the supercargo were in the boat. At the head of the little coral-stone pier, Willie Smee, with an apologetic gurgle, separated from his employer and disappeared down an avenue of palms. Grief turned in the opposite direction past the front of the old mission church. Here, among the graves on the beach, lightly clad in *ahus* and *lava-lavas*, flower-crowned and garlanded, with great phosphorescent hibiscus blossoms in their hair, youths and maidens were dancing. Farther on, Grief passed the long, grass-built, *himine* house, where a few scores of the elders sat in long rows chanting the old hymns taught them by forgotten missionaries. He passed also the palace of Tui Tulifau, where, by the lights and sounds, he knew the customary revelry was going on—for, of the happy South Sea Isles, Fitu-Iva was the happiest. They feasted and frolicked at births and deaths, and the dead and the unborn were likewise feasted.

Grief held steadily along the Broom Road, which curved and twisted through a lush growth of flowers and fernlike algarobas. The warm air was rich with perfume, and overhead, outlined against the stars, were fruit-burdened mangoes, stately avocado trees and slender, tufted palms. Every here and there were grass houses. Voices and laughter rippled through the darkness. Out on the water, flickering lights and soft-voiced choruses marked the fishers returning from the reef.

It Was a Leaky and Abandoned Dugout, and He Paddled Slowly

At last Grief stepped aside from the road, stumbling over a pig that grunted indignantly. Looking through an open door, he saw a native sitting on a heap of mats a dozen deep. He wore glasses and was reading methodically in what Grief knew to be an English Bible; for this was Ieremia his trader—so named from the Prophet Jeremiah.

Ieremia was lighter-skinned than the Fitu-Ivans, as was natural in a full-blooded Samoan. Educated by the missionaries as a lay teacher, he had served their cause well over in the cannibal atolls to the westward. As a reward, he had been sent to the paradise of Fitu-Iva, where all were or had been good converts, to gather in the backsliders. Unfortunately Ieremia had become too well educated. A stray volume of Darwin, a nagging wife and a pretty Fitu-Ivan widow had driven him into the ranks of the backsliders. It was not a case of apostasy. The effect of Darwin had been one of intellectual fatigue. What was the use of trying to understand this vastly complicated and enigmatical world?—especially when one was married to a nagging woman! As Ieremia slackened in his labors, the mission board threatened louder and louder to send him back to the atolls, while his wife's tongue grew correspondingly sharper.

Tui Tulifau was a sympathetic monarch, whose queen, on occasions when he was particularly drunk, was known to beat him. For political reasons—the queen belonging to as royal stock as himself and her brother commanding the army—Tui Tulifau could not divorce her, but he could and did divorce Ieremia, who promptly took up with commercial life and the lady of his choice. As an independent trader he had failed—chiefly because of the disastrous patronage of Tui Tulifau. To refuse credit to that merry monarch was to invite confiscation; to grant him credit was certain bankruptcy. After a year's idleness on the beach, Ieremia had become David Grief's trader, and for a dozen years his service had been honorable and efficient—for Grief had proved the first man who successfully refused credit to the king or who collected when it had been accorded.

Ieremia looked gravely over the rims of his glasses when his employer entered, gravely marked the place in the Bible and set it aside, and gravely shook hands.

"I am glad you came in person," he said.

"How else could I come?" Grief laughed.

Ieremia had no sense of humor and he ignored the remark.

"The commercial situation on the island is damn bad," he said with great solemnity and an unctuous mouthing of the many-syllabled words. "My ledger account is shocking!"

"Trade bad?"

"On the contrary. It has been excellent. The shelves are empty—exceedingly empty. But"—his eyes glistened proudly—"But there are many goods remaining in the storehouse. I have kept it carefully locked."

"Been allowing Tui Tulifau too much credit?"

"On the contrary. There has been no credit at all and every old account has been settled up."

"I don't follow you, Ieremia," Grief confessed. "What's the joke? Shelves empty, no credit, old accounts all square, storehouse carefully locked! What's the answer?"

Ieremia did not reply immediately. Reaching under the rear corner of the mats, he drew forth a large cashbox. Grief noted and wondered that it was not locked. The Samoan had always been fastidiously cautious in guarding cash. The box seemed filled with paper money. He skinned off the top note and passed it over.

"There is the answer."

Grief glanced at a fairly well-executed banknote. "The First Royal Bank of Fitu-Iva will pay to bearer on demand one pound sterling," he read. In the center was the smudged likeness of a native face. At the bottom was the signature of Tui Tulifau and the signature of Fulualea, with the printed information appended: "Chancellor of the Exchequer."

"Who the deuce is Fulualea?" Grief demanded of his employee. "It's Fijian, isn't it?—meaning the feathers of the sun?"

"Just so. It means the feathers of the sun. Thus does this base interloper caption himself. He has come up from Fiji to turn Fitu-Iva upside down—that is, commercially."

"Some one of those smart Levuka boys, I suppose?"

Ieremia shook his head sadly.

"No; this low fellow is a white man and a scoundrel. He has taken a noble and high-sounding Fijian name and dragged it in the dirt to suit his nefarious purposes. He has made Tui Tulifau drunk. He has made him very drunk. He has kept him very drunk all the time. In return, he has been made Chancellor of the Exchequer and other things. He has issued this false paper and compelled the people to receive it. He has levied a store tax, a copra tax and a tobacco tax. There are harbor dues and regulations, and other taxes; but the people are not taxed—only the traders. When the copra tax was levied I lowered the purchasing price accordingly. Then the people began to grumble; and Feathers of the Sun passed a new law, setting the old price back and forbidding any man to lower it. Me he fined two pounds and five pigs, it being well known that I possessed five pigs. You will find them entered in the ledger. Hawkins, who is trader for the Fulcrum Company, was fined—first pigs, then gin; and, because he continued to make loud conversation, the army came and burned his store. When I declined to sell, this Feathers of the Sun fined me once more and promised to burn the store if again I offended. So I sold all that was on the shelves—and there is the boxful of worthless paper. I shall be chagrined if you pay me my salary in paper; but it would be just—no more than just. Now what is to be done?"

Grief shrugged his shoulders. "I must first see this Feathers of the Sun and size up the situation."

"Then you must see him soon," Ieremia advised. "Else he will have an accumulation of many fines against you. Thus does he absorb all the coin of the realm. He has it all now, save what has been buried in the ground."

III

ON HIS way back along the Broom Road, under the lighted lamps that marked the entrance to the palace grounds, Grief encountered a short, rotund gentleman of florid complexion, in unstarched ducks, who was just emerging. Something about his tentative, saturated gait was familiar. Grief knew it on the instant. On the beaches of a dozen South Sea ports had he seen it before.

"Of all men, Cornelius Deasy!" he cried.

"If it ain't Grief himself, the old devil!" was the return greeting as they shook hands.

"If you'll come on board I've some choice smoky Irish," Grief invited.

Cornelius Deasy threw back his shoulders proudly and stiffened.

"Nothin' doin', Mr. Grief. 'Tis Fulualea I am now. No blarneyin' of old times for me. Also, and by the leave of His Gracious Majesty, King Tulifau, 'tis Chancellor of the

Digitized by Google

Exchequer I am; an' Chief Justice I am, save in moments of royal sport when the king himself chooses to toy with the wheels of justice."

Grief whistled his amazement. "So you're Feathers of the Sun!"

"I prefer the native idiom," was the correction. "Fulualea, an' it please you. Not forgettin' old times, Mr. Grief, it sorrows the heart of me to break you the news. You'll have to pay your legitimate import duties same as any other trader with mind intent on robbin' the gentle Polynesian savage on coral isles implanted. . . . Where was I? Ah! I remember. You've violated the regulations. With malice intent have you entered the port of Fitu-Iva after sunset without sidelights burnin'. Don't interrupt! With my own eyes did I see you. For which offense are you fined the sum of five pounds. Have you any gin? 'Tis a serious offense. Not lightly are the lives of the mariners of our commodious port to be risked for the savin' of a penny-'orth of oil. Did I ask—have you any gin? 'Tis the Harbor Master that asks."

"You've taken a lot on your shoulders," Grief grinned.

"'Tis the white man's burden. These rapscallion traders have been puttin' it all over poor Tui Tulifau, the best-hearted old monarch that ever sat a South Sea throne an' mopped grog-root from the imperial calabash. 'Tis I, Cornelius—Fulualea, rather—that am here to see justice done. Much as I dislike the doin' of it, as Harbor Master 'tis my duty to find you guilty of breach of quarantine."

"Quarantine!"

"'Tis the rulin' of the Port Doctor. No intercourse with the shore till the ship is passed. What dire calamity to the confidin' native if chicken-pox or whoopin'-cough was aboard of you! Who is there to protect the gentle, confidin' Polynesian? I, Fulualea—the Feathers of the Sun—on my high mission."

"And who is the Port Doctor?" Grief queried.

"'Tis me—Fulualea. Your offense is serious. Consider yourself fined five cases of first-quality Holland gin."

Grief laughed heartily.

"We'll compromise, Cornelius. Come aboard and have a drink."

Feathers of the Sun waved the proffer aside grandly.

"'Tis bribery! I'll have none of it—me, faithful to my salt! And wherefore did you not present your ship's papers? As Chief of the Custom-House, you are fined five pounds and two more cases of gin."

"Look here, Cornelius. A joke's a joke, but this one has gone far enough. This is not Levuka. I've half a mind to pull your nose for you. You can't buck me."

Feathers of the Sun retreated unsteadily and in alarm.

"Lay no violence on me!" he threatened. "You're right. This is not Levuka. And by the same token, with Tui Tulifau and the royal army behind me, buck you is just the thing I can and will. You'll pay them fines promptly or I'll confiscate your vessel. You're not the first. What does that Chink pearlbuyer, Peter Gee, do but slip into harbor, violatin' all regulations an' makin' rough-house for the matter of a few paltry fines! No; he wouldn't pay 'em—and he's somewhere on the beach now, thinkin' it over."

"You don't mean to say ——"

"Sure an' I do! In the high exercise of office I seized his schooner. A fifth of the loyal army is now in charge on board of her. She'll be sold this day week. Some ten tons of shell is in the hold and I'm wonderin' if I can trade it to you for gin. I can promise you a rare bargain. How much gin did you say you had?"

"Still more gin, eh?"

"An' why not? 'Tis a royal souse is Tui Tulifau! Sure, it keeps my wits workin' overtime to supply him, he's that amazin' liberal with it. The whole gang of hanger-on chiefs is perpetually loaded to the guards. It's disgraceful! Are you goin' to pay them fines, Mr. Grief, or is it to harsher measures I'll be forced?"

Grief turned impatiently on his heel.

"Cornelius, you're drunk! Think it over and come to your senses. The old rollicking South Sea days are gone. You can't play tricks like that now."

"If you think you're goin' on board, Mr. Grief, I'll save you the trouble. I know your kind. I foresaw your stiff-necked stubbornness. An' it's forestalled you are. 'Tis on the beach you'll find your crew. The vessel's already seized."

Grief turned back on him in the half-belief still that he was joking. Fulualea again retreated in alarm. The form of a large man loomed beside him in the darkness.

"Is it you, Uiliami?" Fulualea crooned. "Here is another sea-pirate. Stand by me with the strength of thy arm, O herculean brother!"

"Greeting, Uiliami," Grief said. "Since when has Fitu-Iva come to be run by a Levuka beachcomber? He says my schooner has been seized. Is it true?"

Grief Reached Out an Angry Hand for Cornelius

"It is true," Uiliami boomed from his deep chest. "Have you any more silk shirts like Willie Smee's? Tui Tulifau would like such a shirt. He has heard of it."

"'Tis all the same," Fulualea interrupted. "Shirts or schooners, the king shall have them!"

"Rather high-handed, Cornelius," Grief murmured. "It's rank piracy. You seized my vessel without giving me a chance."

"A chance, is it? As we stood here, not five minutes gone, didn't you refuse to pay your fines?"

"But she was already seized!"

"Sure, an' why not? Didn't I know you'd refuse? 'Tis all fair, an' no injustice done—Justice, the bright, particular star, at whose shining altar Cornelius Deasy—or Fulualea, 'tis the same thing—ever worships! Get thee gone, Mr. Trader, or I'll set the palace guards on you! Uiliami, 'tis a desperate character, this trader man. Call the guards!"

Uiliami blew the whistle suspended on his broad, bare chest by a cord of cocoanut sennit. Grief reached out an angry hand for Cornelius, who titubated into safety behind Uiliami's massive bulk. A dozen strapping Polynesians, not one under six feet, ran down the palace walk and ranged themselves behind their commander.

"Get thee gone, Mr. Trader!" Cornelius ordered. "The interview is terminated. We'll try your several cases in the mornin'. Appear promptly at the palace at ten o'clock to answer to the followin' charges, to wit: breach of the peace; seditious and treasonable utterance; violent assault on the Chief Magistrate, with intent to cut, wound, maim an' bruise; breach of quarantine; violation of harbor regulations; an' gross breakage of custom-house rules. In the mornin', fellow—in the mornin'! Justice shall be done. And the Lord have mercy on your soul!"

IV

BEFORE the hour set for the trial, Grief, accompanied by Peter Gee, won access to Tui Tulifau. The king, surrounded by half a dozen chiefs, lay on mats under the shade of the avocados in the palace compound. Early as was the hour, palace maids were industriously serving squarefaces of gin. The king was glad to see his old friend, Davida, and regretful that he had run foul of the new regulations. Beyond that he steadfastly avoided discussion of the matter in hand. All protests of the expropriated traders were washed away in proffers of gin. "Have a drink," was his invariable reply, though once he unbosomed himself enough to say that Feathers of the Sun was a wonderful man. Never had palace affairs been so prosperous. Never had there been so much money in the treasury or so much gin in circulation. "Well pleased am I with Fulualea," he concluded. "Have a drink."

"We've got to get out of this pronto," Grief whispered to Peter Gee a few minutes later, "or we'll be a pair of boiled owls! Also, I am to be tried for arson, or heresy, or leprosy—or something—in a few minutes; and I must control my wits."

As they withdrew from the royal presence, Grief caught a glimpse of Sepeli, the queen. She was peering out at her royal spouse and his fellow tipplers, and the frown on her face gave Grief his cue. Whatever was to be accomplished must be done through her.

In another shady corner of the big compound Cornelius was holding court. He had been at it early, for when Grief arrived the case of Willie Smee was being settled. The entire royal army, save that portion in charge of the seized vessels, was in attendance.

"Let the defendant stand up," said Cornelius, "and receive the just and merciful sentence of the court for licentious and disgraceful conduct unbecomin' a supercargo. The defendant says he has no money. Very well. The court regrets it has no calaboose. In lieu thereof, and in view of the impoverished condition of the defendant, the court fines said defendant one white silk shirt of the same kind, make and quality at present worn by defendant."

Cornelius nodded to several of the soldiers, who led the supercargo away behind an avocado tree. A minute later he emerged, minus the garment in question, and sat down beside Grief.

"What have you been up to?" Grief asked.

"Blessed if I know! What crimes have you committed?"

"Next case," said Cornelius in his most extra-legal tones. "David Grief, defendant, stand up. The court has considered the evidence in the case, or cases, and renders the following judgment, to wit: —— Shut up!" he thundered at Grief, who had attempted to interrupt. "I tell you the evidence has been considered—deeply considered. It is no wish of the court to lay additional hardship on the defendant, and the court takes this opportunity to warn the defendant that he is liable to contempt. For open and wanton violation of harbor rules and regulations, breach of quarantine and disregard of shipping laws, his schooner, the Cantani, is hereby declared confiscate to the Government of Fitu-Iva, to be sold at public auction ten days from date, with all appurtenances, fittings and cargo thereunto pertaining. For the personal crimes of the defendant, consisting of violent and turbulent conduct and notorious disregard of the laws of the realm, he is fined in the sum of one hundred pounds sterling and fifteen cases of gin. I will not ask you if you have anything to say. But will you pay? That is the question."

Grief shook his head.

"Meantime," Cornelius went on, "consider yourself a prisoner at large. There is no calaboose in which to confine you. And finally, it has come to the knowledge of the court that at an early hour of this morning the defendant did willfully and deliberately send Kanakas in his employ out on the reef to catch fish for breakfast. This is distinctly an infringement of the rights of the fisherfolk of Fitu-Iva. Home industries must be protected. This conduct of the defendant is severely reprehended by the court; and on any repetition of the offense the offender and offenders, all and sundry, shall be immediately put to hard labor on the improvement of the Broom Road. The court is dismissed."

As they left the compound, Peter Gee nudged Grief to look where Tui Tulifau reclined. The supercargo's shirt, stretched and bulged, already encased the royal fat.

V

"THE thing is clear," said Peter Gee at a conference in Ieremia's house. "Deasy has gathered in about all the coin. Meantime he keeps the king going on the gin he's captured on our vessels. As soon as he can maneuver it he'll take the cash and skin out on your craft or mine."

"He is a low fellow," Ieremia declared, pausing in the polishing of his spectacles. "He is a scoundrel and a blackguard. He should be struck by a dead pig—by a particularly dead pig!"

"The very thing!" said Grief. "He shall be struck by a dead pig. Ieremia, I should not be surprised if you were the man to strike him with the dead pig. Be sure and select a particularly dead one! Tui Tulifau is down at the boathouse broaching a case of my Scotch. I'm going up to the palace to work kitchen politics with the queen. Meantime you get a few things on your shelves from the storeroom. I'll lend you some, Hawkins. And you, Peter, see the German store. Start in, all of you, selling for paper. Remember, I'll back the losses. If I'm not mistaken, in three days we'll have a national council or a revolution. You, Ieremia, start messengers around the island to the fishers and farmers—everywhere, even to the mountain goat-hunters. Tell them to assemble at the palace three days from now."

"But the soldiers!" Ieremia objected.

"I'll take care of them. They haven't been paid for two months. Besides, Uiliami is the queen's brother. Don't have too much on your shelves at a time. As soon as the soldiers show up with paper, stop selling."

"Then will they burn the stores," said Ieremia.

"Let them. King Tulifau will pay for it if they do."

"Will he pay for my shirt?" Willie Smee demanded.

Digitized by Google

"That is purely a personal and private matter between you and Tui Tulifau," Grief answered.

"It's beginning to split up the back," the supercargo lamented. "I noticed that much this morning when he hadn't had it on ten minutes. It cost me thirty shillings and I only wore it once!"

"Where shall I get a dead pig?" Ieremia asked.

"Kill one, of course," said Grief. "Kill a small one."

"A small one is worth ten shillings."

"Then enter it in your ledger under operating expenses." Grief paused a moment. "If you want it particularly dead it would be well to kill it at once."

VI

"YOU have spoken well, Davida," said Queen Sepeli. "This Fulualea has brought a madness with him and Tui Tulifau is drowned in gin. If he does not grant the big council I shall give him a beating. He is easy to beat when he is in drink."

She doubled up her fist, and such were her Amazonian proportions and the determination in her face that Grief knew the council would be called. So akin was the Fitu-Ivan tongue to the Samoan that he spoke it like a native.

"And you, Uiliami," he said, "have pointed out that the soldiers have demanded coin and refused the paper Fulualea has offered them. Tell them to take the paper and see that they be paid tomorrow."

"Why trouble?" Uiliami objected. "The king remains happily drunk. There is much money in the treasury. And I am content. In my house are two cases of gin and much goods from Hawkins' store."

"Excellent pig, O my brother!" Sepeli erupted. "Has not Davida spoken? Have you no ears? When the gin and the goods in your house are gone, and no more traders come with gin and goods, and Feathers of the Sun has run away to Levuka with all the cash money of Fitu-Iva—what then will you do? Cash money is silver and gold, but paper is only paper. I tell you the people are grumbling. There is no fish in the palace. Yams and sweet potatoes seem to have fled from the soil, for they come not. The mountain-dwellers have sent no wild goats in a week. Though Feathers of the Sun compels the traders to buy copra at the old price, the people sell not, for they will have none of the paper money. Only today have I sent messengers to twenty houses. There are no eggs. Has Feathers of the Sun put a blight upon the hens? I do not know. All I know is that there are no eggs. Well it is that those who drink much eat little, else would there be a palace famine. Tell your soldiers to receive their pay. Let it be in his paper money."

"And remember," Grief warned, "though there be selling in the stores, when the soldiers come with their paper it will be refused. And in three days will be the council—and Feathers of the Sun will be as dead as a dead pig."

VII

THE day of the council found the population of the island crowded into the capital. By canoe and whaleboat, on foot and donkeyback, the five thousand inhabitants of Fitu-Iva had trooped in. The three intervening days had had their share of excitement. At first there had been much selling from the sparse shelves of the traders; but when the soldiers appeared their patronage was declined and they were told to go to Fulualea for coin.

"Says it not so on the face of the paper," the traders demanded, "that for the asking the coin will be given in exchange?"

Only the strong authority of Uiliami had prevented the burning of the traders' houses. As it was, one of Grief's copra-sheds went up in smoke and was duly charged by Ieremia to the king's account. Ieremia himself had been abused and mocked and his spectacles broken. The skin was off Willie Smee's knuckles. This had been caused by three boisterous soldiers who violently struck their jaws thereon in quick succession. Captain Boig was similarly injured. Peter Gee had come off undamaged, because it chanced that it was breadbaskets and not jaws that struck him on the fists.

Tui Tulifau, with Sepeli at his side and surrounded by his convivial chiefs, sat at the head of the council in the big compound. His right eye and jaw were swollen as if he, too, had engaged in assaulting somebody's fist. It was palace gossip that morning that Sepeli had administered a conjugal beating. At any rate, her spouse was sober and his fat bulged spiritlessly through the rips in Willie Smee's silk shirt. His thirst was prodigious and he was continually served with young drinking nuts. Outside the compound, held back by the army, was the mass of the common people. Only the lesser chiefs, village maids, village beaus and talking men with their staffs of office were permitted inside. Cornelius Deasy, as befitted a high and favored official, sat near the right hand of the king. On the left of the queen, opposite Cornelius and surrounded by the white traders he was to represent, sat Ieremia. Bereft of his spectacles, he peered shortsightedly across at the Chancellor of the Exchequer.

In turn, the talking man of the windward coast, the talking man of the leeward coast and the talking man of the mountain villages, each backed by his group of lesser talking men and chiefs, arose and made orations. What they said was much the same. They grumbled about the paper money. Affairs were not prosperous. No more copra was being smoked. The people were suspicious. To such a pass had things come that all the people wanted to pay their debts and no one wanted to be paid. Creditors made a practice of running away from debtors. The money was cheap. Prices were going up and commodities were getting scarce. It cost three times the ordinary price to buy a fowl—and then it was tough and like to die of old age if not immediately sold.

The outlook was gloomy. There were signs and omens. There was a plague of rats in some districts. The crops were bad. The custard apples were small. The best-bearing avocado on the windward coast had mysteriously shed all its leaves. The taste had gone from the mangoes. The plantains were eaten by a worm. The fish had forsaken the ocean and vast numbers of tiger-sharks appeared. The wild goats had fled to inaccessible summits. The poi in the poi-pits had turned bitter. There were rumblings in the mountains and night-walking of spirits; a woman of Punta-Puna had been struck speechless, and a five-legged she-goat had been born in the village of Eiho. And that all was due to the strange money of Fulualea was the firm conviction of the elders in the village councils assembled.

Uiliami spoke for the army. His men were discontented and mutinous. Though by royal decree the traders were bidden to accept the money, yet did they refuse it. He would not say, but it looked as if the strange money of Fulualea had something to do with it.

Ieremia, as talking man of the traders, next spoke. When he arose it was noticeable that he stood with legs spraddled over a large grass basket. He dwelt upon the cloth of the traders, its variety and beauty and durability, which so exceeded the Fitu-Ivan wet-pounded tapa, fragile and coarse. No one wore tapa any more. Yet all had worn tapa and nothing but tapa before the traders came. There was the mosquito-netting, sold for a song, that the cleverest Fitu-Ivan net-weaver could not duplicate in a thousand years. He enlarged on the incomparable virtues of rifles, axes and steel fishhooks, down through needles, thread, and cotton fish-lines, to white flour and kerosene oil.

He expounded at length, with firstlies and secondlies and all minor subdivisions of argument, on organization and order and civilization. He contended that the trader was the bearer of civilization and that the trader must be protected in his trade, else he would not come. Over to the westward were islands which would not protect the traders. What was the result? The traders would not come and the people were like wild animals. They wore no clothes, no silk shirts—here he peered and blinked significantly at the king—and they ate one another!

The queer paper of Feathers of the Sun was not money. The traders knew what money was and they would not receive it. If Fitu-Iva persisted in trying to make them receive it they would go away and never come back. And then the Fitu-Ivans, who had forgotten how to make tapa, would run round naked and eat one another.

Much more he said, talking a solid hour and always coming back to what their dire condition would be when the traders came no more. "And in that day," he perorated, "how will the Fitu-Ivan be known in the great world? '*Kai-kanak*' [man-eater] will men call him—'*Kai-kanak! Kai-kanak!*'"

Tui Tulifau spoke briefly. The case had been presented, he said, for the people, the army and the traders. It was now time for Feathers of the Sun to present his side. It could not be denied that he had wrought wonders with his financial system. "Many times has he explained to me the working of his system," Tui Tulifau concluded. "It is very simple. And now he will explain it to you."

It was a conspiracy of the white traders, Cornelius contended. Ieremia was right so far as concerned the manifold blessings of white flour and kerosene oil. Fitu-Iva did not want to become *kai-kanak*. Fitu-Iva wanted civilization; it wanted more and more civilization. Now that was the very point—and they must follow him closely. Paper money was an earmark of higher civilization. That was why he, the Feathers of the Sun, had introduced it. And that was why the traders opposed it. They did not want to see Fitu-Iva civilized. Why did they come across the far

The Box-Office Value of Laughter

By MARY SHAW

ILLUSTRATED BY M. L. BLUMENTHAL

JUST now there are twice as many comedies as serious plays in New York. It would seem, then, that laughter has a greater box-office value than tears. And so it has in the gross—but not in the net. Most plays in which laughter predominates—musical comedies and the like—are very expensive productions, having large choruses and high-priced comedians. On the other hand, the serious play, in which tears predominate, may have a cast of from six to eight moderately paid actors. From this one will see that laughter is nowhere near so powerful an agent as tears. To sustain a comedy, mirth must begin at the rising of the curtain and keep up unceasingly until the performance is over; whereas in a serious play one tremendous scene with tears as the great factor not lasting more than fifteen minutes, may carry the whole thing to success.

Laughter is indispensable in any play; whereas tears are not. The first question a manager will ask when a play is submitted is: "Has it comedy relief?"

Why has laughter such a value and what sort of material is available for its production? One would think that the laugh-promoter would be at his wit's end for a subject. As a matter of fact, he can use old material over and over again, with but slight changes. Many will laugh at the same thing as often as others will shed tears at the same story. And there are always numerous things happening in real life that the observing "laugh-man" can use on the stage.

Darwin, in The Expression of the Emotions in Man and Animals, says laughter is the result of a pleasurable surprise. In all laughter there is a kind of surprise or slightly nervous shock. Sudden contrasts—marked or shocking incongruities—often compel it. The laughmaker turns everything to account—even the lugubrious. All kinds and conditions of men unconsciously contribute to his everlasting mill. Death itself is not exempt. The whole thing depends upon the right treatment.

The Art of Satisfying Our Sense of Humor

FEW things are more pathetic than poverty—less laughable. And poverty is doubly pathetic when associated with death. How, then, can a laugh be had from such a combination—two of man's grimmest experiences! It took

The Act of Swindling the "Rubes" is Another Prolific Source of Merriment

He Can Use Old Material Over and Over Again

such a genius as Ned Harrigan, with his knowledge of human nature, to accomplish this. In one of his plays a funeral is supposed to take place "off stage." Persons arrive, cross the stage and exit in the direction of the church. At last comes a cab drawn by a typical East Side barnyard nag. It stops directly over a trap, which is disguised, of course, and through which persons enter the cab and step out of it before the audience. Fully thirty persons descend from that cab. After the fifth, the audience begin to titter. With each succeeding passenger the laughter grows until, when the last one gets down from the cab, the house fairly rocks with mirth.

It is a good scheme to observe children. What makes the little ones laugh will make grown-ups laugh. Most writers of farce and comedy know this. One is astonished to find how little the scope of laughter enlarges as the life of the individual proceeds. So simple a thing, for instance, as one person treading on another's toe has been used by all the clowns in the pantomime since the beginning of things. And if the injured one holds up his toe and dances about with it in his hand it becomes a source of inextinguishable laughter. This device can always be used with the same result, and credit is due to the actor that he so seldom resorts to it. An oath that is not too blasphemous is good comedy material. The reason for this is that for a long time the use of an oath on the stage was forbidden. The pleasure of hearing an oath used now may be due to our secret joy in forbidden things. Obviously anything that causes pain in real life should not be a source of mirth; but, when translated into action on the stage, things can be made comical in spite of the latent idea of pain. The clown, when beaten into subjection with a blown-up bladder, represents an unpleasant situation. Yet everybody laughs at all the accidents that happen to him. It is on the same principle, I suppose, that we laugh spontaneously on seeing a person fall—particularly a fat man—though we know he may be injured.

Once I took my four-year-old niece to see a pair of accomplished acrobats. These gentlemen were supposed to be only funny. The terrible things that happened to them all through their act were received with universal joy by the whole audience—mainly women and children. My little niece, however, hid her face on my arm, shivered all over and begged me to take her out of the theater. She absolutely refused to fall in with the common acceptance of the thing. My surprise at her way of taking it showed me how much a matter of course the attitude of the audience had been to me.

Nor do serious things require to be translated from real life to the stage to be made funny. I remember, when I was a girl, seeing a certain fat man, one Fourth of July, come across a young fellow who was celebrating the day with a small-caliber pistol. Now the fat man was very nervous about such things and he turned to hurry away from the danger zone. The young man, in a spirit of fun and miscalculating the distance, sent a bullet about the size of a buckshot after the fat man, thinking it would spend its force and drop harmlessly near him—giving him a slight scare; but the bullet struck the fat man in a certain fleshy part of his anatomy and, shrieking in agony, he rolled over in the dust. It was only a skin wound, but the shock laid the poor fellow up for several weeks and at one time threatened to end fatally. Now why laugh at this? There was the misfortune of the man in being helplessly fat—a disease; there was the fright and the agony of it. Yet, even as I philosophize thus, I cannot help the mirth that comes to me at the recollection of the accident.

Laughter, though spontaneous, really has modes and fashions quite as much as sentiment has. Keeping strictly to the stage, we find that people laughed at things two or three hundred years ago that they would now resent. Up to Shakspere's time it was impossible to represent a Jew on the stage in any serious situation. The prejudice against the race was so great that audiences would only accept them as a joke. Shakspere conceived and put into eternal poetry the character of Shylock. Nothing more perfect and tragic than that figure can be imagined. Yet Shylock had to be represented in his time as a comic personality. His mental sufferings over the injustice to his religion and race, his agony over his daughter's unfaithfulness, and his final spiritual and financial defeat were received by the audience of that day with wild outbursts of exultant merriment. The most popular comedian would not have the courage to go on the stage and present the character of Shylock to an audience in that way nowadays, unless with the full understanding that it was all done in the spirit of pure burlesque. So far have we traveled in the stage world from that idea of the Jew! The same was true of physical deformities in the bygone. These were all subjects of great merriment to an audience. The hunchback was an unfailing source of amusement. Any character that was lacking in comic relief had only to be made up with such a deformity and the comedy element was at once supplied.

During the Restoration other physical deformities were added to the list. The cripple, the man blind in one eye or having but one hand, were by these misfortunes made peculiarly available for comedy purposes. The hunchback and the cripple have gone from comedy—even burlesque seldom knows them; but the misfortunes that still provoke laughter are the deaf man, the stammerer, the fellow with the harelip and the man without a palate. Bernard Shaw castigates the playwrights who hark back to the cruelty of earlier days by introducing these elements.

The Plot of La Gioconda

HOW far the feeling of mirth at physical deformity has passed away may be sensed in the representation of the character of the woman in D'Annunzio's La Gioconda. This really great modern drama has been handicapped in its effect by the sense of the painful physical accident to the heroine. She is the wife of a sculptor who has fallen in love with his model. In one act she goes to the studio and, in an effort to break the spell of the model over the husband, tells her that the artist has sent his wife there to tell the model that she no longer inspires him and that he does not require her services. The model, enraged at this, pushes the half-finished statue from the pedestal, and the wife, seeing that her lie is about to destroy her husband's work, which may bring about further disaster between her and him, attempts to save the statue; but she is borne down by it and her hands crushed so badly that they have to be amputated.

In the last act she sits looking out at the sea, abandoned by her husband. He has gone off with the model to begin again the work that she destroyed. Long, hanging sleeves cover all evidence of the disaster that has come to her. She sits there, a wonderfully tragic figure without hands—as the audience knows. Yet so terrible is the realization of it through that whole act that modern audiences find it impossible to stand the strain of the story. No one would say that D'Annunzio has reached any greater heights of human truth and sympathy than Shakspere in his magnificent portrayal of the Jew in Shylock; but so great has been the change in our attitude toward physical or spiritual pain that the lesser story of the modern Italian defeats itself by the introduction of a torturing effect from the handless arms of this woman.

It is hard to tell whether we are less cruel today than they were in the time of Shakspere. Certainly we cannot determine the question by what we laugh at. However incongruous our laughter may be now, it has plenty of

Digitized by Google

humor and no spite to it. When the lugubrious is presented it must be only as a basis for a humorous presentation of a very human touch. We laugh at cowardice when it is exaggerated, yet there are few more dreadful qualities. Anger, also, though often the immediate cause of tragedy, is good for comedy purposes. There is one thing about an anger scene on the stage that is remarkable. An angry retort between men is all right, but such a scene between women is one of the most dangerous things to play seriously. No matter what the situation may be, there is always a chance for laughter. Even Modjeska used to call forth snickers in the scene in Adrienne Lecouvreur where she is shut in a dark room and her infuriated rival is looking for her. There is nothing funny in this scene, yet it is one that has always been dreaded by actresses. The spite of the two women, though seriously treated in the play, comes perilously near arousing continuous amusement.

A Much-Dreaded Interruption in the Serious Play is the Theater Cat

The safest thing to do with the anger of women dramatically is to make it comic. The same thing holds good of love scenes to a degree. Except in the hands of a great master of drama, it is better to have some element of comedy even in the most straightforward and direct love-making. The slightest deviation, the slightest lack of continuity in keeping the attention in a love scene, precipitates it instantly into the absurd—the grotesque. This is the reason there is so much giggling in serious love scenes.

Audiences, during serious situations, are always on the lookout for something that will relieve the tension. The experienced actor knows how thin the dividing line is between tears and laughter; in fact, the more absorbing the situation the greater is the danger of the opposite extreme being the result if the least thing out of the ordinary occurs. If a caster is missing from the leg of a sofa when the sobbing heroine throws herself upon it, and one corner suddenly goes down just a little, the scene is ruined by that apparently trifling incident. If, in a serious situation, an actor takes a chair and it cracks as if it were going to break, or if he picks up something and it suddenly falls to pieces or he loses his grip on it, a disconcerting laugh is sure to follow.

A much-dreaded interruption in the serious play is the theater cat. The cat is allowed to prowl about the stage all day, but is carefully locked up before the play begins. This creature seems to have a mania for walking on the stage—not in highly comic scenes where it would add to the hilarity, but always where any interruption must seriously interfere. In spite of the precautions taken, often in the midst of a very serious scene the house cat walks majestically upon the stage, goes down to the footlights, surveys the audience calmly and walks off on the other side. All the finest acting that ever came forth from the soul of a talented actor is powerless against this simple, unexpected innovation.

Classics That Have Turned to Slang

ON THE modern stage there is much laughter that is purely local. Playing a part full of slangy sayings that are current in the larger cities, the actor will, after a number of weeks, feel that these sayings are inherently funny. Yet he will find that the same slang falls upon the ears of the out-of-town people without conveying any meaning and therefore without any effect. There is a distinct vocabulary in jokes as there is in other matters. Expressions which at one time were fraught with deep meaning and intensity come to be used as slang, and are henceforth totally inadequate on the stage for the situations in which they were originally used. One has to be very careful, in old plays, to eliminate all such expressions. In Adrienne Lecouvreur, for instance, one of the most touching situations is where Adrienne, having discovered the perfidy of her lover, agonizingly cries out: "Oh, how I suffer!"

This expression was taken by the comedians and used as slang in mock trouble. It became a great laughmaker in burlesque misery. I shall never forget the amazement of Madame Modjeska when she delivered this line, which had always gone with such terrible, telling effect—and it was greeted with shrieks and roars of laughter! We explained to her that a well-known burlesque actor had been using it. After that it was cut out. The expression, "Forget it!" which was very often used in scenes of great power, was another that had to be eliminated. I remember, in one of Marie Corelli's plays, at the end of a terrific scene, yelling out "Forget it!" which up to that time had been an absolutely safe expression in emotional work. I was not familiar with the slang use to which it had been put after the blowing up of the Maine; and I was dumfounded when, after a silence of a moment, some gamin from the top gallery shouted: "And remember the Maine!"

The house rocked with laughter. It is safe to say that this expression has never since been put into any serious drama.

One rarely feels human sympathy with an unfamiliar race of people. The Chinaman, for instance, is never taken seriously, no matter what the rôle may be. On the stage he is still the incarnation of all that is laughter-provoking. This quality of the ludicrous must be guarded against in the costuming of strange people on the stage. Absolute correctness in such cases is impossible. The wise managers of an earlier day represented the barbarian in one set costume of skins and long, matted hair. That particular make-up stood for the barbarian, and the audience accepted him as belonging to any race.

A foreign language is always amusing to people who do not understand it. At the time of the National Congress of Women, in London, delegates from all parts of the world were present. Most of them spoke in their native tongue. I observed with great interest how that polite English audience wrestled with a sense of the ludicrous as celebrated personalities arose and gave long and serious addresses in tongues totally unfamiliar to everybody. The Chinese woman who spoke very solemnly of the changed conditions of women in China proved no funnier to those present than did the stately, beautiful Russian actress who elaborately pointed out in Russian the glorious achievements of the stage in her country. It would seem that the organizers of this convention were sadly lacking in a sense of humor.

We do not laugh at deformity as they did a hundred or more years ago, but we do something quite as bad—we laugh at disaster and at trickery. The comedian can make a highwayman holding up a poor old woman or the despicable act of a tramp stealing a baby's milk-bottle funny if he gives it the right twist. A baby shrieking with the pain of teething or colic and the helpless father trying to quiet him, if rightly done on the stage, will bring down the house. I am not so sure that the curious twist given in the depicting of misfortune is not the most prolific source of hilarity.

Things that are mean and insulting when said or done in real life become very laughable on the stage. For instance, a hardened fellow, wishing to insult another man, addressed a letter to him as follows:

To Peter Tief, a one-eyed scrub,
This letter's bound to go.
He's choppin' cordwood for his grub
In Silver City, Idaho.

The letter reached its destination and came within an ace of causing a tragedy; yet it got into the hands of a comedian and was immensely successful as a laughmaker.

The oldest joke on the stage, and one that never fails of laughter, is about the mother-in-law. Searchers into the obscure tell us that this joke originated in the matriarchal period. At this stage of civilization the family took its name from the mother. She was the absolute ruler of the family. Suitors for the hand of the daughter and the women selected as brides for the son were obliged to come and live within the tribe or clan for one year before the wedding was consummated. During this time their fitness was decided by the mother. The anxieties and sufferings of these candidates in the matriarchal civilization have been immortalized in the mother-in-law joke.

Here's a sample of the vulgarity that marks many of the jocular allusions to the mother-in-law. O'Reilly, whose mother-in-law has just died, goes to a friendly barkeeper and asks the loan of a hundred dollars with which to bury her. The barkeeper counts his cash and reports that he has only eighty-five dollars on hand. Upon which O'Reilly exclaims: "Lend me the eighty-five, and I'll drink up the other fifteen—celebrating!"

Another story with the mother-in-law trend to it is about the man whose wife was dying. She called him to her side and told him that she had one request and begged that he wouldn't deny it. He committed himself to a promise and the wife said: "I want you to ride to the grave in the carriage with me mother!"

Patrick appeared shocked; and the dying woman, noticing this, reiterated her plea.

"You'll not break your promise—you will do it, won't yer?" she said, seizing his hand imploringly.

"Yes," said Pat grudgingly: "I'll do it—but it'll spoil the day for me!"

Audiences enjoy jokes about human misery such as the one where the starving tramp, in an attempt to show his desperation, begins to eat the grass in the dooryard. The man of the house, coming upon him suddenly, exclaims:

"Why, my poor fellow, are you so hungry as all that?"

"Yes," moans the tramp.

"I'm sorry for you," observes the other. "Come round to the back yard—the grass is longer!"

Irreverent allusions to parents, such as "Everybody works but father," are used by the laughmakers. Yet every one knows that, as a rule, the father is the hardest-working member of the family. Why is it that the drunken father is an inexhaustible source of comedy, though the drunken mother is one of the most serious things to handle in a play? From a practical point of view her shortcoming is no more serious than the father's. Their moral responsibilities would seem to be equal; yet one can be used for comic purposes—the other cannot. A drunken woman is a very ticklish thing to handle on the stage.

The act of swindling the "rubes" is another prolific source of merriment. So is the contemptible act of picking a drunken man's pocket. The horror of nightmare, as set forth in moving-picture shows, is good entertainment. I am not deprecating such shows. The man on the stage does not create these curious faculties of enjoyment in the human mind—he simply finds out what they are and contributes to them. The business of educating is expensive. I knew of an advertiser who spent five hundred thousand dollars to teach the public the meaning of a trademark.

Old Friends With New Faces

RELIGION and all sacred things seem to be good material for laughter. Saint Peter and Noah have furnished more opportunities than any other famous characters; but the jokers are careful that the persons whose religions they ridicule are a very small minority of the audience. One never hears Napoleon, in France, or our own Washington or Lincoln, in this country, referred to in a jocular way. Somehow they don't lend themselves to it. Curiously success does not lend itself to joke-making—only failure.

From Biblical stories constantly heard one gets a rather definite idea of Saint Peter—not wholly flattering. One thinks of him as having a bunch of keys and a scrutinizing look, shrewd, yet something of a good fellow—not too strict in his examination if one could placate him with a good story—something of a wag.

Any kind of burlesque seems to be everlasting The old idea of the Englishman with the side whiskers and checked clothes still goes; or the Frenchman with the Louis Napoleon goatee and mustache; or the German with his enormous stomach and tiny hat; or the Jew with his shabby frock coat, vast shoes curled up at the toes, and crinkly whiskers. Lawyers, doctors, plumbers, druggists and farmers are burlesqued. So are clergymen.

At one time the Irish comedian was the whole thing in side-splitting comedy; but his scepter has passed to the Jew. The popular type changes, but not the essence of things. It is interesting to note, however, that certain nationalities never rise to the glory of being used on the stage as great laughter-producers. Strenuous efforts have been made to displace the Irishman and the Jew with the

ART AND INDUSTRY

Curly Discovers How Things Can Happen in Both

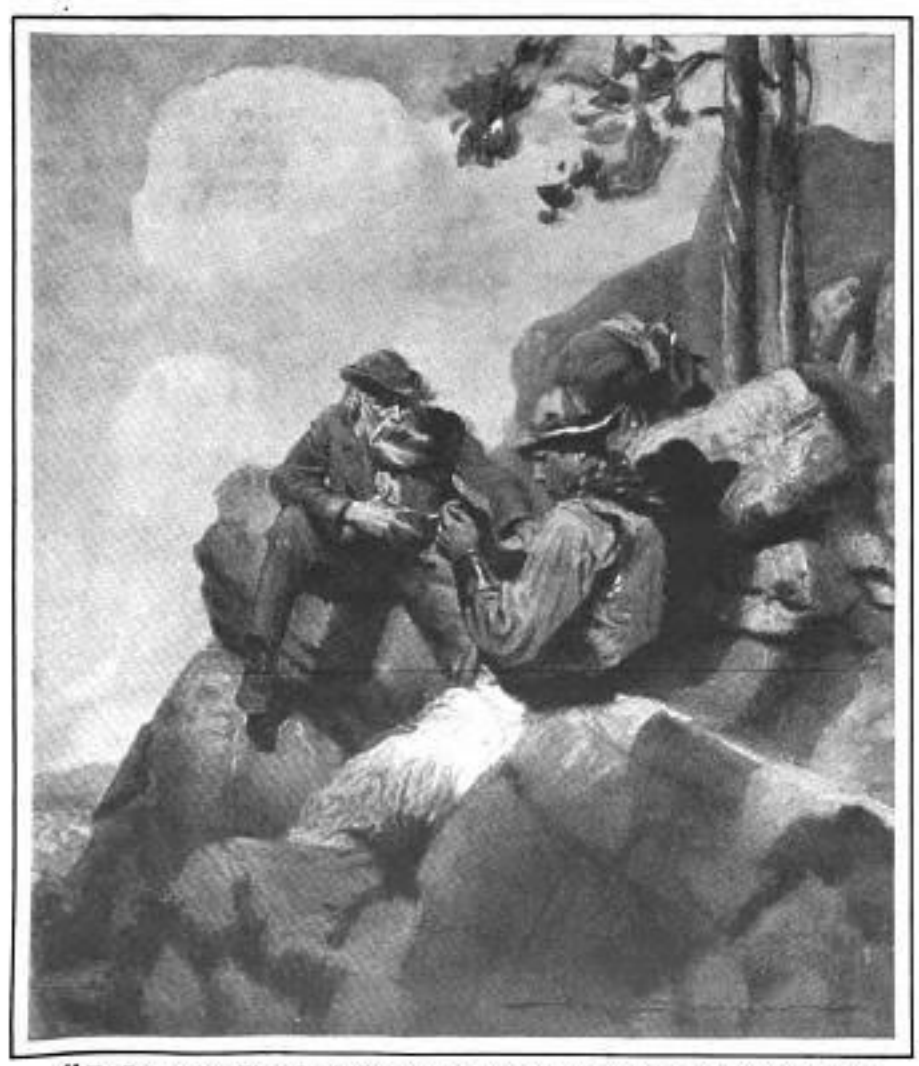
"For the Next Week They Was More People in That Town Than They Ever Was Before or Since"

By EMERSON HOUGH

ILLUSTRATED BY GAYLE P. HOSKINS

"THESE here are great times!" said Curly, fitting a stick into the neck of the frying-pan and whetting the bacon-knife on his boot. "It shore is fine doings when a plain cowpuncher, with red hair, kin make six million dollars in a few moments—an' lose it again in about half that long!"

"That's good as Wall Street," I was obliged to admit.



"I dunno nothin' about Wall Street; but, takin' a chancet, I'll bet it ain't got any the best o' Wyomin' fer sudden action. Now where else but in a region full o' opportunities fer young an' active men—like Emmett Dewees says in his railroad books—could I 'a' made, say, six million dollars in one little round-up? Of course only a young an' active man could 'a' lost it in, say, four or five hours; but ef I could lose that much I must 'a' had it, huh?—er else thought I had. I'd 'a' had it now, an' would be one o' the most beloved people you ever seen—'stead o' settin' here fryin' bacon—ef it wouldn't of been fer so many things happenin' wrong. I notice that's a way things come, somehow, right often.

"Now, lots o' folks 'a' been makin' money in land lately; an' when I fell in with Emmett Dewees, sort o' actin' as a guide, helpin' folks git back to the soil, I taken down some months several hunderd dollars—what they call commissions; though I dunno what made Emmett give it to me, fer I'd 'a' rode out with folks any time fer nothin' to oblige Emmett. He said I was entertainin'. Maybe I was. I fergit what all I used to say to them pilgrims—whatever I happened to think of. Seems like that's the thing to do, though I was only yarnin' because the sun was shinin' an' I felt cheerful-like.

"Trouble with any fool cowpuncher is, he ain't got no sense, except in spots, occasional, an' not fer long at a time." Curly wiped the bacon-knife on his leg and squatted back on his heels, rider-fashion, as he settled down to his story.

"Fer a little while things come my way on roller skates, an' I 'lowed it never rained money but they was a cloud-burst. Most all that season I took things easy, sellin' land to folks from Iowa, an' Illinois, an' Indiana, where it seems they ain't no land no more. I made money; an' I handed out money to anybody that wanted it—in Pateelse an' everywhere else. By diligent lendin' an' spendin', I managed to just about break even.

"It was while I was engaged in them simple pastimes that I met a man—sort o' long-haired, ole-lookin' party, who seemed to have a past—who had blew in somewhere from the Lander Trail down below. He 'lowed he probably was a artist oncet, an' certainly was hungry now; so we fell to conversin' one night an' he unfolded the story o' his life. Now, that artist person learnt me things that I never would 'a' learnt any other way in the world. Seems like he was one of a organized band o' highwaymen that spent their lives makin' out what they call County Histories. You know what a County History is—a big book that weighs about five pounds and lays on the parlor table, with the top of the page turned down where Poppa's picture is at. Along with the picture there is always printed a story of Poppa's life an' adventures, which always begins: 'The subjeck o' this sketch was borned early in life, of pore but honest parents, in the village of Harmon's Crossing'—

"He Points Out That Gold-Bricks an' Green-Goods Still Has a Ready Sale"

or wherever the place is. I reckon you'll see them books in your own time, an' maybe you know that their real idee ain't so much to enlighten later generations as it is to separate Poppa an' his family plumb away from about a hunderd dollars for this portrait an' the explanation of it. Sometimes, too, they put in a picture o' Poppa's general store, or his farm, with likenesses o' Poppa holdin' his livestock by the bridle or lookin' over the fence at his hawgs. That costs about five hunderd extry, on the side.

"Now, this artist man he told me that he followed the game fer years, makin' pictures o' Poppa an' his cattle—or even, when the liter'ry gents was all dead, writin' the story that begins: 'The subjeck o' this sketch.' He said the company he worked for must have printed hunderds o' tons o' these histories, an' that they was distributed on parlor tables all the way from Pennsylvania to Kansas, along with the family Bible an' the album which has a picture o' Poppa an' Mamma in their weddin' clothes. This here long-haired artist allows that them histories done a great good to posterity, showin' future generations how the perminent citizens of past days really looked.

"'This feller he told me that human nature don't learn nothin' at all from day to day, an' that any good way of takin' money away from folks always stays good. He points out that gold-bricks an' green-goods still has a ready sale; an' he says there never was any place in the country where they was a boom goin' on where a man couldn't sell Poppa a picture o' hisself an' his family fer to put on the parlor table in a history.

"Says he to me one day, when he was feelin' confidential: 'I see you have energy an' ability, my friend, as well as wide acquaintance in this here country, where now shore is on the boom. Ef you could furnish me a small capital—myself, havin' had expected remittance from home this month—why, what we could do in these Mormons in here with this County History business would be almost a shame.'

"'Who—me?' says I. 'I'd look fine askin' a man fer five hunderd dollars to printin' his picture in a book, wouldn't I? I've never done such a thing in my life. I've always lived honest in my life—or most of the time anyway.'

"'Man,' says he to me, 'you surprise me—you certainly do! Honest? Why, this is the honestest business in the world. Besides, you kin make a thousand dollars a month easy.'

"'Repeat softly,' says I.

"'A thousand dollars a month easy,' says he.

"'Friend,' says I to him, 'you shore have got me goin' a few.'

Digitized by Google

"'Well, listen, then,' says he. 'There's about ninety-eight per cent profit in this game—because we will have no commissions to pay agents, bein' the whole company ourselves. Now, supposin' you only landed one rancher a week, an' only fer five hunderd dollars—full-page portrait. Ain't that two thousand a month? An' ain't one-half o' that a thousand fer you—or so near you couldn't see no difference? All you'd have to do would be to go out an' visit among your friends here, an' say that you represented the Western Illustrated History Society, Limited—or some such name—an' it would be limited, to us two; an' that you was acceptin' orders fer portraits done by the celebrated Perfessor Cæsar Lombroso Messonyer, who is tarryin' in this country fer a brief time. Ain't anybody in the world that don't like to talk about havin' his portrait painted or drawed, or even photographed. You've got 'em right from the start! Why, I've knowed our men in the old days back in Ohio to write contracks fer five thousand dollars in two days.'

"'An' half o' that's mine?' says I.

"'Shore. An' it's so easy! You get the first one started fer the corral, an' you can't head the others off. They just come along an' beg to be took in. This here thing is founded on human nature as it really is, my friend. Fer instance, you says right proud an' stern, that only the best kind o' folks can get into a proposition swell like this is—only members o' the Four Hunderd, with birth an' breedin' an' money back o' them. You let on you can't take in but one or two people an' one or two hunderd will come an' say they'll sue you fer damages ef you don't let 'em in! Then, at last, you let on that you got to yield, not wantin' no lawsuits o' that nature. Then you hand each of 'em a contrack, which is a promissory note—takin' ten per cent down, not necessarily fer publication. From that time on it's easy, I tell you; fer I've seen it tried enough—so I ought to know.

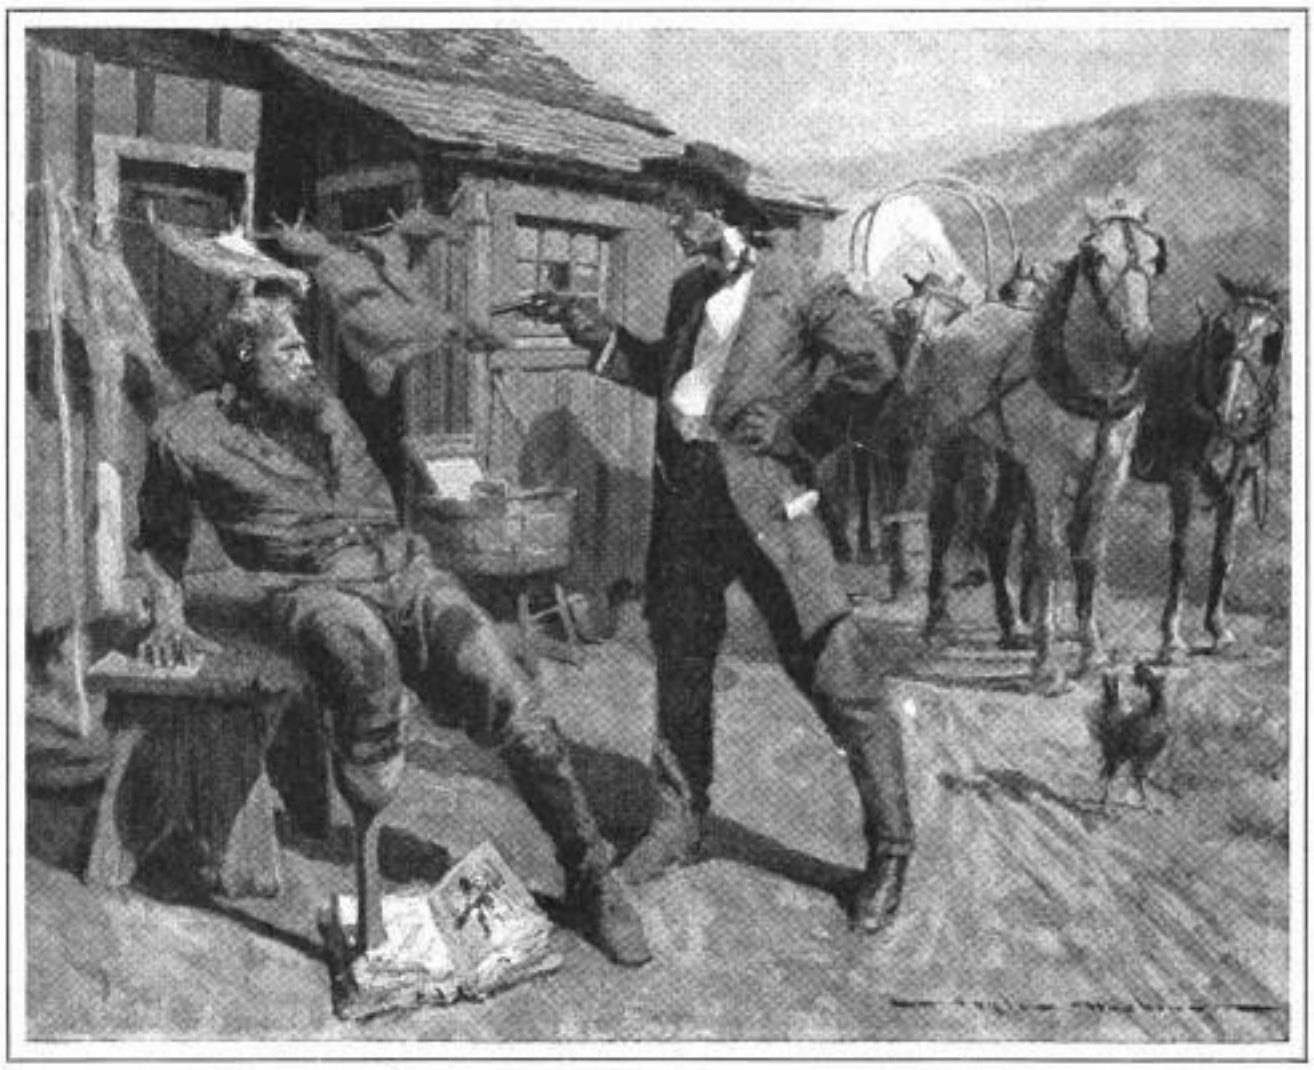
"'Now, when you begin to study into it,' says he, 'you find that men is awful near to bein' human. They all think they're handsome an' they all think they're perminent citizens. They's one crop that don't fail, no matter how little rain there is—an' that's the crop o' human nature. My experience is that, try hard as you can, you can't hardly keep people from givin' their money to you when you start out with a County History.

"'You see,' says he, 'they ain't much to photograph in this country; but I'm this kind o' artist that can put in trees, an' houses, an' things o' that kind, where there ain't none; so that a hardworkin' rancher out here can send back to his folks in the East pictures showin' what the glorious climate of Wyomin' can do fer a feller in a few years. I can draw a public square in a dog-town, an' make a four-story courthouse from the architeck's plans, easy as takin' a drink. Same with any kind o' houses, or any kind o' men—I fix 'em the way they ought to look!

"'It's best to stand in with the local newspapers, o' course, an' to head off the list with some good man fer a beginner. After that, it's simple. Now I suppose maybe you make four or five hunderd dollars a month punchin' cows'—I gasped then—'but, ef you ain't doin' as well as that, why don't you? I'm offerin' you a even break in this, me furnishin' the skilled labor of drawin' all the portraits o' Poppa, his cattle an' his folks. All you do is to get the contrack signed an' deliver the books an' make the collections. Then we meet over in the mountains somewhere an' divide up—I don't never do the collectin' part, because it ain't perfessional fer a artist to do that.'

"'My friend,' says I, 'it looks to me like they might be elerments o' risk in this game in these parts.'

"'Maybe some,' says he; 'but there's always got to be some risk where you git big profits. Ef you like bankin' I'd start a bank with part of my money, ef I was you. Then you can go to Congress ef you want to. Ef you don't make enough money in bankin' or in Congress you can work this scheme all over again about every five years. It don't never wear out, not even in Ohio—an' ef we can rob 'em in Ohio, say, what couldn't we do in Wyomin', where it's all new? It makes me sort o' dizzy to think of it.'



"I admit my head was swimmin'—when he goes on.

"'Just begin to count up,' says he. 'There's seventy Mormon families in this valley below town, an' every Mormon will have his six wives, an' every wife at least six children—I'm makin' a conservative estimate. Say there is a even three dozen in each family. We charge fifty dollars fer small portraits of the children. Now you multiply thirty-six by fifty an' add to that what you git by multiplyin' two hunderd an' fifty by six—fer we do wives at half prices, two hunderd an' fifty per each,' says he; 'an' you git one part o' one valley! Now, when you figger that there is other valleys, an' even some towns—well, you begin to see what you got.'

"Well, sir, I tried to figger that out, an' couldn't! It was like he said—it made me too dizzy.

"'Fine business,' says I at last. 'An' you tell me you kin do this every five years, over an' over again?'

"'Shore!' says he.

"'My Friend,' Says I, 'What Seems to be Agitatin' You About This Here Picture?'"

"'Curly,' says she, 'you can't make me believe that any man with whiskers would pay five hunderd dollars for a picture of hisself, which very likely he couldn't tell from Jesse James er Justice Hughes.'

"I was in too deep to git out now, fer when you start acrost a ford it's a pore place to turn round. Besides, I shore was knocked silly when I seen how near true everything that feller had said come out.

"I went back to Pateelse, an' we got some contracks printed that was promissory notes, an' we put a piece in the paper sayin' that me, Curly, would be there at Pateelse all next week, takin' orders fer spaces from a few selected perminent citizens for the forthcomin' County History o' Park County, Wyoming—only a few bein' elergible.

"Well, fer the next week they was more people in that town than they ever was before or sence. They had to put up tents to accommodate the perminent citizens that come in from Rock Creek an' the Sunshine Basin, an' from down the Lander Trail an' from both ways on the Gray Bull, an' from all along the Shoshone Valley—you see, every one o' them fellers was surprised at seein' everybody else here, thinkin' he was the only perminent citizen worth goin' into a thing o' this kind.

"Well, the wonder is that somebody didn't start somethin'; but I managed to git round among 'em an' keep peace. Ole long-hair, Cæsar Lombroso Messonyer, he proves a good organizer. We fixes up a office, an' we lets 'em in one at a time, every one of 'em thinkin' he was the only remainin' cinch fer such space as was left. Before any one of 'em got out, we had his name on this promissory note, agreein' to pay us from five hunderd to a couple o' thousand fer one of our peerless County Histories on deelivery—ten per cent down to bind the contrack. Well, ef I would tell you how much money we got out o' our feller citizens, you like enough wouldn't believe me what I have at all.

"Then I went back to the little woman, with my overalls full o' real money, an' says I: 'Seems to me that you're wrong about folks with whiskers—I ain't found one yet that wouldn't give five hunderd dollars to have a picture made o' hisself. Lookahere!'

"'Ef these things is true, my friend,' says I, 'it's easy fer me to see that I ain't been appreciated up to this time in this country.'

"Well, to cut it short, we done organized that night, under the name o' the Western Historical an' Pictorial Society. I give the artist feller, Perfessor Cæsar Lombroso Messonyer, about all the money this here wild-eyed party Emmett Dewees had give me. When I looked at that name of our company, an' felt that I was half the company, I felt prouder of myself than I ever did for fixin' over a brand in all my life.

"'No more travelin' round at three er four hunderd dollars a month fer punchin' cows!' says I to the little woman when I went home next day.

"'What are you goin' to do now, Curly?' she says. An' then I told her.

"'Well, of all things! Curly, you didn't give him any o' that money, did you?'

"'I had to,' says I, 'because he was broke. Besides, you can't have a partnership unless you put up somethin'.'

"'Curly,' says she, 'you're the worst bluff at a business man I ever did see!'

"'Huh! I am, am I?' says I. 'Well, you wait. Here I am, a-tryin' to get rich, an' you cut in with cold feet thataway! Why, lookahere ——'

"Then I throwed in an' told her the whole scheme—figgered up all them Mormon families—showed it to her by figgerin' on the back of a envelope. Some women, you can't show 'em nothin'! The more I talked, the more cold water she poured on the scheme.

"She taken away most o' my money from me, o' course; an' maybe it was all right she did, at that, because there's nearly always some one you kin manage to git to take your money down at Pateelse—or anywhere else, I've noticed.

"'Curly,' says she, 'you ought to be 'shamed o' yourself. You'll be runnin' sheep next—an' you oncet a good cowpuncher!'

"'Well, I don't know,' says I; 'there's a heap o' good men in sheep right now—we got the names of a heap of 'em right here on our paper,' says I.

"But, seein' we couldn't come to no agreement about that, I went back to Pateelse again.

"We had to git some one to do the stories about the life an' adventures, an' we 'lowed that ole man Johnson, o' the Pateelse newspaper, would be a good man to do this. He said he'd do it fer nothin' ef we let him have his own way about it. So he prints a little piece in the paper announcin' that he's to do this work—an' then you ought to seen the money that come in fer back subscriptions for ole man Johnson! You see, every one o' them fellers that was goin' to be in the history, he didn't dare take a chancet o' not standin' in strong with Johnson. They was more coin come into Pateelse on account o' me an' my long-haired friend than that town ever saw before. Ole Johnson he gits lit up constant every day, an' he falls on my neck an' sobs with joy at seein' some real money fer the first time in all his life. Me, I swelled up like a horned toad, seein' what a benefactor I was to the valley.

ABSENTEE LANDLORDISM

A Real Weakness in American Railroading

By EDWARD HUNGERFORD

DECORATIONS BY WILLIAM HARNDEN FOSTER

A BIG railroad president—a man big in mind and heart and body—sat in his office at the top of a city skyscraper, on the February day of last year when the Interstate Commerce Commission made public its famous decision on freight rates, and poured out his woes to a reporter.

"I don't understand it," protested the railroad man. "We played fair and then lost out. We raised the wages of the men and we made public the increased cost of operating our business. It was a good case—legally and morally—and then the good case lost! I feel, myself, as if I had been hit across the face!"

The reporter nodded assent. He was a sympathetic soul and yet he knew; for it so happened he had come from a little country daily, printed in a town that was reached only by a side line of the largest of the big man's railroads. The side line—let us call it the Tremont & North Valley—had been originally built to cut into the earnings of a great trunkline which, with the same reticence for using real names, we will designate the Tremont & Southwestern. Tremont & Southwestern had been a pretty prosperous railroad since the beginning of the business. It had grown rich on the carrying revenues of a single great state; and the cities and towns of the great state along its rails had also waxed prosperous and rich. It was an admirable copartnership and one upon which outside capital looked with hungry eyes.

How a Loose Screw Was Located

FINALLY outside capital got itself into working harness and planned the Tremont & North Valley, which was in a general sense to parallel the rails of the long-established Tremont & Southwestern. The plans were ambitious and the cities and towns along the older road welcomed them with glee. They thought their old partner had not always been fair with them. The first-established road awoke and tried to head off those plans—too late. It was still a day in which cutthroat railroad competition flourished, and the Tremont & North Valley emerged from the drafting boards into a flesh-and-blood railroad. It was a good railroad—a forerunner of the low grades and easy curves that are the trunkline boasts of today; and it should have prospered. It did not. The family interests that owned the older road were both rich and wonderfully resourceful. They gave battle to the newcomer before it was old enough to stand squarely upon its legs. A rate war, memories of which still linger, was its baptism—it was in bankruptcy before the double track was laid the length of its main stem. Little fortunes and big went down in the crash; and while the smoke was still high the older road bought the competitor—a property that had cost some one hundred million dollars—for something like twenty-two million dollars in cash.

There, then, was a Cinderella for one railroad family. Its new owners could not express their contempt for it. From the beginning they suffered the property to endure the worst sort of railroad neglect; but it so happened that a part of the ill-fated T. & N. V.—known today as one of the tragedies in American railroading—passed through a rich agricultural and manufacturing valley in which it was the only trunkline railroad. Before it had aspired to the bigger things, it had served the towns of that valley faithfully. They had given it business and it had given them growth—there was another partnership of commerce entitled to respect and encouragement.

From the moment the owners of the big Tremont & Southwestern took over the management of North Valley, however, they began what might have seemed a studied neglect of the valley towns and cities. They not only reduced the service and neglected the upkeep of the property, but they stole from it the best of its cars and locomotives for use on its own main line. The seeds of hatred against a big railroad property were sown in a dozen pretty prosperous American towns. The towns began planning reprisals. They looked at their dirty depots, saw the constantly increasing delays to their trains; and then they demanded—and received—gates and watchmen at every crossing. They piled on those demands until today the half-used property has more watchmen along its tracks than any other stretch of similar length in the country. The managers of the T. & S. swore and began cutting off stops from the through trains.

The reporter came from Old Town; and Old Town had begun to see the fast summer trains omit stopping at its station even though a change from the main line of the old North Valley to a branch feeding road—the O. T., G. & L.—at that point necessitated a change of locomotives. The train changed its engines in the yards while the crew kept the vestibules locked. If a passenger escaped from the train at Old Town, and a "spotter" from the superintendent's office discovered it, the crew were fined ten days' pay. That sort of thing has gone on for five summers now, and Old Town is going to make its trunkline railroad remove every remaining grade crossing in the city, at an expense of more than a million dollars. They were fighting for the removal of the first of these crossings at the time of the rate decision down at Washington.

The reporter sat in the president's office and told him every word of the row as it had come down to him from home. It was not news to the railroad head.

"Yes, sir," said the reporter; "and New Town is going to do the same thing. Old Town's set the example, and yet the O. T., G. & L. has three times the number of highway crossings in our town that you people have; and they have never yet maintained even a watchman—let alone a pair of gates—at one of them. The people in Old Town think a lot of that other property!"

"We might see our way clear to stopping those fast trains another summer," said the president.

"You'd be too late," replied the reporter—"they've set their hearts on removing that crossing now."

The president put a book of earning-sheets of the old Tremont & North Valley—now they call it the Valley Division of the Tremont & Southwestern and dump all the worn-out rolling stock of the parent road on it—into the hands of his caller. There was not much encouragement about the earning-account, and the reporter was honest enough to admit that. The president drew back the book. "We're trying to pick some earnings out of the thing as a differential route from Millvale and Chicago east, and not succeeding very well. There is a pretty hot fight for differential business, you know."

"Yes, I do know," said the reporter in a low voice; "and that probably is the reason why you are killing the local business and why every town up and down the valley is praying for a trolley line—a good-enough trolley line to handle both passengers and freight." He raised his voice and addressed the president squarely. "How often do you go up the North Valley road in your car? How long since you were last over that division?"

The big railroad president stammered; and, instead of telling the reporter to go and mind his own business, he began finding an answer.

"The North Valley terminals are not quite so handy for me as T. & S.," he finally said. "They're over the river and I'm generally in a hurry when I want to get over that property. . . . I think I went over the Valley Division three or four summers ago with our directors."

"It was five years ago," corrected the reporter. "I only left Old Town two summers ago and all the time that I was there I covered the depot. When you folks came up the line that time we felt that the world was coming to an end in the valley; but you never came back, and I can tell you that is what is the trouble. The big folks don't get over it. It lacks attention. I'd call it absentee landlordism."

The Best Boss for a Branch Road

THE railroad president was on his feet in a moment. He was angry—and yet he liked any man who spoke his mind. His offices were filled with bootlickers.

"You are as bad as the rest of the muckrakers!" he sputtered. "You pull down the structures that have taken years to build and yet you will do nothing to help us rebuild them. What we need is constructive criticism. Make me a suggestion what to do with the old Tremont & North Valley and you'll probably find me jumping at it."

The reporter got to his feet.

"I'll take you on that," he said. "Give the Tremont & North Valley back its old name. The folks in its territory liked it, and it'll inspire new loyalty among the men who are working for it. Give Tremont & North Valley a new boss—make it a separate railroad in fact and in name, even though you folks do own it, body and soul. Let its boss be a real boss, with some powers of decision. Let him hustle and operate the road down to the last cent of efficient economy—only let him operate the road for itself. Let him have his boys hustle for traffic. He'll steal it from the other differentials. If he cuts a little into your standard business, why, well and good—you'll get the money in the long run.

"Other railroads have done something of the same sort with their branch lines. You do the same thing with North Valley. Give us a president and general manager in one, and tell him that his pay hinges on the showing he makes with the property. He'll make the showing. He'll get up and down the line and give its men what they need—inspiration and confidence from higher up. He'll find out what is the trouble with towns like Old Town, and there'll be an era of good feeling."

The president of the railroad interrupted his caller.

"Well and good that sounds," he said; "but it's against our policy. We're consolidating on this system, bringing five more new roads into the parent organization, painting the old stencils out on the sides of the cars and locomotives, and putting T. & S. on every blessed one of them. We're consolidating. We're going to be one of the biggest single

Digitized by Google

roads in the United States. That's the new order of things. We can't separate the units of our organization."

And yet within the past few weeks one of the big American railroad properties has just begun such a process of separating some of its constituent members. Two of these have already been torn from the parent member and are today being operated as separate railroad units. A railroad can sometimes grow too large for its own good.

. . . . . .

The president of Tremont & Southwestern bore the reporter's suggestions in mind for a week and a day—though he did not have the fast trains stopped at Old Town after all—and then he dismissed them as being contrary to the policy of the system he headed. A month later, Snowden, the veteran general manager of the aristocratic T. & S., was in the president's office asking for a place for his boy—fresh from a technical college.

"Dan's a nice kid," he argued, "and I'd rather have him nicely settled with our road than anything else in the world. He's studied quite a bit in railroading—spent one summer in our shops; another with the engineering corps; a third in the trainmaster's office here at headquarters."

The president shut his eyes that he might think the more clearly. It was against his principles to elevate young boys from college into good jobs ahead of the men who had been shuffling forward slowly for years up from the ranks—yet T. & S. owed Snowden something for the years of loyalty and of faithful service he had given it.

"What did you want to make of Dan?" he inquired.

"An assistant superintendent," was the reply.

The president winced again. This was raw business and there would be criticism of it, even though it never came to his ears, from the men in the ranks; but in the end he surrendered and Dan jumped into a high-grade job. And in a little while the general manager was pleading for Dan. Could he not have a division of his own to tackle? There was nothing against Dan's record, and so it came to pass that he got that same unfortunate Valley Division.

Unfortunate beyond any question of doubt! Last summer we came down over the North Valley leisurely in a day local that we might see the remains of what had once been a pretty proud stretch of main-line railroad. The demoralization of the division was worse than ever; the train-crew criticised their commanding officers in the cars and off, so that any passenger might hear. Two of them referred to Dan as the "cigarette-smoking dude of a super," and a third was willing to sit in the end of a day-coach and tell you just how the boss down at Tremont North Side was running the property into the ground. The locomotives were leaking; the record of engine failures was appalling; the cars and depots were dirty; the trains, as a matter of regular habit, were running late.

We stopped at Old Town on that same trip while our train changed crews and engines—a simple process in railroading, accomplished in half the time on the well-managed main line of Tremont & Southwestern. While we went into the station a commercial traveler bustled in.

"How late's Sixteen today?" he laughed at the agent.

"On time," replied the agent.

"How's that?" laughed the drummer—"Must be yesterday's train just coming in!"

The agent did not answer. He laughed too. The taint of absentee landlordism was also in his blood. If it had not been there would have been enough of that intangible thing called *esprit de corps* in his heart to have made him resent the slur of the traveler.

That is what absentee landlordism did for the operation of five hundred miles of railroad, the sole traffic artery of a rich valley. Now see what it did for the traffic end of the same proposition: A man walked into the showy new Union Depot at Millvale last September and asked for three tickets and three lower berths over the T. & S. to Tremont. You remember that we called Tremont & Southwestern a "standard" road, while its North Valley route is classed among the "differentials." In the first case the one-way fare to Tremont is twelve dollars, while in the second, for a slightly slower service and inferior accommodation, but ten dollars is charged.

"Sorry; but the homebound rush from the resorts is on," said the courteous young man from behind the ticket wicket, "and I can't even give you uppers. You can go out on the platform, however, and see if you can pick up space as the through trains pull in."

That potential passenger wanted no such risk, however, and he walked out of the station. There were three "differentials" from Millvale to Tremont which left from other stations, and it is a fair assumption that he found accommodation on one of them that night; but T. & S. also had a "differential"—that same old North Valley—out of that same Union Depot, and the North Valley's chief night train that very evening carried two sleeping cars. Between them they held just seven passengers. That was where absentee landlordism was hitting the traffic returns. A lively boss on the "differential" would have seen to it that the ticket clerks at the Union Depot at Millvale were alive to the necessities—and the conveniences—of his route.

This may sound like fiction, but it is all real—as real as the main line of the Pennsylvania or New York Central or Union Pacific—and any keen-witted railroader can quickly locate the Tremont & North Valley property to his own satisfaction, although you must understand that it has been built up here out of a number of real instances. He can tell you frankly that these are some of the things that absentee landlordism accomplishes in railroad management. They are also some of the things that constantly make public outcry—just and unjust—rise high against the big carriers of the land.

The ticket agent at Millvale is the counterpart of a man in a Western city. In that town, two important trunkline roads, let us call them the Y—— and the Z——, are owned by the same interests and managed from a skyscraper twenty-five hundred miles or more away. A man who had come into the agent's office over the Y—— road wanted to continue his journey over the newly completed Z——, after a stopover of ten days. He designated the day and train he wished to take and asked for a Pullman stateroom. The agent fumbled among his car diagrams and finally produced a blue ticket for a stateroom to the same destination—only upon the R. & L. The R. & L. used to make the through connection across the country for the Y——; now it was a competitor of the new Z—— line.

"But I want to go by the Z——!" protested the passenger. "The R. & L.'s a good road; but I want a

X

THE one incredible fact of Mr. Clark Story's life had been becoming the father of Sylvia. It seemed that God had honored him with a kind of heathen miracle. Not that Sylvia was literally a heathen. She had submitted like any ordinary child to the Christian catechism. But she looked entirely too much like a mere Corinthian virgin.

He had married Mrs. Story off the streets of Augusta years ago, when he had gone there with a drove of cattle for sale. This was the real explanation, of course. Somehow a child will not take after its father if the mother of it has previously earned her living singing to other men. This is no reflection upon the legitimacy of its birth, but it is a tribute to the fertility of the mother's experiences. In the case of Sylvia there could be no question of this sort. She really was the child of her proper father. But if you marry the most charming woman in the world under these circumstances, and she remains as faithful as Ruth to her marriage vows, the next chapter in your romance is apt to be a mysterious and over-endowed offspring. If Mrs. Story had lived long enough to bear another child it might have been an equally strange reversion to memory. Fortunately, Mrs. Story died before she increased the confusion of Mr. Story's parenthood with another heir. And he had accepted Sylvia with the adoring admiration that such children usually excite in those who have the honor and adventure of begetting them.

But the society of Ruckersville had proved a trifle more squeamish. Only the male portion of it was ready to take Sylvia for better or for worse. From the time she was out of school at sixteen up to the beginning of this story, when she was twenty-five, she could have married any man in it, married or single. This is too much to say for any woman's attractiveness; and this accounted for the fact that Mrs. Fanning-Rucker had never recognized her existence and that Mrs. Rucker-Martin had never even asked her to join the missionary society. It was true that Sylvia seemed to have been properly born; but she certainly did not look like it, and you do not want contaminated money for your heathens. Still, she sang in the church choir; but it is a curious fact, often observed, that any person with a voice like the heavenly hills set to music may sing in any Christian choir. We are democratic about the voice. But so far as any one knew in Ruckersville she had never been converted. It was a delicate matter, such a woman's soul. Therefore she had been left entirely to the consideration of her Maker, with the tacit understanding on the part of Ruckersville saints that this was the best disposition to make of such a soul. Amy White was the one woman in the place who cultivated her acquaintance—and Amy was not an exhorter.

In short, Sylvia had had rather a hard time of it and she promptly took it out of the men, not maliciously but naturally. Mrs. Fanning-Rucker knew that Sylvia could become her daughter-in-law any day. Mrs. Patricia Felton had every reason but one to be jealous of her. Sylvia had explained to poor Mr. Felton that she would not elope with him for the remaining reason that she cordially despised him. She said nothing about its being wrong to elope with a married man, because this was beside the mark, her contempt being a so much greater objection, as far as she was concerned. Captain Martin never missed one of those rare occasions when she appeared on the street to declare his devotion in a manner too flamboyant to be disgraceful, as he accompanied her from one store to another, strutting by her side with his hat in his hand and his old back limbered with the exaggerated bowings and scrapings caused by the romantic ecstasy of his emotions. Tony Adams was wont to affirm futilely, with tears in his eyes, that she was the one woman in creation designed especially for the delectation of man. And Tony was right so far. She was certainly designed for nothing else.

He Was More Reconciled to Loving a Woman Than He Had Ever Been Before

But now Sylvia discovered that she was in a predicament. For the first time in her life she had been interested, almost attracted, by a person of the opposite sex, and that person had suddenly disappeared without offering his scalp. For nearly a week she had not seen Jim Bone in the late afternoon upon the opposite hill. So far his had been a long-distance courtship. Still, she

Digitized by Google

recognized it as such, and had calmly waited, cat fashion, for him to draw nearer. Such women do not love, but they desire more than any others in the world to be loved. And at last this had come to her with overwhelming force—the desire to be loved by this wonderful straddling stranger, whose long shadow fell almost upon her doorsill at sundown like a drawbridge between the hills that he let down for her to walk upon to him.

Before she could make up her mind what to do about it he had disappeared, taking his grand shadow and his impudent scalp with him. If she had been one of those anti-climaxes of femininity—a dim, starspirited virgin—she would have spent her nights weeping. But she was merely a natural virgin without any starspirit at all. So she sat up and wondered, with a sort of savage rage, what had happened to her and what was best to do about it. Women of this class are great pragmatists. They always get what they want. They never shrivel into spiritless old maids; at the worst they become female bachelors.

Every one sees their potentialities plainly, and they are judged by these rather than by their deeds, which may even exceed in innocency the clinging conduct of the starspirited.

If Sylvia could have found Jim Bone in her surprised, bereaved mood, she would have been perfectly capable of demanding satisfaction of him by wringing his lover's neck for him—figuratively speaking, of course. She was indignant, disappointed, as one would be with a fascinating orator who stopped in the midst of an eloquent peroration, turned his back upon you, and left the stage without giving you the chance to reply in the same exalted strain.

She did the only thing she could do under the circumstances. Late in the afternoon of each day she made a pretty toilet and went out to stroll upon the hill. If you desire to see a really beautiful woman, observe one who discards mere fashion and dresses to meet the far greater demands of love. Clothes become an inspiration then. They are the flowing footnotes of a sweetly mysterious personality. You feel that if she did not wear them you could not understand her at all. You could not believe her. But the bodice cut low, the loving, clinging folds of the skirt, the gleaming girdle, tell the tale. They translate to you what she cannot confess with her lips. They say plainly:

"Love me."

You cannot express anything so cold as intelligence, or science, or philosophy in the fashion of your garments without looking like a frump. This is why your merely intellectual women often appear so ugly and so absurd. They are fools who do not use the sweet patterns of love when they cut out their hideous clothes.

I am coming now to a certain August evening, the seventh since the disappearance of Mr. Bone from Sylvia's skyline. She stepped down from the porch in the early twilight, looking so white and golden one might have inferred that she expected to be wooed by the stars. As a matter of fact she was very shrewd. She concluded that if her lover was not gone forever he would return to the hill; and in case he did she purposed to be quite unconsciously adjacent.

Women are queer. They really know everything. The only protection that men have is that the women do not know that they know everything. They only feel that they do, and you have only to contradict them in order to confuse them.

Thus Sylvia felt each day the exhilaration and excitement that she would surely meet Jim Bone. She was determined to do it. On this particular evening she had predestined it again—fixed it with a rose in her hair. She advanced down the hill from the house like a young beam. She stepped ankle deep in the grass. She held her skirts up and showed the white stems of her being rising to unimaginable heights out of her little, dusty, high-heeled slippers. Her hair was braided and bound tight about her head. The nape of her neck glistened between two little thin, vagabond curls below the braids behind. Her spreading, swallow-winged brows curved above her eyes inquisitively. She wore that exaggeratedly innocent expression a woman assumes when she wants you to think she is looking for something, but not for you. For seven days in the twilight she had put it on, this manner of looking for something in the grass as she went along. Women are delightfully naïve comedians when they wish to find you and to conceal themselves. They invariably flutter all their wings in the opposite direction from the way they are really going and thinking. One of them comes tilting along, heading straight for your arms, so to speak, but she pretends—and really believes her own pretense—that she is not thinking of you at all. She is thinking of Ruskin, say, or of Valhalla, or of Idylls of the King, or of something else, oh, infinitely beyond and above mere man! But when she does come upon you in this artless fashion, somewhere in the world, on the street, in a drawing room, or even a back hall, the very man of all men who is thinking about her, you will know what she is up to by that wide-eyed expression of unfeigned surprise with which she regards you and draws back, and looks "Excuse me! I didn't know you were here!"

A Flock of Pigeons Dropped Down and Entered Into the Spirited Confusion of the Scene

So, I say, it was thus that Sylvia Story made her way down the green-skirted hill to where the brook lay like a golden mace in the fading sundown dividing the two hills. She was absolutely absorbed in her search for mint that grew wild upon the banks. She thought she would see whether the geese had been muddying the spring again and whether the water rock under the pasture fence had been washed away by the rain that had fallen that morning. Sylvia, the mysterious, was translating herself, you understand, into the little green words of the field. It all depended upon whether you could read the translation or not. She stood upon the bank where the grass lay flat like a green fringe that has been drenched by the little flood of summer rain flowing inside. She looked this way and that. She lifted the ruffled whiteness of her skirts a little, held them tighter, stooped, and showed the smallness of her slippers and not more than a modest inch of the pretty white-stockinged stems of her being. Her head was bent low, like a golden blossom in the greenly golden dusk of the evening. If anybody were there to see he would see, of course. If no one were there to see—well, it is a fact that one has a certain satisfaction in dramatizing one's self by way of practicing, with only the willows to observe the performance.

She gathered a handful of mint. Then she saw that it grew more luxuriously upon the opposite bank. She went back to the footlog that spanned the stream. The rain had swelled the current until it flowed within a few inches of the underside of this log. She put one foot on the end of it and considered. You have seen exactly the same expression of uncertainty upon a young hen's wing feathers, when she makes up her red comb into a strictly feminine resolution to climb a stick pole that reaches from the earth to the bough on the tree where she intends to spend the night. She starts, balances herself with her wings falters, drops back to the ground and cackles that she cannot do it. After the third or fourth attempt she walks along up without the tremor of a feather. All that other had simply been a matinée of the hen-feminine. Sylvia started across the log much in the same mood. Really there is nothing like swiftly flowing water close beneath her for disturbing a woman's equilibrium. She paused, wavered—nearly lost her balance, in fact—jerked her skirts instinctively high and skipped back to the bank. She composed herself, smoothed her courage and started the second time. The width of the stream was absurdly narrow to cause such a flutter—less than ten feet. This time she would certainly have made it but for the most unexpected accident. Suddenly, as she was mincing swiftly along more than halfway across, there was a rush from behind a clump of willows that grew there very close, and Bimber, the hound, appeared near the other end of the log, every leg limber with ecstasy, ears flapping, tail wagging. She pressed the hand that held the sprigs of mint close to her breast, closed her eyes, dropped her skirts and threw that hand out instinctively to balance herself. It all happened in an instant, including the quick thud of boot heels beside her on the log. She felt her body lifted, clasped close and swung forward. It seemed best not to open her eyes for a moment, even after it was all over. But never in the years that followed the dreadful sequel of that hour could she forget the thrilling, pungent odor of the mint that lay bruised upon her breast, that fell down in expiring fragrance upon the ground between them, as she disengaged herself the next instant and stood looking from the green stain upon her bosom into the enraptured face of Mr. Jim Bone. The thing could not have happened more aptly or more romantically if they had both been characters in a novel.

The dog reeled off a circle around them about the size of the Great Dipper, which was beginning to show dimly in the sky above, then made a handle to it by darting off up the hill. It was as if he had wagged off with his tail: "Excuse me! I think I smell a rabbit!"

Nothing could have exceeded the intelligence and delicacy of such a withdrawal of a third party at such a moment.

Having no further use for his hands, Mr. Bone thrust them both into his pockets and stood as usual with his feet wide apart before Sylvia, who was still engaged in getting her breath and in trying to withdraw her eyes from his face.

"Good evening!" he said smilingly.

This was a mistake. There are occasions where a smile is so appropriate that a woman cannot bear to see one. At the sight of this merry contraction of Mr. Bone's features Sylvia collected herself. She was indignant. She showed plainly that she felt she had been wronged. She turned, cast one cool, swallow-winged glance at him, and walked sedately back across the log as calmly as if she had been a migrating lily. She had not said "Thank you" or even returned his salutation. He was not so much aggrieved as he was confused. He knew why she came. What he could not understand was why she did not remain. He had a simple, direct mind about women. And for years he had lived among a class of them that were as natural and primitive in matters of love as he was himself. It is good women, you understand, who have invented the only art in the world that they themselves cannot practice acceptably—the art of courtship. If it were left to men, or even to the other kind of women, there would be mating enough and to spare, but no courting. But your good woman feels that she must deceive her lover utterly about every advance she makes and that she can never yield without some excuse for the concession. Thus she exacts enough persuasion to make it perfectly clear to him that she never would have consented of her own accord to anything, but only in response to his overwhelming arguments and prayers.

Jim stood looking after the retreating form of the girl with a deep frown above his nose. The fact is that Sylvia was about to be lifted by Mr. Bone's imagination into the sanctity of poetry, that high rampart of love. She drifted along toward the old house, attended overhead by her stars, leaving in her wake a long streamer of fireflies trailed from the grass by the brushing of her skirts. God has a wonderful way of transfiguring His commonest creatures now and then. The queer thing is the ones He does not transfigure. For example, there was Jim Bone, designed by inheritance and everything else for great deeds of one sort or another, who stood beside the running water in the gathering gloom, ugly, gaunt, unillumined by any possible flash of the imagination. It may be, of course, that God has much less to do with the transfiguring business than we suppose; that it is merely some advantage the Sylvias take of His great lights and shadows.

Digitized by Google

In any case, Mr. Bone sat down upon the end of the footlog, clasped his hands around his knees, waited for the dog, and made up his mind that he was more reconciled to loving a woman than he had ever been before since he had been old enough to know much about love or woman.

XI

THE bomb already referred to in these pages exploded two days after the return of Jim Bone from Atlanta. The exact locality of the explosion was a vacant lot on the north side of the square opposite the Confederate monument, and that duck-legged hero's was the one impassive face turned upon the performance. When you have resurrected your dead and exalted them forever into a statue they stand and observe the uttermost energies of men thenceforth with a terrible calm. They can watch men build a city, conquer an invading army, without the least expression of admiration. And they can look at Rome burning, with a benignity that the lurid light only enhances, but cannot change. Once you erect a statue you have belittled and defeated yourself. You cannot compete with it. The thing outlasts you. This is one reason why in those countries where there are the greatest number of monuments to the memory of men and deeds, there is to be found the poorest quality of living manhood. And this is why, for one, I have always been thankful that the hero surmounting the monument to the Confederate soldiers in Ruckersville was a trifle too short in the stride. The absurdity seemed to give the surviving descendants of this hero a better chance.

Well, I say, it was a very warm morning in August, one of those days when the sun rises early and gets down to business with as much energy as if the preservation of the whole solar system depended upon making every man sweat. Such a thing as activity in Ruckersville at such a season was unheard of. The entire male population of the town was hibernating in the sunshine, listless, comfortable, drowsily acclimated to the heat and to a golden sunlit poverty. They sat in their shirt-sleeves beneath the awnings on every side of the square, smoking, spitting, whittling, and engaging in that aimless talk of the constitutionally idle. Captain Martin and Elbert White held a checkerboard upon their respective knees in front of Bilfire's saloon. Each smoked a short-stemmed briar pipe, which exhaled an odor that was still pungent, for the distance of a block, in any direction the wind blew. Elbert held one spatulate forefinger upon his king, uncertain whether to move into the "double corners" or attempt a hurried, leaping march across the board and risk the captain's attacking his flanks with one of the latter's novel movements, which the captain declared was due to the military training of his faculties.

Two wagons drawn by mule teams were standing in front of the stores; and there was some talk of turnip seeds and shuck horse collars across the counter in Magnis & Luster's, but it was tentative. Purchases were never made till the late afternoon, and only then when every ingenuity to cheat the other had failed between merchant and farmer. Three or four of these lounged on the sidewalk outside, silent, hairy-faced, sunburnt men with pipes in their mouths. The Southern farmer must never be confounded with that character in fiction, the Southern planter, now an almost extinct animal in that section. The farmer is the planter reduced to his least common denominator—of a slouch hat, a blue hickory shirt, jeans breeches, and a pair of brogan shoes smelling of ground in spring and of red clay at all seasons.

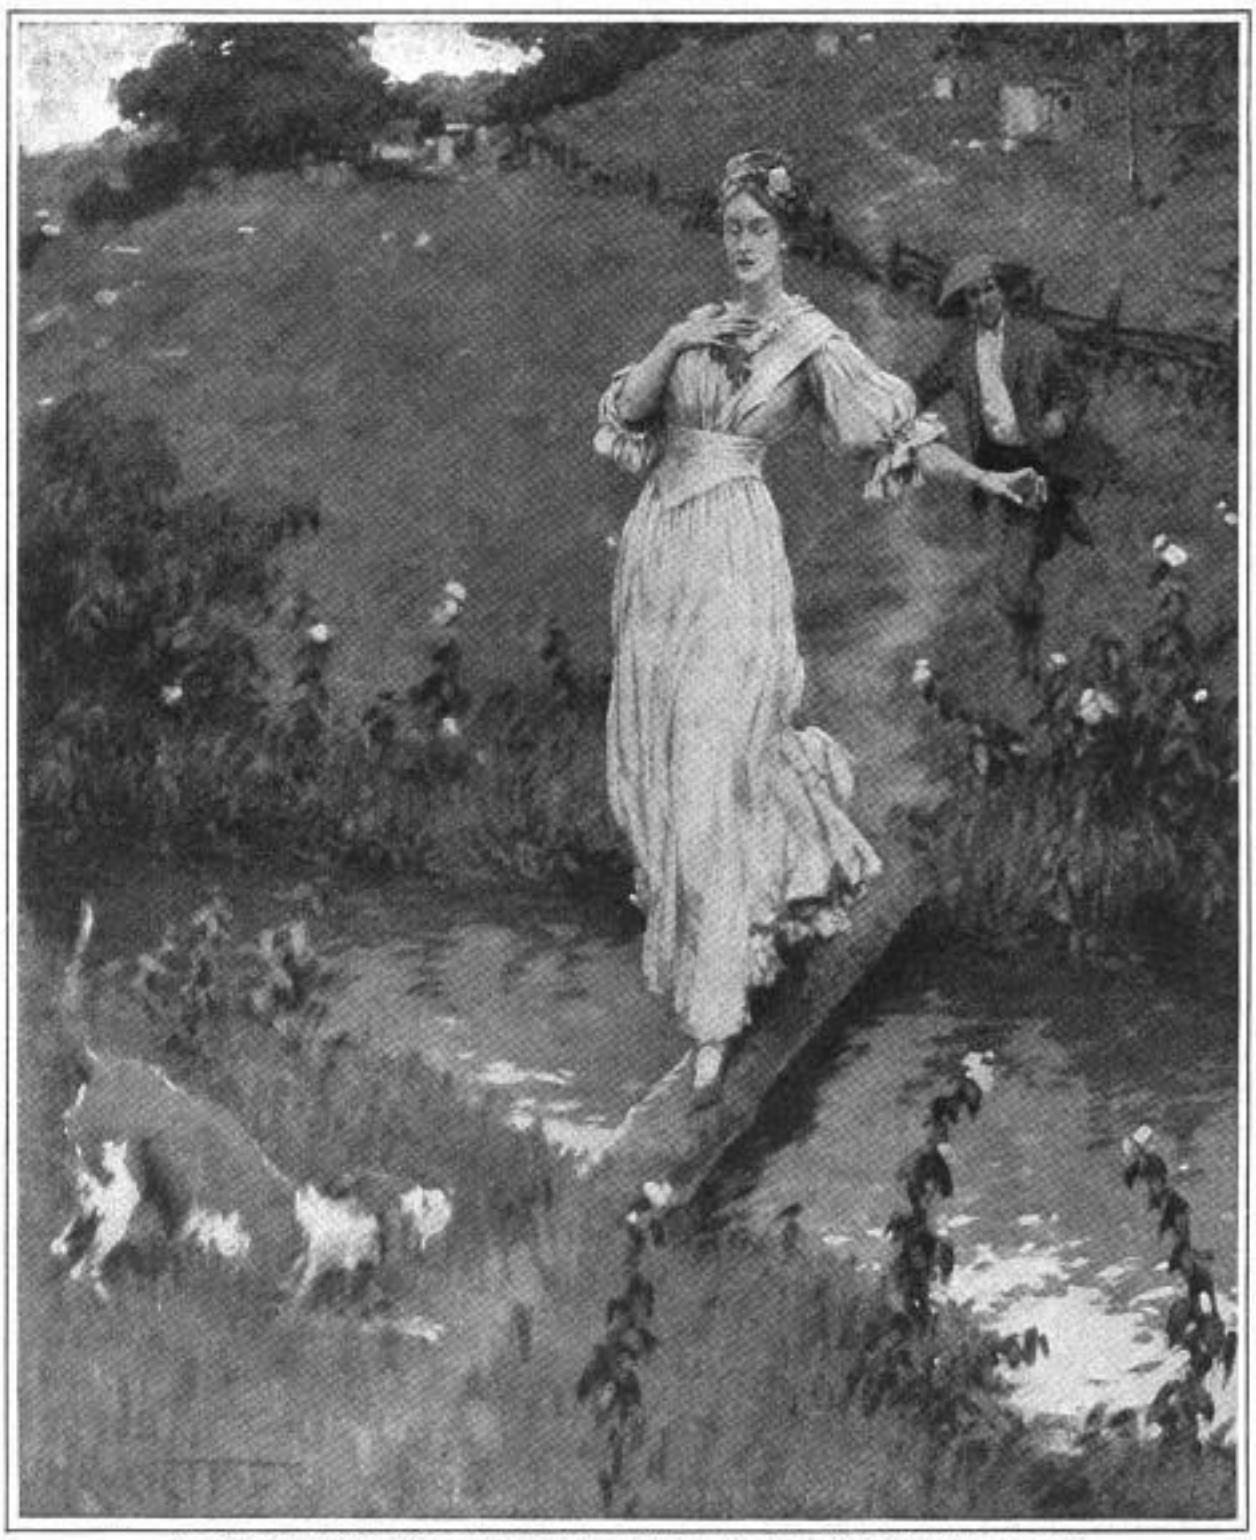
Between this group of country customers and the awning of Bilfire's saloon which shaded the checker players Colonel Lark and Colonel Fanning-Rucker sat in chairs tilted back against the wall of the courthouse, discussing local option—a measure that was to come up in the next county election. The enterprising idleness of the Southern village Solon reduces all political discussions merely to the moral and immoral. Up to this time in Ruckersville there had never been a question of bond issues or water and gas franchises. Everybody had his own well and his own sputtering kerosene lamp, and political questions consisted entirely of whether or not there should be a stock law in the county and saloons in the town.

"The women and the preachers are at the bottom of this temperance agitation," commented Colonel Lark.

"Curious how women and preachers always gang together politically," mused the young attorney, throwing back his head, opening his mouth and letting out the cigar smoke in soft blue rings.

"Well, the ladies can't vote, thanks be."

"If they could this country would be in the hands of the preachers and the poets before night any election day."



"I don't know about that, Fanning. If the rest of us turned lovers time enough in the campaign we could persuade 'em with a billy-doo ballot to vote with us in spite of all the gospel and poetry ever written. You can't bribe 'em with a drink, nor enough of 'em with new parasols, but there's nothin' easier than bribin' their tender hearts, bless 'em!"

I do not know that I can make you see it as I see it—the gentle, pipe-perfumed calm of Ruckersville upon this eventful morning. But if you are to understand the moral of this simple tale it is necessary for me to dwell upon it. Years and years ago it was called the Christian peace of the community. Certainly it resulted, aside from the genial climate, in a very large degree from a form of religious teaching that prohibited all manner of worldliness. But this is the truth, which most preachers have neglected to tell even when they knew it, that if one is in the world it is especially designed by Divine Providence that he should be of it with might and main. This is where the old revivalist preachers in Ruckersville had slipped up and the town had slipped down. The effort of the Church had been to make as many converts as possible and to subtract them from the world, the flesh and the devil at any cost. Now, nothing is more praiseworthy, of course, than cheating the devil out of his own if you can, but it is as impossible to deduct living men and women from the things of the world as it is to resurrect the dead. The nearest approach is that naïvest and most sincere of mortals, the hypocrite—a poor creature doing its best to be what it is not.

The citizens of Ruckersville passed out of the grandiloquent cavalier stage into the sorrows of the Civil War, and after the Civil War into the only resignation left, that of "O Lord, revive us!" And there can be no doubt that the Lord would have done so, but it is not in the nature even of the Almighty to revive a community according to a mere religious creed, and especially one that was conscientiously opposed to all forms of worldliness and to the exercise of many natural human instincts. Thus Ruckersville, bereaved of wealth, of prestige, of everything but its bees and its exalted sacrificial virtues, faced life, failed and sank into apathy. This is the history of thousands of old Southern towns. If you accept an impossible ideal you insure a bad conscience. And a bad conscience insures loss of hope and of energy and of enterprise. This was why in the mornings the square of Ruckersville was rimmed with sitting citizens, who played checkers, engaged in heated political discussions or theological arguments, and spent their evenings drinking and swapping horse yarns in Bilfire's saloon. The men were poor old salts who had lost their savor and had yielded with a feeble flourish to the flesh, having no other diversion. They would have liked to yield more explicitly to the world. But the world had passed them by. The town was merely a little human dirt-dauber's nest, left sticking half destroyed to the rafters of time. And the women—well, we all know how pathetically just virtue and nothing else affects the characters of women. They were poor, dear, good creatures, always morally stretched doing their best, which is entirely too great an undertaking for any mortal, especially a feminine mortal.

Now then, I say, about nine o'clock in the morning on this day in August all this was changed. Ruckersville was to be delivered with a sort of grin from her long trance. Her hammers and saws and wheels were to start, and there was to be an amazing lot of ticking and tocking and strange hours striking for the next twelve months.

Just as Elbert White decided that discretion was the better part of valor and had moved his king back into the "double corner," the captain leaped to his feet and the board slipped to the ground, carrying with it Elbert's king, and two crowned heads of the Captain's which occupied a very strategic position in regard to the "double corner." The captain stared, as if he were snorting, down the street like an old war

She Closed Her Eyes, Dropped Her Skirts and Threw That Hand Out to Balance Herself

Digitized by Google

horse with his head over the top rail of a pasture fence. At the same moment Colonel Lark and Colonel Fanning-Rucker also stood up and backed against the courthouse wall and stared down the street. Elbert was astonished. He caught hold of the back of his chair and pulled himself around sidewise in it. He was not the man to get up unless it was absolutely necessary. Apparently it was. He drew himself up, fascinated, and stumbled into the door of the saloon. One of the mules hitched to one of the wagons in front of Magnis & Luster's shied. This awakened the other mule, and between them it seemed best not to face what was coming, accompanied as it was by a devil of a racket. They bolted. Sympathy between mules and strikers is strong. The other team also bolted. The next moment the square was in an uproar. Two wagons drawn by four galloping mules with windmill ears tore around the square, a comet's tail of loafers following in the cloud of dust, yelling and profanely exhorting, commanding them to "Whoa, there! Whoa! Whoa! W-h-o-a! you —— of a gun!"

A trail of brown sugar, green coffee, flour and molasses marked their course, but the animals pointblank refused even to consider "whoaing." This may have been due to the indelicacy of the language used by their pursuers, but more likely it was owing to the approach of a curious procession that was itself accompanied by a peculiarly disconcerting noise. Both teams made a tremendous exit down a street on the opposite side of the square, followed by their respective owners and a long, whooping, yelling strand of little black boys. The uproar had drawn every man in business in Ruckersville out upon the sidewalk, hatless, coatless, where he stood astonished at the sight and sound that had caused the mules to bolt. A lean old white horse, obviously blind and spiritless, and guided by a pair of ragged rope lines held by a negro man, crept slowly along, dragging after him a sort of inverted turtle-shaped iron shovel or scoop upon which reclined a plow stock with its trivet clattering. The rattling and grinding of the shovel and plow upon the stony street was the unheard-of noise that had destroyed the confidence of the mules. The horse lifted his feet very high at each step and switched his tail feebly against the trace chains.

On the sidewalk immediately in the rear, Jim Bone stepped along between Tony Adams and a stranger, afterward recognized as the contractor James, of Atlanta. Behind the team followed a dozen negro men, barefooted, ragged, carrying picks on their shoulders, jostling one another and laughing loudly after the manner of negro workmen. Mr. Bone smoked a red-and-gold-gartered cigar, the triplets of which might have been seen between the lips of his two companions. His hat was tilted forward over his narrow, smiling, pistol beaming eyes. He held his chin up and out and his mouth puckered tightly about the end of his cigar. He was gesticulating mysteriously to the contractor, who apparently confirmed every arc and angle and spire of these gestures by referring to the lines and symbols on a large sheet of blue paper that he held unrolled in his hands. When this singular company arrived at the vacant lot it appeared that the purpose was to destroy it. The horse was hitched to the plow and made to open a thin black furrow, which laid off the ground in an irregular and marvelous shape. The negroes with picks fell to widening and deepening the furrow, every stroke of every pick being accompanied by a humorous grunt and the rhythm of a song that ran something like this:

Dig my grave wid er silver spoon,
Lemme down wid er golden chain,
Two turtle doves on mer breast!
Oh, yez! Oh, yez! Oh, yez!
Dig er my grave wid er silver spoon!

The jungle of weeds that stood shoulder high and that had sprung on that lot from their forefather weeds for fifty years fell before the scythe; a flock of pigeons dropped down and entered into the spirited confusion of the scene, strutting about among the freshly turned sods with an eye to business. Even Tony Adams took off his coat, set his narrow-brimmed straw hat on the back of his head, put his hands in his pockets, and passed from one side to the other, directing the work of excavation as if it were a matter of buried treasure. Having had a good deal to say about the breaking of the lines by the plow, Bone and James immediately withdrew as if they had more important business in another part of town.

All the time the regular population of the square stood in the background, stretching from beneath the awning of Bilfire's saloon nearly half a block like the straggling teeth in an old worn-out comb, some short, some tall, all warped and bent with curiosity. The only thing positively known was that on the previous day Jim Bone had purchased two pieces of property in Ruckersville—this vacant lot and the old Joseph Rucker place which, as I have already indicated, stood upon a gentle eminence near the center of the residence portion that lay almost entirely to the west of the square. Both were owned by a syndicate in Atlanta—the same syndicate, in fact, holding mortgages upon half the real estate in the town. Now it appeared that some sort of building was to be erected upon the vacant lot—Colonel Lark in fact having issued, as mayor, a permit for this construction the evening before; but it was at an hour of the day when he could not be sure of himself and he could not recall details—if indeed Mr. Bone had mentioned any. Colonel Lark looked appealingly at Rucker, as much as to inquire if he remembered anything of the circumstance; but Colonel Rucker was determined not to be implicated in the scandal. He declared hastily that he had not been with Colonel Lark the evening before, as much as to say that under no circumstance would he have his name coupled with anything relating to the affairs of a person of so dubious a character as Jim Bone.

"If it's another store, he'll fail," commented Magnis, a merchant with a wrinkled, dried-apple face.

"There ain't enough trade in this country to keep any of us goin'," agreed Luster.

"I don't care what he's fixin' to do, he'll fail. There hasn't been a successful business in this town since I have been postmaster," agreed Martin. But nobody noticed or respected his opinion, because he was a Republican and held an office that by rights belonged to a Democrat.

Suddenly the old captain broke ranks and started across the square with the challenging, spur-clicking air of a very thin old game rooster who would suffer no intrusion upon his barnyard, even if he lost every neck feather he possessed.

"Mr. Adams, may I ask you what manner of breast-works you are raising here in this peaceful community?" he demanded of Tony, whom he found squatting with a spirit level in one elbow of the shallow trench.

"Have to ask the General, Captain; I ain't in his confidence no deeper than this ditch," answered Mr. Adams, looking up smiling.

"Well, sir, all I have to say is that it's an outrage that such a business should go forward without the knowledge or consent of this community that knows what it needs and what it don't need better than a buckle-banded, pistol-bellied outlaw!" With which explosion the captain turned and hastened back to his comrades.

Halfway across the square he passed Bilfire. The fact that Jim Bone had a way of setting down his glass with a scowl every time he emptied it in the saloon caused Bilfire to fear that he was about to have a rival in the whisky business. Bilfire was a large man with a head like a maul. He always wore a long white apron and went without his hat.

He halted just above the spirit leveler in the trench, stood with his hands behind him fiddling with his apron strings and looked at the excavations with his red nose wrinkled by a sun smile.

"Tony," said he, "what the dickens are you doin' over here?"

Once more Mr. Adams, turning up his blond, vacuous, batter-cake face, widened it with a grin.

"Damfiknow, Billy."

"What do you think you are doin'?"

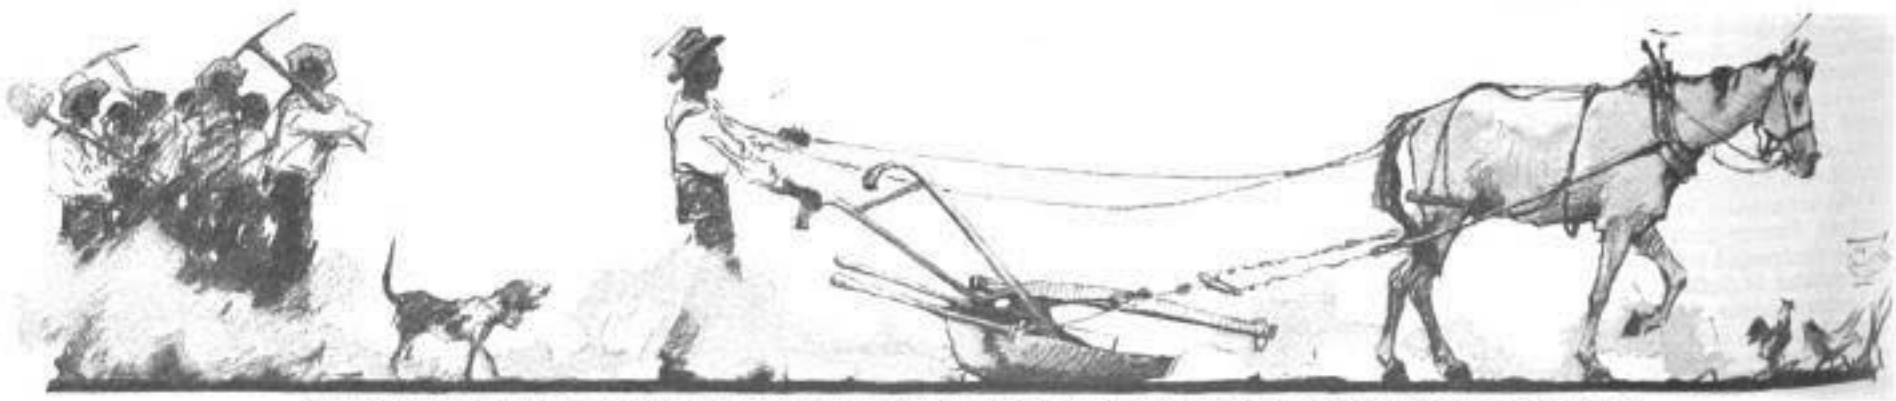
"Well, Jim says he's fixin' to revive and redeem the town. That's all he told me."

Bilfire placed a fat leg in front of the other, drew back, pulled out his thick red neck, closed one eye and squinted along the foundation; then he set his foot down in it and stretched his apron as he stepped off the distance.

"'Tain't a saloon anyway," he remarked with every appearance of relief. "Nobody but a fool would put up a saloon with a fifty-foot front."

He withdrew to his place of business where custom was brisker than usual, owing to the fact that the excitement of the morning called for a steadying of the nerves of the citizens. You will have observed this difference in strong emotion among men and women. The former instinctively demand a "bracer." They depend upon their stomachs to help them rise to the occasion. It is the place where they keep their altar fires and the engine room of their valor. But for this useful organ of the body more of them would show the white feather. As it is, the most timid man alive can take three drinks and face an army with every sensation of cheerful heroism. And personally I venture the suspicion that few men would voluntarily risk the most glorious death a hero ever died without at least one bottle of champagne if he could get it. But women do not know how to stoke the spirit with stimulants. They have more highly developed the martyr instinct that does not require a cocktail for submission. If they must, they can go down to the gates of death primly, a little tearfully and, apt as not, with empty stomachs.

XII



IT MAY have been two hours after the events recorded above that the town of Ruckersville sustained another shock.

Mrs. Martin was seated in her bedroom. The house was pervaded by the odor of boiling cabbage. This indicated that she had put on dinner and was now at leisure to invite her soul, a situation not so incongruous as it smelled. Women are often obliged to accommodate the needs of their spiritual natures to their domestic environment. Mrs. Martin suffered from a conscientiousness that did not permit her to indulge in merely religious devotions so long as the breakfast dishes were unwashed; in fact, she never could call her soul her own until dinner was on and hot enough to boil. Then she relaxed her material nature, abandoned her carnal mind, and withdrew to her bedroom for an hour of prayer and other devotional exercises. On this particular morning she was in an unusually peaceful frame of mind. She sat spread out comfortably in her chair. Her thin gray hair was drawn up to the severest point on the back of her head and wound into a knot so small and tightly twisted it might have been a little coiled worm. Her face, down to the last crease of her double chin, was fiery red from her exertions. And she could not have worn a more matter-of-fact expression if she had been about to sew the top button on the garment of her spirit. Two or three volumes lay upon the windowsill beside her.

It is a circumstance you may have observed, that old men and old women nearly always contract this windowsill habit according to their characters and general dispositions. If it is a rheumatic old man he will lay his pipe and tobacco there. He will pigeonhole his letters between the sash and the sill. And if any one moves these possessions the old man is more disturbed than if his pockets had been robbed. If it is a religious old woman you will find there her button basket, her knitting—with the long steel needles sticking out at fierce angles—and above all you will observe her open Testament. They are the prim witnesses of the fact that she has ceased to waste her leisure in any adorning considerations of the flesh and has withdrawn from the world to hibernate in the scriptures in the soothing occupation of turning stocking heels. In addition to a very homely, rusty-backed Testament upon Mrs. Martin's window-sill there was a sock for the captain—which had reached the crucial knitting-needle stage where the toe was being narrowed—an old strawberry-shaped emery for sharpening her needle, a bit of beeswax, a thimble, a quarrelsome-looking pair of scissors, and two thin volumes on the slum life of the poor. These were really Mrs. Martin's dime novels, although she was very far from suspecting the fact.

If you want to know who reads the worst and most harrowing literature in the world, observe the old ladies who are interested in home and foreign missions. They make a spiritual business of acquainting themselves with the most degrading details of the most degraded lives.

XXXIV

SABATINI and Arnold stood up in the automobile. The former's face had darkened. He leaned over and said something to the chauffeur. They drove on through the press of people, who gave way sullenly. A police inspector came to the side of the car.

"This way is blocked for the present, sir," he said to Sabatini. "If you want to get past you had better take one of the turnings to the left."

"My destination is just here," Sabatini replied. "Tell me what is the cause of this disturbance."

"Some of our men have gone to make an arrest in that house there, sir," the inspector replied, "and we are having some trouble."

"Is it the man Isaac Lalonde whom you are after?" Sabatini asked.

"That is so, sir," the inspector admitted. "A desperate scoundrel he is too. He's shot at and wounded all three of the policemen who entered the house, and he lies crouching before the window, threatening to shoot any one who passes up the street."

"Who is in charge here?" Sabatini inquired.

"Chief Inspector Raynham," the man replied, pointing to an officer in plain uniform who was standing a few yards away.

"Take me to him," Sabatini directed. "I may be of use in this matter."

The crowd opened to let them pass through. They were on the corner of the pavement now, and the street to their right was empty. There was a disposition on the part of the people to hug the wall and peer only round the corner, for they were within easy range of the grimy window opposite.

"Mr. Inspector," Sabatini said, "I am Count Sabatini, a nobleman of the country from which that man comes. I think, perhaps, that if you will allow me to make the effort he will listen to me. I may be able to save the loss of useful lives."

The chief inspector saluted.

"I shouldn't recommend you to go near him, sir," he declared. "They say he's an out-and-out anarchist, the leader of one of the most dangerous gangs in London. We've got the back of the house covered and he can't escape, but he's shot three of our men who tried to get at him. The chief of the police is on his way down and we are waiting for instructions from him."

Sabatini's lips parted in the faintest of smiles. One could well have imagined that he would have devised some prompter means to have secured this man if he had been in command.

"You will not forbid my making the attempt, I trust?" he said courteously to the official. "I do so at my own risk, of course."

The inspector hesitated. Sabatini, with a sudden swing of his powerful arm, made his way into the front rank. Arnold clutched at him.

"Don't go," he begged. "It isn't worth while. You hear—he has shot three policemen already. You can't save him—you can't help him."

Sabatini turned round with an air of gentle superiority.

"My young friend," he said, "do you not understand that Isaac will not be taken alive? There is a question I must ask him before he dies."

The inspector stepped forward—afterward he said that it was for the purpose of stopping Sabatini. He was too late, however. The crowd which thronged the end of the street and the hundreds of human beings who peered from the windows had a moment of wonderful excitement. One could almost hear the thrill that stirred from their throats. Across the empty street, straight toward the window behind which the doomed man lay, Sabatini walked, strangest of figures amidst those sordid surroundings, in his evening clothes, thin black overcoat and glossy silk hat. Step by step he approached the door. He was about three yards from the curbstone when the window behind which Isaac was crouching was suddenly smashed and Isaac leaned out. The crowd, listening intently, could hear the crash of falling glass upon the pavement. They had their view of Isaac too—a wan, ghostlike figure with haggard cheeks and staring eyes—eyes that blazed out from between the strands of black hair.

"Stand where you are," he shouted, and the people who watched saw the glitter of the setting sun upon the pistol in his hand. Sabatini looked up.

"Isaac Lalonde," he called out, "you know who I am?"

"I know who you are," they heard him growl—"Count Sabatini, Marquis de Lossa, Chevalier de St. Jerome, Knight of the Holy Roman Empire, aristocrat, bloodsucker of the people."

Sabatini shrugged his shoulders slightly.

"As to that," he answered firmly, "one may have opinions. My hand at least is free from bloodshed. You are there with nothing but death before you. I am here to ask a question."

"Ask it then," the man at the window muttered. "Can't you see that the time is short?"

"Is it true, this message you sent me by that young man? Is it my daughter, the child of Cécile, whom you have kept from me all these years?"

Isaac leaned farther forward out of the window. Every one in the crowd could see him now. There were a few who began to shout. Every one save Sabatini himself seemed conscious of his danger. Sabatini, heedless or unconscious of it, stood with one foot upon the curbstone, his face upturned to the man with whom he was talking.

"Ay, it is true!" Isaac shouted. "She is your daughter, child of the wife whom you hid away, ashamed of her because she came from the people and you were an aristocrat. She is your child, but you will never see her!"

Then those who watched had their fill of tragedy. They saw the puff of smoke, heard the sharp, discordant report, the murderous face of the man who leaned downward. They saw Sabatini throw up his hands and fall. Isaac, with the pistol to his own forehead, overbalanced himself in the act of pulling the trigger and came crashing down on to the pavement. The crowd broke loose, but Arnold was the first to raise Sabatini. A shadow of the old smile parted his whitening lips. He opened his eyes.

"It's a rotten death, boy," he whispered hoarsely—"a cur's bullet, that! Look after her for me. I'd rather—I'd rather hear the drums beating!"

Arnold gripped him by the shoulders.

"Hold on to yourself, man!" he gasped. "There's a doctor coming—he's here already. Hold on to yourself for all our sakes! We want you—Ruth will want you!"

Sabatini smiled very faintly. He was barely conscious.

"I'd rather have heard the drums," he muttered again.

XXXV

IT WAS twenty minutes past nine on a Saturday morning when the wonderful thing happened. Precisely at his accustomed hour, in his accustomed suit of gray clothes and with his silk hat a little on the back of his head, Mr. Weatherley walked into his office, pausing as usual to knock the ash from his cigar before he entered the clerks' counting house. Twelve young men gazed at him in frank and undiluted amazement. As though absolutely unconscious of anything unusual, Mr. Weatherley grunted his "Good morning" and passed on into the private room. Arnold and Mr. Jarvis were busy sorting the letters that had arrived by the morning's post. Mr. Weatherley regarded them with an expression of mingled annoyance and surprise.

"What the devil are you doing, opening the letters before I get here?" he exclaimed. "I'm punctual, aren't I? Twenty-two minutes past nine to the tick. Get out of my chair, Jarvis!"

Mr. Jarvis rose with a promptitude that was truly amazing, considering that a second ago he had been sitting there as though turned to stone. Mr. Weatherley was disposed to be irritable.

"What on earth are you both staring at?" he asked. "Nothing wrong with my appearance, is there? You get out into the warehouse, Jarvis, and wait until you're sent for. Chetwode, go and sit down at your desk. I'll be ready to dictate replies to these as soon as I've glanced them through."

Mr. Jarvis made a slow retreat toward the door. Every now and then he turned and looked back over his shoulder.

"You will allow me to say, sir," he faltered, "that I—that we all are glad to see you back."

"See me back?" Mr. Weatherley repeated, frowning heavily. "What the devil do you mean, sir? Why, I was here till nearly six last evening, straightening out the muddle you'd got Coswell's account into."

Mr. Jarvis withdrew precipitately, closing the door behind him. Mr. Weatherley glanced across the room to where Arnold was standing.

"I'm hanged if I can understand Jarvis lately," he said. "The fellow seems off his head. See me back, indeed! Talks as though I'd been away for a holiday."

Arnold opened his lips and closed them again without speech. He seated himself on a swing chair, with his face half turned toward his employer. Mr. Weatherley took up the letters and began to read them, at first in silence. Presently he began to swear.

"Anything wrong, sir?" Arnold asked.

"Has every one taken leave of their senses?" Mr. Weatherley demanded in a startled tone. "These can't be this morning's letters. They're all about affairs I know nothing of. They're dated—yes, they're all dated July first. I was here yesterday—I remember signing the checks—May fourth it was. What the ——"

He stopped short. The office boy had performed his duty. Opposite to him stood the great calendar recording the date—July 2 stared him in the face. Mr. Weatherley put his hand to his forehead.

"Come here, Chetwode, quickly," he begged.

Arnold hurried over toward his employer. Mr. Weatherley had lost flesh and there were bags under his eyes. His appearance now was the appearance of a man who has received some terrifying shock. His hands clasped the sides of his chair.

"I'm all right, aren't I, Chetwode?" he gasped. "I haven't been ill or anything? This isn't a nightmare? The office seems all changed. You've moved the safe. The letters—I can't understand the letters! Give me the daybook quick."

Arnold passed it to him silently. Mr. Weatherley turned over the pages rapidly. At May fourth he stopped.

"Yes, yes! I remember this!" he exclaimed. "Twenty barrels of apples, Spiers & Pond. Fifty hams to Coswell's. I remember this. But what ——"

His finger went down the page. He turned over rapidly page after page. The entries went on. They stopped at June thirtieth. He shrank back in his chair.

"Have I been ill, Chetwode?" he muttered.

Arnold put his arm upon his employer's shoulder.

"Not exactly ill, sir," he said, "but you haven't been here for some time. You went home on May fourth; we've none of us seen you since."

There was a silence. Very slowly Mr. Weatherley began to shake his head. He seemed suddenly aged.

"Sit down, Chetwode—sit down quickly," he ordered in a curious dry whisper. "You see it was like this," he went on, leaning over the table: "I heard a noise in the room and down I came. He was hiding there behind a curtain, but I saw him. Before I could shout out to the servants he had me covered with his revolver. I suppose I'm not much to look at in a black tie and dress coat—wrong thing altogether, I know—but Fenella was out, so it didn't really matter. Anyway he took me for the butler. 'It isn't you I want,' he said, 'it's your mistress and the others.' I stared at him and backed toward the door. 'If you move from where you are,' he went on, dropping his voice a little, 'I shall shoot you! Go and stand over in that corner behind me. It's Mrs. Weatherley I want. Now listen. There's a ten-pound note in my waistcoat pocket. I'll give it to you to go and fetch her. Tell her that an old friend has called and is waiting to see her. You understand? If you go and don't bring her back—if you give the alarm—you'll wake up one night and find me by your bedside and you'll be sorry.' You see I remember every word he said, Chetwode—every word."

"Go on, please!" Arnold exclaimed breathlessly.

Mr. Weatherley nodded slowly.

"Yes," he said, "I shall tell you all about it. I remember every word that was spoken; I can see the man at this moment. I didn't move from where I was, but I was a little annoyed at being taken for Groves and I told him so. 'If you're a burglar,' I said, 'you've found your way into trouble. I'm the master of the house and Mrs. Weatherley is my wife. Perhaps you'll tell me now what you want with her?' He looked at me and I suppose he decided that I was telling the truth. 'Your wife,' he said slowly, 'is looking for trouble. I'm not sure that it hasn't come. You know she was a friend of Rosario—Rosario the Jew?' 'I know that they were acquainted,' I said. He laughed then and I began to hate the fellow, Chetwode. 'It was your wife,' he said, 'for whom Rosario wanted that title. She could have stopped him ——' Then he broke off, Chetwode. 'But I don't suppose you understand these things,' he said. 'You'd better just understand this though. I am here to have a little explanation with Mrs. Weatherley. I have a message for her and she's got to hear it from my own lips. When I've finished with her I want her brother, and when I've finished with him I want the young man who was here the other night. It's no good saying he's not here now because I saw him start.'"

Mr. Weatherley paused and felt his forehead.

"All the time, Chetwode," he went on, "I was watching the fellow, and it began to dawn upon me that he was there to do her some mischief. I didn't understand what it was all about, but I could see it in his face. He was an ill-looking ruffian. I remembered then that more than once Fenella had been frightened by some one hanging about the house. Well, there he was opposite to me, Chetwode, and by degrees I'd been moving a little nearer to him. He was after mischief—I was sure of it. What should you have done, Chetwode?"

"I am not quite sure; what did you do?"

"We're coming to that," Mr. Weatherley declared, leaning a little forward—"we're coming to that. Now in that open case close to where I was my wife had some South American curios. There was a funny wooden club there—something like a life-preserver. The end was quite as heavy as any lead. I caught hold of it and rushed in upon him. You see, Chetwode, I was quite sure that he meant mischief. If Fenella had come in he might have hurt her."

"Exactly," Arnold agreed. "Go on, sir."

"Well, I gripped the club in my right hand," Mr. Weatherley explained, seizing a ruler from the table, "like this, and I ran in upon him. I took him rather by surprise—he hadn't expected anything of the sort. He had one shot at me and missed. I felt the bullet go scorching past my cheek—like this."

Mr. Weatherley struck the side of his face sharply with the flat of his hand.

"He had another go at me, but it was too late—I was there upon him. He held out his arm but I was too quick. I didn't seem to hit very hard the first time, but the club was heavy. His foot slipped on the marble hearthstone and he went. He fell with a thud. Have you ever killed a man, Chetwode?"

"Never, sir," Arnold answered, his voice shaking a little.

"Well, I never had before," Mr. Weatherley went on. "It really seems quite amazing that that one blow right on the head should have done it. He lay there quite still afterward and it made me sick to look at him. All the time, though, I kept on telling myself that if I had not been there he would have hurt Fenella. That kept me quite cool. Afterward I put the club carefully back in the case, pushed him a little under the sofa and then I stopped to think for a moment. I was quite clever, Chetwode. The window was open through which the man had come, so I locked the door on the inside, stepped out of the window, came in at the front door with my latchkey, crept upstairs, undressed quickly and got into bed. The funny part of it all was, Chetwode," he concluded, "that nobody ever really found the body."

"You don't suppose that you could have dreamed it all, do you?" Arnold asked.

Mr. Weatherley laughed contemptuously.

"What an absurd idea!" he exclaimed. "What a perfectly absurd idea! Besides, although it did disappear, they came up and told me that there was a man lying in the boudoir. You understand now how it all happened," he went on. "It seemed to me quite natural at the time. Still when the morning came I realized that I had killed a man. It's a horrid thing to kill a man, Chetwode!"

"Of course it is, sir," Arnold said sympathetically. "Still I don't see what else you could have done."

Mr. Weatherley beamed.

"I am glad to hear you say that, Chetwode," he declared, "very glad. Still I didn't want to go to prison, you know, so a few days afterward I went away. I meant to hide for quite a long time. I—I don't know what I'm doing back here."

He looked round the office like a trapped animal.

"I didn't mean to come back yet, Chetwode!" he exclaimed. "Don't leave me! Do you hear? Don't leave me!"

"Only for one second, sir," Arnold replied, taking an invoice from the desk. "They are wanting this in the warehouse."

Arnold stepped rapidly across to Mr. Jarvis' desk.

"Telephone home for his wife to come and bring a doctor," he ordered. "Quick!"

"He's out of his mind!" Jarvis gasped.

"Stark mad," Arnold agreed.

When he reëntered the office Mr. Weatherley was sitting muttering to himself. Arnold came over and sat opposite to him.

"Mrs. Weatherley is calling round presently, sir," he announced. "You'll be glad to see her again."

Mr. Weatherley went deadly pale.

"Does she know?" he moaned.

"She knows that some one was hurt," Arnold said. "As a matter of fact," he continued, "I don't think the man could have been dead. We were all out of the room for about five minutes and when we came back he was gone. I think that he must have got up and walked away."

"You don't think that I murdered him then?" Mr. Weatherley inquired anxiously.

"Not you," Arnold assured him. "You stopped his hurting Mrs. Weatherley though."

Mr. Weatherley sighed.

"I should like to have killed him," he admitted simply. "Fenella and Sabatini, too, her brother—they both laugh at me. They're a little inclined to be romantic and they think I'm a queer sort of a stick. I could never make out why she married me," he went on confidentially. "Of course, they were both stone broke at the time and I put up a decent bit of money; but it isn't money, after all, that buys a woman like Fenella."

"I'm sure she will be very pleased to see you again, sir," Arnold said.

"Do you think she will, Chetwode? Do you think she will?" Mr. Weatherley demanded anxiously. "Has she missed me while I have been—where the devil have I been, Chetwode? You must tell me—tell me quick! She'll be here directly and she'll want to know. I can't remember. It was a long street and there was a public house at the corner, and I had a job somewhere, hadn't I, stacking cheeses? Look here, Chetwode, you must tell me all about it. You're my private secretary. You ought to know everything of that sort."

"I'll make it all right with Mrs. Weatherley," Arnold promised. "We can't go into all these matters now."

"Of course not—of course not," Mr. Weatherley agreed. "You're quite right, Chetwode. A time for everything, eh? How's the little lady you brought down to Bourne End?"

"She's very well, thank you, sir," Arnold replied.

"Now it's a queer thing," Mr. Weatherley continued, "but only yesterday—or was it the day before?—I was trying to think whom she reminded me of. It couldn't have been my brother-in-law, could it, Chetwode? Did you ever fancy that she was like Sabatini?"

"I had noticed it, sir," Arnold admitted with a little start. "There is a likeness."

"I'm glad you agree with me," Mr. Weatherley declared approvingly. "Splendid fellow, Sabatini," he continued; "full of race to his fingertips. Brave as a lion, too, but unscrupulous. He'd wring a man's neck who refused to do what he told him. Yet do you know, Chetwode, he wouldn't take money from me? He was desperately hard up one day, I know, and I offered him a check, but he only shook his head. 'You can look after Fenella,' he said; 'that's all you've got to do. One in the family is enough.' The night after he played baccarat with Rosario and he won two thousand pounds. Clever fellow, Sabatini. I wish I wasn't so frightened of him. You know the sort of feeling he gives me, Chetwode?" Mr. Weatherley continued. "He always makes me feel that I'm wearing the wrong clothes or doing the wrong thing. I'm never really at my ease when he's about. But I like him—I like him very much indeed."

Arnold had turned a little away. He was beginning to feel the strain of the situation.

"I wish Fenella would come," Mr. Weatherley wandered on. "I don't seem to be able to get on with my work this morning since you told me she was coming down. Queer thing—although I was with her last evening, you know, Chetwode, I feel somehow as though I'd been away from her for weeks and weeks. I can't remember exactly how long—there's such a buzzing in my head when I try. What do you do when you have a buzzing in your head, Chetwode?"

"I generally try and rest in an easy-chair," Arnold replied.

"I'll try that too," Mr. Weatherley decided, rising to his feet. "It's a—most extraordinary thing, Chetwode, but my knees are shaking. Hold me up—catch hold of me quick!"

Arnold half carried him to the easy-chair. The horn of the automobile sounded outside.

"Mrs. Weatherley is here, sir," Arnold whispered.

Mr. Weatherley opened his eyes.

"Good!" he murmured. "Let me sit up."

There was a moment's pause. Arnold moved to the door and held it open. They heard the swish of her skirts as she came through the outer office and the heavier footsteps of the doctor who followed. Mr. Weatherley tried vainly to rise to his feet. He held out his arms. Fenella hastened toward him.

"Fenella, I couldn't help it," her husband gasped. "I had to kill him—he told me he was waiting there for you. My hands are quite clean now. Chetwode told me that he got up and walked away, but that's all nonsense. I struck him right on the skull."

She fell on her knees by his side.

"You dear brave man," she murmured, "I believe you saved my life."

He smiled. His face was suddenly childlike. He was filled with an infinite content.

"I think," he said, "that I should like—to go home now—if this other gentleman and Chetwode will kindly help me out. You see I haven't been here since May fourth and today is July second. I think I must have overslept myself. And that idiot Jarvis was opening the letters when I arrived! Yes, I'm quite ready."

They helped him out to the car. He stepped in and took his usual place without speaking again. The car drove off, Fenella holding his hand, the doctor sitting opposite.

XXXVI

THERE was nothing about their attitude or appearance that indicated the change. Their chairs were so close together that they almost touched. Her white, ringless hand lay in his. Through the wide-open window of their tiny sitting room they looked down upon the river as they had sat and watched it so many evenings before. Yet the change was unmistakable. Arnold no longer guessed at it: he felt it. The old days of their pleasant comradeship had gone. There were reserves in everything she said. Sometimes she shrank from him almost as though he were a stranger. The eyes that grew bright and still danced with pleasure at his coming, a moment later were almost filled with apprehension as she watched him.

"Tell me again," he begged, "what the doctor really said. It sounds too good to be true."

"So I thought," she agreed; "but I haven't exaggerated a thing. He assured me that there was no risk, no pain, and that the cure was certain. I am to go to the hospital in three weeks' time."

"You don't mind it?"

"Why should I?" she answered. "The last time," she continued, "it was in France. I remember the white stone corridors, the white room and the surgeons all dressed in white. Do you know, they say that I shall be out again in a fortnight." He nodded.

"I can see you already," he declared, "with a gold-headed stick and a fascinating limp."

She smiled very faintly, but said nothing. Somehow it was hard to make conversation. Ruth was unusually pale even for her. The eyes that followed that line of yellow lights were full of trouble.

"Tell me," he begged presently, "you have something on your mind, I am sure. There is nothing you are keeping from me?"

"Have I not enough, Arnold," she asked, "to make me anxious?"

"Naturally," he admitted, "and yet, after all, you have only seen your father once in your life."

"But I am sure that I could have loved him so much," she murmured. "He seems to have come and gone in a dream."

"This morning's report was more hopeful," he reminded her. "There is every chance that he may live."

"All the time," she answered fervently, "I am praying that he may. If he treated my mother badly I am sure that he has suffered. I can't quite forget either," she went on, "although that seems selfish, that when I come out of the hospital, even if all goes well, I may still be homeless."

He leaned over her.

"Ruth," he exclaimed, "what do you mean?"

"You know," she answered simply. "You must know."

His heart began to beat more quickly. He turned his head, but she was looking away. He could see only the curve of her long eyelashes. It seemed to him strange then that he had never before noticed the likeness to Sabatini. Her mouth, her forehead, the carriage of her head, were all his. He leaned toward her. There was something stirring in his heart then, something throbbing there that seemed to bring with it a cloud of new and bewildering emotions. The whole world was slipping away. Something strange had come into the room.

"Ruth," he whispered, "will you look at me for a moment?"

"Our Ships," She Whispered—"Together, Dear!"

She kept her head turned away. "Don't!" she pleaded. "Don't talk to me just now. I can't bear it, Arnold."

"But I have something to say to you," he persisted. "I have something new, something I must say, something that has just come to me. You must listen, Ruth."

She held out her hand feverishly.

"Please, Arnold," she begged, "I don't want to hear—anything. I know how kind you are and how generous. Just now—I think it is the heat. I can't bear anything."

Her fingers clutched his and yet kept him away. Every moment he was more confident of this thing that had come to him. A strange longing was filling his heart. The old days when he had kissed her carelessly upon the forehead seemed far enough away. Then in that brief period of silence, that seemed to him too wonderful to break, there came a little tap at the door. They both turned.

"Come in," Arnold invited.

There was a moment's hesitation, then the door was opened. Fenella entered. Arnold sprang to his feet.

"Mrs. Weatherley!" he exclaimed.

She smiled at him with all her old insolent grace.

"Since when?" she demanded. "Fenella, if you please."

She was more simply dressed than usual, in a thin black gown and black picture hat, and there were shadows under her eyes. No one could look at her and fail to know that she was suffering. She came across to Ruth.

"My brother is the dearest thing in life to me," she said. "He is all that I have left to me belonging to my own world. All these days I have spent at his bedside, except when they have sent me away. This evening I have come to see you. You are his child, Ruth."

Ruth turned her head slowly.

"Yes," she murmured half fearfully.

"When Arnold brought you to Bourne End," Fenella continued, "for one moment I looked at you and I wondered. You seemed even then to remind me of some one who had existed in the past. I know now who it was. You have something of Andrea's air, but you are very like your mother, Ruth."

"You knew her?" Ruth excitedly asked Fenella.

"Very slightly," Fenella replied. "She was a very clever actress and I saw her sometimes upon the stage. Sometimes I think that Andrea did not treat her well, but that was the way of his world. Assuredly he never treated her badly, or you and I should not be here together now."

"I am afraid that you are sorry," Ruth said timidly.

Fenella laid her hand caressingly upon the girl's shoulder.

"You need fear nothing of the sort," Fenella replied. "Why should I be sorry? You are something that will remind me of him, something I shall always be glad to have near me. You can guess why I have come?"

Ruth made no answer for a moment. Fenella laughed a little imperiously.

"You poor child!" she exclaimed. "You cannot think that since I know the truth I could leave you here for a single second? We can fetch your clothes any time. Tonight you are coming home with me."

Ruth gazed at her with straining face.

"Home?" she murmured.

"But naturally," Fenella replied. "You are my brother's child and I am a lonely woman. Do you think that I could leave you here for a single second? Arnold has some claims, I know," she continued. "He can come and see you sometimes. Do not be afraid," she went on, her voice suddenly softening. "I shall try to be kind to you. I have been a very selfish person all my life. I think it will be good for me to have some one to care for. Arnold, please go and ring for the lift. Now that I have two invalids to think about I must not be away for long."

He looked at Ruth for a moment. Then he obeyed Fenella. When he returned Ruth was standing up, leaning upon Fenella's arm. She held out her other hand to Arnold.

"You will help me down, please?" she begged.

It was a day of new emotions for Arnold. He was conscious suddenly of a fierce wave of jealousy, of despair. She was going, and notwithstanding the half-pathetic, half-appealing smile with which she held out her hands she was happy to go! Fenella saw his expression and laughed.

"Arnold looks at me as though I were a thief," she declared lightly, "and I have only come to claim my own. If you behave very nicely, Arnold, you can come and see us just as often as you please."

It was all over in a few minutes. The automobile that had been standing in the street below was gone. Arnold was alone upon the sofa. The book that she had been reading, her handkerchief, a bowl of flowers she had arranged, an odd glove, were lying on the table by his side. But Ruth had gone. The little room seemed cold and empty. He gripped the windowsill and, sitting where they had sat together only a few minutes ago, he looked down at the curving lights. The old dreams surged up into his brain. The treasure ship had come indeed, the treasure ship for Ruth. Almost immediately the egotism of the man rebuked itself. If indeed she were passing into a new and happier life, should he not first of every one be thankful—first of every one because within that hour he had learned the wonderful secret which he had been dimly struggling to fathom?

XXXVII

THE accountant was preparing to take his leave. There had been an informal little meeting held in the dingy private office of Samuel Weatherley & Company, at which he had presided.

"I really feel," he said as he drew on his gloves thoughtfully, "that I must repeat my congratulations to you, Mr. Jarvis, and to your young coadjutor here, Mr. Chetwode. The results that I have had the pleasure of laying before you are, without doubt, quite excellent. In fact, as far as I can remember, the firm has scarcely ever had a more prosperous half-year."

"Very kind of you, I am sure," Mr. Jarvis declared, "and most satisfactory to us. We've worked hard, of course, but that doesn't amount to much after all. When you've been in a business for something like thirty-five years, as I have in this one, the interest you take in it is such that you can't help working. This I must say, though," he went on, placing his hand on Arnold's shoulder, "Mr. Chetwode is almost a newcomer here, and yet his energy has sometimes astounded me. Most remarkable and most creditable! For the last two months, Mr. Neville, he has scarcely slept in London for a single night. He has been to Bristol and Cardiff and Liverpool—all over

THE CORNER GROCERY

By WALTER E. WEYL

ILLUSTRATED BY IRMA DÉRÈMEAUX

MY FRIEND, the Socialist, is convinced that the corner grocer is doomed. "I do not say I think it," he told me. "I know it! The little grocer is an economic has-been."

I have respect for my Socialist friend. He knows all that is to be known about surplus value and economic determinism. He is a man who unites intellectuality with throbbing sympathy, a man who can really feel with a whole group or a whole generation. I always listen to whatever my Socialist friend has to say.

"I am sorry for the grocer," he mused, "and for all these little devils in the retail trade. They're economic victims, like you and me. They cling to their dying little businesses like a cripple to a crutch. That's what they are—cripples, industrial cripples. They have just enough capital to bind them to their chains." He waved his arm with a large, all-including gesture which focused upon us the eyes of the passers-by. "The corner grocer, I tell you, is done for. He does not fit into our economic structure. He does not harmonize with our inevitable economic development. His business is too chaotic. He works too hard, earns too little, costs too much. He can't survive. Already Big Business—Capitalism with a capital C—is invading his territory. The big grocery eats up the little grocery. The little grocer dwindles. Soon he will be as rare as a cow on Broadway. Soon ——"

"There used to be three grocers in this block," I interposed reminiscently. "Today there are four."

For a moment the Socialist was silent. It was a thunderous, protesting silence.

"Oh, a single instance," he began.

"And here is the fourth," I interrupted as we stopped at the corner. "A brand-new shop, a brand-new grocer—and a poet as well."

Trials of the Middleman

OVER the door of a new and brilliantly painted grocery store hung a wreath-crowned sign bearing this metrical device:

Plenty of turkeys, plenty of geese,
Plenty of chickens, too;
At prices to fit every poor man's purse—
What more can a grocer do?

My Socialist friend has one failing. He does not love poetry.

"A single instance," he repeated, "proves nothing. You will find, if you take the trouble to look it up, that the little grocer is disappearing. The inevitable economic development, which ——"

. . . . . .

I did take the trouble to look it up. I wondered how three grocers could dwindle to four. I wondered what the grocer himself thought of this "inevitable economic development" which was obliterating him. I wondered how it felt to dwindle.

So, on a certain sunny day, I took my stand at the street corner and watched a little crowd of purchasers force a path through an alleyway of barrels and boxes into the store of the grocer-poet. Surely, I thought, poetry pays when it is to the point. As I entered the shop I glanced at the grocer. He bore no physical symptoms of dwindling; there was about him rather a latent expansiveness, as though he would have become stout had he had the time. He was a man of fifty or fifty-five, with deep brown eyes. He was smooth-shaven in deference to his business. His accent would have told me he was a German, even had not the name Carl Hengelmüller stood above the door.

At a desk in the near corner of the shop sat a young blond woman, the presiding genius of the place. She was evidently of recent importation, like the Westphalian ham, the German prunes, and the crisp honeycake with *Gruss aus Nürnberg* traced in white sugar upon the brown surface. I might have taken the blue-eyed young woman for the grocer's daughter but for her broad, ostentatious wedding ring. "*Meine zweite Frau*," vouchsafed Hengelmüller, with an unconcealable pride. The grocery business could not be hopeless if grocers could afford second wives!

As I lingered, after laying in a stock of inharmonious edibles, I amused myself by watching the intense activity of the little store. Frau Hengelmüller, who had acquired a vivacious grocery English, had her eyes everywhere.

"Try our plums, Mrs. Wentworth!" she cried out to a customer who was about to leave the store empty-handed. "We have a special price on them today and they are fine with turkey—and much cheaper, now that cranberries are so high. Carl, tell that lady to come here. I'll give her a good recipe for those greens. Heinrich," she shouted to the tired little clerk who was tying up a parcel with dignity and deliberation, "*schnell!* The lady hasn't got all day to wait. *Schnell!*"

She Argues Obstinately That Dash Ought to Put Up His Delectable in Half-Pound Packages

When the rush was over and the business of the little grocery entered again into quiet waters I engaged Hengelmüller in conversation. In exchange for some confidences of mine he gave me his life history. He had come to America as a boy of seventeen, had worked five years as a grocery clerk, had started business with five hundred dollars saved, had married and raised three sons and three daughters, had prospered moderately and continuously, and could have retired by now had not his wife—*meine Erste*—lingered six years with an incurable and expensive disease. "Doctors cost money," explained the grocer. "You must sell many pounds of sugar to pay for one little operation—easy, like this." With an abrupt movement of the cheese-knife he showed me how easy the costly surgeon's operation really was.

I soon realized that this corner grocer was a philosopher as well as a poet. For thirty years prior to moving into our neighborhood he had been in one shop. From that vantage-ground he had watched the public. Watching the public makes you a philosopher, whether you live in a tub like Diogenes or are sandwiched between a saloon and a barber's shop as was the poet-grocer; and philosophy, which is at first a rare intellectual dissipation, ultimately becomes a habit.

"The public says," I ventured, "that the grocers and the other middlemen are the cause of the high prices. Now what do you think of that?"

The grocer did not take the trouble even to shrug his shoulders. "What does it make a difference," he asked, "what I think? The public is always right. The customer can do no wrong."

"Is that what you think?"

"It ain't what I think," he answered. "It's what I act on."

For a few minutes Mr. Hengelmüller ruminated audibly.

"It is a crazy world," he said. "Some of the public is in prison and some in the asylum. The public is no better than you or me, and much more unreasonable; but let it grumble—let it growl—you've always got to give the public right.

"Here's the philosophy of it," he went on: "When a fellow comes in to sell me stove polish he says 'sir' to me and laughs at my jokes. When the same fellow comes in to buy Dash's Delectable Coffee I say 'sir' to him and laugh at his jokes—because then he is the public. And there you have the whole secret of trade.

"There's a woman now," continued Mr. Hengelmüller as a stout, red-faced person huffed out of the shop after giving the grocer a redundant piece of her mind—"that woman is a reg'lar type of the public. She won't take no coffee except Dash's Delectable and she wants it at twenty-five cents when I pay twenty-eight for it. She tells me I grind the faces of the poor; but I make only twenty dollars a week. She says I'm responsible for the high cost of living."

Troublesome Tomatoes

I TALKED with Mr. Hengelmüller on many subjects, but we always came back to the cost of living. I dilated on the wide difference between wholesale and retail prices, and asked what became of that difference.

"You can search me," responded Mr. Hengelmüller impatiently. "I ain't getting rich and I work hard for what I get."

If you sit in the back corner of a grocery for a few days and watch the business from the time it begins, at six o'clock in the morning, until the shop closes, at nine or ten, you begin to believe that Mr. Hengelmüller is right—that the grocer works hard for what he gets. Whether or not he is responsible for the high cost of living, his gains do not come to him sleeping. The grocer bears no physical resemblance to the stout, comfortable, leering monsters, cigar in mouth and rakish high hat on head, whom we see pictured in the newspapers as the representatives of the trust.

The typical grocer is rather a pinched and active type. He does not seem quite at peace with the world. He appears to think too much of business. When, at six in the morning, he comes downstairs to the store he looks as though he had stayed awake all night wondering how he could dispose of those canned tomatoes. When he comes back from market, at eight o'clock, he still seems to be thinking of those canned tomatoes. During the morning a thin stream of customers flows into the store and the grocer says "Yes, sir," and "No, ma'am," and "Thank you," while all the time he is weighing and measuring and wrapping up and making change—and thinking of how he can dispose of those tomatoes!

He takes his dinner at noon and for an hour or two he is absent from the shop, though always he has it in mind. While he is away it is his wife and the little boy who meet the thinner stream of customers. It is they who say "Yes, sir," and "No, ma'am," and "Thank you," and weigh and measure and wrap up and make change. At three o'clock the grocer, the lord of all the store, comes down again, bearing a sign: Canned Tomatoes, First Quality. Twelve Cents! He shows the sign to his wife. "We've got to

Digitized by Google

clear those shelves!" The stream of customers increases, and faster and faster the grocer says "Yes, sir," and "No, ma'am," and "Thank you," and weighs and measures and wraps up and makes change.

About six o'clock the stream has become a flood; and the grocer, working very fast but very quietly, says, "In a moment, sir," "In a moment, ma'am," and "Yes, sir," and "No, ma'am," and "Thank you." The store, which was crowded a moment ago, suddenly becomes empty except for one customer who wants half a pound of Dash's Delectable, though she knows it comes in pound packages only. She is a quiet, pale woman, who argues obstinately that Dash ought to put up his Delectable in half-pound packages and it's the grocer's business to see that he does. After she leaves, the store takes on a dead-and-alive appearance; but every few minutes the clangorous door-bell rings and customers come in for a box of matches, a cake of soap, a can of tomatoes, a pound of sugar, or for information as to the present whereabouts of "a fellow named August Schmidt, who lived round here three or four years ago."

At nine the store closes, unless there is a customer—but there is always a customer; and the later she is, the more leisurely. It takes some time to choose between Dash's Delectable and Blank's Double X, and the grocer has time—or is supposed to have it. He does not hurry the customer; and as she leaves he closes the door as though regretting the untimely end of the deliberations—as though regretting that the workday is only a scant fifteen hours.

If you look at the grocer as he closes his shop at night you are surprised that he does not seem tired. He does not look very different from the way he looked at six in the morning. Then, as now, he did not seem refreshed or buoyant. He only looked untired. And he looks untired now.

If he is making a fortune he is not spending it in visible ways. His rooms upstairs are in no way superior to those that a skilled mechanic inhabits. The food he eats is not better. And his wife, like your wife and mine, complains of the high cost of living. Even a grocer does not get groceries for nothing.

Risks and Returns to the Retail Grocer

PERHAPS he is saving his wealth. Perhaps he is hiding it and is living a deceitfully spare life, only to emerge in old age with a huge fortune. That would account for high retail prices. When, however, you examine the grocer's books you see even this illusion fade. More money is spent in the average grocery store than ever before and there are more grocery stores in which to spend it; but not all of it—or much of it—sticks to the grocer's hands. Wholesale prices have risen, but the rate of profit has not. The retail grocer is like the engraver of banknotes—he makes no more working on a thousand-dollar bill than he does on a one-dollar bill.

Of course conditions differ. They differ with the city or town or village. In the village the store in which you buy groceries can hardly be called less than a general store, for feed and clothing and furniture and books, and even drugs, form part of its stock. Conditions depend also upon the neighborhood—upon the store itself. There are great department stores and mail-order houses doing a vast, ramified grocery business; and there are chains of stores, with hundreds of establishments under one management. Some of these stores doubtless earn their tens of thousands and others their hundreds of thousands. At the other end of the line is the microscopic cellar grocery, perhaps run by an immigrant's wife and stocked with the most apologetic supply of fruits and vegetables. It is merely a subsidiary business, which cannot stand on its own feet and earn a decent living for a whole family.

Avoiding these extremes—the grocery emporium and the little cellar counter—let us try to strike an average. But this, too, is difficult. Who is the average grocer? We don't know; and the grocers know—or seem to know—least of all. A grocer does not tell his business. He dispenses groceries—not information. Though we cannot strike an average, here is a single instance that seems to represent fairly well a large proportion of the grocers we know.

This grocer started with a capital of a thousand dollars. By means of credit he secured a stock in trade worth twelve hundred and fifty dollars, not counting store furnishings. He turned over his stock once a month, doing a business of fifteen thousand dollars. His operating costs were almost twenty-one per cent, thirty-one hundred dollars in all. Those costs included a drawing account of seven hundred and fifty dollars, on which the grocer lived. At the end of the year he had saved six hundred dollars—or four per cent on his business.

This is doing very well—doing far better, I believe, than most grocers do. It is not an exorbitant profit. Altogether the grocer made thirteen hundred and fifty dollars, of which fifty dollars might be considered as interest and thirteen hundred dollars as salary. That means about twenty-five dollars a week for fifty-two weeks for a man who worked hard and was above the average of the men in his trade.

In counting this man's returns we have not taken risk into consideration; but the risk is serious—very serious. Have you ever noticed how the grocers' signs change? The name Hallahan above the door is replaced by Parker—Parker by Bauer—Bauer by Goldfarb—Goldfarb by Masiello. Not all of these represent failures. Sometimes the grocer retires or dies—or follows his old customers to a new neighborhood. Often, however, he has not been able to make both ends meet. He has overstocked or bought injudiciously. His neighbors may not have liked him. He may not have been obliging enough. He may have been too obliging and extended credit to whom credit was not due. He may have failed to make his store attractive. He may have had a dishonest or careless clerk. He may have been beaten out by a man who counted only fourteen ounces to the pound and seven quarts to the peck. Or he may have been outmaneuvered by a competitor with more brains, more initiative or a more engaging personality. In any case, failures are frequent and many ex-grocers are now timekeepers on railroads or night watchmen in factories. When a man puts his little capital into a grocery he may never get it out again. There should be money in groceries—for much money has been sunk in them.

The risk is especially great—here as elsewhere—for the old-fashioned little merchant who cannot change. New ways of selling goods are introduced and the grocer who sticks to the old methods of doing business does no business. There is growing specialization. Delicatessen stores, answering the needs of those who cook badly or not at all, spring up everywhere; and the old-time grocery must adapt itself to this new competition. Everywhere the customer seeks to save time at the expense of pennies, and ready-to-eat foods of all kinds pour into the groceries on their way to the dining rooms of a continent. Standardization invades the grocery. The old cracker barrel, from which the village philosophers gained aliment and inspiration, makes way for cleaner and more expensive crackers, easier to sell, but upon which there is a smaller profit for the grocer.

"'The World Can Never Get Along Without a Grocery Round the Corner'"

The Philosophy of the Cracker Barrel

GIANT manufacturing concerns, advertising the standardized articles over the head of the grocer, create a demand which must be met by the specific article at the advertised price, however small the profit and even though there be a loss. Grocers, whose operating expenses range from fifteen to thirty per cent, are obliged to sell many articles at an advance of only ten per cent; but to refuse is to invite worse evil, for the customer who cannot get what he wants will not take anything. And the customer, as Hengelmüller asseverates, is "always right."

To all these changing conditions the grocer must adapt himself. He must make his store as clean as are the delicatessen stores; he must accept occasional losses for the sake of a larger gain. He cannot be too insistent on justice. The public has no time to heed his grievances. If he cannot make a living at his business let him get out and make place for some one else. He must adjust himself.

Curiously enough, he does adjust himself. As the great world outside the grocery changes, the grocery changes with it. A more aggressive, intelligent and honest grocer enters the business. The new grocer reads his trade journal and keeps abreast of the times. He learns to avoid traditional errors and he gains confidence as he sees that new developments, which were to have crushed him, pass innocently over his head.

"When the department store began to sell provisions," said Hengelmüller, "some of us grocers said: 'It's all up with us at last!' They said: 'Big fish gobble up minnows.' But I said: 'The world can never get along without a grocery round the corner.'"

Hengelmüller proved himself a prophet. The department store bought more cheaply than did the little grocery. It spread out its operating expenses over a larger business. It gave good service. It could afford to run its grocery business at a slight profit or even at a loss, because people who came to buy cranberries stopped to buy furniture and books; but the corner grocery survived. The department store delivered your cranberries in half a dozen hours; the little grocery in half an hour. You did not have to spend

(Continued on Page 61)

Sunshine of the Traffic Squad

By Robert Emmet MacAlarney

ILLUSTRATED BY WILL GREFÉ

YOUNG Billy Hopeleigh sauntered down the clubhouse steps, kitbag in hand, smoking a dinner-size cigarette—not that it was dinnertime; he had just finished a late breakfast. But the shirred eggs and bacon, and the small pot of coffee possessed the stimulating qualities of the cocktail he had resolutely denied himself. So he had gone over to the glass-covered trays beside the office window, and had signed for a box of the absurdly long and fat paper rolls which the manufacturer ostentatiously labeled as the best brand.

Hopeleigh Looked at His Watch and Did a Bit of Rapid Calculation

Billy Hopeleigh would not have mustered up sufficient courage to buy them in the evening, with the fireplace chairs filled and the usual knot of thirsty souls clustered about the small bar-window. Billy had marveled often at this habit of flocking to the little window-bar, even when he had found himself in the clutches of the impulse evening after evening. It was the American restlessness, he decided. This explained the million of men who daily hitched about upon toe and heel, trying to make hootnail impressions upon the brass of glistening foot-railings.

There was practically no one to see him sign for the imposing packet of tobacco. He had been the last to quit the breakfast room. Then he had handed over the check for his bag at the coatroom and had stepped into Forty-fourth Street.

He could recall this, the club street of streets, as it had been—say, seven or eight years before—when he had been asked to eat dinner in this same house with a Varsity captain. Since then he had watched the vague diplomacy of college football wax and wane, and wax again. At it all he had smiled many times. In his preparatory-school days, ends that were rangy youngsters of eighteen, who needed only to be taught the more elemental points of tackling, so that they might never be drawn wide enough to overrun the man with the ball, had been objects of genuine though stealthy interest in certain elm-shaded towns.

It had been Slick Hopeleigh, of Martinsburg Academy, who had alternately stuffed and stammered before the keenly appraising stare of a next year's football general. And Billy realized that, if it had not been for that dinner, probably he would now be coming out of the loftier and more pretentious structure which bulged heavenward from the opposite sidewalk. He would probably have captained—at least would have played upon—a winning eleven. This thought made him glower; but he was not really sorry that things had turned out as they did.

Had he worn a jersey of a different college he might never have met Rheta Marriner, who had been, for a long season or two, the chief aim of his rather leisurely stockbroker's existence. He had first seen her, arrayed in a fur motor coat, in a stadium section. And she had manifested faintly expressed interest, after a needlessly elaborate introduction by Kid Stanton—how silly the undergraduate nicknames seemed!—one of the legion of university Kids, only because she had caught the words: "Captain of the Naughty-Naught Team."

Tomorrow would be the Fourth of July. And he was to spend it and the evening before it at the Marriner place; so he felt quite self-satisfied—in touch pleasantly with time and circumstance—as he strode to the taxi, tossing in his bag himself. This, to those who knew him well, would have been an omen. Usually Billy Hopeleigh allowed the hallman to transport his luggage from threshold to waiting cab. And Billy would have followed the bag had not a youth in horizontally striped waistcoat and many brass buttons pursued him down the clubhouse steps.

"There's a call by telephone, sir," he said. And over the wire had come the voice of Hungerford Ellis, the Ellis one always sees mentioned in the morning papers the day after a championship polo match.

"I've found the very pony you've been looking for," he was saying. "He's not fifteen feet from me this blessed moment, at the Empress Stables, in Twenty-sixth Street. It's now or never, Billy. They'll keep him out of the auction shed for another hour, but no longer. He's carded with a lot that have to be sold at once. Come on down."

Hopeleigh looked at his watch and did a bit of rapid calculation. He could take a later train, a local, and make the Marriners' in time for luncheon. Well, it might be worth while. Ellis knew a good pony when he saw one. He ordered the chauffeur to drive to the Empress Stables instead of the Thirty-third Street tube. The polo crack was waiting.

"The funny thing about it, Billy," remarked that enthusiastic person, "is that I'm not getting any commission. This is done purely for the love of Meadow Brook prestige. We'll need more ponies when the Englishmen come over again to have a try for the cup."

The Empress Stables are not New York's nearest approach to Tattersalls. They do not allure many gilded owners on the lookout for Horse Show blue-ribbon speculation; for it is here that one sees good horseflesh, but horseflesh in the rough. A crowd is ever loitering about the two green-painted brick barracks, through the open doors of which come out-at-the-elbow hostlers, wrists twisted into throat latches of carelessly groomed animals—most of them new to town and plunging at the sound of street-car gong and motor horn.

They give a guaranty good for a week, do the Empress proprietors; and one does his bidding from the curb, while the object of his regard balks or lumbers unskillfully over the asphalt. Rabble and a handful of knowing ones look on, and there is an infrequent offer from some quiet individual, utterly "unhorsey" in appearance. The paddock-coated party to be seen round Madison Square Garden's arena in late November never seems to materialize here. The Empress draws the middleman, the man who is willing to gamble upon crude thoroughbreds in bulk. Ellis and Hopeleigh were out of their element as they stood in the staring throng, and the throng marked it. None the less, the polo pony pleased. And the Meadow Brook roster of available mounts was increased by one—at a bit higher figure than Billy had contemplated.

"Just for your scout-work, Ellis," he said after a check had been written in the little office, "I'll charioteer you wherever you say. Then I'll catch the eleven-thirty."

His friend, however, waved aside the invitation.

"I'm going to walk back to the rooms and pack a bag myself for over the Fourth; going out to the Essex County Country until Wednesday. Where are you bound for, son?—the Marriners? Seems to me, Billy, you ought to buy a commutation ticket; it would be economical in the —— Hello! What's all the East Side doing at the fair?"

Hopeleigh saw the shabbier part of the crowd stringing off to the farther end of the barracks. The alley seemed to have become crowded of a sudden. Cherry Hill, the Ghetto and Little Italy were all represented in the jam that jostled about the doorway, through which might be seen the perch of the Empress auctioneer.

Then there was a glimpse of police blue, with the familiar insignia of the Traffic Squad. The officer was having a final word with the man of the hammer.

"That's Sergeant Hogan," said Ellis. "I got to know him well on the bridlepath while you luxurious dogs were shying your morning canters in February and March. It's another sale of worn-out police nags. Let's have a look."

"Sure it is," said the sergeant, after he had shaken hands with the polo player, as eighteen animals were paraded from stalls into waiting line while the sharp-faced little auctioneer was choosing his first offering. "We keep the good ones as long as we can; but the department vet comes along, every once in a while and, no matter how fond of a mount we are, if it shows signs of wear and tear it's got to go."

"But I thought there was a city farm," said Billy Hopeleigh.

"There's a place to train 'em all right," explained the policeman; "but they haven't spent any money yet on a horse Bellevue. The poor brutes are so used to having their flanks scraped by a leather puttee that they'll never be good for anything else. And yet they get the gate."

"Where do they go?" asked Ellis.

Hogan waved a broad thumb at the jargoning knot of East-Siders.

"They get 'em. Most of the bunch that will be making fifty-cent bid-raises are ragmen or hucksters. They'll buy the brutes for next to nothing and they calculate to get their money's worth in a hurry. I've had three mounts break legs under me trying to stop runaways, and I felt bad when I shot 'em; but I'd rather have Sunshine go that way than this. You know, in Uncle Tom's Cabin, where they sell the old nigger that has lived on a gentleman's plantation? That's the way I feel about Sunshine. He's the bay yonder."

Billy Hopeleigh followed the level of the policeman's finger and frowned.

"There's Doc Perry, the vet," continued Hogan. "He'll tell you Sunshine's good for another five years if he's treated kind. Hey, Doc! How about that Sunshine horse?"

"A little too old—that's all," said the veterinary. "He's by far the best of the lot. Some of the others are gone in front. They can't be depended on for the gallop it takes to stop a bolter on asphalt. Sunshine's different. He's just too old—almost thirty. I hated to condemn him, Hogan; but what would Mrs. Hogan have said if he had bundered on the Avenue some day and they had carried you home with a broken neck? Why don't you bid him in?"

"See, He Wants to Shake Hands on It"

"Why don't I?" growled the sergeant. "You know why. There's some of us in the department that don't graft, no matter what the newspapers say—and I happen to be one of 'em. I've enough children to feed, let alone horses. Why ain't some of the women whose lives he saved, in twenty years of keeping an eye on the Park, here to make his last days comfortable? He only wants a boxstall and a bit of exercising

Digitized by Google

now and then. Where's the stingy millionaire that Sunshine shouldered into the bushes near the Plaza, when a yellow touring car had set his green cob crazy? The pirate would be in Greenwood now but for Sunshine. The price of a few dinners would give the old horse grass for the rest of his life. I don't suppose he's had a mouthful of real country grass since he was a colt."

The bay knew his friend when the sergeant led Hopeleigh and Ellis to the head of the line. "Always looking for sugar. The boys at the Arsenal made a pet of him," said Hogan as the warm nose touched the coat pockets of the three in turn, singling out Billy, however, for the most persistent attention. Sunshine nosed like the gentleman he was, and he stirred something in the horse-loving Hopeleigh breast deeper than the feeling aroused by the clean-cut polo pony, bought a half hour before.

"Almost thirty years old and they're selling you to a Cherry Hill junkman!" thought Billy. "I'm an idiot, but I'm going to blow you to club life in your old age, Sunshine. I'm going to see that you get grass, with clover and clean dew in it, for breakfast—and the morning papers, too, if you want them, old fellow."

"He knows a lot of tricks," he heard the sergeant telling Ellis. "He'll pick your pocket and then let your handkerchief fall on the ground, looking as innocent as a baby. And I'd trust my own kids in his stall, even if they played paper dolls under his hoofs. He's gentle as a lamb, except when he feels the spur and knows he's got to overhaul a runaway. Then he turns savage; and by the time he gets alongside he's reaching out, trying to take mouthfuls from the neck of the brute that is making all the trouble."

"Got to do it, Ellis," said Hopeleigh, slapping the animal's neck. He stepped back a pace, Sunshine following as far as the short halter would allow. "I've simply got to do it. If an ungrateful city lets its old horses go this way it is up to good citizens to interfere."

"What in thunder will you do with a condemned police horse?" asked Ellis. "Don't be a sentimental ass, Billy."

"Got to do it," repeated the man who had come to the Empress Stables to buy a polo pony and nothing else. "He's taken a fancy to me and I couldn't disappoint him. And—by Jove! I have it. I'll take him out as a Fourth-of-July present to the Marriners."

"You'll be as welcome as a man with the measles," said Ellis.

"I'll take him out and give him to Miss Marriner. He'll stand for a side-saddle, won't he, sergeant?"

"Don't believe he's ever had one on," replied Hogan. "It might be too late to teach him that now."

"You're an idiot, Billy; but I can't do the square thing by the horse if I don't remind you that side-saddles are going out of fashion. Miss Marriner never uses one," Ellis interrupted. "Don't you remember when she rode her blue-ribboner last year?"

"Chump that I am!" exclaimed Billy Hopeleigh. "Of course I do. He'll carry a woman that way all right—eh, sergeant?"

"Sunshine'll carry any one astride of him as steady as a church—except when he's told to go after a runaway. You always want to remember that. He won't chase 'em unless he's told; but afterward there's nothing short of catching up or a broken leg will hold him. Whoever's riding will have to hang on. Sunshine wouldn't wait to see what happened if you fell off. Would you, old horse?" The bay, tugging at the halter in the line of worn-out department steeds, bobbed his sleek head and whinnied, lifting a forefoot in the direction of his friend.

"See, he wants to shake hands," said Hogan. He walked over, touched the uplifted hoof and slapped the horse.

"It'll be better than the rockets and pinwheels I'm taking out for the Marriner twins," said Billy. "Have him bid in for me, sergeant, will you?"

"Are you taking fireworks to the twins?" asked Ellis, laughing outright. "That's a symptom of the last stage. That's what all of your disheartened predecessors have done—taken things to those thirteen-year-old malefactors. What a long procession of Greeks bearing gifts has traveled to Haworth! They never seemed to pave the way to ——"

Billy Hopeleigh was turning away in mock anger when Hogan interrupted to inquire:

"How high will you go, Mr. Hopeleigh? Those junkmen may boost the price a bit when they find some one out of their line wants the Sunshine horse. You won't be sorry if you get him. I'd buy him in myself if I could."

"Go as far as you like," said Billy.

And in another quarter of an hour the East Side pedler flock jabbered excitedly while they watched the prize of the condemned lot knocked down to "W. H., of the Carston Club," for twenty-two dollars and seventy-five cents—a pyramid figure that the Ghetto, Cherry Hill and Little Italy had builded, half a dollar at a time.

"Thank you, sergeant," said Sunshine's new owner, the relieved Traffic Squad officer shaking hands so vigorously that the polo forward's palm tingled. "Remember you can have a look at him whenever you have a day off and the mind to."

"He's as playful as a kitten," said Ellis as the rescued bay was led from the line. After which Hopeleigh arranged to have an express car shunted upon a Haworth siding the next morning at six o'clock, with an Empress groom in charge who could be trusted not to go upon his holiday spree until he had turned over his convoy, in good condition, to the young man who gave him a five-dollar tip in advance and did not seem to begrudge the cost of this sudden expedition.

The twins were waiting when a local deposited Billy at the Haworth station. The Marriner twins were famous folk, for folk so young—girls, who by all signs and portents should have been boys. They rode their ponies as well as Rheta Marriner her blue-ribboner—had even learned to break clay pigeons through the offices of a weakly indulgent

"I Feel Like a Picture Puzzle That Some One Has Shoved Off the Table"

head stableman—and knew the good and bad points of their catholic collection of dogs better than their undergraduate brother. And now they had motored alone in the runabout to welcome this latest victim of their bow and spear—Margaret at the wheel, with a solemn covenant that she would yield the driver's seat as soon as Billy Hopeleigh should see, beyond doubt, that she had driven all the way herself.

They were really anxious to see Billy as well as the fireworks they knew he would bring them; for, of all of the Greeks bearing gifts, as Ellis had styled them, this newest incense-burner at Rheta's shrine pleased these young incorrigibles most.

"How!" exclaimed Hopeleigh as he alighted, tossing upward the hand that was not grasping the kitbag, after the fashion of the Indian game he and the twins often indulged in these days. "How! Heap sun. Ugh!" A wonderful thing about Billy was the way he could still play at games with youngsters.

"How!" grunted the twins, small fingers flung heavenward. "Big chief welcome. Ugh!"

Leatherstocking pretense faded into shrieks of delight, however, as they watched Hopeleigh run along the track to the baggage car, where a brakeman helped lift down a box that had every appearance of concealing red fire and powder of sorts.

"We do like you, Billy," said Margaret after the treasure had been stowed in the runabout, resigning the wheel to Mabel without regret—was she not near enough to things that would blow up to finger the label?

"Yes, we are really and truly fond of you," agreed Mabel, turning for a moment before she shocked them into speechlessness by an inevitably sudden start. "You're different from the other slowpokes that come to see Rheta."

"Thank you, twins, separately and together," laughed Hopeleigh. "And now, Mabel, see if you can drive home without ditching this precious consignment of explosives."

The Marriner house was three miles from the station, just far enough from the village to have a perspective of red-colored roofs and one church steeple from the front veranda. To reach it, Mabel shot the car along the Country Club golf links, she and Margaret yelling, like the Iroquois they liked to pretend they were, whenever they saw an acquaintance; and they saw many such. Billy Hopeleigh knew that the men and women who smiled as the treble hail halted them in the act of putting, or made them slice a drive carefully begun, were saying: "There goes young Hopeleigh again. He's the twins' newest burnt offering."

And now the car swung into the driveway, a warwhoop rather than the horn announcing its arrival to the group on the porch.

"Have you brought your present?" gibed Percy Winslow from his wicker chair. "I find that it is customary to bring a present when you come to the Marriner house. The twins have established a pay-as-you-enter system. Little fiends, unhand the good youth! He's leaving the loot for you in the runabout."

"Children!" called Miss Marriner from the top step. "Billy, they're such dreadful bandits. They humiliate me so often. What have you brought them in that packing case?"

"A few pinwheels and crackers," said young Hopeleigh, grasping the hand she extended. "I promised them weeks ago; and I never forget a promise—do I, twins?"

Chorus of "No, Billy," from Margaret and Mabel, cruising off with their prize to the garage.

"Remember," cried Rheta Marriner—"not one squib tonight! We'll have our celebration tomorrow."

"Sweet-natured babies," said Percy Winslow. "What am I offered that they won't break open the treasure chest within the hour?"

"I've got something for you, too, Rheta," murmured young Hopeleigh. "It won't come until tomorrow. There's a story that goes with it. And if you don't like your present I'll take it back without telling."

"Percy Winslow is right," whispered Miss Marriner. "I begin to feel that we are bandits—all of us. You know, Billy, there are a few persons we ask for week-ends because we like them."

"What I wish to remark," said the indefatigable Winslow, "is, whether it is to be tennis, or golf, or both, or motoring—or neither."

There were a lot of people in that night for bridge. Percy Winslow, ever the introducer of something to banish boredom, produced some tennis balls that had been covered with phosphorescent paint, and the very youngest persons batted them about the turf before the east veranda until the last one was knocked into the shrubbery, where its dulled glimmer did not betray it. It was quite late when young Hopeleigh found a chance for a word alone with Miss Marriner as the women were going upstairs.

"I'm a brute to suggest it," he said, "but if you'll be on Wakerobin, where the road from the station cuts the links at the tenth hole, tomorrow morning at seven, before the rest are thinking of getting up for breakfast, I'll show you your Fourth-of-July present. It will be here by then."

"Seven o'clock," repeated Miss Marriner.

"I know it's awfully early," said Billy, "but I rather want to surprise you. And it will be a glorious morning for a canter. Besides, it will be the only chance we shall have. A holiday always takes so many people out of town. There'll be nothing but joy-riders on the roads all day tomorrow."

"Oh, I don't mind because it's early," said Miss Marriner. "I merely want to fix my mind on it, so I shan't have to be wakened. It is always such a nuisance to have to be wakened, for it means you aren't doing the

PHILADELPHIA, MARCH 9, 1912

The Trust Invisible

AN INDUSTRIAL trust is a very tangible sort of thing. Its shares are daily bought and sold in the stock market. It publishes reports of its assets and operations. Its directors and officers are known. With comparatively little trouble any intelligent person can find out what property it possesses or controls, the exact extent and character of its business, the price it charges for its goods, the wages it pays employees, how it treats competitors. It is well established in law, moreover, that an industrial trust is almost completely subject to control by the Federal Government.

Congress began investigating industrial trusts at least twenty-five years ago, and Congress or some other branch of the Federal Government has been on the job continuously ever since; but to this day no even approximately satisfactory scheme of dealing with industrial trusts has been worked out. The problem of regulation of those concerns stands where it did twenty years ago.

This is why the Money Trust investigation is discouraging. Instead of attacking the tangible, concrete, thoroughly surveyed problem of industrial trusts, Congress wanders off into an investigation of the vague, formless, bodiless thing called the Money Trust, whose very existence is denied by many. Undoubtedly Mr. Morgan has great influence with many bank directors, but what is Congress going to do about that? There would be no particular objection to Congress' amusing itself by cross-examining Wall Street if it had nothing else to do—but it has much else to do.

Profit and Loss in Steel

FROM the quite complete trade reports now at hand it appears that the average prices of leading iron and steel products during the last year were decidedly the lowest since 1904. Bessemer pig, for example, averaged under sixteen dollars against nearly twenty-three dollars in 1907—steel billets, twenty-one dollars against twenty-nine. Six big items—not, of course, including steel rails, which remain at twenty-eight dollars a ton year in and year out, regardless of trade conditions—show a decline from 1907 of about thirty per cent.

In this poor year the Steel Corporation, after meeting all expenses, repairs and maintenance of plants, earned one hundred and four million dollars net, out of which twenty-six millions was deducted for sinking funds and depreciation and twenty-three millions for bond interest, leaving enough to pay fifty million dollars in dividends, including five per cent on the copiously watered common stock, and a little surplus besides—this in spite of the heavy cut in prices. Of late, steel and iron prices have been advancing; yet steel men maintain that they couldn't stand a cut of twelve per cent in protective duties!

England's Balance-Sheet

SEVERAL exponents of conservatism in this country have pointed out that radical legislation in Great Britain during the past two years has already brought dire results—namely, Mr. Morgan is removing his paintings, statuary and tapestry from London museums and shipping them to New York, because if they remained in England at the time of his demise the government would levy a heavy death duty upon them.

This unquestionably is unfortunate for England. On the other hand, as Great Britain's fiscal year draws to a close, London papers speak of an overflowing exchequer. With no new taxes the receipts of the government were larger by some millions of pounds than in the preceding year—due simply to a state of abounding prosperity. The foreign trade was larger than ever before in the history of the nation. Railroad earnings set a new high-water mark. Most significant of all, unemployment has fallen practically to zero, reports from nearly four hundred labor unions showing less than three per cent of their members out of work. Weighing these things in the balance against the loss of Mr. Morgan's paintings, England herself seems to think she is doing very well indeed—which shows again that so-called radical legislation is often most conservative of the nation's true wealth.

Courts Divided

IF NEW YORK'S judges should hold a mass meeting it would require Madison Square Garden approximately to accommodate them; and it would be found convenient, for the orderly dispatch of business, to form them into companies, regiments and battalions. In passing a law, the legislature simply enters it for an extensive, perilous and uncertain hurdle race through numerous courts.

For example, the legislature passed a law designed to protect employees in that state from the more rapacious loan sharks—with the following results: A railroad employee applied to a loan shark for thirty-seven dollars, payable in a month. He was required to sign a power of attorney in favor of the shark's pal. The attorney thus appointed executed a note in Maine for forty-five dollars, which, when discounted, yielded the sum the borrower required. When the note fell due the borrower failed to pay it; so his attorney proceeded to execute an assignment of his wages in the sum of ninety dollars. The New York court before which this transaction came found in favor of the loan shark. The loan, it held, was not made in New York, but in Maine; so the transaction was governed by the laws of that state and not by the laws of New York.

This decision was by the Appellate Division, Second Department, of the Supreme Court. A little earlier, in a similar case, the Appellate Division, First Department, of the Supreme Court held differently. Government in the Empire State appears to be wonderfully complicated!

A Bureau of National Parks

THE United States possesses thirteen splendid national parks—the Yellowstone, Yosemite, Grand Cañon, Glacier and Mount Rainier being probably the best known. These parks are national assets of incalculable value. Who has ever gone through the Yellowstone or surveyed the Grand Cañon without feeling mentally larger and spiritually richer—without, in other words, a real advance in civilization? What might happen to any one of these revelations of Nature if they were not national possessions is suggested by the hard fight to preserve Niagara. Merely to preserve the parks is not enough, however. That is like preserving a coal deposit by keeping it under ground when people want fuel; and up to this time, with the exception of the Yellowstone, the Government has done very little to make the scenic wealth of the parks accessible to the public. Management of the parks is now divided among three different departments, none of which is well equipped to develop them as they should be developed.

A bill before Congress, indorsed by Secretary Fisher and recommended by President Taft, proposes a Bureau of National Parks, to take charge of these wonderful possessions and, so to speak, mine their riches by making them as accessible as possible. Obviously, to develop the highest value of natural beauty, it should be made as easy as possible for people to see it. This bill embodies true national economy.

No Bad Losers Need Apply

THE governors of the Consolidated Stock Exchange in New York recently found it necessary to "discipline" a member of that institution for attempting to attract women customers by providing a room especially for their use, with clerks of their own sex. One authorized to speak for them explained: "It is the policy of the exchange that its members shall not cater in any way to women customers. Such catering is punishable under the head of 'acts detrimental to the exchange.'"

The same policy, we believe, prevails in every speculative organization. Probably any exchange or board whose chief business consists of speculating in securities or products would promptly "discipline" a member who especially sought the trade of women.

The reason is that women are notoriously "bad losers." When they find their money is gone they make a fuss about it. Now, every speculative body subsists upon "good losers," who can be separated from their money without noisy, disagreeable consequences. The difference isn't that women lose any oftener proportionately than men, but that, having lost, they become troublesome.

There is no question here of equal justice as between the sexes. If equal justice were done governors of exchanges and boards of trade would "discipline" their members for catering to the trade of men customers too.

Aristotle and Company

WE ARE much pleased to hear that out of a Harvard class in comparative literature, containing about a hundred students, not one could tell when Aristotle lived, though half a dozen guessed that the period was subsequent to 1840! Knowing when Aristotle lived—or anything else about him—is one of the least profitable uses to which lay human brains can be put. It is a fine testimonial to the undergraduate's intelligence that his real studies in comparative literature are confined to the batting averages of the two major leagues just about in proportion as the faculty tries to palm off Aristotle on him!

Learned persons are continually asking why people don't read more books of permanent value. The answer is obvious. Being minded to read improving books, people turn to some learned person's list of the twenty or forty "best." The list is sure to contain some of the dullest and least profitable works that are accessible to a modern lay reader. People conclude that if those are the best they will get along without any. For example, there is much more meat for the ordinary reader in any single extant Greek tragedy than in all classical speculative writings combined; but fifty representative lists of the "best" will mention philosophy twice to every mention of tragedy. As we recollect it, Aristotle is rarely found among the "best"—probably because, even to the learned who compose the lists, he is only a prodigious name. The first thing undergraduate students in comparative literature should be taught is to avoid reading most of the classics, in order to retain a proper admiration for them.

Seesawing Cotton Prices

SOUTHERN cotton mills, in the eighties, used one bale of cotton to six used by the Northern mills. At present they use practically as many as their New England rivals. Both together take about a third of the crop.

A dozen years ago the mills could get all the cotton they wanted under six cents a pound. Then the million producers of this great Southern staple were oppressed. Nowadays the producers sometimes get ten, sometimes fifteen cents a pound, and the mills claim they cannot operate profitably. Meanwhile, neither mills nor producers have much to say as to the price at which cotton shall sell. One year it may be fat for one and lean for the other; next year the fat may be on t'other side. A fair and reasonably stable price from year to year would be to the obvious interest of both; and by coöperation it may yet be brought about.

Business in the Senate

THE Department of Commerce and Labor wished to acquire a strip of land on the Texas shore of the Gulf of Mexico for lighthouse purposes. A bill to that end was introduced into the Senate and referred to the Committee on Commerce, which duly considered it and recommended that it be passed without amendment. Senator Newlands, therefore, by direction of the committee, called up the bill and asked that it be immediately considered. Whereupon up rose Senator Heyburn, his mind weighted with a grave doubt as to whether the bill should not have gone to the Committee on Public Buildings and Grounds instead of to the Committee on Commerce. This important point was gravely debated. In the midst of the earnest deliberation Senator Culberson, of Texas, entered. Here was a bill referring to land in Texas; but he had not been notified or informed about it! Upon inquiry of his colleague, Senator Bailey, it appeared that he also was unnotified and uninformed. So, upon objection by Senator Culberson, the bill went to the calendar, to be taken up at some future time.

Now the land to which this bill applied was a strip of sand comprising sixteen acres, and the purchase price was to be one dollar an acre—the total appropriation carried by the bill being just sixteen dollars!

A serious difficulty in running this Government is that matters which in any intelligently managed private corporation would be turned over to the third assistant janitor or the office boy must—at Washington—be gravely debated, with anxious searchings for precedents, deep ponderings of the rules, and edifying displays of Congressional lore. The Committee on Commerce, which considered and recommended this bill, consists of sixteen senators.

We should think the Senate could trust them to the extent of one dollar a head, but it seems unable to do so!

WHO'S WHO—AND WHY

A First-Class Fighting Man

OF COURSE one never could guess the basic nationality of the governor of Alabama after examining his name. The forebears of that impetuous gentleman sought craftily to conceal the implied Hibernic quality of the patronymic O'Neal by tacking thereon Robert Emmet and sending the young man forth into the world as Robert Emmet O'Neal, a name as essentially non-Irish as Patrick J. Killarney or Michael G. Galway, as all will agree. But if one did possess sufficient wisdom as to the derivation and application of names to assume that the governor of Alabama has some smattering of Irish in him, one would be reasonably correct in the assumption, even though the Governor has shed the Robert part of it and is now Emmet O'Neal. Should one lack in this power of discrimination, one still might hazard a guess that such is the fact, after watching the Governor in action or on observing his trends.

You see, the Governor is a fighting person—highly scrappaghous, as I might say—and has a habit of mixing in from any incentive, from fun to duty. Being somewhat Irish, as has been intimated, he is a person of convictions, and if you do not care for his convictions he will see to it that you learn to, using any instrument that may be handy to help in the convincing. He is no bigot, of course, but when he has a conviction he has it hard, and it is just as well to humor him while the spell is on. Anyhow, he insists on remaining convicted of his own convictions—and what's the use?

Take that time, back in the summer of 1909, when he sat in his office in Florence, Alabama, smoking a brier pipe and looking out of the window at the sizzling square. He had a book in his hands, but he was not reading it. Instead, he was arriving at a conviction. He sat for an hour, two hours, three hours. Then the conviction arrived—ker-plunk! Also there arrived simultaneously the governorship of Alabama, but that was unnoticed at the time, remaining quietly and unostentatiously in the background.

"Dodgast it!" said Emmet O'Neal, arising from his desk and throwing the book into a corner. "Dodgast it!"—or words to that broad, general effect—"I've got to cuss. And, by golly"—or words to that broad, general effect—"I'm going to cuss right now."

No sooner said than cussed. Emmet O'Neal had decided to cuss. He had picked out as his target the liquor question in Alabama. There had been much pother and to-do about this question. The state administration at the time was elected on a local-option platform. At a session of the legislature in 1907 a state-wide prohibition bill was passed. Before that prohibition had not been a political issue. The local optionists were discouraged, for the state-wide law went into effect on January 1, 1909. In July of that year a special session of the legislature ordered a constitutional election to determine whether prohibition should be placed in the organic law. It was at exactly this time, and for exactly this reason, that Emmet O'Neal decided to get into the fight.

He began immediately. He went out in the public square of Florence and talked to his townspeople. Then he took the train for Montgomery and talked every time the train stopped, cussed the legislature that had tried to ingraft prohibition on the state constitution. In the four months preceding the election he talked in practically every one of the sixty-seven counties of the state. He proved himself a good journeyman talker, too, for the amendment was overwhelmingly beaten. There were other results also. During that campaign the governorship of Alabama came marching to the front and O'Neal took it over at the request of the people, who apparently liked his line of talk. Four years before they had defeated O'Neal for the lieutenant governorship. This time they made him governor.

A Little Bout With Woodrow W.

COINCIDENTALLY with O'Neal's assumption of his office came a session of the legislature that again took up the liquor question. Along in the closing days of the session things began to boil. Old-timers in Alabama say there never was a session of a legislature that was so heated as this. O'Neal was for local option. He helped draft every local option bill that was presented. He led the fight, and finally he won, defeating state-wide prohibition and giving the counties the local-option privilege with such restrictions as were deemed proper.

While this fight was going on Alabama had a mining disaster in the Birmingham district. More than a hundred men were killed, many of them state convicts. "What are you going to do about it?" a newspaper man asked him.

O'Neal filled his pipe before he said: "I am going to write a law—a law that will protect our miners."

Being a Fighter, He Fights and Is Fought

Serious and Frivolous Facts About the Great and the Near Great

Two days later the law was written, and O'Neal saw to it that this law was passed. He had a conviction about the matter, you see.

Then there was the delay in the courts. He had a conviction about that, being a lawyer and knowing how slowly the courts worked and how congested their dockets were. He sent a special message to the legislature urging the establishment of a court of appeals, and he saw to it that said court of appeals was established. He kept having conviction after conviction on various subjects, and most of these he made stick.

Presently there came to his desk various bills authorizing the commission form of government for Alabama municipalities, and containing provisions for the initiative, the referendum and the recall. Governor O'Neal is not impressed with the initiative, the referendum and the recall, but he let these bills go, inasmuch as they were purely local bills. However, he was not without convictions on this phase of popular government, and he spoke about it last September at the conference of governors in the East. Governor Woodrow Wilson, of New Jersey, having arrived at a full working knowledge of the initiative, the referendum and the recall in a short space of time, said a few kind words for the processes, and instantly Emmet O'Neal alighted on the angular form of the political schoolmaster and remarked that, in his opinion, the initiative, the referendum and the recall are "an insidious popular vagary." Naturally there was some small bickering over the matter, and E. O'Neal bickered his full share and got away with his end of it in excellent style. It appears there are many persons of the same frame of mind as O'Neal on this subject, for ever since that speech and debate O'Neal has been deluged with invitations to come out of Alabama and make speeches along the same lines. No invitation, however, has been received from W. Wilson, Governor of New Jersey.

As may be inferred, when a gentleman named after Robert Emmet, who wears an O with an apostrophe in his other name, has convictions and makes those convictions stick—or gets stuck by the same process—there have been times when the Governor, both before he was governor and since, has met with opposition. That is a nice, ladylike way of saying it—met with opposition. He has not only met with opposition but he has caught up with it, run into it and has been run over by it. Likewise he has had his share of the running-over privileges. It is quite impossible to turn a person named Emmet O'Neal into Democratic politics in Alabama without thereby arousing various healthy ires.

O'Neal's success in this regard has been in full keeping with his methods. If you are interested in the question you can find plenty of Alabamans who will give you a dozen reasons why O'Neal should be impeached. If you go farther you will find scores of persons who will speak so violently about him that their language will fill you with astonishment and cause you to mutter: Can such things be?

Then, if you will walk round the corner, you will find a large and enthusiastic gathering of leading citizens who will inform you that Emmet O'Neal is positively the finest performer in the way of a governor they have ever known, with a better idea of his responsibilities and a clearer conception of his duties to the people and higher motives behind his public acts.

As I have intimated, O'Neal has convictions, has courage and has sense. When you combine these qualities and fuss in politics you never get any lukewarm results. Either you are the best or the worst. O'Neal is a fighter. Being a fighter, he fights and is fought. Is it to be wondered that most of them love him and some of them hate him? I trow not.

Political Hymns

BIRD S. COLER, who was Greater New York's first controller, was nominated for Governor of New York by the Democrats in 1902.

Mr. Coler is deeply interested in religious work, and three days after his nomination he was scheduled to address an afternoon meeting of the Y. M. C. A. in Brooklyn. The other speaker was Frank Harvey Field, an ardent Republican.

It was the practice at these meetings for each speaker to lead in the singing of a hymn as a preface to his remarks. When Mr. Field got up he announced: "We shall now sing hymn number 316—'Throw out the life-line; some one is drifting away.'"

The audience looked at Coler and everybody grinned—that is, everybody but Coler, who was entirely serious. After Field had finished it was Coler's turn. He advanced to the edge of the platform and was loudly applauded. He turned the pages of his hymn-book rapidly and, after the handclapping had subsided, announced cheerfully: "We will now sing that beautiful hymn: 'When the roll is called up yonder I'll be there.'" To this day he doesn't understand the roar of laughter that followed.

Not Like Father

AN OLD Irishman who had made a good deal of money, but who wasn't very particular about his habits or conduct, lived in Chicago. His custom was to go downtown about once a month on a spree, and then come back home and beat up his family and break the furniture. His aged wife, who had stood him for many years, was blind.

Finally he died, and his children gave him a fine funeral. They had plenty of money now that the old man was dead, and so they spread themselves. At the church there was elaborate ceremony. The blind widow was dissolved in woe. She cried and cried all through the services, paying scant heed to what was going on until the eulogy was pronounced. She listened. The priest referred to the dead man in glowing terms. After about ten minutes of this the aged widow nudged her son and whispered: "Danny, do they be havin' two funerals here today?"

Not Hot Enough

MR. JUSTICE McKENNA, of the United States Supreme Court, took up golf a time ago, and played at it at the Chevy Chase links near Washington.

He was practicing one day, and there was nobody with him except his caddie. He teed up his ball, made all the preliminary waggles he could think of and swiped at the ball. He missed it a foot. He tried again, and this time struck the earth eighteen inches behind the tee. He made another effort and missed again.

Then he stopped, looked at the ball and said: "Tut-tut! Tut-tut-tut!"

"Mister," observed the caddie, "you'll never learn to play golf wit' dem words!"

An Open Countenance

FREDERICO GONZALEZ GARZA, Under Secretary of the Interior in Mexico, is a matter-of-fact man who has the habit of holding his mouth open.

The other day Secretary of the Interior Gonzalez walked into Garza's office and exclaimed: "Old chap, you have your mouth open!"

"I know it," replied Garza, not looking up from his writing, "I opened it myself this morning."

"EN PENSION"

By CORINNE LOWE

ILLUSTRATED BY JAMES M. PRESTON

WHAT AMERICANS WILL PAY TO LIVE CHEAPLY

The Gay, Shabby Little Pension Where I Stayed in the Latin Quarter

THERE are in the world lovely mauve temperaments who scorn the grossness of shiny bathtubs, and the humbler folk who depend upon such comforts. These, professing to have outgrown the weakness of butter, elevators and good coffee, stand out for Europe as a dwelling-place. Often they are poets and artists who, when sufficiently inspired by the glint of sun on an olive-clad slope or the spatter of European uniform against a gray wall, stoop to send a madrigal entitled Love Song in Sicily, or a dab named The Gendarme's Wedding, to a mere American magazine for mere American dollars. Of such is the kingdom of the *pension*—in plain English, the boarding house.

There are American women—pinched schoolmistresses who have saved up a little money; wee, gentle spinsters who have left the town missionary meetings and their pastor; comfortable but unaspiring widows from all over the states—who are devoted to the theory that "You can live twice as cheaply in Europe as you can at home." These pay ten dollars a week and secure in return all the comfort they have ever known! Of such is the kingdom of the *pension*.

There is the great army of the culture seekers—among whom are many young men studying European art, European science, European manners; but the largest battalion of these is composed of the American girl being educated abroad. This young person is the victim of her mother or her guardian, either of whom has pathetic trust in Europe as the sandpaper that shall smooth down all the rough edges and make Dorothy fit for entering a drawing room. So Dorothy studies the languages, blots up what art she can and takes a fall out of music.

The Truth About European Boarding Houses

MEANWHILE, it may be observed, she is forgetting how to serve a good straight tennis ball and is missing altogether the fine, wholesome life of the schools and colleges where American girls are taught how to treat American people in an American way. Of such is the kingdom of the *pension*.

The Hero of the Magazine Pension Story

Yet, in spite of these paragraphs, I am not attacking the *pension*. The boarding house in Europe is as a rule, indeed, far better than the middle-class hotel in Europe; and the tourist, particularly the woman tourist, will find it much more economical. It is, therefore, only as the permanent address of thousands of good American people that I find it deserving of a philippic. Under such circumstances the *pension* seems to concentrate in itself all the disadvantages and limitations of European life. To write about it fittingly, one must dip one's pen deep into the pool of medieval household arrangements; must saturate one's typewriter ribbon with the scorn of all things backward, clogging, quaint and inconvenient.

But what is a *pension?* Personally I hardly knew before I started for Europe whether one ate it with mayonnaise or bought it by the yard. Perhaps I had grasped the fact that it was a European boarding house and that one pronounced it through the nose—thus: "pong-see-ong," only differently. Certainly, however, I had never gone so far as to picture it to myself.

Yet I was not long in being enlightened, for when I got to Europe I found it boiling over with the *pension*. In the matter of enterprise it deserves to be ranked with its own cousin, the English tearoom. Both have flown their flags over every romantic and hallowed spot in Europe. There is a *pension* in the old Italian hill city of Perugia, where the bold and bad and beautiful family of the Baglioni used to stab friend and foe in the narrow, overhanging streets; another of the tribe pertly intrudes in the byways where Saint Catherine of Siena preached and molded the political life of her time; the city of the Cæsars is full of them, and in Florence it is estimated that over a thousand Americans have taken the life vows of the *pension*. It bubbles continually all through the majestic Alps; and in Paris, the native home of the *pension*, a large percentage of the eight thousand expatriated Americans who live there are to be found in *pension* geography. With some minor variations, the *pension* also asserts itself in Germany, Austria, Belgium and Holland; and I have no doubt there are excellent Scandinavian editions.

Nearly all of them you will find listed by the helpful Mr. Baedeker, who is kind enough to qualify them frequently by such phrases as "Frequented by English and Americans" or "Patronized by Germans." And in all of them you will find Americans who have fled madly and permanently from the annoyance of home conveniences.

I can think of no better way to illustrate the case of the *pension* than by explaining the first one which I visited, because, after all, the *pension* atmosphere is unchangeable. You find the same set of people with the same set of conversation in a boarding house in Rome that you do in a boarding house in Munich—though one might add that the Roman institution affords an acquaintance with more Germans. In all *pensions* there is little to choose in the primitive character of the household arrangements.

This first *pension* which I visited was in Naples, and you reached it after a drive along that wonderful crescent street which follows the blue bay. When the little wobbly *settura* stopped it was before a dignified stone front whose entrance led at once to a big court, set picturesquely about with palms and guarded by the smiling Italian version of the *concierge*. It was an attractive, operatic spot—a worthy climax to the old, soft-toned houses, the glistening palms of the Neapolitan park, the smiling blue of the hills which we had been passing on the way. "What ho!" thought I to myself; "I am in stageland. I shall need here trappings—velvet cloak and rapier."

I found out presently, however, that what I needed was anything but stage legs. My supports had to be real and strong. For I learned that this *pension* did not, as I had supposed, occupy an entire house. On the contrary, it was confined to one floor, and that floor the top one. Afterward I found that this is quite a little habit which Italy has in *pensions*—art-galleries too, for that matter; and I grew into graceful acceptance of the fact; but on that first day I grumbled at them—those four flights of interminable stairs; those lovely, wide, cold, marble stairs, with their tang of kerosene! And when I reached the top I thought enviously of that young lady who had only dreamt she dwelt in marble halls. How in the world, wondered I, do women of fifty and more stand this sort of thing?

Of course there is generally an elevator; but—ah! shades of our nimble American servant!—how one does smile at the recollection of this *pension* installment! How one does learn to deride the *pension* circulars which announce a lift among their comforts! There may be other things in the world as inactive. The harp that once through Tara's halls might be able to qualify for membership in the same fraternity; but I personally never met them. Perhaps now and then the lift does make a shallow pretense of motion, but for the most part one finds beside it an explanation in the person of the *concierge's* wife.

"*Ah, signorina, mia signorina,*" she murmurs with a gesture of despair toward the helpless elevator, "*piano!—piano!*" Thereupon she raises her eyes to the sky—which certainly is not a thought encouraged by the *pension* elevator—brings them back to your face in tragic pleading and disappears into her rooms.

All Not Gold That Glitters

FROM all of which you gather that, for some mysterious reason, the lift is not lifting—and one prods those weary sightseeing members up the four flights of stairs.

What I found that first day upon reaching the top was a bowing Italian servant who ran off with a murmured word about the *signora;* but that which she brought back as a keeper of the *pension* was not a *signora* at all, but a plain little Scotch woman. She had a very nice room for me, she said, and I followed her wonderingly through many dark, narrow passages to—a room? No, no—nothing of the sort. It was a temple, a lecture hall, a place where one holds Chautauquas. I have really seldom seen a much larger room. Its floor was of stone and was laid very cannily with small rugs; its stuccoed walls were of enormous height and were hung with stuffy drapery; and in the center of this wide area, obscure as one white dandelion in a field, was a bed. The air was very, very damp, and I shivered a little as I said: "It's very—ugh!—very big, isn't it?"

"Yes," assented the little Scotch woman; "this was an old palace at one time, you know."

Now I had never before heard this tale, and I must say that I was tremendously impressed; but after I had

Digitized by Google

resided at a few more *pensions* I discovered that the claim is a common one. They have all been located in old palaces or castles or, at least, old monasteries.

May I say that I took that room? Or shall I be literal and admit that it took me, absorbed me, assimilated me and made of me only a dwindling memory to myself? I used to feel like a Lilliputian sent for a ramble on the vasty vest of Gulliver, and the mere sight of my insignificant self in the mirror would send me into peals of merriment. The thought of sleeping in that room was as cheerful as taking a solitary nap on Mont Blanc.

Of course I had heard about that European bath, but I was nevertheless not prepared for the situation as it unfolded itself in my auditorium bedroom. The ceremonies started with a rap on my door. This was followed by the smiling Italian chambermaid or *cameriera*, as she is called; but the *cameriera* demands a little diversion on my part.

Only in the Arabian Nights Did There Ever Exist Such Perfect Service

It takes the form of a hymn. I am firmly convinced that the Americans in Italy stay there not because of the art or the climate, or the vaunted "picturesqueness," but because of the Italian chambermaid. Only in the Arabian Nights did there ever exist such perfect service. She makes you feel as though you were a leading authoress and a shah's favorite wife all rolled in one. At night, when you enter your room you find she has been there before you; that she has tenderly turned down the covers of your bed and laid out your sleeping raiment. In the evening, before dinner, she comes to you with your pitcher of hot water, and puts it down in a way that is a caress. In the morning her cooing "*Buon giorno, signorina!*" is accompanied by a grave, tender look of her brown eyes, followed by a smile of irresistible sweetness. Though you do not speak a word of her language, she wraps you in an atmosphere of jasmine, soft southern airs and the languorous twang of guitar.

To go back to that bath. The *cameriera* carried in one hand a large pitcher of hot water and in the other a small, particularly graceless tub. Both she put down at the other end of the room. From my remote position on the bed, scanned across that wide range of bare floor and small rugs, they looked very, very tiny. I wondered whether after a brisk walk of five minutes I could reach them! And then I realized that I could not walk at all. That would involve touching the clammy coldness of the floor as it lay between those infrequent rugs. No; the thing was quite clear. I must skip, leap, hop, fly or be blown to that bath.

Knights of the Round Table

THEN a pleasant and beguiling fancy struck me. I would treat this European bath as a game! The tub and pitcher should be the goal, and the interest of the sport was sufficiently assured by the fact that the small rugs lay three feet apart. So, clearing the first bare space with a flying leap from the bed, I landed on rug number one, and hop-scotched a breathless way to my goal. It is an agreeable exercise, and I recommend it to those who become impatient of European bath facilities.

Of course there are bathrooms in *pension* Europe. You are apprised of the fact that you may enter those hallowed precincts at prices from twenty cents to half a dollar. And there is hardly a *pension* that does not mention in its circular, in the same boastful breath with lift, the existence of baths. Yet I have never known any *pension* residents who bought up these baths. I have never known one who did not prefer even the sectional wash offered by the portable tub to daring the mysterious European home of the really-truly bath.

Meanwhile I had had my first *pension* dinner. At this I had been seated at a long table between a rusty English clergyman and a little Illinois woman in a black silk basque emphasized by a breastpin. Opposite me was one of those genteel English gentlewomen whom I afterward recognized as among the most insistent of *pension* types. This woman was attired in one of the heirlooms of silk and lace which the British female calls her "evening dress," and its gentility was reënforced by a pair of black silk mitts, in which she ate. Farther down the line was an artistic American girl, whom I afterward found spent all her time in Italian *pensions*. Beside her was her sister, a fresh young thing in a sailor suit, who was being inoculated with foreign culture and finding the process rather trying.

It was, indeed, a typical table—one which was repeated, with few variations, in nearly every *pension* I visited.

I noticed that in front of each person's plate there was a bottle of wine—one of those fat, roguish, straw-covered bottles of Chianti with which I subsequently became so familiar. And I was hardly surprised when, upon taking up my glass of water, one of those British mitts was raised in decorous protest.

"Pardon me, but you are not going to drink the water?" I was conscious of the extremely correct concern in that extremely correct English voice.

I admitted thereupon that I was contemplating some such irregularity.

"Quite—quite unsafe!" she assured me, and everybody at the table nodded ominously.

Then and there did I become acquainted with the ordeal by water of pretty nearly every *pension*. European water is, in fact, like most other European properties—picturesque, not practical. And, even though it be pure; the oldest *pension* resident won't let you think so. She watches you tremblingly while you drink it and reminds you that only last year Mrs. Brown—such a nice woman from Montana—got typhoid from drinking the water here and died in this very *pension*. Surprising, is it not, that thousands of Americans have given up a lifetime of unterrorized water-drinking for the privilege of this typhoid-deathbed specter!

I sometimes think the suspicion of the water is shrewdly encouraged by the *pension* and hotel keepers abroad. For the suspicion logically results in a bottle of wine, and bottles of wine logically result in a tidy little bill by the end of the week. Of course there are a few of the *pensions* which lavish upon you "red ink," but at most of them wine and mineral waters are extras, which mount up to about eighty cents or a dollar a week.

It was just a short time after the water episode that I noticed the genteel Englishwoman was not touching her fish. Some one remarked the fact aloud, to which she responded: "No, I never eat fish in Naples—cholera, you know—and they tell me these Neapolitans are so careless."

Typhoid in the water—cholera in the fish! Now, by my halidom, this was no place for timid old ladies! The Italian *pension*, it seemed to me more and more, furnished just the right thrill for highwayman or swashbuckler.

After this the meal progressed rather uneventfully and was, I must admit, a most savory one. To it was added an appetizing feature in the presence of an Italian waiter, who answered to the name of Orestes and answered in the names of Italian. The one real drawback was the conversation, a section of which ran something like this:

Artistic American girl: "I bought some lovely coral earrings today."

Lady from Illinois in the black silk basque, bending forward enthusiastically: "Oh, did you? Where did you get them? From Signor Ramacolazzi?"

Artistic girl: "No; I think he charged me too much for my tortoise-shell combs. I got these from Peregrinetta, on the Via La-la-da-ra-da-di. Perfectly sweet! And he came down five francs on them!"

Genteel English person: "Indeed? I congratulate you. It is so seldom that one can get a bargain nowadays in Italy. You Americans have quite spoiled the shopkeepers."

This illustrates it quite luminously—that shopping conversation which one must endure all through Europe. In Naples it was corals and tortoise-shell; in Rome it became Roman pearls; in Florence the motif changed to turquoises and embroidery—and so on through the whole range of so-called European specialties. What renders, too, your own individual share in such conversations particularly trying is that the other woman has always managed to get precisely the same article that you have bought for fifteen francs, at five francs less.

Much has been said in song and story regarding the Continental breakfast. I shall not enlarge on it—however much I wish they would. All I care to say is that the mere sound of "coffee and rolls" conveys but a weak impression of this repast. If it were real rolls and coffee one should not so much mind perhaps; but on that first morning I discovered that Italian coffee is but a pale specter of the American kind and that rolls are as unimpressionable as the lady who sells you hair-ribbons. Rending one of these souvenirs and then chewing it is a primitive exercise, and whets your appetite for food which does not follow.

However, breakfast has this much to be said for it: It is, as a rule, the one European meal at which butter makes its appearance. To be sure, this is generally in the form of the butter-ball—that airy spiral, that wraith of real butter—that is so popular in Europe; but, even so, it is greeted gladly, joyfully. In time it even becomes the occasion of a patriotic outburst called The Butter-Spangled Roll.

To eat this breakfast is quite bad enough; but to say that you like it, that it agrees with you so much better than the American repast, must be infinitely worse. Yet this is the task which every American woman abroad sets for herself. I don't believe this tale myself. I think that every one of them is struggling with a guilty yearning for nice appetizing ham and poached eggs, and a bowl of good cereal swimming in cream. I don't think for one minute that any one would voluntarily wobble forth to see five churches and five hundred pictures on one cup of poor coffee and one hard cement roll!

A pathetic instance of the American struggle to crush this plebeian longing for food at breakfast was furnished that first morning by a nice, comfortable woman who was sitting with her son at one of the side tables near me. The son, it seemed, had been in Europe for a year and had an air of vast experience—your regular cosmopolite, he! The mother had been in Europe for a day and she wanted a vast experience—that moment and with lamb chops!

In answer to this the son replied nervously, looking round to see whether any one had overheard his mother's shameful request:

"No, mother, they don't serve lamb chops over here at breakfast."

"But can't I even have fruit or a cereal?" almost wailed his mother.

"No, you can't," said Sonny, the cosmopolite. "You'll have to get used to not having that great big farmhand breakfast. Why, they'll think we're regular barbarians!"

After which, of course, mother meekly attended to the pale coffee and immutable roll.

How Far the Little Candle Throws Its Beams

YET it is quite possible to get something to eat at a European breakfast. In order to do so one simply pays for an extra meal. For instance, one soft-boiled egg or a tiny omelet costs from ten to twenty cents. Meat would probably make the week's excesses dent a millionaire's pocketbook; in fact, even if one joins the ranks of the snobs who "so much prefer the Continental breakfast," one is likely to tolerate the softening influence of honey or orange marmalade, which is sold by the *pension* and which becomes quite a consideration in *pension* expenses.

At some of the Continental boarding houses you pay for electric light; at others it is given free. In both cases the illumination is the sparsest I have known. It would be quite impossible to read anything but a primer beneath its reserved beams. So, as a rule, one must eke out a bare lighting by the use of many candles, which always appear as an extra in the weekly settlement.

To add to the general bleakness, the bedroom is always cold, and one pens those "Wish you were here!" postals to friends at home with numb and aching fingers. Sometimes, of course, the room contains a quaint little stove which one may fill with quaint little fagots at extremely modern prices. And, as a rule, one invites the "extra" for such in preference to daring the *pension* drawing room.

Traveling Leaves You to the Mercy of Five Bundles and a Decrepit Porter

Cordova
Hand Bags

THE chemists and color artists of these shops have perfected a wonderful new leather treatment termed "Iridescent."

The "Iridescent" result is obtained by genuine gold and silver, so applied that it permanently permeates the leather. The effect is indescribable, always soft, rich, exquisite and very oriental.

The shades of Cordova Iridescent Hand Bags most widely selected for 1912 by the Paris shops to which we sell are Old Rose (to be worn with misses' white summer gowns), bronze, purple, blue and brown. There are 60 styles and shapes.

With many new and unique designs, we continue to make the most artistic modeled leather articles, now exceeding 1,000 pieces, as well as items in genuine seal and other high-grade leathers, all with exclusive frames and patterns. All work made at these shops carries the trade mark below, which is the emblem of superiority in leather goods.

Cordova articles are sold by high-grade stores everywhere. Send for booklet.

Buffalo, N. Y.

New York Branch:
286-288 Fifth Avenue

This latter abode of bleakness is fitted up with moldy furniture, a few tattered volumes and nice-minded old ladies who do tatting and read guidebooks. The volumes are not likely to be anything more exciting than Who's Who, a Burke's Peerage and a Baedeker of the seventies; but you never can tell—in a *pension* at Assisi I was fortunate enough to find a throbbing, vital, beguiling bit called Improvements in Modern Dentistry.

As to the ladies, they discourse between glacial pauses on the butter in Munich, the way they like carrots, and the newest stitches in shawls. They also borrow each other's copies of Ouida and practice lessons in the foreign phrase-books. At times, too, they dwell on that inevitable person who died in the *pension* last year, just after she had come over to be near the grave of her husband.

On that first night in the Naples drawing room I was told that it was considered extremely dangerous to be out-of-doors at sunset. And when I got up to leave, the dignified British mitts stopped me on my careless way.

"Don't forget," said their owner in her proper voice, "that it is dangerous to leave your windows open at night."

"Why?" I asked in amazement.

"Oh," said she, "the night air in Italy is very noxious, you know; and then there are always the mosquitoes. One never knows when one is going to get malaria here. I myself have had it in my system ever since last year."

Typhoid, cholera, malaria and—a curse in the very sunset! That night I went to bed reeling with the perils of my situation and was aghast to see at the head of my bed a spectral white figure. It was about five feet in height and leaned over my pillows with what seemed a grinning threat. I gave a hysterical scream and ran from the apartment. When I had recovered my calmness they told me it was only the white mosquito-net with which most Italian bedrooms are equipped.

By this time I was determined to find out why so many American women spend their entire lives in a *pension*. And the next morning my reportorial zeal was directed toward a pudgy old lady whom I met at the foot of the keroseney marble four flights of stairs.

"Will you kindly tell me," said I with a winning smile, "why you like Europe so much?"

She looked at me in wonder.

"Because," she answered after a moment, "I can live so much more cheaply over here. Take this *pension* here—it is only one-fourth as expensive as a place at home."

"Ah," interposed I gently, "but how did you live at home?"

"Oh," she replied as she puffed up the third flight, "I lived very simply. I had a flat in New York and I kept one little maid."

"Yes," responded I fiercely, "and you had an elevator, and water that you weren't afraid to drink, and air that you weren't afraid to breathe! You had a bathtub; and you didn't have a Ku-Klux Klan mosquito-net standing at the head of your bed!"

Why They Live Without Luxury

This tale, I know, seems incredible; but you hear it repeated all over Europe. Hundreds of American women, who wouldn't be content for one moment to live in *pension* style at home, justify their residence abroad on the ground of economy. And when confronted with the confusion in their sense of values they invariably take refuge in that old explanation: "Oh, but it is so much more interesting over here!"

I wonder where that interest lies—that is, after one has gotten over the first fine careless rapture of being in strange places! Like a very Ulysses of the *pension* I sought it, and my Odyssey took me through many *pensions* in many lands. I looked for it all through Italy and in the immaculate toy country of Switzerland; I tried to grasp it in the gay, shabby little *pension* where I stayed in the Latin Quarter; I even dared in my pursuit the unmanageable feather-bed coverings and more unmanageable food of a German *pension*—and I finally concluded in abject discouragement at a sparkling, well-kept and thoroughly matter-of-fact *pension* at The Hague.

Yet there must be something—some elusive element, some subjective enthrallment—which holds the American woman at the *pension*. Otherwise, how can one explain that dear old soul of sixty whom I met at a *pension* in Rome? She had spent the last six years at this same Roman *pension;* and, so far as I could observe, she had spent the entire six in knitting shawls there in the big, bleak drawing room of the house. She seldom went out—the Coloseum exercised over her no resistless domination; she probably never once realized that all the armies of the ancient world had swept over the streets about her. And once, when I asked her something about getting into the Sistine Chapel, she looked at me with a smile beautiful to behold.

"Do you know," said she, "I have never been there! I really want to go some time!"

Impossible! In Rome six years and had never once beheld the glorious, inspired creations of Michelangelo—had no conception, in fact, of all the thrilling past that constitutes the whole value of Europe in the minds of most of us! Yet she preferred knitting in Rome to knitting in Yonkers. Strange, baffling phenomenon it was!

Certainly most of the people with whom one is brought into contact at the Continental boarding house throw little light on the advertised interest of foreign residence. For, though it was my lot to encounter some charming, well-bred and clever folk, the stock assortment is not good. A large percentage of these people are the well-meaning English women whose curiosity regarding America is little short of insulting—to wit: there was that girl with the inevitable bracelet-watch, who was staying with me at an Italian *pension*. She had been inquiring the character of the American breakfast and I had been describing what I considered a typical repast, when, turning upon me the full wonder of her round blue eyes, she asked:

"And I suppose you don't have toast in America?"

Her mother, who was a whit more sensible, tried to hush her, and the other Americans at the table giggled outright; but I solemnly assured her that even such civilization had penetrated our bleak shores.

The American Child Abroad

There are others whose attitude to this country of ours is even more directly offensive. I shall never forget, for instance, the case of that large and aggressive Swedish woman who sat opposite me at my Florence *pension*. She told me she had taught ten years in a school in New York and she ended by beating upon her breast in violent declamation:

"I am tiret off the vulgar Americans. They are s-s-so gr-r-r-eedy—s-s-so gr-r-r-asping! It iss s-s-so hart for a sensitif person like me to be among that kind of people!"

Here there occurred a diversion in the form of a large platter of chicken on which there were left four pieces of white meat. I wanted a piece of that white meat very much—but she wanted first; and with a gasp of dismay I saw the "sensitif" soul scoop in to herself every one of those coveted four pieces!

Most persistent of all American types is the widow who is living abroad with her daughter. Mother is generally an earnest soul, who tells you that they are letting Florence or Munich or Paris, or wherever they may happen to be, "soak in." Daughter is a meek little soul, who looks up into her mother's face and says: "What was that church we saw this morning?" In both the process of absorption is a most painful thing to watch.

Of all who wander through the European *pension* in the leash of that "cheaper and more picturesque to live abroad" theory, none certainly is more pathetic, more wistful, more forlorn than the American child. He doesn't find it interesting in Europe; he groans over the necessity of seeing old canvases and wearily wonders if he has to visit another church. None illustrates his plight more vividly than a dear little ten-year-old boy of my Paris stopping place. "I'm sick of this place!" he confided to me over a game of checkers. "I hate these French kids and I hate their old schools. What do you think—they never even heard of baseball over here!" Poor little alien, deprived of his baseball and obliged to live in a land where big lads wear silly socks and never get any more exciting sport than sailing boats on a little park pond! There wasn't a soul in the place who didn't long to pack him up and bundle him off home on the next steamer.

Even more tragic in its ultimate results is the American child who has formed a taste for European culture. There was [illegible] such in my Florence *pension*. She was [illegible] eight years old and she could tell the difference between a Perugino and a Botticelli and could discourse on the art of Cimabue. Poor child! There is, I am sure, a dark future in store for her.

No; I have not forgotten him! I was only saving him until the last—that lapse who is always the hero of the tragic *pension* story. He really does exist in quite a few *pensions*—perhaps because they recognize him as a "property" to pay him for staying; but the thrill of his presence becomes somewhat less poignant after you have seen him eat and witnessed the unbaronly quality of his table manners. However, he possesses one unwavering charm—and that is that he, together with a few teachers, artists and poets, represents the masculine element. The *pension* is, indeed, essentially a woman's resort; and, as one little American schoolgirl expressed it, "Men look out of place in a *pension*."

I have saved up until the last a grudge against the *pension* which, in spite of its insignificance, seems to tarry most irritatingly in my memory. It is the shoe-shining inefficiency in the European boarding house. What makes this so bad is that shoes are a pretended specialty of the *pension*. Each institution has its "boots" and each evening one's shoes are placed in front of one's door for the observance of this functionary. This custom [illegible] gives to the corridors of the *pension* a most uncanny look, and I shall never forget the last evening that I made my way through the aisles of waiting, gaping, yawning shoes.

This would all be very well if they employed skilled labor; but I had not been in Italy very long before I decided that all the home talent was busy shining up shoes on Broadway. I used to look at my shoes in the morning and wonder whether "boots" had forgotten them—so absolutely dull and dingy was that morning face of theirs.

Yet, after all, that which constitutes the real objection to the *pension* as a residence of American people is not the house itself but the surroundings of the house. It would be a different thing if your *pension* was just a little isle of discomfort lapped by waves of unending joy; but no one can claim that life in European cities is unending joy or anything resembling it. It is, on the contrary, full of constant [illegible]. Streets in Italy are often mere excuses and you walk with a carriage wheel grazing your heel. Streets pretty much all through Europe—save in Holland and Germany—are fearfully dirty.

The Return of the Native

In every place one is grappled by beggars. The postal-card vender spoils [illegible] noble joy in beholding any place of interest. You are obliged to tip everybody who answers a civil question. Traveling is a nightmare which permits no checking of trunks, but leaves you to the mercy of [illegible] bundles and a decrepit porter. And if you wish to prove the reliability of that [illegible] syrupy, reassuring "Oh, everybody speaks English over there!" just go out somewhere when you are in a hurry and try your English on porters, policemen, soldiers, passers-by or some one from whom you wish information.

There is this much to be said for the woman—or man—who lives permanently in the *pension*. She does not get "stuck." Unlike her countryman who takes a thousand dollars and a little flyer in European picturesqueness, she puts all her Yankee shrewdness to work and meets the European brigand more than halfway. Save the inevitable "extras" of pensione life she makes, indeed, a very creditable showing.

Yes, yes; she is shrewd enough with money—this woman who lives in a *pension*—but she is not shrewd enough to see that she is sacrificing the years of her life.

Brought squarely up to this unelaborated thesis, it was my immense joy to witness one conversion. It was that of a nice spinster of fifty who had been wandering malarially about Italy for [illegible] nearly six years.

"I'm going home," said she [illegible]. "I've just engaged my passage and I sail Saturday. My system is so choked [illegible] quaintness I'll never be able to get [illegible]. I'm tired of talking to these English [illegible] in *pension* drawing rooms, and I'm sick, sick of their beautiful voices. I'm going back to breathe and to drink water and to walk on clean streets. I'm going back to Terre Haute!"

The Senator's Secretary

THIS sort of thing happens half a dozen times a day in Washington:

A leading citizen, from some point outside, comes gallumphing into the corridors of the Capitol, into a hotel lobby, into the White House, into the office of some member of Congress he knows, or into any other public or semi-public place.

"Hey!" he gasps, "why don't you do something? What's the matter with you people? Ain't you got any sense? It's all over, I tell you! You're skinned—beat—done! They've double-crossed you. You're a fine lot of dubs, you are!"

"What's all over?"

"Why, this nomination business. Roosevelt's going to be nominated, sure's a gun! Roosevelt! What do you think of that? He's got Taft on the run. He's going to grab it. Roosevelt! Sitting back there and playing his cards. Get busy! Do something! You're licked, I tell you!"

By this time the leading citizen is out of breath and he is asked to pause, recover his poise and tell what he knows.

He repeats his story. It's all Roosevelt. Nothing else to it.

"How do you know?"

"Well," he replies slowly, trying to arrange his information in his mind, "I saw a lot of newspaper polls; and I've just come in from the West and everybody I talked with on the train was for Roosevelt. I hear a lot of talk everywhere; and look at what the papers are printing. It's in the air; and —— Oh, you know as well as I do that I'm right!"

"But," puts in the other, "who were those people who were shouting for Roosevelt?"

"Why, I don't know them. Fellows I met—you know—men you run up against when traveling; and, besides, the Roosevelt sentiment is very strong back home."

"Are any of these men who are yelling for Roosevelt delegates to the Republican National Convention?"

"No."

"Do any of them control any delegates or will any of them control any delegates?"

"Not that I know of."

"Do any of them control the machinery that will elect the delegates?"

"I don't suppose so."

"Well, cheer up; maybe it isn't so far gone as you think."

Runners Out for Roosevelt

That will answer for a dozen conversations a day between men in Washington who are looking after the interests of Mr. Taft and the visitors from all parts of the United States who are seeing and hearing things. They come in panicky over the prospect of Roosevelt, or the great wave of Rooseveltism that is sweeping over the country; and they go out convinced that perhaps it is just possible there is more noise in the Roosevelt boom than delegates. Also, it is impressed on them that it takes delegates regularly seated on the floor of the convention, placed on the rolls with full credentials, to nominate a candidate for president, and not newspaper straw votes or proclamations by Insurgent governors, or resolutions passed by meetings, or chatter in hotel lobbies and on trains.

The Roosevelt propagandists have done good work. They have engineered "spontaneous" enthusiasm meetings in many parts of the country. They have started newspaper polls in places where the people naturally are for Roosevelt against any man—as in Kansas—and have made a tremendous showing. They have obtained more miles of newspaper space than the Taft people, merely because the average editor's job isn't to promote the candidacy of any particular man, but to make news as well as print it. And anything Roosevelt does in the present circumstances, or anything he does not do, or anything he may be imagined to do or not to do, is "good news."

It is folly to assume the Roosevelt boomers are proceeding without an understanding of the situation—that is, it is folly to assume that at the time this is written. Politics shifts rapidly, and it may be The Colonel will say or do something before this is printed that will eliminate him from the contest; but the chances are he will not. Meantime the shouting and the tumult continue; and the leading citizens arrive in Washington in droves and go back in somewhat calmer frames of mind.

That large bodies move slowly is an axiom that is early impressed on the human mind. That Mr. Taft is a large body is sufficiently well known. So far as his renomination is concerned, he has been moving very slowly. Instead of beginning to shape up things for a renomination as soon as he was comfortably in the White House, he let things drift. Six months or a year ago he made the announcement that he felt he was entitled to a renomination and would ask for one. Being of a non-political temperament, he thought that would suffice. Being also of a cheerful and amiable disposition, he did not bother to look into the reports that Roosevelt would oppose him, and set these reports down to the activities of the friends of The Colonel whom he had, in many instances, been obliged to divorce from jobs of one kind or another, or on whose toes he had felt impelled to tread occasionally.

Large Bodies That Move Slowly

The fact is, President Taft had his head up in the stars a bit, and did not bother with the actualities of practical politics. Also, he is impatient of bad news. He does not like to hear it. In many instances he laughed off reports of what was being done against him. In other instances he characterized these reports as bluffs. It is not easy to tell the president of the United States what he does not want to hear. The President was comfortable. He did not want his comfort disturbed by disquieting reports—and he got few of them.

The result was that until two months or so ago there really was little done toward securing the renomination for Mr. Taft beyond the statement that Mr. Taft desired to be renominated. It was held to be a sort of settled thing; and Mr. Taft busied himself with whatever came his way, and had a lot of fun, and made a lot of speeches, and traveled round, and wasted hours and hours of time over trifling details—and was happy enough after his own way. Then the reports of the activities against him began to get insistent. After a time—a long time—the President became convinced that there really was a Roosevelt movement and that Mr. Roosevelt was a party to it. This hurt Mr. Taft deeply, not only because Mr. Roosevelt is apparently out against him, but because it brought home to him the truth that every political observer has known for two years at least; and that truth is that there is a very large element in the Republican party opposed to Mr. Taft, that will not vote for him next November, and that the Republican party, as it exists today, really has two branches—Taft and anti-Taft.

It is doubtful whether Mr. Taft knows the extent of this split even yet. He is slow to comprehend politics. Also, Mr. Hilles, his secretary, works slowly. Both Mr. Taft and Mr. Hilles, however, have finally awakened to the situation—to a degree, at least; and having awakened they are now at work. A large body may move slowly, but it moves with considerable momentum when it is started. There is no doubt at all that Mr. Taft, had he gone to work six months ago as he is working now, would at this moment be absolutely sure of renomination. He has the power and the place to secure this result. The delay has handicapped him, but he still has the position of advantage; and he is a long way from being beaten for the nomination—a long way.

The great, basic condition in securing a nomination for president of the United States under the present convention system is the control of the machinery. Mr. Taft and his friends still control the machinery, not only in a national sense, but in a majority of the states. The machine secures the delegates and the machine seats the delegates. It may so happen that the national committee, for example, that has the making of the temporary roll of the convention, will shift from Taft to Roosevelt—it may so happen, but it is hardly likely. A national committee is a non-emotional sort of organization rarely affected by outside noise; and when you come to sum it up all the preliminaries of the Roosevelt campaign have been noise. If the national committee, which, at its

Wheat or Rice Toasted and Exploded

(Prof. Anderson's Invention)

These curious foods—so immensely enticing—have had a remarkable history.

A college professor—an expert on foods—exploded them first in a gas pipe.

He was trying, as men have for ages, to break up the millions of food granules. That's essential to digestion.

The partial result in baking, cooking and toasting he knew to be insufficient. So he set out to turn the grain's moisture to steam, then explode it. Thus to literally blast every granule to pieces.

Now Shot From Guns

The final result was to build bronze-steel guns. To seal up the grain, then revolve the guns in an oven heat of 550 degrees.

After an hour of this heat, inside of each grain there exists an enormous steam pressure. It penetrates every atom.

The steam is exploded by unsealing the gun. All the food granules are blasted to pieces.

The grains are puffed to eight times normal size—made four times as porous as bread. Yet the coats are unbroken. The grains come out shaped just as they were before.

And never before, in any grain, has digestion been made so easy.

Puffed Wheat, 10c
Puffed Rice, 15c *Except in Extreme West*

Another result is this:

A myriad cells are created, each surrounded by toasted walls, so thin that they melt in the mouth.

The crisp grains taste much like toasted nuts. They are used like nuts in candy-making, in frosting cake, in garnishing ice cream.

They are so delightful that people are eating 22,000,000 dishes per month. And others begin as fast as they find the foods out.

Their Unique Uses

They are served largely, of course, with sugar and cream. Or mixed with fruit at breakfast. But they also are eaten like crackers in milk. They form an ideal supper.

Children at play eat the grains like peanuts. Girls use them in candy-making.

They are eaten between meals, at bedtime—whenever one feels hungry. For they do not tax the stomach.

That's the best fact about them. They are whole grains made wholly digestible. And that's the ultimate in food.

When will you enjoy them?

The Quaker Oats Company

Sole Makers—Chicago

(227)

December meeting, clearly was dominated by Taft, remains in that frame of mind a long step toward Mr. Taft's success is taken.

This applies to the various states also. Though the Roosevelt people are making most of the noise, it must be remembered that in some localities—indeed, in a good many localities—Mr. Taft has friends. He is not entirely deserted. Also, these friends are, in most cases, the men who control the machinery and who will, in many instances, name the delegates. It would have been far easier for Mr. Taft if he had pulled himself down out of the clouds six months ago; but, now that he is down, it will help him a lot if he can be persuaded to stay down and play the game. So soon as they got his feet on earth and convinced him of the necessity of playing politics instead of being academic about it, he went feverishly to work. He called in men from all parts of the country and began doing things. Some results were immediately apparent. Despising politics, Mr. Taft embraced politics eagerly once he woke up to the fact that his embrace was needed. He set the entire Federal machinery at work in his behalf. He made appointments for political purposes. He put old and tried politicians in charge. He is playing the game! And—as a good many of his friends would say—it is about time!

You remember the saying about the zeal of the new convert? Well, that applies in the case of Mr. Taft. He feels that he has given the people a Republican Administration—that he has been loyal to all of the precepts and policies of his party—that his failure to receive a renomination will be a repudiation of Republicanism; but, having discovered that these feelings on his part are not sufficient to allay opposition to himself and his renomination, he has decided to put on all the screws he can control. And, being unused to putting on screws, he is turning them eagerly and vigorously.

There is no doubt there is a great sentiment for Roosevelt throughout the country or that that sentiment is being skillfully fostered by the friends of Mr. Roosevelt on the one hand, and the opponents of Mr. Taft, posing as the friends of Roosevelt, on the other. Speaking in a general party sense, Mr. Taft has failed to make good as president. A large section of his party is opposed to him, not because they are losing faith in Republicanism but on personal Taft grounds. Still, there are several months before the convention meets; and, if Mr. Taft continues to play politics as he is now playing, it will take some very strenuous work and some very skillful work on the part of the supporters of Mr. Roosevelt to defeat Mr. Taft and nominate Mr. Roosevelt. As the situation now is, if Mr. Taft stays in the race as he declares he will, he has much the better of it for the nomination, notwithstanding all the Roosevelt clamor.

Delegates are what count—delegates who are seated on the floor of the convention and entitled to vote; and it is quite likely that in the final round-up Mr. Taft will have enough, or more. At any rate, as this is written, he is not beaten or anywhere near beaten, the Roosevelt shouters to the contrary notwithstanding. Mr. Taft may be beaten, of course; but he isn't yet.

CURIOSITY

AN IRISHMAN walked up Fifth Avenue, dropped into a Presbyterian church and immediately went to sleep. After the services were over the sexton came and shook him by the arm.

"We are about to close up," said that functionary, "and I'll have to ask you to go now."

"What talk have you?" said the Irishman. "The cathedral never closes."

"This is not the cathedral," said the sexton. "The cathedral is several blocks above here. This is a Presbyterian church."

The Irishman sat up with a jerk and looked about him. On the walls between the windows were handsome paintings of the Apostles.

"Ain't that Saint Luke over yonder?" he demanded.

"It is," said the sexton.

"And Saint Mark just beyant him?"

"Yes."

"And, still farther along, Saint Timothy?"

"Yes."

"Young man," demanded the Irishman, "since whin did all thim turn Protestants?"

Clean Teeth—White Teeth

Clean, white, sound teeth; each and all of these things depend upon mouth and teeth that are free from germ life and acidity and that are kept pure, sweet and clean. You are assured of these things by the use of

SANITOL TOOTH POWDER OR PASTE

The whole science of tooth soundness and mouth cleanness and white teeth put into dentifrice form.

Ingredients in these Sanitol Tooth Preparations that produce such white teeth are also what give them the power to overcome acidity in the mouth.

Ingredients that leave such a fresh taste and such *purely* clean teeth are also the ingredients that destroy all germ life in the mouth and so preserve teeth and health.

Sanitol Tooth Powder and Sanitol Tooth Paste are powerful germicides. Being principally [illegible] destroy harmful bacteria in the mouth. The use of Sanitol Powder or Paste and semi-yearly calls on your dentist to have your teeth examined will prevent all serious tooth trouble.

An Individual Package of Sanitol Powder or Paste, Face Cream, Talcum Powder, Antiseptic Liquid or Shampoo sent free on receipt of your dealer's name and address and 4c to pay postage and packing.

OUT-OF-DOORS

The Plowman

HE RISES at dawn, the first citizen of this republic, for the duties of conducting a republic are many and hard. Yet he makes no attempt at physical culture, for the muscles on his somewhat stooped frame stand out definitely enough. He pauses but little in getting into the garments left near by on chair or floor—garments that still hold the smell and color of the soil. His bath is at the kitchen sink—or perhaps in a basin at the pump beyond. His hair stands strong, erect like a mane; his face is lean and hard, his hands large, his wrists heavy. As he walks he treads downright and firm, with little elasticity—the step that gives trouble for drill sergeants in the army. Literally he has been hopping clods; and he sets down his feet heels first, as he did while staggering through the furrow all day long, his shoulders slightly bowed, his neck leaning forward, his chest not thrown back expanded—yet all of his figure tense and strong. The lines of his muscles are specialized—not meant for display, but for labor. And, that this republic may live, he labors day after day.

Perhaps he eats his breakfast in the same room where it was cooked, with the smoke and savor of it in the air about him. In all likelihood he eats in silence, for his manner of life does not make for loquacity. In the barn, with its roof of straw piled on poles, the horses, hearing his footsteps approaching, turn their heads sidewise to him, in anticipation of the food and drink they too must have before the day's work may be done. The dawn is red at the rim of the world when the cold harness falls on their backs and they turn out on their way to the field. They pass through the open gate and take the faintly defined trail to the fields. As they appear there arises the honking of wild geese that have been feeding on the stubble. The day and the world are young. When toil is duty and custom it is not wholly toil; and when the world is young its problems are few. Small need for complex nature in the man who comes now where the wild geese call. Life for him is simple. His duty is straight before him and he is certain of his ability to do his work.

The plowman rides a horse in at night when he is weary; but now in the early morning it is cold and he walks alongside of the team, urging it querulously, although the horses need little more guidance than he does. Presently they arrive at the edge of the field where the plow was left the evening before. The plowman looks to the clevis pin and there comes the jingle of the doubletree swivels as the team starts off with the plow. Its master holds the handle of one side down, so that it may slide and not bite into the soil until the appointed place is reached. The horses walk slowly, steadily, with drooping heads—mechanically ready for the day's work.

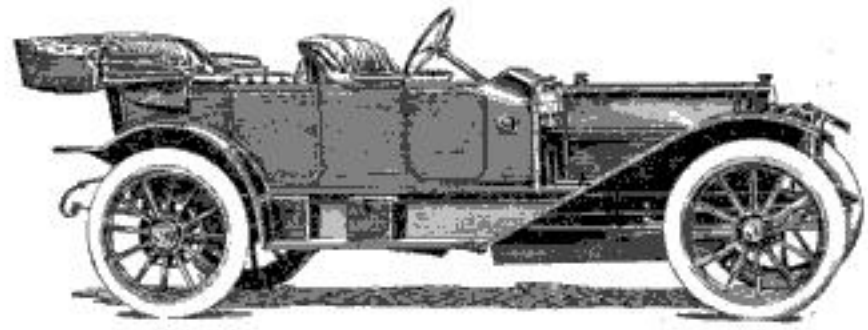
Our First Citizens

Now the plowman passes the reins, tied or buckled at the right length, across one shoulder and under the other arm, for he must have both hands to the plow handles. Indeed, his art is one that must be respected. You could not do this work yourself without training, simple as it seems—and some men never can learn to do it well. At county fairs prizes are offered for the man who can plow the straightest furrow with no guide save his eye, and can lay under a field in the most regular and exact fashion. Almost any one can soon learn the guiding of an automobile, which is done by the lightest and gentlest motions with the wrist. The art of the plow is harder to acquire.

From our field the wheat has been removed. The purr of the thresher—droning when busy, roaring and screaming when the cylinder went empty—has droned and roared its way across the country some days since, and the stacks of sheaves are now stacks of straw. Ten miles across the level alluvium show the tall pillars of the elevators at the railway town. The wheat that grew here has begun its journey—perhaps is now upon your table. The stubble, still white with the frost of early fall, stands upon the field close and thick, like the hair of the plowman, on which rests any sort of shapeless hat. Into this stubble now he cuts with the one sword that not any force or all the forces of the world—not even all the armies of kings and emperors—ever have been able to withstand—the sword of the plowshare, which never can be beaten back, which is the conquering sword of swords.

The plowman's eye is calm and untroubled. His muscles begin to be more supple now—to feel less the cramp of a fatigue steeped in sleep. His hands are light on the handles; yet something of his weight goes into the touch. He holds his course by instinct, by training, by habit. Of his feet he is careless. They must follow as they may, stumbling once in a while when clods fall down into the furrow. Yet the ground is soft underfoot. He goes on steadily, almost softly, methodically.

An hour. The day has begun. Two; three—it has advanced. The team plods on. The wild geese on the distant roosting bar begin to think of their second flight for the midday feed on the stubble. Before long the plowman will hear their honking as they come out and see the long black lines against the sky, scolding him for turning under the table where they have fed. He does not note them much and does not pause. Here is his day's work. Steadily, almost slowly, he goes on at a pace that none the less would kill the man not used to it—back and forth, across and across his field, the line of the black upturned soil, moist and shining in the sun, growing wider and wider back of him as the plow eats into the field—toward the ultimate dead furrow of the middle land. His tissues lean and hard, he perspires but little, though the day grows warmer. Streaks of sweat break out on the flanks of the horses, which sometimes sigh or cough at the end of the furrow. It is rare that the plowman bursts into any sort of song or ventures a whistle at this time of the day, unless he be very young. His melodies are those heard at the town yonder, or at the cottage organ or phonograph of the home parlor.



A Day's Work

The day grows warmer now. Certain plovers have swung in across the field, swooping down from their southbound flight to feed and rest. They alight far back of the plow, combing the soil for food. Many blackbirds—occasionally a robin—boldly follow along close behind the plowman, hopping near and voicing their displeasure that he plows no faster than he does and finds no larger and fatter worms for them. The birds look to him for sustenance, even as we do.

Noon approaches. The sun burns the skin, though the winter solstice is now at hand. The plowman carries no watch, but instinct keeps him in pace with the hour. At one furrow he stands, his brown face turned inquiringly, his hat pushed back on his tawny hair as though he waited for something. It comes—the clangor of the expected bell, summoning man and horse for a brief rest. They must eat or the work cannot be done. The plow also rests as they leave it and plod off toward the house for the noonday meal. Again refreshment at the pump. Again a hearty meal, probably eaten with small speech for those who make it ready.

He comes out into the shadow of the house and looks off across the country, without much query in his eye. The afternoon will be much like the morning for him. In some way the hours pass after he has returned. The heat of the sun grows less. After a time he hears the calling of the wild geese going home for the night; and when the dusk has fallen yet a little more he, too, turns toward his home. He climbs now upon his favorite horse and rides in, the harness jingling. All the world is drooping, quiet, tired. He finishes feeding his team and himself. Before very long he will seek the bed from which he rose, leaving near at hand, upon the chair or floor, his garments, with the smell and color of the soil upon them. The first citizen of this republic has finished his day.

On his march—endless, continuous—all our life and hope depend. He must walk

BUYING an automobile is an important matter to most persons. A few are rich enough to buy on impulse and change if they find they were mistaken, but with most persons the automobile is, next to the home, the most important purchase.

Mitchell cars are built for the people who can't afford to make a mistake; the more you know and the closer you investigate, the more you'll realize that Mitchell cars give the most for the money and are made to last indefinitely.

Mitchell cars are economical cars to operate, and in appearance they class with cars that cost three times as much.

Don't buy a car hastily; look around; learn the important points; study all the cars you can; every step in such things will emphasize the conviction that the value offered in a Mitchell car is the greatest value in the automobile field today.

How Manufacturers Are Increasing Their Profits By Using

Compo-Board

The Modern Wall Lining

Hundreds of manufacturers have improved their products and made them more salable by using Compo-Board in their manufacture. Hundreds of manufacturers have put it to severe tests and found it the best material for backs of mirrors, medicine cabinets, wardrobes, wall cases, book cases, picture frames, calendars, for lining incubators, refrigerators, cabinets, for blackboards, for lambrequin work, for advertising figures, stage scenery, and for any number of other uses too numerous to mention.

What Compo-Board Is

Compo-Board, as its name implies, is a composition board. It has three principal parts: its surfaces of heavy paper, the wooden core and the cement. The paper is heavy, close pressed. The cement is of very great strength, and the slats thoroughly dried and put in indiscriminately as to grain, which prevents warping.

The whole, after the parts are assembled, being subjected to very heavy pressure and intense heat, makes a smooth, straight sheet of very great strength—one quarter of an inch thick, and four feet wide.

Compo-Board being air tight is impervious to cold, heat and moisture. It is tough and durable. It cannot warp. It presents a smooth surface for papering, kalsomining or decorating in oil or water color.

Here is one of many letters from well known manufacturers:

"For several years we have been using Compo-Board exclusively in all of our kitchen cabinet backs. As you are aware a kitchen cabinet is subject to violent changes of temperature and humidity when placed in an ordinary kitchen, and the Compo-Board stands the strain the best of anything we have ever used in that place. You will please feel at liberty to refer anyone in the same line of business to us."

Minneapolis Furniture Company.

SEND FOR SAMPLE

You may be able to use Compo-Board to good advantage in your own product. Surely you will sooner or later find economical use for it about your factory. If you build a home, a barn, garage, factory or warehouse, Compo-Board will serve you somewhere better than any other material. Write us and get posted. Send for sample and booklets. Compo-Board is sold in strips 4ft. wide and 1 to 18ft. long by dealers in nearly every town.

This Magazine

Free to Painters

Among the subjects treated last year were:

Cracking and Scaling

Two Thick or Three Thin Coats?

Effect of Adulterated Oil

Painting Pitch Pine and Cypress

Bleaching of Certain Colors

Short Life of One Coat Jobs

Every issue contains much that is helpful to the painter who wants to keep up with the march of progress in his profession.

If you do not receive "The Carter Times" regularly, ask to have your name entered for a free subscription.

THE PAINTER'S PAINT

Find the painter who has made a success of his business, who has established a reputation for doing first class work, and you will find one who pins his faith to pure white lead and linseed oil, mixed to suit the requirements of each individual job.

Find the *progressive* painter, who observes and tests his materials carefully, and you will find him using

CARTER WHITE LEAD

"The Lead with the Spread"

It is the same strictly pure white lead that he learned to use when learning his trade, only whiter and finer, because made by a modern process, which has enhanced the beauty of paint and has increased the covering power of a pound of lead.

The same reasons that have induced painters to adopt Carter, should induce property owners to *specify* Carter. It insures paint satisfaction and ends paint troubles.

Every property owner who plans to do any painting this Spring, should have our book "Pure Paint." It is a text book on housepainting and the color suggestions are illustrated by six handsome color plates of real houses correctly painted. Sent **Free** on request.

Carter White Lead Company

Factories: Chicago and Omaha

or we must starve. Literally we depend upon him. The wild game of the world would not long feed us, the fish would not support us, the herds that once sufficed would no longer serve. Only as this man walks, following the plow, can our hunger be appeased, can our civilization endure, can our cities be builded or continued. When he stops we stop. When his furrow is done the world is done. His day's work is the day's work of the world.

Did you ever see a world before the plow had come? Look for it early or you may be too late. Perhaps in your case it is too late already. In different and separated lands some of us perhaps have seen it—the world that never knew the plow. It is very beautiful, covered as it is with wild grasses and sunflowers, with rosin weeds and small wolf-willows and sweet-williams, and the small wild rose, kindliest flower of the prairies. Over the surface of the earth, rippling in the grasses, waves continually pass as they do upon the sea, one following the other, coming no man knows whence, going none knows whither. Very likely across this wild land when you saw it, which lay there for the most part as the wildfowl found it before the ship of Columbus plowed the sea, there ran the faint and scarce-repeated trace of wheels. The wheels mark the soil even ahead of the plowshare. You came across a country without fences, following what they called the main-traveled road; and now the road has split and wandered and thinned—and here at this little ridge has disappeared, so it would seem. The grasses have almost all stood up again.

From where you stand you look out across a wide and flat green valley over which the sun of springtime is shining bravely. It lights now a fleck of yellow over yonder. That is the raw roof of a crude new home. Beyond it gleams something long and black, shining moistly in the sun. It is the first furrow in the turf, the first work of the advancing plow. Your young new world is old; it is done—it is old. The plow will not turn back. This picture, green and lined with black, soon will be all black—and later, gray, as the soil dries out. A home has come here, possible because of the plow and the man who knows its use—an outpost of the people that will not be driven back—the man who plows, conquers and permanently prevails. Four thousand million miles he walked last year, back and forth, across and across his field; but of those miles not one foot was backward—each one was in the advance.

We of the cities, juggling this man's deeds while he is far away, sometimes think we are this man's leaders; but he is our leader and our master. We follow him. We are the robins, the curlews, the blackbirds—hopping, twittering, complaining in his trail. His is the greatest and gravest figure of all in the picture framed within the lines of our republic. From your desk, from your loom, perhaps you at first did not recognize him—perhaps did not call him the first citizen of this republic. Perhaps in November you have called him brother. In reality, in that month and all the other eleven, he is not your brother but your master.

BUSINESS HELPS

WHENEVER I hear men complain that they have had no opportunity; that their ill luck, their failure to succeed, is due to Fate; that if they had been differently situated they would have made good—that, in short, there has always been some malign influence or other, without any fault, any shortcoming, of their own—I think of two men whom I have got into the way of terming the Two Men in a Boat.

For these two men, each in his own and separate way, have done the seemingly impossible—attained the unattainable, achieved the unachievable. I was a passenger on their boat and it came about that each of them told me his story—though, oddly enough, I think neither knows the story of the other. I am going to tell their stories here, for I know of nothing more encouraging to those who feel they are penned in, circumscribed and held back by adverse surroundings. What these men did was to win success in business on shore while at the same time they attended most thoroughly and satisfactorily to their water jobs and spent far the greater part of each year afloat.

. . . . . .

The boat was one of the great steamers of the Great Lakes; one of the men was chief engineer—the other second mate.

Navigation on the Great Lakes is annually put an end to for a while by cold and ice. All sailormen, therefore, are likely to have some weeks of enforced idleness, as it is difficult for them to obtain regular work on shore in winter, because that is a time, in the lake region, when great numbers of other men of various occupations, skilled and unskilled, are also out of work on account of the weather. Most of the lake sailormen practically rest and loiter and stagnate through the winter, for there really seems to be nothing else to do. And, indeed, the only thing that can be relied upon is creative work.

Two Men in a Boat

Now, most people have come to believe that creative work means something like writing poems or making pictures; but, as a matter of fact, it means anything a man creates himself—and the man who creates a job for himself where there was no job before is doing creative work of a mighty valuable kind. That is what these two men in a boat did—one of them, the mate, being started on his way by stress of being "in a boat" figuratively as well as literally; and the other, the engineer, being moved by a laudable ambition that Chance had turned enthusiastically into an unexpected line.

The engineer, when I met him, was but little over thirty and had won his place of responsibility without the aid of technical training. He was thus one of the many examples which illustrate that young men with an ambition for technical work should not despair merely because they can graduate only from the schools of experience and correspondence.

He had married when he was twenty-two and at that time had saved a thousand dollars. At first, he and his wife had planned to rent for a while; but houses were hard to find, there having recently been a boom in manufacturing, and consequently such an increase in population in their city as to cause desirable houses at reasonable rents to be snapped up quickly. Naturally enough, therefore, there arose the desire to build—to have a house of their own; and the necessary extra money was arranged for by borrowing.

A Beginner at the Building Game

The engineer tried hard to have the house finished with the approach of spring before going aboard the steamer. It was odd, he thinks, as he looks back upon it, that his only ambition was to leave his wife in her own home when he should have to go. "I knew all about the general situation as to houses and their values in a growing city, but it did not occur to me that I could or ought to act upon that knowledge," he said to me, thus expressing the general reason why hosts of people do not make money. They see opportunities—safe opportunities—but keep pegging away at their own line only and leave the opportunities to others.

However, in this case of the engineer Chance was kind; for an unexpected thing happened. Before the house was finished some one offered to buy it in its unfinished condition, and the engineer promptly closed with the offer, for it meant—for house and lot together—a clear profit of nine hundred dollars.

It was this that opened his eyes—that set his mind and his imagination to work. Why not make a business of building houses? He had sold one house—why not build and sell others? Clearly, there was money in it. The idea was fascinating.

Yet, being a wise young man, he did not throw up his well-paid situation. He went to his steamer and worked faithfully during the long months of the season; and in all his spare time he was thinking and planning in regard to the possibilities that had so interestingly opened up. A ship is a good place for thinking—leisure hours, the stars shining far overhead and the land stretching off mysteriously on every side are apt to be fruitful of ideas that are worth while if it happens to be an earnest [illegible]

Digitized by Google

who is thinking. And so it came about that when this engineer went home again he had his system pretty well planned out. He had planned it as thoroughly as possible because, knowing that his time on shore must necessarily be limited, he wanted to make every hour of that time pay.

. . . . . .

"I went to the courthouse and studied the records to find land on which there were unpaid taxes, for it seemed obvious that the man who couldn't pay his taxes must be hard up—or, at least to some considerable degree, in want of ready money. From the various plots of land that I found listed with taxes due I picked out only such as were in the general part of the city I had decided upon for my ventures.

"That I knew the city very well, and how it had grown and was growing, was a strong point in my favor. It was not like guessing in strange territory. That is something I have kept in mind from the first. There have been times when I was tempted, touching at different cities as I do, to make speculations at some of the other places when surface indications seemed good and I feared that the growth of my own city was becoming less active; but I have never let myself get into untried territory. I have kept right on where I had the basis of local knowledge, leaving the other places to the men who knew them.

"And I did not attempt to handle land that already had a house on it. I wanted just the land, and I would do the building. I am not sure I had a particularly good reason for this, except that I had to concentrate my efforts as closely as possible on account of my limited time. And I felt sure that I could buy to better advantage if I went after vacant lots rather than houses; for I knew that houses were pretty easy to rent in the good neighborhood I had picked out and that their selling price would therefore be high. And right here I ought to put in that I never for a moment let myself think of going into any neighborhood that had begun to show signs of falling behind, even though the prices might be wonderfully enticing and even though I could see no reason why the neighborhood should deteriorate. Real estate is a freaky thing, and one must never argue with its facts, no matter how unreasonable those facts are. One neighborhood goes ahead and another falls behind—all you can do is to accept each situation as it is.

"Well, when I found a likely bit of land I would hunt up the man who was behind in his taxes on it and find out what was his very lowest price. Then I would dip considerably under his figure and offer spot cash. I made a point of knowing, of course, at what prices land had been selling, so that I should not go too high in my offer. I knew that, with a certain amount of cash as a basis, there were ways of readily getting the rest of the money needed—and I never for a moment forgot that the man with back taxes is likely to sell low. If I found one whose prices were too high I merely dropped him and went to another. It's a sure system for results."

Door Knobs and Wall Paper

"I saw, too, after my first experimenting, that I could do much better by giving out the work in a number of separate contracts—the parts that I did not do myself—rather than give it in one single contract. Perhaps, if I were not a man with a practical knowledge of mechanics, this would not be the best way; as to that I cannot say—but I know it is the best way for me."

At first, he found it necessary to have an architect, but it was only at the beginning. Settling upon a general type of house, as he has done, he soon found himself able to make all the drawings himself; for his training made plans and specifications and drawings and blueprints familiar and easy, and he closely studied the architect's first work for things to follow or to avoid.

"Any changes in type or detail I can see to myself. And I have certainly made some changes since my first efforts; for, after two or three single houses, I put up a double house, and now I am building what is called a terrace—being a group of four."

For six years this young man has been doing this kind of work and has built up a business that pays him handsomely. He aims to build for the people who do not wish to pay more than five thousand dollars for a home, and his profits have averaged over two thousand dollars a year, with a constant upward trend as his working capital has increased.

"My wife has a natural bent for things mechanical and can superintend building work most admirably. She sees to the running of things while I am away—and runs them mighty well! We keep in touch by letters—she knows when I am due at the different ports; and once in a while she joins me for a run between two ports. And, say! we've got a boy just five years old! And already he can tell one kind of wood from another—knows the difference between poplar and oak and pine—knows lots of things about building! That shows how early you can begin in a practical education and get a little chap intelligent about things worth while."

I was interested in some of the ideas of this engineer as to the handling of his property. "I aim especially to catch the women," he says—"catch the woman and you're pretty likely to get the man.

"I am always ready to be a little extravagant with two things—doorknobs and wall paper. It's astonishing how these two things impress people. And here is another thing: When I go through a house with a prospective buyer or renter—for I am always ready to rent for a while if I find any delay in getting a buyer at the right price—I watch closely any criticisms they may make. The criticism may be just a bluff to make me put my price down, or it may be sincere but mistaken, or it may be good. At any rate, it is an expression of feeling from people I want to do business with; and if it's worth while I'm sure to see to it that the matter is all right in the next house I put up."

Chickens on the Side

The success of the second mate is of a totally different character. Earning a salary less than that of the engineer, he was working patiently along, putting by as much as he could every year, and hoping, with his wife, for at least a modest and comfortable competence—when suddenly there came a change. His father, with no money saved, came to make his home with them.

It seemed to spell tragedy, but the young man rose to the occasion. The emergency developed new qualities in him. As he paced the deck and looked out over the black waters, it gradually came to him that the situation held potential advantages—that it might be made of positive financial good. Really, for an earnest man, a ship is an excellent place to think!

He would buy a home—some little place just outside of the city where he had always lived—which did not, by the way, happen to be the city of the engineer. He would start a chicken business and would follow it earnestly, deliberately, with close and intelligent care and study. He himself would superintend and plan; his father would take charge of the daily running of the plant during the sailing season; his wife would help materially. There was no reason why the business should not make them rich!

He went into it with a sober deliberateness that fully counted the cost. A house and barn, with five acres, were purchased for seventeen hundred dollars. The place was just four miles from the city. A full outfit, purchased and built with the utmost economy, including incubator, brooder, coops, fencing and runs, cost three hundred and thirty dollars. Books were carefully studied. People who knew about chickens were consulted. No move was made without caution—but caution did not mean a particle of hesitation.

That was begun just a few years ago, and here are some of the results already: The property itself has increased in value through the natural growth of the near-by city, and is now worth, at a conservative estimate, over a thousand dollars more than it cost, as it was bought at a bargain. A horse and wagon have been purchased for daily trips to the city, and the sale of eggs and broilers gives a snug sum every week. The mate is at home to give his personal work and supervision at the very time of the year when he can do the most good; for it is special winter work that makes chickens pay the best. The off-season broiler is an expensive delicacy! The chickens are fed and tended and watched with such successful care that sickness is practically unknown among them; and the hens lay freely when eggs are dear. With prosperity, happiness has come to all—and the father is pathetically proud to show daily that he is not old enough to be shelved.

The organization which produces the Paige automobile means more to purchasers of Paige cars than the specifications of the car mean.

Paige Model Brunswick, Self-Starting 5-Passenger Touring Car, $1000

BY themselves, Paige specifications and construction are enough to make it distinctly the best automobile in *its price field*.

The Paige organization, the entire personnel of the Paige-Detroit Motor Car Company, is a staunch guarantee of the honest construction of every Paige automobile—a guarantee of careful selection of materials, a guarantee of high-grade workmanship, a guarantee of stability and permanence. And stability and permanence as typified in such an organization are of vital importance to the car owner.

The PAIGE Car

is not a car of mushroom growth, it is not designed simply to *sell*, it has been developed carefully and honestly by *men who know*, to meet every requirement and every possibility of the $1000 field.

Compare the Paige car part by part with every other car in the thousand dollar class, and it will *sell itself* to you even without that *unseen* strength of the organization back of it. And when you buy your Paige keep in mind the fact that these men collectively and individually vouch for the honest construction and durability of your car and a high-grade service to Paige owners.

The Paige Organization

THE ACHIEVEMENTS OF DOLLAR DIPLOMACY

(Continued from Page 4)

using the capital of the country in the foreign field in a manner calculated to enhance fixed national policies. It means the substitution of dollars for bullets. It means the creation of prosperity which will be preferred to predatory strife. It means taking advantage of the interest in peace of those who benefit by the investment of capital. It recognizes that financial soundness is a potent factor in political stability; that prosperity means contentment and contentment means repose." *

The most striking instance in which dollars have been used and have succeeded where bullets would have done naught but add to the misery of an unfortunate people, occurred in Santo Domingo. In 1904, that country having been torn for years by internal dissension and revolutions, the Dominican people found themselves in a position where the revenues of practically every port in the republic were pledged for the payment of debts held mostly in Europe. There were no funds left with which to carry on the work of government. The total revenues from imports and exports had for years been insufficient to meet even the interest on the outstanding indebtedness, and the people of the island were face to face with bankruptcy. They were also face to face with the prospect of seeing the custom houses seized by European powers for the protection of European creditors.

At this point the United States, armed with dollar diplomacy, came to the assistance of the Dominican republic. An agreement was entered into in 1907 by which the customs revenues of the island were to be collected by an American receiver-general. To this the foreign bondholders, by reason of the practical guaranty provided by the interest of the United States, were glad to agree. Since the inauguration of this system the country has enjoyed peace. The custom houses could not be seized by incipient revolutions, and therefore funds could not be procured to make such revolutions successful. Last year the total customs revenues collected in the Dominican republic amounted to the record-breaking sum of $3,485,000. Of this sum $1,442,500 is devoted, under the convention, to the payment of the interest and the sinking fund of the foreign debt. Thus the bondholders receive the interest on their investment and are assured that the principal is safe and will by means of the sinking fund be returned to them at the maturity of the loan. In round numbers, $2,000,000 thus went to the Dominican government for the administration and development of their country.

Hope for Nicaragua and Honduras

Compare this situation with that which existed before the dollar diplomacy of the United States was invoked, when the Dominican government had nothing, the country was racked by revolutions, the bondholders received no interest, and an Italian gunboat was actually dispatched to Dominican waters for the enforcement of agreements with Italian subjects.

There are now awaiting ratification by the United States Senate conventions of this same nature with two Central American republics—Nicaragua and Honduras. Both of these countries have been the field for almost incessant revolutions, which prevent all progress and development and confront the people with the prospect of national bankruptcy and possible intervention on the part of foreign governments in the interest of foreign creditors. The present situation of each of these republics, in whose prosperity and peace we must necessarily take such an active interest, is analogous to that which existed in Santo Domingo in 1904. It is confidently expected that by the operation of the conventions now pending in our own Senate—Nicaragua has already ratified the convention with that country and is eagerly awaiting its adoption by us—the peace, credit and prosperity of both will be firmly established, as has happened with the Dominican republic. This phase of dollar diplomacy is no longer an experiment.

Another typical work of dollar diplomacy has been our help to Liberia. Since that small African republic was founded by Americans and colonized by liberated slaves it has been our ward, and its welfare has naturally always been of great interest to us, especially so to our citizens of African race and to those particularly interested in them. Pressure of frontier troubles, fighting with turbulent tribes and onerous foreign loans reduced the country to a stage of tottering weakness where apparently it was about to disappear from the map. Under a treaty with the United States, Liberia sent a commission here to ask aid. We sent a commission to Liberia to investigate and report, and as a result we got American bankers to interest themselves in the rehabilitation of Liberian finances. The governments of Great Britain, France and Germany, having commercial or neighboring interests, joined in the work, and their bankers coöperated with ours. The result is an understanding by which an American is about to enter on his duties as general receiver of customs for Liberia, and we are sending three or four military officers, at Liberia's request, to instruct and drill an efficient constabulary to maintain order. We hope that we have thus succeeded in guaranteeing not only continued existence, but also prosperity and welfare to the republic of Liberia, which has excellent resources and which it was our moral duty to assist and preserve in accordance with our present interest in the country and its future possibilities.

Improved Trade Conditions in China

The Spanish War left us with extensive possessions in the Far East, and immediately thrust upon us a direct interest in the affairs of that part of the world. When President Taft, early in his Administration, found himself called upon to announce his Far Eastern policy, he declared it to be not one of territorial aggrandizement or of merely commercial expansion but a policy that should tend to the continuance of the sovereign and territorial integrity of China and the "open door."

This declaration was not hastily made. While he was Secretary of War and long before his nomination for the presidency, Mr. Taft in a speech at Shanghai had firmly taken the same attitude:

"If in helping China to preserve her sovereign and territorial integrity economic and commercial factors enter into the problem, that is because we are working in an actual world where practical interests operate and clash. We must reckon with the ordinary human motives in popular and governmental action among all the powers and make use of the everyday purposes and instrumentalities of life. Our activities in the Far East none the less express a logical, worthy and beneficent program altogether consistent with the principles and ideals of our Government, because of the fact that American dollars are made to perform a high moral duty."

The main points in the development of this policy may be briefly stated: In the Treaty of 1903 with the United States, China agreed among other things to abolish the system of internal taxation called "likin," which impeded the free circulation of commodities to the general detriment of trade; to adopt adequate measures for the protection of industrial and literary property; to revise the mining regulations and encourage mining operations; and to provide for a uniform system of national coinage that should be legal tender in the payment of all duties, taxes and other obligations throughout the empire.

Early in 1909 the Department of State ascertained that capitalists of three great financial powers, Great Britain, France and Germany, had all but completed an arrangement with the Chinese government for the building of certain trunk lines of railway in Central and Southern China. It was learned at the same time that the revenues pledged in connection with these railway projects vitally affected the national reforms in which this country was so deeply interested.

The American Government did not demand that these railways should be built or that American capital should necessarily

* From the address of the Honorable Huntington Wilson, Assistant Secretary of State, at the Third National Peace Congress, Baltimore, May 4, 1911.

Digitized by Google

e employed. Its demand was that if the ailways were to be built, and to be built ith foreign capital, American rights and merican interests in the development of hina, based upon the Treaty of 1903, ould be duly recognized.

It has been stated in some hostile quarrs that the recent upheaval in China was aused by the injection of American enterrise into the situation. Nothing could e farther from the truth. The railways ould have been built if Americans had ever appeared on the scene, but with this ifference, that the control of the principal evenues throughout the heart of China ould have been pledged to other foreign owers, and America would have been eprived of any voice at the council board t which the important questions involved n the disposition of these revenues were etermined.

After some negotiation the claim of the nited States to equal participation with ther powers in all respects, including the isposition of the securities, the supplying f funds and of materials, was admitted y the foreign financiers and governments oncerned.

Later the Chinese government, knowing he interest which the United States had ong taken in the currency reform, applied o us for financial assistance in carrying ut the project. The Department of State ad but recently demanded for Americans he right to share in the railway project. Moreover, it recognized the treaty rights of he other powers and the vital importance f coöperation with them in the working ut of the currency reform. The occasion as therefore seized to forward the policy f the open door, or equal opportunity, hich had always been so strongly advoated by the United States since the time f John Hay; and the door was opened, ith China's consent, to the financiers of he other powers already associated in the ailway loan.

America has frequently been criticised n past years for trying to exert an influence n Chinese affairs out of all proportion to he importance of its vested interests there. The successful completion of the two rojects mentioned has given the United tates for the first time, since our early arrying trade, such a substantial interest n the material development of China as o give us more than a moral right to a oice in all questions affecting China's welfare. Our Far Eastern policy has been rought "back to earth." In addition, our nterests have been so associated with hose of the other leading powers by comnon financial ties that it is to the benefit of ll alike to join in maintaining the political ntegrity of China and to unite in sympahetic and practical coöperation for its eaceful development; for where nations nvest their capital there they are intent pon preserving peace and promoting the levelopment of the natural resources and rosperity of the people. No better proof f the wisdom and effectiveness of the olicy adopted could be found than the way in which the powers have worked toether to protect their common interests nd to avoid all unnecessary interference luring the recent disturbances in China.

So, you see, dollar diplomacy has substituted peace and prosperity for bloodshed in Santo Domingo and is at work to do the same for Nicaragua and Honduras. Dollar diplomacy is working for coöperation and concerted support to help China toward material development, modernization and peace. Dollar diplomacy is carrying out the moral duty of the United States to Liberia.

If the name dollar diplomacy is to be understood as popularly applied in a general way to the diplomacy of President Taft's Administration, I could show you how methods dubbed dollar diplomacy, which sounds very materialistic, have literally prevented or terminated a war between Ecuador and Peru; a war between Haiti and Santo Domingo; a war in Honduras; not improbable war between Panama and Costa Rica; and chaos sure to lead to war in Nicaragua.

In a régime styled dollar diplomacy an American president has taken the world's greatest step toward universal peace through the French and British arbitration treaties. During the same period, through our new treaty with Japan, the so-called Japanese immigration question, at one time so troublesome and by many declared impossible of solution, has been settled permanently and satisfactorily. There have been more resorts to arbitration and more peaceful settlements of just claims and more brushings away of misunderstandings than seem to have occurred in any other corresponding period.

The effective work done by the consular service is just beginning to receive recognition, and during the last two years the diplomatic service has been aroused to the fact, which long ago was well recognized by other powers, that one of the most important functions of that branch of the foreign service is to help promote trade. The consuls have been extending unusually efficient help in the way of keeping American exporters in touch with the commercial situation and the opportunities in their districts. They have opened up many new avenues of trade through the information forwarded, which is transmitted to American manufacturers and exporters. A notable feature of the work in Washington, so far as it relates to trade relations at least, is the large number of important American business men who now come to the department for personal conferences and to secure advice and suggestions either at the Bureau of Trade Relations or from the experts in charge of the politico-geographical divisions.

All these modern activities of the Department of State and the foreign service are entirely dependent upon that professional efficiency and up-to-date method and organization which have been the aim of President Taft's Administration, and, of course, the rigid application of the merit system is indispensable. I do not think it is generally appreciated that during this Administration there have actually been more appointments of consular officers and secretaries in the foreign service made, in proportion to population, from the Southern than from the Northern states. This is to equalize the representation of the states and territories in the service along the lines of the new regulations which the President has urged Congress to give the force of law.

There is another thing perhaps not generally realized, namely, that with an export trade of over $2,000,000,000, the total cost to the American taxpayer of the whole foreign service establishment, including the Department of State, the diplomatic service and the consular service, in 1911, was only $1,760,000 net in round numbers. Thus last year, the year of its greatest activity, the whole foreign service establishment, which is expected, besides extending foreign trade, to conduct our foreign relations and, through a just and conciliatory diplomacy, to preserve us in peace and amity with the nations of the world, cost the American taxpayer less than $2,000,000—surely a ridiculously small sum when one reflects that during the same year the cost of the military and naval establishments of the United States, exclusive of pensions, reached the enormous total of some $215,000,000!

Of course our enormous coastline, our outlying possessions, our position as a world power and as a commercial nation demand a powerful navy; but surely where we spend one hundred dollars for military and naval establishments we ought at least to be able to spend more than one dollar upon the cultivation of international commerce, good neighborhood and peace.

FITFORM CLOTHES
FOR YOUNG MEN

Here are good and sufficient reasons for selecting FITFORM clothes in preference to all others—why you get the smartest, most distinctive and desirable clothes when you buy them.

FITFORM clothes are designed and cut with minute and exact reference to the young man's figure. They are superior in fit, style, fabric, tailoring.

They give the figure the appearance of physical strength and grace; they add tone, distinction; command respect and win admiration for the wearer.

They are the only real "college men's clothes"; they give the professional young men prestige; they make business friends; meet all requirements of the social "mixer".

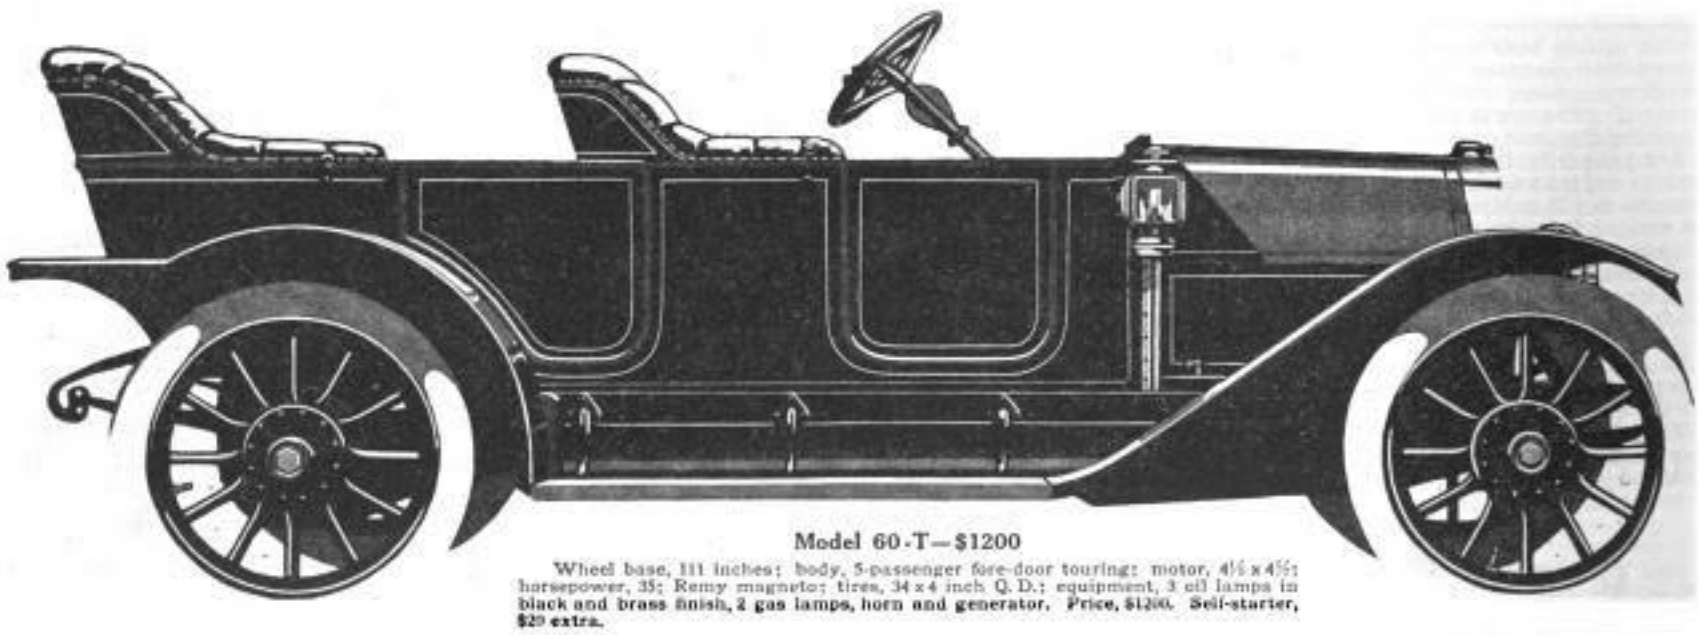
How Factory Facilities

Showing Why the Greatest Factory in the

ANY one with enough capital to buy a few parts can make a line of automobiles. Frames, motors, transmissions, bodies, axles, etc., can be delivered in at least thirty days from part makers all over the country. Just get a stock design—put these parts together—find out how much the parts and the assembly cost you—add what you consider a fair profit—then go out in the open market and start your business.



This description represents the small assembly shop. They buy everything and make nothing. Therefore it must cost them more to do business than the larger factory, for every single part of their car is bought from some outside source. They must pay the part maker a profit as well as themselves, *and the consumer is forced to pay both of these profits.* If, for instance, this maker is producing a forty-five horsepower touring car, it must cost you a good thirty per cent. more than the finely finished Overland car of that type. Generally this grade of factory turns out about 1,000 to 2,000 cars a year. *Why should you pay their higher prices?*

The next step, in automobile manufacturing, is the plant that markets 5,000 to 6,000 cars a year. This plant is not much different from the smaller plant, except that it is a little larger in appearance. Here you may see some little manufacturing. You see men drilling and filing, and possibly you will find quite a few lathes in operation. Their motor is probably built from a special design, *but built by some one else.* This grade of plant also has to pay the middlemen a profit, and get its own profit besides—*all of which the consumer must pay.*

Compare this plant with what you see at the enormous Overland factory, where 25,000 cars a year are made. Here the middleman does no business. Nothing is bought from the outside. There are *no* extra profits to be provided for, for which the consumer must pay. Every single part of the car is made in the Overland plant. Our buildings cover over 80 acres. 5,000 men are employed. Millions are invested in automatic machinery. A few of the things you see in the Overland factory which are absent in the smaller plants is the great die cutting plant. You see lamps, radiators and wind shields being made. You see the most modern expert gear cutters. You see huge machine stamping outfits—turning out pressed steel frames, fenders, mud guards, hoods, etc. You see the enormous body building plants and the great drop forge plant. You see the bronze and aluminum foundry. You see what seems like miles of automatic machinery; in fact, you see the greatest and most modern automobile plant in the world.

In the automobile business—like everything else—the facilities—first, last and all the time—govern the selling price of each individual car. The greater the facilities, the lower the market price of the

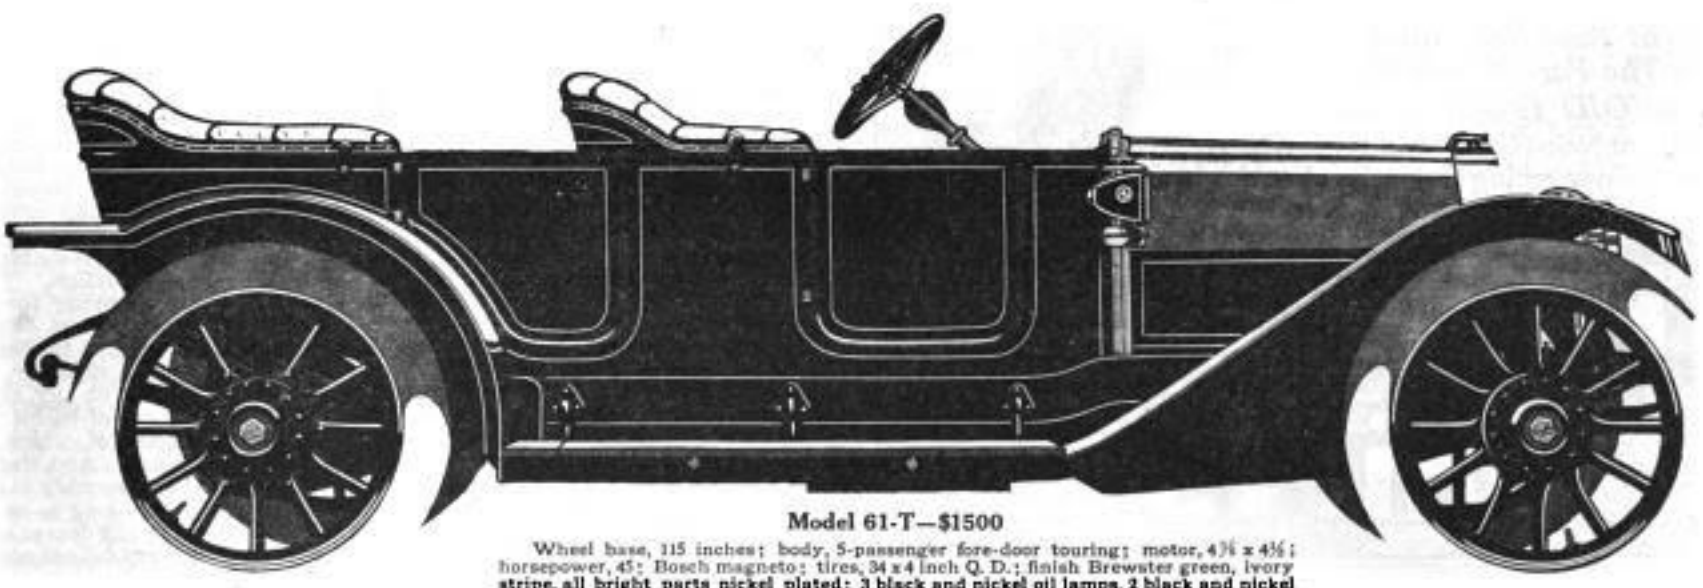
Affect Automobile Prices

Industry can Give You More for Less Money

Overland

mobile. Where we make 25,000 cars average plant will make but 5,000, and . What the smaller plant must buy, make. What they do by hand, we do machinery. Where they employ 500 to men, we employ 5,000. Where they material in small quantities and pay long price, we buy in large quantities pay the small price. We are not handi- ped by any financial water. Every share ne Willys-Overland stock is owned by n N. Willys—the president. He con- s and directs. No one else in the world a word to say. And the net result better car for less money than any other er can produce. Two values, typical what we do in the way of economical luction, are shown here.



odel 60 (left hand page) is a thirty-five epower touring car priced at $1200. a big five-passenger car—comfortable with lots of room. It has a powerful ty-five horsepower motor, which can easily develop fifty miles an hour. The wheel base is one hundred and eleven inches. The transmission is of the selective type—three speeds and reverse—fitted with F & S bearings, which are used in the most expensive cars made. Crank and gear casings are made of aluminum. The frame is of cold rolled pressed steel. The operating levers are in the center of the car. The body lines are graceful and pleasing. The upholstery is of good leather hand stuffed with fine hair. We equip this car with our simple self-starter for only $20 additional.

Can you duplicate this car for much less than $1500? If you want a machine of the thirty-five horsepower touring car type, would you pay $1500 when you can get this car for $1200?

Model 61 (right hand page) at $1500 is another exceptional value. This car has a forty-five horsepower motor; seats five people. The wheel base is 115 inches. The front axle is a one piece drop forged I section fitted with Timken bearings. The rear axle is full floating, also fitted with Timken bearings. The pressed steel frame has a double drop. It is equipped with Bosch magneto. Tires 34 x 4 inches. The big handsome body is finished in rich Brewster green, ivory striped. All bright parts are heavily nickel plated. Upholstery is of the best leather and genuine hair. This car is big, strong and magnificent. It is hard to figure what more anyone could possibly want in an automobile. It is complete in every detail, having all those little modern refinements that make for comfort. The price for this car is $1500. Self-starter only $20 extra. Go over the market with a fine tooth comb and you will not find its equal for less than $2,000.

Our 1912 book gives you all the further facts. Write for a copy today and see the difference in automobile plants. Please ask for book A 23.

THE NEK-GARD KIND

ON MAIN STREET

(Continued from Page 6)

and is deftly and quietly piloted out into the cool night air and folded up in a cab. On still rarer occasions, some exhilarated roisterer of a village cutup opens the front door and enters with a whoop; but he never gets past the oyster counter. There is no record of a person rolling a whoop that ever did get past the oyster counter, because this department is in charge of a gentleman who opens oysters for a living and removes disturbing elements for pleasure. He is a wide, thick person, and the "muscles of his brawny arms are strong as iron bands"; and he could open oysters with his thumbnail, though generally using the edged tool provided for that purpose. He is likewise gifted with the calm, judicial temperament; and he never lets his disposition or his hair get rumpled. The cutup, entering, utters his preliminary whoop. The oyster-shucking gentleman lays down the implements of his calling, wipes his hands on the front of his apron, thereby practically hiding the apron for the time, and comes swiftly out from behind. There is a brief flurry, a squeal as if some one had stepped on a mouse, and the person who whooped is out on the sidewalk in practically a whoopless state, yet entirely unhurt and wondering vaguely how he got there without walking. And that is positively all there is to it.

Not a ripple of excitement has been communicated to those sitting at the tables—the diners dine on in ignorance of what has taken place at the front door; but the sightseers sit and sit and sit, waiting wall-eyed for the customary evening's contest between the gridiron heroes and the waiters. Finally Mr. Town Mouse, speaking in the disappointed tones of one who really can't get his proper night's rest until he has seen two or three Freshmen mangled up, will say: "Well, old man, it looks pretty quiet tonight; but last night, if you'd only been here, you'd have seen some lively scrapping—believe me!"

Here, of late, it has come to be the custom among those who are seeing the town to drop into one or another of two or three big, gaudy restaurants for the so-called cabaret shows that start after midnight and continue until everybody goes home or to sleep. This cabaret stunt is supposed to be the very capsheaf of rollicking, reveling deviltry—the latest importation in the acting-up line from dear old Paree—in short, the last word in refined and expensive wickedness. It is supposed to have brought a new fillip of sensation to the sated and jaded palates of the Broadway *boulevardiers*. One is told that all the society people and all the theatrical set and all the clubmen and all the men about town are just held spellbound by it! And generally one is given to understand that it is just a little bit the spiciest, sauciest thing that ever came to town. That is what one hears—but what does one see?

The Latest in Café Naughtiness

Very well, Rollo, since you must know, here is what one sees: One sees, on a given signal, several couples—hired from a theater or specially retained—dancing between the tables, back and forth among the diners and the drinkers. It is apt to be rather ordinary dancing, done in a rather ordinary way; but because the dancers don't dance on a platform or a stage, but right down among the tables, why, that—don't you see?—makes it just too piquant and scandalous for anything!

And so, with first one thing and then another, the giddy, delirious night wears on and wears out; and along about four A. M. our two devil-may-care friends come forth upon Broadway. Broadway at this hour looks like almost any other street anywhere at four A. M. The electric signs which made it to glitter like a gambler's bride are now turned off; and Broadway, which naturally is about the worst-lighted street on earth, has become a long, dim, drafty cañon, through which occasional footsteps echo hollowly. Save for the occasional taxi, the semi-occasional victim of the sleeping sickness hanging to a lamp-post, and once in a great while a tired policeman paddling by in his overshoes, it is empty and deserted. It is also cold and raw and dismal, and the air tastes of coming day; but, somehow, to the doctored imagination of the stranger, Broadway, even at four A. M., is invested with hidden deviltry and wanton wiles and mocking la and silken swishings, and to the bett his illusioned soul he is satisfied. Fo he not done New York? He has.

And when he wakes up in the mid the next day he finds that New York lowing its pleasing custom, has also him. He has seen and heard the things that he could have seen and h had he been so minded, in any to a hundred thousand inhabitants i United States—seen and heard them larger and louder and brisker scale haps, but nevertheless the same and for the entertainment he has paid nine times as much as the smaller would have charged him.

Just as bogus as the stock wicked Broadway, but of a different sort, stock wickedness of the East Side. numbers of persons from remote poi nightly demanding to be led to the Side in order that they may look with own eyes upon the sordid sin of the olis as contradistinguished from the ing and tinsel brands of sin. An they are led—there are persons spec the business of leading them.

The Highly Respectable Bow

First off, of course, they must see Bowery—the wicked, dangerous, dou desperate Bowery of song and story, pa ularly song. Well, maybe it was all of once—say, about the time of the Me War; but not any more. Gone is Sa Hall; gone is Steve Brodie's; gone are the rest. The Bowery of today and wise of tonight is almost altogether a ness thoroughfare. For every shabby that still lingers along its length, it has a dozen big factories and wholesale house for every ginmill sitting room, a d moving-picture shows; for every barroom, a block of soda fountains and jewelry sho and dairy lunches and retail clothing store.

The sightseer will look in vain for th roistering, rowdying swarms of blue-jacketed sailor boys; he'll wait in vain to be robbed and maybe slugged by a low-browed highwayman. The kind of sail boy that makes up Uncle Sam's navy tod is more apt to be uptown somewhere, sit ting in a two-dollar seat at a high-cla theater, or consulting books of refere at a public library; and the nearest to stranger will come to being robbed is wh a souvenir postcard purveyor tries t charge him five cents for a postcard tha was meant to sell at two for five.

The depraved monster who will take th job of killing a man for five dollars maiming him for two-fifty is strangely s on the job. This bloody-minded but a commodating party isn't there any mor and, to tell you the truth, he never wa It is true that on the Bowery you can g a shave for five cents and a haircut f fifteen; but, except in the "mellerdra mers" and the dime novels, there nev was any cutrate schedule on murder dis there. Eighty per cent of the resident po ulation of the Bowery is made up of ha working longshoremen and laboring me who live in the Bowery lodging hous because they are cheap places and han to their work; and fully ninety per ce of those who pass through the Bowery night are hardworking, law-abiding, sleep headed tenement dwellers. The rest a mainly sightseers looking for excitem and not finding it. I sort of hate to de a blow to a time-buffed tradition; but tell you the truth, a slummer is infinite safer in the Bowery at any hour that would be in any one of half a dozen low West Side streets, of which, probabl he has never heard. And, for that ma ter, he would be reasonably safe on any those streets, too, so long as he minded h own business with any degree of success.

When the Bowery fails to come up to i press notices, and the slummer shows sig of a slight swelling in his bump of disa pointment, the official guide steers hi through Mulberry Bend, after warning hi to be on the lookout for Blackhande and hurtling bombs. The slummer emerg from that quarter breathless but safe. W having seen any Blackhanders or bomb and he wouldn't, either, if he hung ro a week, waiting—and then he is steer into Chinatown for the real thrill.

and includes one very short, very crooked street—Doyers—and sections of two longer streets—Pell and Mott. It contains a number of Chinese restaurants, Chinese joss houses, Chinese curio stores, Chinese groceries, Chinese clubhouses and Chinese laundries, some Christian missions, an undertaking establishment—Caucasian—a drug store and several saloons, also Caucasian. There is wickedness and to spare in Chinatown, wickedness of a slinky and furtive oriental type, but it keeps itself hidden away on the upper floors of dark rear tenements and behind blind walls, where no uninitiated outsider ever finds his way; and the wickedness that is on tap for every casual eye to see is made-to-order wickedness, which Chinatown wears, like a false face, for the benefit of the impressionable visitors who flock there.

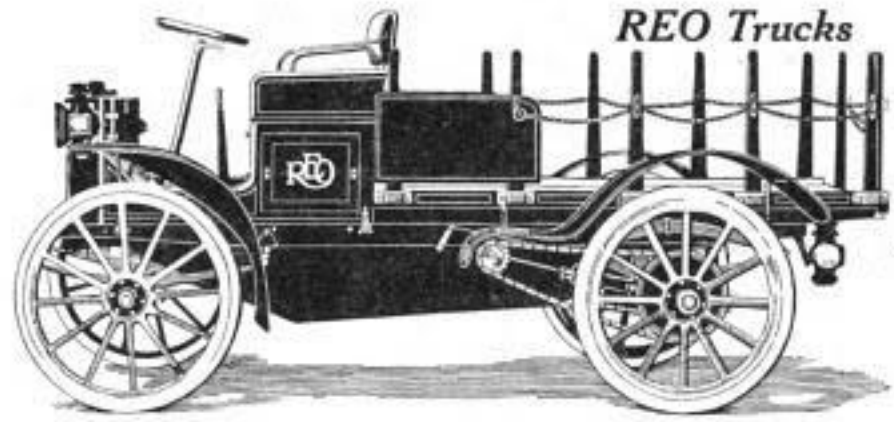
There have been shootings in Chinatown, just as there have been shootings on Main Street, in Pokeville; but no honest Pokeviller hangs round Main Street waiting for more shooting to take place. He reserves that form of idiocy for his trip to Chinatown. The pilot cautions him beforehand to be ready to flee for safety at the first crack of a gun—and he is ready to flee. Of course, if he stopped to think it might occur to him that a Chinese tong fighter would hardly be likely to wait until a large crowd of tourists came along, before pot-shooting his chosen victim in full view of the audience; but he doesn't stop to think. He is not in New York for that purpose.

It has been found necessary and profitable to devise dens of iniquity for the benefit of Chinatown visitors. There used to be one place in Chinatown, a bat-cave of a cellar, smelling like everything unsainted—admission, twenty-five cents—where the entranced vision of the tourist might rest upon a group of Chinamen engaged in what he was told was a gambling game for enormous stakes. And there used to be another place—and probably is yet, unless the police have shut it up—where, peering through a grimy glass door, the visitor might see lying on a bunk—oh, true word, bunk!—a fair-haired creature, smoking opium—charge, one dollar. Maybe a regular opium den wasn't something to go back home and tell the fellows about!

Places That Do Not Exist

Chinatown is chock-a-block with steerers, who make their living introducing visitors to Chinatown's make-believe wickedness. One of these is affectionately known among his friends as Willie the Fits, through the circumstance of his having occasional epileptic seizures. Willie the Fits was escorting a nervous covey of slummers—mainly females—through Doyers Street one night; and seeing a fee of augmented size in sight he was moved to apply the local color with a heavy brush.

"Gents and loidies," spake Willie the Fits impressively, "dere's been a moider for every foot of asphalt in this here street." Instinctively his listeners drew closer together. "Every brick in this here sidewalk is stained wit' huming blood. In them houses above yous the Hip Sings and the On Leongs and the Four Brudders kills their victims and hoils down the dead bodies. At any minute they's liable to be a bleeding corpse droppin' at yore feet!"



At this moment a negro, who was washing windows on the second floor of a saloon two doors below, so far forgot himself as to fall out and strike the pavement with a loud and painful splash. There was a mad medley of shrieks, a clatter of flying feet; and Willie the Fits stood alone, minus his flock—and, worse than that, minus his tips! Too much realism had been his ruin. Willie the Fits lay down and had one.

To get the right idea of New York wickedness, ask a policeman. Approach one of these stolid guardians of the public peace, as he stands post on a corner in some so-called slum district, and ask him the whereabouts of one of those typical New York dives you read of, where cutthroats plan their nefarious crimes while drinking deep potations from black bottles, and rat-eyed thieves slink in the shadows, and crime—as they say in the evening newspaper headlines—and Crime is Rampant! This has been tried before now by verdant strangers and almost invariably the policeman in his answer mentions the name of William Tell's brother, Wat.

"Wat Tell?" he says. "Wat Tell? G'wan now, and run along back where you belong! There ain't no such a place!"

And no more there ain't.

REO Trucks

Wheel base, 90 inches—Horsepower, 10 to 12—Length behind seat, 6 feet—Capacity, 1,500 pounds. Front seat top, $25 extra.

Only $750

And Built by R. E. Olds

Please mark that price, and note this truck's capacity.

Most trucks which do what this truck does, cost from $1,200 up.

We are building trucks on a business basis—at a dray-wagon profit.

They are built in a separate factory, with a capacity of 5,000 trucks per year.

And they are sold through the thousand dealers established on Reo cars.

To pay more than we ask for a truck like this is rewarding inefficiency.

The Famous Designer

It goes without saying that R. E. Olds knows how to build a truck.

The dean of designers, with 25 years of experience. The builder of myriads of pleasure cars. The creator of Reo the Fifth.

Mr. Olds should be—and he doubtless is—the best qualified man in the business.

Mr. Olds' method of perfecting this truck was to put hundreds of them into use.

They were operated in city and country, on hills and plains, in all sorts of business service.

One loaded truck ran from New York to Oregon. Two carried the baggage in the Glidden Tour, from New York to Jacksonville.

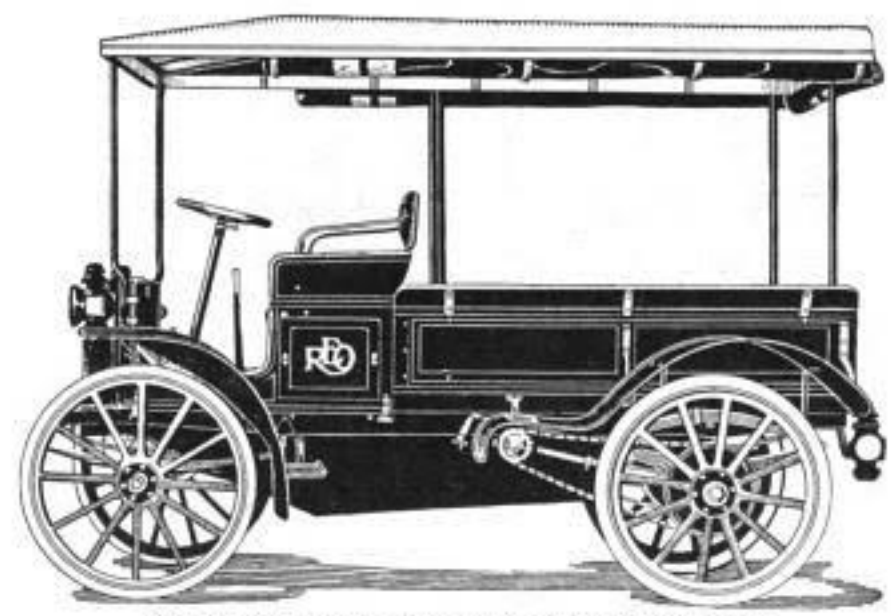
These tests have now covered two years. And never has a truck of this size and capacity shown better records in service.

50 Cents a Day

This truck is built so a 12-year-old boy can drive it. There is nothing to get out of order—nothing to do but steer.

It is immensely economical. On a six months' test, covering 4,553 miles and making 3,773 stops, the cost for gasoline, oil and repairs averaged 50 cents per day.

The average of many accurate tests shows the cost of delivery by Reo truck to be 60 per cent the cost of delivery by horse.



It does five times the work of a one-horse truck, and does it three times as quick.

It is always ready—never gets tired. Nothing can feaze it—heat or cold, rain or snow.

The Reo dealer—right in your town—will demonstrate the truck. He will teach your men to run it. And he is always there to take care of it.

Write us for information.

427 Stockbridge St., Springfield, Mass., U. S. A.

We show here a .38 Double Action Perfected Smith & Wesson. You have your choice of 3¼, 4 and 6 inch barrel, blue or nickel finish, rubber or pearl stock. Our booklet shows full line.

The Box-Office Value of Laughter

(Continued from Page 11)

Swede, but without success. The Spaniard, the Italian and the Russian have never been accepted generally as good laughter-provoking propositions.

The "yap" drama, with a lot of country "rubes" in it, is only popular in the city; in the neighborhoods where "rubes" do most abound it is received in solemn silence. If you don't believe this go to a performance of The Old Homestead in some New England town and see for yourself. The same thing is true of the mining drama. It is far more successful in the East than in the West. And, on the contrary, the farther you travel toward the setting sun the better they like the Yankee play.

Why do audiences laugh over and over again at the same old jokes—at the same minstrel gag, for instance—that they have heard for years? Do not be deceived by the bored and weary criticisms that you read of the minstrel gag. Believe me, the experience of all those who know is that there is nothing so safe to rely upon as a very aged gag. People seem to have the ability to laugh indefinitely at something that has amused them once. They not only thoroughly enjoy it themselves, but will take their friends to see the show and enjoy it over again seeing their friends laugh.

The Professional Woman's League determined once to give a minstrel show for a benefit. It was to be a women's minstrel show. Primrose & West's Minstrels were playing at a New York theater; and, as the benefit was to take place there, Mr. William West very kindly offered his entire scenery for the first part and also his services to get our performance into the proper shape.

With an absolute ignorance of the requirements of minstrelsy we had foraged about among our friends for new jokes with telling points. Also we had marshaled our fine singers and had asked them to get the last thing for the singing in cadenzas and roulades and fine operatic work.

Time-Honored Favorites

When the matter for our first part was selected and ready Mr. West strolled in to stage-manage it for us. He listened with a very peculiar and quizzical expression to our jokes as we bandied them about between Bones and Tambourine. After we had performed our first part for this wizard of minstrelsy he took our stage manager aside and said to her: "I think you have made a great mistake in your minstrel gags. It would be far safer simply to select from the time-honored lot that have served so well since the advent of negro minstrelsy."

We were much surprised and inclined to be very argumentative on the subject; but Mr. West was so calmly superior that we decided to abide by his judgment. Great was the disgust of all concerned as those dear old things that we had all heard from the beginning were rolled out, one after the other.

Sure enough, however, on the day the performance was given, though we might be said to have, in a sense, a selected audience, Mr. West's wisdom became very apparent as the old favorites—moss-grown and aged—were received with shrieks and yells of laughter and approval. The one or two of perfectly modern and up-to-date variety we had insisted on retaining met with a solemn silence. I do not remember even a snicker.

As to the operatic selections, which we had counted on as being a feature of the entertainment, we had a similar experience. A certain woman, who had a very fine voice and was a cultivated singer, had consented to take part only if she were allowed to give us a difficult aria from grand opera. After rehearsal she executed this amid the tumultuous applause of the hundred women concerned. Mr. West, with a rueful face, suggested it would be far wiser for her to sing Nellie Was a Lady, and said she would be sure to win favor with the audience.

The singer in question was called down for a conference with him. She upheld the banner of operatic music with great spirit and used many arguments to persuade him that the novelty of a grand-opera selection was what the general public was hankering after. He remained obdurate; and it took the combined effort of all concerned to bring her down to the simplicity of the old

Chiclets
REALLY DELIGHTFUL
The Dainty Mint Covered Candy Coated Chewing Gum

Look for the Bird Cards in the packets and learn how you can secure a beautiful Bird Album.

Half a million folks of all kinds—including grown-ups, children, teachers, etc., are collecting our wonderful Bird Studies—faithful reproductions of American birds in full colors, with descriptions of the birds' plumage, habits, and how to know them on sight. You will find one beautiful bird picture in each packet of Chiclets. Send us any fifty of these pictures with ten cents in stamps and we will send you our splendid Bird Album.

The refinement of chewing gum for people of refinement. It's the peppermint—the *true* mint.

THE RECORDING ANGEL

(Continued from Page 18)

y read with an omnivorous appetite ies of actual wickedness that would lt the average reader of decadent on. This is why the returned mis- ary is always sure of an audience and n enthusiastic interest. He seeds his ion or lecture with horror tales that al to this same diseased imagination. agons often have the most naïvely upt minds in the world. Mrs. Martin herself a waddling encyclopedia of doings and heathen scandals. There nothing that the worst woman in the d could do with which Mrs. Martin not have a sort of sighing, praying, rious acquaintance, a fact largely onsible for the suspicion with which egarded all dancing and strolling and ting. She never could see an unmarried and woman exchanging sweetly Shak- an glances without suspecting them e light of all her moral reading. The tion is, Which is the more reprehen- , the glances exchanged between lovers e eavesdropping eyes of the saint who cepts and reads them?

rs. Martin found the book of Leviticus interesting. She had just finished a in chapter and she was about to get upon her fat old knees to pray, two things occurred simultaneously stract her attention. First, there was t, stearny explosion from the kitchen, ded by the disagreeable odor of burn- cabbage. Her pot had boiled over! leaped to her feet with astonishing y. But she had not gone halfway e door leading to the kitchen before was appalled by a crash that rent the ant silence of the cloudless summer like a thunderbolt.

e stood for one instant in frightful nse between curiosity and the instinct ve her dinner, when again the terrific was repeated, and she yielded the age and ran out upon the veranda to the world was really coming to an end. a fact that she had long expected catastrophe, especially in Ruckersville e she knew wickedness to abound. It hing worth noting that a certain class ous people do come to that stage of ctiveness in their religious experience they expect the Lord to get mad and oy the world. You never hear of an st, or even of an agnostic, prophesying a destruction. It seems that neither ese has the faith to believe the Creator do so mean and sudden a piece of endous mischief. But ferocious saints erfectly capable of entertaining the by way of justifying their own indig- opinion of sinful man, and are even ble of predicting the event. More once Mrs. Martin had shaken her at the goings-on in Ruckersville, with ations about a day of wrath. But as she stood on the veranda of her e, leaning with one hand against a tall pillar of it and shading her eyes the other, she trembled. When you down to the uncertain feeling of it in own bones, nobody wants the Lord too literal and comprehensive in His h.

e looked this way and that, working her res into a fearful smile. A flock of tened birds flew past. A man driving m had pulled up in the middle of the t and was sitting upon the pole of agon looking back over his shoulder. saw the head of Mrs. Fanning-Rucker in its nightcap sticking far out of her oom window, craning this way and

Next there was a rush of feet on idewalk, and she beheld a long strand en and boys running from the direc- of the square. The captain led this g company. His hat merely clung to back of his little old bald head, his mus- bristled. He was hopping along with hin arms spread like featherless wings, he instinctive desire to fly was apparent ery movement.

hind him came Luster and Magnis Bilfire, all with their features sharp- to an interrogation point, while Elbert e shambled far behind, his knees hin- g him as usual, his coat on his arm, loodshot eyes swimming beneath the len lids, his head lifted and his lower sagging.

Elbert," screamed the old lady, "what arth is the matter?"

bert was short-winded; he had no th to spare in words at such a moment. He merely waved his hand in a certain direction as he went by. She followed it with her eyes and beheld a sacrilege.

Upon a gentle eminence, among the huge bolls of many ancient oaks, she saw the old Joseph Rucker mansion, standing like an old woman whose nose and chin are about to meet. The long fluted columns that supported the gable roof of the front porch lay prone upon the ground, the roof itself sagged nearly to the floor below, while a dozen men leaped about upon the main building shoving and pushing at it with ramming beams. Even in that instant the nose and chin met, the roof groaned, dropped sadly, then fell, filling the air with the sound of splitting timbers and enveloping all with a cloud of dust.

Mrs. Martin stood dumfounded. If she had seen ghouls robbing a tomb in the old churchyard behind she could not have been more horrified than she was at this sight of men ripping off the weatherboarding and romping up and down the half-disclosed ribs of the ancient house. When the dust cleared she put on her glasses and distinctly saw Jim Bone, on the ground below, waving his arms and shouting orders to the destroyers. She looked about, like a mariner cast into a stormy sea, for a refuge from her own distracted senses. Then for the first time she caught sight of Amy White seated by the window of her little old house across the street, weaving her fingers in and out with a long thread among her shining beads. Her serene face showed in the shade like a gentle epitaph upon all human follies. Mrs. Martin was indignant. She threw her apron over her head and waddled down the walk from her house, flung the gate open, came out, slammed it, hurried across, opened the one to Amy's yard, which sagged and refused to close, flip-flapped in her old heelless slippers up the narrow path that led to the entry, set one foot upon the step and could contain herself no longer.

"Amy," she cried, "I do believe you'd sit there and never move if Gabriel blew his trumpet!"

Amy, lifting her blind face, curved her lips into a Paradise smile.

"I reckon I would, Rachel," she said.

"Do you know what's happenin' right here under your nose?"

"No; what?"

"Jim Bone's got a dozen niggers over yonder in the grove tearing down the old Joe Rucker house. Didn't you hear the columns fall?"

"I may have, but I didn't notice."

"Well! It jarred the ground, and you didn't notice!"

Amy laid down her band of beads, took the end of her thread and began to feel with it for the eye of her needle with that curious insistent intelligence of the blind.

"When I first lost my sight every sound frightened me. Then when I understood that it was no use, that I could never save myself from any danger, I ceased to be afraid. I reckon I have more trust than you who see. I used to be afraid of storms here by myself. But now the lightning could zigzag across my face and the thunder might shake the house, but I'd sit and fear not. When you are blind you come to the place where you can trust the thunderbolt as if it were a little child with flowers in its hands."

Rachel was looking up at her from the yard outside. She could not comprehend such trust as this. She was nervous about storms, she was always afraid there might be an earthquake. She did not like to think how she would feel if God did actually carry out His wrath and destroy the world. But as she stood there—the tall grass waving its little feathery seed plumes in the gentle breeze—bedimmed by this faith of her blind friend, she suddenly recalled the burning smell in the kitchen.

"Lord 'a' mercy, my cabbage! I left 'em boilin' over!" she exclaimed as she wheeled and trotted off, leaving Amy to dream out a sentence for her Book of Life about the marrow of faith being blindness of one sort or another.

On this same afternoon Miss Leonora Bell, who was that funny thing, the lady principal of the Ruckersville Academy, was returning home. She was preceded by a group of fat and lean little girls who were talking about her. This is what all little girls do for the distance of a quarter of a mile immediately after they have been

THE Spencer Steam or Hot Water Heater

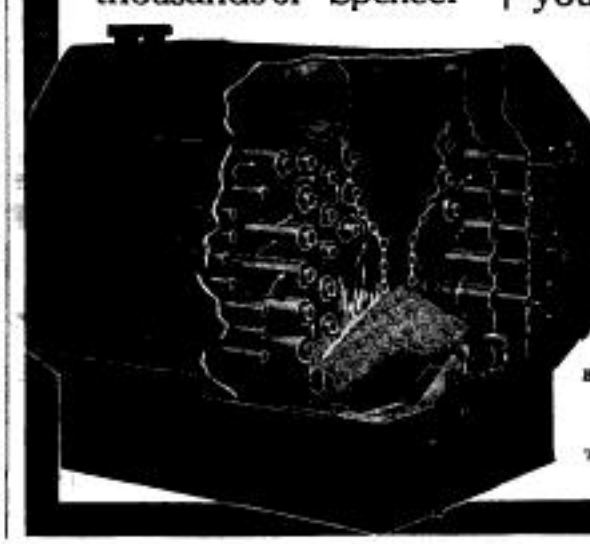
Positively reduces coal bills ⅓ to ½ by burning the smallest sizes of hard coal.

Ordinarily requires coaling but once a day.

Holds heat for 10 hours without attention.

These are strong statements.

But could we afford to spend the thousands of dollars it costs us to print them were they not true?



Would "Spencer" sales have increased nearly tenfold within the last six years, as they have done?

We are not trying to sell you anything directly by mail.

All we ask is an opportunity of proving the truth of our unusual claims, so that you can consult your architect or heating man.

This we can do by the endorsement of thousands of "Spencer" owners throughout the land, each of whom has proven for himself that the "Spencer" *does* reduce his coal bills ⅓ to ½; that it *does* hold a 24 hours' coal supply in ordinary weather (12 in severe); that it holds heat for 10 hours at a stretch without attention.

Is not such a heater at least worthy of your investigation before you decide on any new system? If you realized, as every "Spencer" owner *does* realize, what a wonderful money, time and labor-saving heater the "Spencer" really is, you'd write us *now.*

FREE BOOKS

Our new 40-page catalog and the experience of 57 "Spencer" users in various parts of the country will be gladly sent on request.

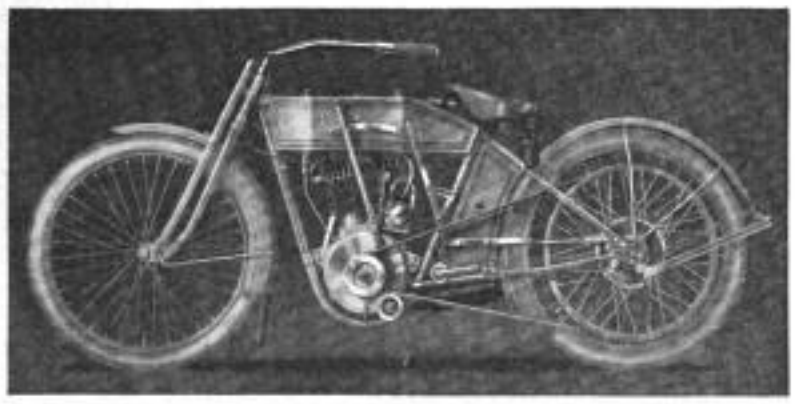
"I Tell You, It's a Great Saw!"

When you get hold of a Simonds Saw you *feel* that you can "do things" better; and you *can*. A Simonds Saw cuts true and fast and easily. It has the right "hang"—and its glistening blade and polished handle are a constant pleasure to its owner.

Besides saw-making skill and "know-how," it is Simonds Steel that makes a

SIMONDS SAW (Pronounced Si-monds)



the most satisfactory one to own. We make our own steel, and our exclusive tempering process gives the teeth a toughness and hardness which enable them to hold their quick-cutting edges under long, hard usage. You can't keep saw teeth sharp if they are not tempered right, and a dull saw is almost worse than none. Take the word of the man who has used a Simonds Saw. He will tell you which saw to buy. Ask your hardware dealer.

Send for "GUIDE BOOK FOR CARPENTERS"—free—and learn how to care for a saw.

Remember Simonds Hack Saw Blades and Files are most efficient. Simonds Circular, Band and Cross-cut Saws are the American and Canadian lumbermen's accepted standard.

SIMONDS MFG. COMPANY (Founded 1832), **FITCHBURG, MASS.**

Chicago New Orleans Portland New York San Francisco Seattle Montreal Lockport, N. Y.

Harley-Davidson

THE MOTORCYCLE WITH THE NEW WAY OF STARTING

No running alongside or tiresome pedaling needed to start the new Harley-Davidson. Just start the motor and at your convenience mount the machine, push forward the lever of the **Free-Wheel** Control (a new and exclusive Harley-Davidson feature) and glide away. Unlike the ordinary motorcycle clutch the action of the Free-Wheel Control is semi-automatic, thus preventing killing of the engine. The Free-Wheel Control friction surfaces are nearly twice that of the ordinary motorcycle clutch and therefore are practically indestructible.

RIDES LIKE A TOURING CAR

The *Ful-Flotsing* Seat (another new and exclusive feature) does away entirely with the jolts, jars, bumps and vibrations due to crossings, bad roads, etc. The weight of the rider is held in suspension or floated between two long, heavy, concealed springs held under heavy compression. This device is in addition to all the shock absorbing provisions of the ordinary motorcycle and permits a range of action of nearly four inches as against the scant one inch of the ordinary motorcycle.

RUNS EXTREMELY QUIET

These newest models deserve the name "The Silent Grey Fellows." An extremely quiet motor, combined with an exceptionally large muffler, makes this machine so quiet it cannot be heard across the street. Send for catalogue or call on our dealer.

HARLEY-DAVIDSON MOTOR CO.

235 B Street MILWAUKEE, WIS.

delivered from the intellectual claws of any lady principal. They were giggling and looking back over their shoulders at her, and commenting upon the stringency of her discipline and the injustice of her demands upon their eternally tadpole faculties. And they were relating in explosive whispers the secret victories they had that day achieved over her. But more particularly they were discussing the sudden change in the unfrizzled severity of her appearance. For she had dawned in the schoolroom that morning with her thin black locks extravagantly curled. This had never happened before. The author of "Man the Orang-Utan" had always worn her hair parted in the middle and drawn back smoothly like a carefully punctuated sentence in a book of rhetoric. They were at a loss to account for this extravagant crimping. They were very far from suspecting that she was still capable of a sort of vinegar sentimentality, and they would have been awed into something like sympathy if they could have known that the little thin, dark, sharp-featured old maid, whose heels were clacking along behind them on the brick pavement, was at that moment thinking tremblingly of the possibility of meeting Mr. Jim Bone, who was often seen in the late afternoon coming from the opposite direction along this same street.

Like every other unmarried woman in Ruckersville, Leonora was in love with him. She would not admit it, of course, but her hair did. Every stiff wave of it was a tribute to the marvelous and outrageous fascination of that wicked prodigal. If the silent, secret, futile romances of any village could be gathered up and set down in a book they would augment the sentimental literature of the world a hundredfold more than those other affairs that ripen into reciprocity, courtship and marriage. And it would be discovered that maiden women are lonesome moving figures in nearly all of them. These romances, guided virtuously by their faded heroines into the innocuousness of manless sequels, record in fact the waste material of every civilized community. And they are inspired by the inhumanity of men, who do not ask as many women in marriage as are entitled to this excellent martyrdom.

As Miss Bell was about to pass the gate of the Yancey residence she saw Mildred Percey sitting upon the shaded veranda with Mary and Agnes. They were each looking supernaturally young and tinted and gay in freshly laundered muslins.

"Come up, Leonora, and hear the news!" called Mary.

Leonora went in, regarding her friends curiously as she advanced along the walk. It seemed to her a strange circumstance that she had not seen any of the three with their hair curled and puffed in this manner since they were girls together. She wondered what it meant more than she wondered what news they had to tell. News in Ruckersville was a poor commodity.

Agnes went in and returned, drawing after her a lagging wicker rocker. Leonora dropped into it with an air of fainting relaxation.

"We were just discussing Jim Bone," said Mary.

"They say he met the sheriff face to face this morning," explained Mildred.

"Which killed the other?" inquired Leonora.

"That was the queer part of it. He offered him a cigar."

"Who offered which a cigar?" demanded Miss Bell, who hated ambiguity and battled against it every day in the composition class.

"The sheriff, Mr. Barfield, of course," answered Mildred. "The captain came by and told father about it. He says that Barfield says that Mr. Bone explained everything so satisfactorily that the warrant has been dismissed, and that they were actually seen crossing the square together this morning arm in arm. He says everybody is disappointed in the sheriff and that he'll be defeated for office this fall, and that it wouldn't surprise him if Bone himself should be elected instead."

Barfield was the typical sheriff in appearance. He had a long, drooping black mustache that hung down like a brace of pistols under his nose, and he wore a wide-brimmed black slouch hat, and looked like the stage villain in a cheap melodrama. He was one of the most timid men alive, but Nature had endowed him, apparently as a sort of joke, with a ferocious expression. And it was upon the reputation of this

Warmth at lower costs

Cozily warmed rooms at breakfast time—all rooms softly warmed *early* and late, day and night—make the best conditions for domestic peace and comfort. *Even warmth* with fuel economy is insured by the

IDEAL SYLPHON **Regitherm**

It goes on the wall of a living-room; you turn an indicator hand to the exact degree of warmth wanted in all rooms.

The REGITHERM device communicates motion (without wind-up, electricity or diaphragms) to the dampers of Boiler or Furnace in cellar. It operates by the "everlasting" Sylphon bellows principle—none other has it. Under REGITHERM control you keep the fire-pot full of coal; then, instead of fluctuations—fierce firing and overheated rooms followed by an exhausted fire and cold rooms—you have an evenly warmed house all over, day and night. The REGITHERM is a fine investment—soon pays for itself by cutting off coal wastes; no parts to wear out; lasts a lifetime.

Please us both by writing to-day for our free booklet "The Regitherm and Its Work"

fierce expression that he had held his office. As a matter of fact, he considered it a frightful accident when he met Bone that morning, and no one ever knew what actually passed between them, further than that Barfield was seen to offer Bone a cigar and then walk on with him on terms of friendly conversation.

"I never thought Tom Barfield was anything but a legal scarecrow," commented Leonora.

"But that is not the greatest piece of news," interrupted Agnes.

"No, they say Jim Bone has bought that vacant lot just in front of the monument to the heroes in gray ——"

"And he has not only bought the old Joe Rucker place, but he's tearing it down today and ——" Mary put in; but Mildred, ignoring her, went on about the vacant lot enterprise.

"——and this morning they began breaking the ground for the foundations for some kind of building. The captain told father ——"

"——and by twelve o'clock they were hauling off the beams and weatherboarding to be used in the construction of the building on the square," Mary interrupted again, but Mildred held to her original theme of this strange enterprise.

"——that he had brought an architect from Atlanta with him and that he is offering to employ every idle man in Ruckersville to help with the construction, and ——"

"The construction of what?" demanded Leonora, looking from one to the other.

"Nobody knows what!" chimed in all three ladies in high treble voices.

"That is why we are all so excited," Mary began.

"They say Jim Bone is the most popular man in town. Everybody is talking to him and asking him questions about what he is doing. But he just laughs and tells them to wait and see."

"Captain Martin told father that Mr. Bone told him that he was preparing to redeem the town," said Mildred. "So Mrs. Martin thinks he is building another church. And she feels very badly about it. She says apt as not he is a Presbyterian, or something, and that now the religious harmony of Ruckersville will be destroyed by denominational dissensions."

"He has made Tony Adams boss of the hands working on the foundations. And they say it is a sight to see him strutting up and down ordering the negroes about. I reckon it is the first time Tony was ever at the head of anything," mused Agnes.

"Well," snapped Leonora, "if he gets the men in this town to work, he will come nearer redeeming it than the preachers ever do with their revivals."

During the whole of this conversation each woman was casting sidenote glances up and down the avenue in search of the hero of their combined conversation. Each gave little furtive dabs with her hands at her stray locks and pats to her draperies. They took out their back combs slyly, raked up the straggling hairs from the back of their necks and eased the combs in again carefully. It was funny that not one of them suspected that the others shared her thoughts and anticipations.

Suddenly a silence settled upon them—a quivering bird-winged silence, as if the claws of their spirits gripped tighter the swinging bough of love's hope—and their heads turned modestly sideways so that they looked out upon the street archly and obliquely, as if they were not looking at all. The object of their speculation swung around the corner at this moment and walked with his usual deliberate straddling gait past the house. His hat was tilted forward at the romantic ambush angle. His chin was drawn down in contemplation. He was accompanied by the dog, who had his tongue out, his tail at half mast, and appeared to share his master's preoccupied mood. Neither of them looked to the right or to the charming lady-besprinkled left. The rough thumping rustle of the straps on Mr. Bone's boots as they rubbed together at each step thrilled and excited the company on the veranda.

"Why does he wear those horrid boots!" murmured Mildred.

"Better ask where he is going!" commented Leonora with suspicion, the depth of which was emphasized by her low voice.

"He goes by here at this hour every afternoon," agreed Mary.

You may have observed this, that it is perfectly legitimate for a man to be going toward town at any hour of the day; but

if he wishes the suspicions of the entire female population of any village let him be seen going regularly at the sundown hour toward the open outer regions of moonlit darkness. And they are usually quite right to entertain such suspicions. Men do not love Nature enough by herself to keep an inanimate tryst with her. Women are justified in supposing that there is a strictly feminine star about to shine somewhere upon the man's hawthorn skyline, which engages his astronomical enthusiasm.

"It is rumored that he goes to see Sylvia Story," said Agnes primly after a pause, thus voicing the secret despair of her companions.

"That is a mistake," exclaimed Mildred quickly as if she would defend the reputation even of the prodigal. "Fanning-Rucker told me that Sylvia told him she had never so much as spoken to Mr. Bone."

"I must be going. I am tired to death," said Leonora dully as she arose and gathered up her schoolma'am papers. Her light had passed and gone out. The muscles of her face relaxed. Her cheeks sagged. All the little wrinkles in them let go and curved downward forlornly. It was as if Fate had postmarked her from the dead-letter office.

(TO BE CONTINUED)

ART AND INDUSTRY

(Continued from Page 13)

"The little woman didn't side in with me at all, somehow. She figgered out that a feller who had never made more'n forty-five dollars a month in his whole life couldn't really earn no more'n that. I just couldn't explain to her that times was changed an' that we was livin' now in a time o' progress.

"'I'm a risin' man,' says I to her; 'but the trouble is, I never was appreciated by them who ought to have knew me best.'

"'Curly,' says she, 'you make me tired! But say, now,' she says after a while, 'does women git in that book?'

"'Shore,' says I; 'we've got to put 'em in—ladies half price.'

"'Curly,' says she to me after thinkin' fer a while, 'do you think my old alpaca dress that we got over to Missoula two years ago would look all right in a picture?'

"'Ma'am,' says I, 'it certainly would. An', just to show you that I'm a good business man, I'll thank you fer ten per cent o' two hundred an' fifty dollars—the Curly family ain't goin' to git into this History any cheaper'n anybody else.'

"Well, when she fell fer it I could see there was nothin' left but to simply git something big enough to hold the money.

"Now, when ole man Johnson begun to git busy, an' old Cæsar Lombroso Messonyer begun to circulate roun' an' bring in his rough sketches o' Poppa an' Momma, an' the children an' the cows, we could see that we was goin' to have a book which would weigh somewhere roun' twenty pounds. It was mostly ranchers an' grangers an' sheepmen—we had to leave out the towns an' promise them the next chancet, though they was some sore about that.

"Well, sir, we didn't spend quite all our money round Pateelse, an' at last we did get them books printed. They come out in a trainload one time a few months later—me to pay the freight. About then ole man Johnson was visitin' friends in the East, and I dunno where Cæsar Lombroso Messonyer went to—but I suppose he was kind o' sensitive about the sordid business o' makin' collections.

"My ten per cent was pretty well spread by this time; so I was anxious to finish up gittin' pay on them notes. So one day I taken a four-horse wagonload o' these precious volumes, an' a basketful o' promissory notes, an' I starts out from Cady on a collectin' tower.

"First man I called on was ole man Hayes, over on Dry Creek. I hadn't looked at his picture in the book, fer somehow I kind o' was afraid o' trouble all along, havin' seen some of our long-hair's work. His favorite way was to take a patent medicine woodcut which he found in Johnson's office an' work it over fer a portrait o' Poppa. I don't know but what he had tried that on ole man Hayes—but I did have sense enough to take my gun when I started out on this part o' the work.

"Well, sir, when I pulls this book on ole man Hayes the first thing he looks for is his own picture. Then he goes straight up into the air an' turns a complete summerset, an' comes down yellin'.

The biggest box of all—in actual food.

Don't be deceived—one package of Ralston contains more actual food than the breakfast foods that have larger boxes. Ralston comes in condensed form. It is not factory cooked, but fresh cooked, every morning, in your own kitchen and brought to your table tempting and delicious.

Ralston Wheat Food

is a wholesome, solid, commonsense food, of natural wheat color, with all the flavor and nutriment of the whole wheat left in. Just the sort of food your children need to grow up on.

Get a package today for your children's sake—you will like it as much as they will.

Ralston is most economical—one cup makes a breakfast for six; 8 cups in a package.

Purina Whole Wheat Flour

makes delicious, nourishing bread, muffins, rolls, etc. Try it, too.

"'It's a outrage!' says he. 'I've been a Democrat all my life, an' everybody knows it; an' yet here's my name on a page portrait that looks exactly like William Howard Taft!'

"'Shore now!' says I to him, tryin' to gentle him down a little bit. 'It does look like Taft, don't it? I'm sorry you look thataway; but our artist he can't make no mistakes. Besides,' says I, 'it's a heap better to be took fer Taft than fer Wild Bill er Henry Wadsworth Longfeller,' says I.

"'I'll not pay it,' says he when I pulls the note on him. 'Has any o' the others paid theirn?'

"'You're the first gentleman I've saw this mornin',' says I; 'but my belief is that it'll be healthier if everybody pays right along cheerful.' I had my eye on him all the time, because I knew where he kep' his Winchester.

"Well, ole man Hayes he thought fer a while, an' he looked over the other portraits an' compared 'em to his. After a while he begun to laff fit to kill.

"'Why this mirthfulness?' says I.

"'I'll tell you, Curly,' says he. 'Ef you kin collect your money fer this here portrait o' Bill Bedlow, down below here on the crick, why then I'll pay mine cheerful; an' I'll help you git all the other bills paid too.'

"'You're on!' says I. 'I'd always ruther be peaceful than any other way. I'll go right down an' see Bill now. Of course,' says I, 'you know that Bill he's shy a laig an' a arm; but the picture shows that.'

"'Uh-huh!' says ole man Hayes; then he laffs some more.

"'We offered,' says I, 'to soften down them things so they wouldn't show in the picture, not wantin' to hurt the feelin's of a man that's played in hard luck; but Bill, he said he wanted to go into the book thataway. We warned ole man Johnson not to tell that Bill had lost his laig in a mowin' machine when his broncs run away, an' that he had an arm busted off while he was haulin' dynamite on the Shoshone Dam. Bill always acted mysterious about them missin' members, an' a good many folks thought that he had been either a bad man er a hero of some sort. That was why he wanted to go in with the play as it lay on the board. He was one o' the first to sign up his contrack too—he was plumb eager to git in among the perminent citizens.'

"Well, I went down to Bill's feelin' plumb cheerful about the prospects. I didn't stop to examine the picture very clost, except to see that it showed him standin' there with only one arm an' one laig between hisself, so to speak. Everybody in the whole country knowed he was shy thataway; an' it looked to me like as ef we couldn't collect on as safe a bet as that we didn't have no chanceт with none o' them. I couldn't tell what made ole man Hayes laff so when he sent me down to see Bill first.

"I goes down to the place where Bill was at, an' I says: 'Here you are, Mr. Bedlow, all fine an' dandy—true to the life an' natural as a photograph.'

"Well, he taken the book an' he cast one look at it; an' then he gives a wild shriek, same as ole man Hayes did. He couldn't jump, havin' only one laig; but he reaches fer his crutch an' I knows he meant trouble. So I covered him prompt an' told him to set still an' think it over a while.

"'My friend,' says I, tryin' to gentle him some, too, 'what seems to be agitatin' you about this here picture? Ain't it all right?' says I.

"'All right!' says he. 'Of course it ain't! How kin you call that outrage any kind of a picture of me?'

"'Why, what's wrong?' says I. 'It's you, all right—only one arm, only one laig—why, count 'em, man. Now, ef our artist—I don't deny he's some impressionistic sometimes—had only give you one arm an' no laigs at all you might have had some right to kick; but, far as I kin see, this here picture's you, an' you ain't got no kick comin'.'

"'It ain't me at all,' says he—'nohow!'

"'Why ain't it?' says I.

"'Why, lookahere, Curly,' says he, 'I tol' that long-haired son-of-a-gun that he wasn't takin' time enough makin' a sketch o' me—I'm hard to draw! Now he may have made a note that the subject o' this sketch may have had only one arm an' one laig; but when he come to do the drawin' he fergot which one it was!—don't you see? This ain't me at all!'

"Well, sir, I looked at the picture; an', shore enough, ole Cæsar Lombroso Messonyer had took the wrong laig offen

How a Manufacturer Cut His Lubrication Bill $15,000 a year

It was costing him $35,000 a year. He thought it too much.

He consented to let one of our experts investigate. Result: the adoption of Keystone Grease and a saving of nearly half.

Have you a lubrication problem?
If so, send the coupon below.

A man from our corps of experts (distributed all over this country) will come and investigate. Leave it to him to show how to save money for your firm, save trouble for your engineer, prolong life for your machinery. If your problem is very small we'll solve it by correspondence.

The great, scientifically-operated plants in this country and abroad which test their lubricants for dollars-and-cents value, use Keystone.

No other lubricant approaches it in efficiency. We guarantee one pound of Keystone Grease to last as long as three or four pounds of any other grease or four gallons of the best known oil.

Thousands of testimonial letters in our files; tests made by Wm. Cramp & Sons, the ship builders; and signed statements of the foremost lubrication experts, all give Keystone Grease first place above all other lubricants for efficiency and final economy.

We couldn't make this offer to send *our* expert at *our* expense to solve *your* problem to save *your* money if we didn't know that Keystone Grease makes good—the standard for 30 years. For the dollars-and-cents reason you simply *have* to use Keystone Grease.

KEYSTONE TRADE MARK Reg U.S. Pat. Off. GREASE

is a compound of absolutely pure, high-grade refined petroleum, unaffected by speed or pressure—always stays "put"—cannot waste—cannot spatter and collect dust—is not soluble in water—not affected by severe atmospheric or working conditions of heat and cold—always remains the same consistency.

Best Automobile Lubricants

Keystone Grease (1 and 3 densities) are, by all odds, the best automobile lubricants. Keystone Motor Oil puts an end to cylinder troubles.

THE UNDERFEED Cuts Coal Bills ½ to ⅔

High Grade Coal — Top Feed Supply $90

Low Grade Coal — Underfeed Supply $30

Heat Results the SAME; Underfeed SAVING, $60

ARE YOU one of the thousands who suffered discomfort during the unusually cold winter of 1911-12? While in many homes ordinary heaters were ***wasting coal*** and yielding ***little heat;*** while natural gas supplies were running short, in thousands of other homes Underfeed Furnaces and Boilers were making good with ***adequate, clean, even*** heat—and at a ***saving*** of one-half to two-thirds the usual cost of coal. The Underfeed Booklet Tells Why—It is yours for the asking.

The Peck-Williamson Underfeed HEATING SYSTEMS WARM AIR FURNACES-STEAM-HOT WATER BOILERS

If your heater—new or old—is defective, unsatisfactory or expensive to maintain, *replace it* with an Underfeed, which soon pays for itself in reduced coal bills. If you are about to build, install an Underfeed Furnace, Steam or Hot Water Boiler. Either is adapted for buildings, large or small—residences, offices, churches, hotels, etc. 'Twill add to the renting or selling value of *any* building.

Ira B. Ford, of Wilmette, Ill., writes: "With the Underfeed my coal bill is $40 a year, using screened Carterville No. 4 coal. My neighbors, using hard coal, burn from $85 to $100 worth in the same sized houses, eight or nine rooms, in either topfeed furnaces or hot water plants. After using the Underfeed three years I should certainly want one of the same kind should I build again."

In the Underfeed coal is fed from below. All fire is on top. Smoke and gases (heat units *wasted* in other heaters) must pass *up through the fire* in the Underfeed, are consumed and make more heat. Cheapest slack, soft coal, and pea and buckwheat sizes of hard coal yield as much heat in the Underfeed as *highest* priced coal in ordinary furnaces and boilers. The fire washes are removed by shaking the grate as in other furnaces and boilers.

Let us send you a lot of fac-simile letters from delighted Underfeed users with our Underfeed Furnace Booklet or Boiler Catalog—FREE. Plans of our Engineering Corps are also FREE. Write today using coupon, giving name of local dealer with whom you prefer to deal.

FELT & TARRANT MFG. CO., 1709 N. Paulina St., CHICAGO, ILL.

Bill Bedlow—shore's I'm born!—an' he'd done the same thing with his arm too! Then I understood what was the matter with ole man Hayes.

"'Well, now, lookahere, Bill,' says I. 'What's the use makin' a furse over a little miss like that? Everybody knows you're shy a arm an' a laig, an' I don't s'pose many o' them would ever figger out on this the way you do—I didn't my own self. You're tallied up with one laig an' one arm—an' that's all you got comin' to you, ain't it?'

"'But,' says Bill, 'he's got me with my right arm off an' my left laig, an' it's just the other way about—I wouldn't be a one-armed man that didn't have no arm—that's a outrage!' He talked wobbly and looked like he was goin' to cry on me.

"'Sir,' says I, 'are you the sort o' person that wants to avoid legal, lawful an' bindin' contrack, an' go back on his own signature—one o' the high contrackin' parties?'

"'No, I ain't,' says he. 'I wanted in this book—people with one laig has got feelin's about citizenship same as people with two—but I'll be hanged ef I'll pay fer bein' put in a book with the wrong laig off—not sayin' nothin' about that arm business at all! Before I'll pay fer a thing like that I'll go to law about it,' says he.

"Well, sir, I kep' on learnin' a heap o' things. Fer instance, I seen that, like as not, ef a man didn't have no laigs or arms at all, he'd be stuck on hisself just the same an' think he was entitled to a place among the leadin' pictures! Also I seen that collectin' was no snap, an' that maybe enough Cæsar Lombroso Messonyer was blame' wise when he lit out about this time.

"Believe me, Sir Algernon, the best I could do, I couldn't collect that note o' Bill Bedlow—an', o' course, not o' ole man Hayes either. An', before I could get any farther down the valley with my wagon-load o' books, here comes a deputy with a injunction o' some sort; an' the hull thing goes up to co't in Cady.

"Well, I had to go home an' own up to the little woman that I was in wrong oncet more in my career. She was right sorry, because she was plumb pleased with her own picture in the book—Uncle Cæsar had retouched a portrait o' Lilly Ann Russell we found in the beauty ads down in Johnson's paper; an' Mrs. Curly 'lowed that County Histories was all right. But what could I do?

"Now, Bill Bedlow an' ole man Hayes, an' a lot o' the other fellers, they hires Lawyer Bennett to take up their cases. He's runnin' fer the state legislature, you see; an' it didn't take him long to git on to the fact that ef he kin git a vote from every dissatisfied perminent citizen in Park County he's in fer a cinch—fer they wasn't no other kind.

"Now, you ought to have heard Lawyer Bennett argue before the co't an' the jury about them pictures! He'd taken them up, one by one, an' he plumb defied the jury or anybody else to identify them portraits o' Poppa ef the writin' was lost off. Then he has a enlarged photograph made of this picture of Bill Bedlow, with his only good arm an' his only good laig in the wrong place. He interjuces this before the co't as Exhibit A; then he interjuces Bill hisself as Exhibit B.

"'Your Honor,' says he, 'an' gentlemen o' this jury, I ask you to compare these two exhibits—one a patient, law-abidin' citizen, partially cut down in the prime of his life an' deprived o' things which might otherwise have been useful to him in supportin' a family an' earnin' a honest livelihood—an' the other this mockery, this outrage, this dastardly caricature o' one o' our noblest an' finest-lookin' fellow citizens! Need I name the honorable William Bedlow, o' Dry Creek, who has been in our midst all his machure years?'

"Well, sir, when he went on with the subjeck o' his sketch I certainly was glad that ole Bald Face, my cowhorse, was faster'n anything they was in Cady at the time. I slips over acrost the street an' bought two boxes of ca'tridges an' put 'em in my saddle pockets. I didn't wait fer the jury to come in—an', fact is, I heard later [illegible] never went out at all! I was settin' as near as I kin git at it, to be hanged by the neck till dead nex' Friday—unless the lynchers got to me first—an', do you know, I wasn't comfortable round home fer several days—until the thing sort o' quieted down!

"After a while Lawyer Bennett [illegible] that he was goin' to git the solid vote of the entire county—Democrats, Republicans, an' folks that votes fer all [illegible] causes—why, he 'lowed he might get a vote, too, an' make it unanimous. So it's agreed that I'm to call off all the [illegible] if he explains to the fellers that I was right an' wasn't tryin' to put them in wrong none at all. Thataway, after a while it kind o' quieted down.

"Well, I never did hear of Cæsar Lombroso Messonyer but oncet. He sent word that he was waitin' patient on the Sunshine Basin—an' would I [illegible] come over some moonlight night with the cash! All I could do was to send him my regrets. He faded away then, I reckon, but, like as not, he is doin' this same thing over in Idaho or Oregon—I sometimes wonder a bit. There's always a four-flush puncher standin' round, waitin' to be let on any kind o' shell game that crops up. kin think of!

"Sometimes," said Curly, feeling in his pocket for his tobacco, "I think that progress business ain't what it's cracked to be. I don't know as I was ever happier in my life than when I was takin' [illegible] cold forty-five a month from the Wright an' eatin' at the ranch [illegible] much as I could hold whenever I [illegible] Way things is now, ef it hadn't been for little woman hangin' on to some [illegible] ten per cent advance I actually [illegible] whether I'd winter all the family [illegible] or not.

"It's thisaway: Some people [illegible] ciers an' others ain't. Sometimes [illegible] look at myself in my full-page picture in the County History o' Park County [illegible] Western Historical an' Pictorial [illegible] which was half me—I sometimes [illegible] maybe I was one o' them that [illegible]

"What became o' the Historie[illegible] there's about eight hundred tons [illegible] as near's I kin tell, that's in cold storage in the livery stable in Cady now. [illegible] what there was left over after the [illegible] 'ment got done buildin' the Shoshone [illegible] They made fine fillin'. Dam's [illegible] all except a little mortar to hold [illegible] gether! Highest dam in all the world, [illegible] an' I bet a thousand it's the most [illegible] dam they is. Think of a dam [illegible] nacherelly plumb full o' art [illegible] the handiwork o' that distinguished [illegible] Perfessor Cæsar Lombroso Messonyer! An' think of all them literary [illegible] by ole man Johnson—not to mention [illegible] few promissory notes oncet owned by [illegible] little friend and playmate. Other [illegible] may bust, but not ole Shoshone—[illegible] that's busted!

"But, say—tell me—ain't it [illegible] many things can happen, even in a quiet industry—not sayin' nothin' about art?" demanded Curly. [illegible] near's I can tell, though Wall Street [illegible] be a fine place, you got to show me any better'n Wyomin', either in business, takin' it goin' an' comin'.

"Just figger on it. Allowin' [illegible] million copies got into the dozen dollars each, there is two and a half dollars, ain't there? Besides, [illegible] was five hunderd pages and we [illegible] five hunderd a page fer Poppa to [illegible] That's two and a half million, or, say, five million altogether. [illegible] what's left in the livery stable [illegible] million, an' you might say it [illegible] lion dollars I had in sight. [illegible] sight now; but you can't [illegible] Only thing I'm sorry for is [illegible] woman didn't git away with [illegible] o' hern!

"But, say," he concluded, "[illegible] better cook another pan o' [illegible]

THE CORNER GROCERY

(Continued from Page 33)

carfare or time to run round the corner. You could see what you bought. Besides, you liked the little groceryman! You might be fifty times richer, but he was still your neighbor. And your order pleased him, whereas it did not make much impression on the girl at the department store. We all like to be benefactors even when we are getting the worth of our money.

The mail-order house also entered the field, but the corner grocery held its own. The chain of stores went into groceries and still the corner grocery survived. Whether the corner groceryman is better off or worse off than before these changes it is difficult to say. Whether his chances of going to the top are as good is problematical. The important fact, however, is this: he was expected to become as extinct as the dodo; and, instead—somewhat to his own surprise—he has increased, multiplied and replenished the earth.

And that for many reasons: Never before were there so many people in the country and never did these people, in proportion to their numbers, consume so much. The eatables of the world flood the American market increasingly. Some one has to bring twenty million pounds of sugar to the consumer daily—more than seven thousand million pounds annually. Every year a billion pounds of coffee must be sold in one-pound and two-pound packages. Every year one hundred million pounds of tea must be handed over the counter. The same is true of soap, biscuits, breakfast foods, canned goods and a hundred other articles. Fewer of the things which the consumer uses are manufactured in his own home. Fewer goods are sold directly; for the little manufacturer who traded at retail in the wares which he made is disappearing and the workman's bench and the store counter move farther apart. The occupation of the grocer is not gone—nor is it in danger of going.

Perhaps the danger lies in the opposite direction. Are there not too many grocers and is not the number growing too rapidly?

If you put this question to Mr. Hengelmüller, or to any of his competitors, the answer is immediate. There are too many. Competition is too intense. Hengelmüller is the fourth in our block, but Hengelmüller will admit that three groceries would be enough, or two, or one—if that one were Hengelmüller's. There are over three hundred thousand groceries in the United States—one to every sixty families. You need not be a statistician to realize that the number is too great.

A Chance for the Early Bird

You need not be a statistician to realize that all these grocers must make their living off the difference between the wholesale and the retail price. Their own food, clothes and lodging, and the food, clothes, recreation and education of their wives and children—to say nothing of the upkeep of their stores—must be added to the price of prunes, cocoa and baking powder. It costs us a few hundreds of millions annually to get our food from the wholesale to the retail grocer; and this is more than the services would cost with a better organization.

I put this problem up to Hengelmüller. "Say," he replied, "if you can get Katz and Bolte and Lynch"—his nearest competitors—"to get out of this business there won't be a kick coming from me. But what's the use? If they'd get out others would come in. They're like flies round a fly-trap!"

Hengelmüller is right. The grocery business attracts. Though his average earnings are small—though he works long hours—still, the grocer is his own boss. He takes orders from his customers, but none from an employer. Being your own boss means getting up at five o'clock when you would like to sleep until nine—working hard all the afternoon when you would like to go to the baseball match—planning and worrying about business at night when a man on a salary is carefree. But, however hard you work, being your own boss is being your own boss! It is individual liberty in its most absolute form—and the grocer, big or little, is an individualist.

Moreover, there is always a chance to rise. The chance is smaller than the hopeful beginner believes, but a chance there is.

Beauty Always Masters

The influence of feminine beauty is responsible for the great achievements of womankind, for she who is beautiful sways the world as her own. To preserve or even to acquire this noble attribute is a pleasure when the one toilet cream of purity and quality is used—that cream is ELCAYA.

CRÊME ELCAYA

Over 100,000 Housekeepers Now Testify to the Wonderful Merits of the Rapid Fireless Cooker

MADAM, please do not consider the saving of 50% to 75% of your fuel bill—75% of your time—half your work—food 75% better cooked, as being all of the merits of my Fireless Cooker. The great convenience is another large factor, so write thousands of users—the convenience of placing your food in the cooker, the shutting up of your hot kitchen and going to the club, matinee, shopping, calling, getting out of doors and coming home to find your meal most deliciously and perfectly cooked, without the slightest chance of burning or drying up, or being under or over-done.

Let Me Prove These Things to You For a Month at My Risk

I am the original fireless cooker man, selling direct from factory at factory prices. I have made and sold more cookers than all other cooker concerns combined. It is because, first—my cooker is the most practical, hygienic rapid fireless cooker made, and second—because I sell it at factory prices, saving you from ⅓ to ½ in cost.

Then you don't need to keep my cooker if it doesn't prove all my claims for it, because I allow a full month's trial in your own home at my risk—your money back if the cooker is not satisfactory in every way.

Description: Metal throughout, including nests and covers; no pads or cushions to absorb odors; cooking utensils all highest grade aluminum, compartments aluminum finish, rust proof with proper care. Steams, stews, bakes, broils, fries, and boils all kinds of meats, breakfast cereals, vegetables, etc. Also, finest thing made for use as cold storage for ices, puddings, custards, etc.

I Am Making a Special Price on 10,000 Cookers

Let Me Mail You Prices and This Free Book of 125 Famous Fireless Cooker Recipes

You will be surprised at the low direct prices I make you, so low that you will not think of being without a cooker—the most convenient thing in the house, when you have read my book. Write me today. I will gladly mail you the book of recipes and quote you prices.

Remember, I ship promptly and save you money on the best fireless cooker ever made, the old, original **RAPID.** Why take chances on any other cooker when over 100,000 users point the way to sure success with the **RAPID?**

WM. CAMPBELL, Pres.

Wm. Campbell Co.

Dept. 314 **Detroit, Mich.**

The grocer always hopes that, though his predecessors have failed or just made a living, he will go to the top.

And he may rise if he is a wide-awake man of the modern type. The successful grocer of today must be an abler man than was the successful grocer of thirty or even ten years ago. He has been obliged to advance. He has been forced to a higher standard of intelligence. The public has demanded a better service and the grocer has had to give it. The grocer who is to rise must be not merely an automaton, handing out packages impartially as the post-office clerk hands you stamps. He must know his goods. He must be courteous and infinitely patient. He must have individuality. He must specialize in something. He must understand buying and—above all—selling. He must know when to give credit and when to withhold it. He must anticipate the changing desires of his customers, for there are fads and fancies in food products as in hats and coats. The grocer, to succeed, must be more than a grocer. He must understand some of the legal phases of retail business. He must understand costs. He must know enough to value his own labor and that of his wife. He must not meet every cut in price, for if he does his business will come down to a "granulated sugar basis" and profit will disappear. The grocer must think in terms of profit and not merely of sales. The grocer who has all these habits and qualities may go to the top—if he has luck.

So long as the grocer is his own boss and has a chance—even a slight chance—of going up, the grocery business will be crowded and the cost of retailing high. The public may complain, but it is the public's fault quite as much as the grocer's. The consumer demands that his grocery be round the corner. He does not wish to walk far. He does not wish to wait long. He wants the goods sent home, for carrying packages has gone out of style. Twenty years ago a woman emerged from a grocery laden with bundles.

Today she comes out empty-handed—or does not come out at all, but merely telephones her order. Delivery wagons cost money; telephone companies are not philanthropic institutions and the customer pays. He—or she—pays for the better service, the cleaner store, the larger and better assorted stock, the telephone, the grocer's wagon, and for the enlarging and ever enlarging number of grocers. What is the grocer to do about it? What are we to do about it?

I put this question to my Socialist friend. "How about the increased cost of retailing?" I asked. "How about the increasing number of groceries?"

It was one of the Socialist's blind days. "Do not worry," he reassured me. "The department store and the mail-order house are wiping out the poor little grocer. The inevitable economic development ——"

Official Sanction

EARLY in Oscar Underwood's service in Congress, when Mr. Cleveland was President, Underwood was made referee for Federal patronage in his district in Alabama.

One day Underwood was out campaigning some miles from Birmingham, and he stopped at a little village where there was a sawmill that employed a good many hands. He knew the sawmill owner and was talking to him when a doctor who lived in a village near by, where the postmaster had just died, came along in a buggy.

The doctor stopped at the sawmill. The sawmill boss introduced him to Underwood; but the doctor had other fish to fry and paid no attention to Underwood, and apparently didn't get his name. He produced a petition and said:

"Now, boys, the postmaster over in our town has just died and I'm a candidate for the job. I'm getting up a petition to send to Washington, indorsing me for the place. I wish you boys would sign it."

Some of the boys did, and finally the doctor handed the petition to Underwood. Underwood looked at it. It was addressed to the Honorable Oscar Underwood, referee for Federal patronage, at Washington.

"I can't sign this," said Underwood. "I don't live in this community."

"Oh, go on and sign it," urged the doctor. "What difference does that make? That young fool Underwood won't know the difference when he gets it—and I want the job."

ABSENTEE LANDLORDISM

(Continued from Page 15)

change. I like the way the advertising reads for the new route and I am going to give it a trial."

And by standing stoutly for his point he finally purchased accommodations from the joint office of the Y—— and Z—— properties over their own rails instead of over those of a competitor.

It sounds incredible to say that any organized business permits these things; that they are permitted not only to exist but also to continue proves that absentee landlordism is a really deep-seated taint.

Take the case of these two railroads, the Y—— and Z——. Together with a third connection, the X——, they form a group of roads well known across the land. The present head of the road is still a young man. He is a popular man in almost every way and he has had a good deal of training in practical railroading. He has never been willing, however, to make his own location upon the lines of his properties and he has not always been successful in the choice of his subordinates. So it has come to pass that the X—— has its executive offices eleven hundred miles away from its principal terminal; the Y—— begins its rails two thousand miles away from its executive offices, while the Z——'s rails do not come within twenty-six hundred miles of those same headquarters.

Now see how that works out in the operation of these properties: Their chief owner decided a year or two ago to bring to the management of the center link of his long chain a man who had attained a reputation for railroad achievement down in the Southwest. The man was honest to the core, and capable besides. He brought to the Y—— enthusiasm—to its owners loyalty. Both of these were tested almost as soon as his car had touched the rails of the mountain-threading Y——.

Y—— was choked with a congestion of freight cars. Its long trail of single track was attempting to handle a double-track traffic—and failing miserably. The shippers might have wailed their woes in vain until the "dead stuff" began piling up on the main-line tracks and delayed the through mail trains. And when a through mail train was late the Y—— paid good-sized penalties to the Government.

A Manager Misunderstood

There at Clarksville, where he first struck the rails of the road he was to manage, the freight blockade was already running toward the highwater mark. The superintendent of the next division was also having his troubles. He had resorted to the simple expedient of placing an "embargo" on westbound freight—which, translated, meant that he would accept no cars on his division from the one to the east of it. They were short of motive power up and down the line and the situation was getting worse.

Though the general manager was wrinkling his brows over the first problem of his new job, he looked up long enough to see a westbound freight struggling past his car. Somewhere amidships in the long clanking trail of dirty box cars were two new locomotives, bright and shiny as locomotives are before they begin the grill of long, hard usage. He caught the legend upon the sides of their cabs. They belonged to the Z—— road, which was just approaching completion. They were going through for service upon it when the last link of its rails should be laid.

"How about all that power?" the general manager asked of a trainmaster who stood beside him in his car. "Why can't we turn it to use in raising these embargoes?"

"Mr. H——"—and the trainmaster mentioned the name of the president of the property who was sitting in his office twenty-five hundred miles away—"gave positive orders that they were not to be used before they struck their own road."

The general manager thought quickly. After all, the Y—— was financing the construction of the Z—— out of its own good profits. Why should it not have the benefit of the power in an emergency such as this? Mr. H—— did not know the seriousness of the situation. The new man caught up a telegraph blank.

"I'll take the responsibility of this on my own shoulders," he said in a low voice as he

What tooth brush is it?

¶ Most people will recognize at sight and know by name the one Tooth Brush *that really cleans between the teeth.*

¶ We are anxious to know your opinion as to why this—The Pro-phy-lac-tic Tooth Brush—is the best Tooth Brush in the world—therefore we offer the prizes as specified for the best answer, not exceeding 25 words, which includes the name of the Tooth Brush and gives the best reasons why it does what we claim it to do.

So light a child can use it, yet we guarantee it to clean as rapidly, thoroughly and with as little effort as any other cleaner, regardless of cost. Will you let us prove this broad claim at our own expense? Write today for booklet and full particulars of our Free Trial Offer.

EUREKA VACUUM CLEANER CO.
1231 Majestic Bldg. Detroit, Mich.
WE WANT AGENTS EVERYWHERE

began writing the orders that brought the new locomotives into practical service and ended the freight congestion on the main line of his road. At the same time he wired a careful account of the whole situation to the officers at the distant headquarters. They would understand the facts—and appreciate his judgment.

The answer to his long telegram came that evening as he sat at supper. It was terse. It read:

"Your action is disapproved. H——"

And another good, valiant American railroader had felt the cancer of absentee landlordism.

. . . . . .

Do not imagine for a moment that the railroad men across the land have not already come in contact with absentee landlordism. It has long been one of the bugbears of the capable men in the minor but important positions of the land transportation service. The tremendous desire for centralization in railroading—which, by the way, has already passed the zenith of its popularity—did much to strengthen this same absentee landlordism. Two decades ago the railroad man who found himself at the head of twenty-five thousand men was alone on the continent, while today there are at least two American railroads that employ upward of two hundred and fifty thousand men apiece, while the aggregate mileage of the big roads has reached such a figure that the general manager must think twice before he recalls whether this or that specific town is upon some one or other of the many obscure branches over which he is in control. Can you imagine what sort of individual attention that town is apt to receive from the general manager?

Regeneration of the Railroads

The railroads have already begun to see this weakness in their great organizations, and within the past few months several of the largest of them have been reshaping their organizations so as to bring big bosses—men high enough in the staff to have authority to decide, and money resources to back up their decisions—closer to the localities they serve. A certain road has been creating general managers and general passenger agents—men who can move quickly in emergencies without running the risk of incurring "disapproved" telegrams from headquarters—for the three great districts into which its property has been divided. Another line has gone even farther. There has been no doubting the fact that its properties, operated under what are in many ways tremendously adverse conditions, five hundred miles away from its nearest tracks, were nevertheless brilliantly operated and came near proving the exception to the rule of absentee landlordism.

Yet this great single property, consisting of a group of railroads still recognized as separate units, has shown a desire to be operated more directly in the interests of the communities it serves.

So, five presidents were created this fall and, in the swift certainty of railroad administration, are already in their offices.

. . . . . .

Such is the recognition already being given by farsighted carriers to the taint of absentee landlordism. They have moved none too quickly. One fairly populous Western state is already considering a statute to compel the board of directors of a railroad to spend an hour in each of its stations once every year.

It is typical of the new type of railroader that has arisen in the land that they have begun to recognize the dangers of absentee landlordism. The cutting out of that cancer is already under way. It cannot come too quickly for the satisfaction of many prosperous communities.

Judging From Results

THERE used to be a police judge in a Kentucky town who liked a toddy before his dinner. In the same town a newcomer started a distillery whose product before long was famous for its fire and its potency.

One day, after court adjourned, the old judge was sipping a toddy at his favorite bar when a friend came in.

"Judge," said his friend, "did you ever try any of the new whisky they're making down the street here?"

"No," said the judge; "but I reckin I've tried everybody that did try it."

"What's In Here!"

MORE than 500 varieties of the finest confectionery are made by the New England Confectionery Company and sold under the seal shown below. Four factors contribute almost equally toward their purity and wholesomeness:

The best of materials;

A factory where sunlight and pure air reach every corner;

A scrupulous cleanliness—in personal dress and machine;

And last, a constant watchfulness against the letting down of a high standard.

Necco SWEETS

should be eaten by everyone, because *pure sweet* is a true body-building food. Even babies are benefited by it, for now and then a taste of Necco Sweets.

Ask your dealer for them, and do not buy unless you see the Necco seal on the box.

THE LIGHTED WAY

(Continued from Page 21)

the country, in fact—in the interests of the firm, with results that have sometimes astonished us."

The accountant nodded approvingly. He took up the balance sheet they had been perusing and placed it in its envelope.

"I shall now," he said, "call upon Mr. Weatherley, and I am sure he will be most gratified. I understand that our next meeting is to be down here."

Mr. Jarvis beamed.

"Although I must say," he admitted, "that the responsibility has been a great pleasure, still we shall be heartily glad to see Mr. Weatherley back again."

"I am sure of it," the accountant assented. "I understand that he has made a complete recovery."

"Absolutely his own self again, sir," Mr. Jarvis declared, "and looking better than ever."

"Odd thing, though, that loss of memory," the accountant remarked. "I was talking to the doctor about it only the other day. He seems to have wandered away into some sort of hiding, under the impression that he had committed a crime, and now that he is getting better he has absolutely forgotten all about it. He just thinks that he has had an ordinary illness and has had to stay away from business for a time."

"Queer thing altogether, sir," Mr. Jarvis admitted—"a queer business, sir. However, it's over and done with, and the less said about it the better. We are both very much obliged to you, Mr. Neville, for your kind offices, and I am only thankful that the results have been so satisfactory."

Mr. Jarvis conducted his visitor to the door and returned to Arnold with beaming face. In anticipation of the accountant's visit Jarvis was wearing a frock coat that was already a shade too small for him. He carefully divested himself of this garment, put on his linen office coat and turned toward his companion.

"Chetwode," he said, "I have a proposition to make. The firm shall stand us a little dinner this evening which we will take together. We will go up to the West End. You shall choose the proper place and order everything—just the best you can think of. The firm shall pay. Mr. Weatherley would be quite agreeable, I am sure."

Arnold forced himself to accept the suggestion with some appearance of pleasure.

"Delighted!" he agreed. "We'll have to finish up the letters and go through this mail first."

"Just so," Mr. Jarvis replied. "After that we'll shut up shop. This is quite a red-letter day, Chetwode. I knew that we'd held our own, but I must confess that I found those figures most exhilarating. Our little bonus, too, will be worth having."

Later on they found their way to a restaurant in the Strand, where Mr. Jarvis ate and drank perhaps better than he had ever done in his life. The evening to him was one of unalloyed pleasure, and he was genuinely disappointed when Arnold pleaded an engagement as an excuse for not finishing up at a music-hall. About nine o'clock the two men parted, Mr. Jarvis to spend the rest of the evening alone, with a big cigar in his mouth and an unaccustomed feeling of levity in his head. Arnold, after a moment's hesitation, walked slowly back to his empty rooms.

So this was success! Without a friend in the world, without training or any practical knowledge of life, his feet were firmly planted upon the ladder. He had stifled all sorts of nameless ambitions. He had set his teeth and done what appeared to be his duty. Now it seemed to him that he had come to a pause. He drew up his sofa to the window of his sitting room and looked downward. Somehow or other the depression against which he had struggled all the evening seemed only intensified by what he saw below. An early autumn had stripped bare the leaves from the scanty trees; the sky was gray and starless. Even the lights along the river-front seemed to burn with a dull and uninspiring fire. He looked round him and his depression became an almost overmastering sensation. He hated the sight of his empty room, the phantom thoughts that would light upon his shoulder, the sofa upon which he was sitting alone, the memory of the things he might have said to Ruth in the days when the opportunity was his. For a moment he even thought of Mr. Jarvis alone, at the

Coffee Pot Percolator No. 8293.

"My Manning-Bowman Coffee Percolator is Economical"

When heat is applied to a Manning-Bowman Coffee Percolator, hot water passes through the ground coffee, extracting the strength and goodness, but never remaining in contact with the coffee long enough to bring out its bitterness. This method is economical. It takes *less* ground coffee to make a given number of cups with a

Manning-Bowman
Coffee Percolator

than in any other known way of making. You will find Manning-Bowman Coffee Percolators with all large dealers. More than 100 different styles and sizes—copper, silver plate, nickel plate and aluminum. Style illustrated here is No. 8293. Write for a recipe book—free—and catalogue No. C-21

music-hall, the welcoming lights, the pleasant warmth, the music, the cheerful throngs of people. Better anything, he told himself, than this brooding! A sudden almost reckless impulse called him back again into the streets, only to pass away the same moment with the vision of Ruth's pale face by his side, her eyes alternately gazing down the lighted way and seeking his, her fingers grasping his hand. His head sank forward into his hands. He was alone!

He sat up suddenly with a start. The inner door of the room had opened and was softly closed again. A familiar voice addressed him.

"I find your habits, my young friend, somewhat erratic," Sabatini remarked. "Your supply of common necessaries, too, seems limited. I have been driven to explore quite fruitlessly the whole of your little domain in the vain search for a match."

He pointed to the unlit cigarette between his fingers. Arnold, who was a little dazed, rose and produced a box of matches.

"But I don't understand how it is that you are here!" he exclaimed. "I thought that you were at Brighton. And how did you get in?"

Sabatini seated himself comfortably at the end of the sofa and placed a cushion behind his head.

"We came up from Brighton this afternoon," he explained, puffing contentedly at his cigarette. "I am now pronounced convalescent. Ruth, too, could throw away her stick any moment she wanted to, only I fancy that she thinks its use becoming."

"But," Arnold persisted, "I don't understand how you got in! You know that I am glad to see you."

"I got in with Ruth's key," Sabatini replied.

Arnold leaned against the back of the sofa.

"I had forgotten," he said. "Of course if I had known that you were coming I should have been here. The accountant brought in the result of our last six months' work this afternoon and Mr. Jarvis insisted upon a little celebration. We had dinner together."

Sabatini nodded.

"So you have been successful," he remarked thoughtfully. "You kept your feet along the narrow way and you have done well. I am glad. Sit down here by my side."

Arnold sat down on the end of the sofa. The curtain was pulled up as far as it would go. Below them the curving arc of lights stretched away to the dim distance. Sabatini followed them with his eyes for a moment as though he, too, found something inspiring in that lighted way. Then he said with a queer little twinkle in his eyes: "By-the-by, you haven't heard—Fenella hasn't told you—of the last turn in Fortune's wheel?"

"I have seen little of Mrs. Weatherley lately," Arnold murmured.

Sabatini leaned back in his place. His hollow eyes were lighted now with laughter, his mouth twitched. The marks of his illness seemed almost to pass.

"It is delicious," he declared. "Listen. You remember that one day when you dined with me I told you of my uncle the cardinal?"

"The uncle from whom you borrowed money?" Arnold remarked dryly.

"Precisely," Sabatini agreed—"I borrowed money from him! It was only a trifle, but I chose my own methods. Heavens, but it is droll!"

Sabatini began to laugh softly. His whole face now was alight with enjoyment.

"Last month," he continued, "His Eminence died. He had fourteen nephews, three brothers, two sisters, no end of nieces. To whom do you think he has left his entire fortune, my dear Arnold?—three hundred thousand pounds they say it is!"

"To you?" Arnold gasped.

"To me indeed," Sabatini assented. "I did not even go to the funeral. I read of his death in the newspapers and I shrugged my shoulders. It was nothing to me. Yet those thirteen nephews were not left so much as would buy their mourning clothes. This is the chief sentence in the will: '*To the only one of my relatives whose method of seeking my favors has really appealed to me I leave the whole of my fortune, without partition or reserve.*' And then my name. I was that one. Almost," Sabatini concluded with a little sigh, "I am sorry that he is dead. I should have liked once more to have shaken him by the hand."

"How Easy It Is When The Knife Is Sharp!"

The "art of carving" is really the art of putting a fine, keen edge on a knife. But carving is only *one* of the tasks that are tasks no longer when the tool is sharp. Everything you do with edged tools becomes easier and quicker when you use

PIKE SHARPENING STONES

The only line that includes EVERY sharpening substance—natural or artificial—each the best for some sharpening purpose.

For the home—and for ordinary shop uses too—the one great all-around sharpening stone is the PIKE INDIA Oil Stone. No other stone cuts so fast yet wears down so slowly. A PIKE INDIA *holds its shape without grooving* for years—is almost unbreakable—and, if kept properly oiled, positively *will not glaze.*

Alundum, from which these stones are made, is a crystal formation produced in great electric furnaces at the most intense heat known to man.

Coarse, medium and fine—each with an absolute evenness of grit that never varies—and in all shapes and sizes.

Guarantee.—Your dealer is instructed to replace any Pike Stone that proves defective.

Send for "How to Sharpen"

This booklet makes it easy. It shows how to select and care for a stone to always get the best results—tells why no *one* abrasive substance will do for all requirements—and why *Pike India* stones are the best for general all-around use everywhere. Send for this book today.

LOS ANGELES INVESTMENT COMPANY
333 D Hill Street, Los Angeles, California

Arnold was speechless. The realization of what it all meant was beginning to dawn upon him. Sabatini was wealthy—Ruth was a great heiress. Her fairy ship had come in indeed—and his was passing him by.

"I am glad," he said slowly, "glad for your sake and for Ruth's."

Sabatini nodded.

"My shadowy means," he remarked, "have kept me in comfort. Perhaps even they have been a trifle more than I have let people imagine. Still this is all very different. Ruth and I are going to wander about the Riviera for a time. Afterward we are going to sail to Sabatini and patch up my old castle. I have some tenants there who certainly deserve a little consideration from me—old friends who would sooner live without a roof over their heads than seek a new master. I shall grow vines again, my young friend, and make cheeses. You shall come from the illustrious firm of Samuel Weatherley & Company and be my most favored customer. But let me give you just a word of advice while I am in the humor. Buy our cheeses, if you will, but never touch our wine. Leave that for the peasants who make it. Somehow or other they thrive—they even become at times merry upon it—but the Lord have mercy upon those others, not born upon the island of Sabatini, who raise it to their lips!"

"I shall leave the wine alone," Arnold promised. "But shan't I be able to say goodby to Ruth?"

Sabatini leaned toward him. His expression was once more grave, yet there was the dawn of a smile upon his sensitive lips.

"You can say to her what you will," he murmured, "for she is here. She had a fancy to look at her old room. I was there with her when you arrived. I have a fancy now to give an order to my chauffeur. *A bientôt!*"

Arnold rose slowly to his feet. His heart was beginning to beat fiercely. He was looking across the room with straining eyes. It was not possible that clothes and health could make so great a difference as this! She was standing upon the threshold of her room. She was coming now slowly toward him, leaning ever so slightly upon her stick. Her cheeks were touched with pink, her eyes were lit with so soft and wonderful a brilliance that they shone like stars. He forgot her fashionable hat, the quiet elegance of her clothes. It was Ruth who came toward him—Ruth radiantly beautiful, transformed—yet Ruth! He held out his arms and with a little sob she glided into them.

Side by side they took their accustomed places upon the horsehair sofa. Her head sank upon his shoulder, her hands clasped his, her eyes were wet with tears. A siren blew from the river. A little tug, with two barges lashed alongside, was coming valiantly along. The dark coil of water seemed suddenly agleam with quivering lights.

"Our ships," she whispered—"together, dear!"

(THE END)

Going to the Front

CRAIG WADSWORTH, cotillion leader, society man and former diplomatist, enlisted in the Rough Riders at the outbreak of the Spanish War. He made the sad mistake of reporting personally to President McKinley who passed him along to the War Department, where he was peremptorily ordered to report to his regiment in the South. The Department designated the train he should take and told him to get a move on.

Wadsworth engaged a drawing room on the train and embarked with his valet as traveling companion. Soon after the train started and Wadsworth was supervising the arrangement of his traps by his valet, a soldier with a sergeant's stripes on his sleeve opened the door and walked in upon them.

"Are you Wadsworth?" he asked.

"I am."

"I'm in charge of the squad of recruits on this train," said the sergeant. "Come with me."

Wadsworth put on his coat and followed the sergeant to a day coach forward. He found a dozen other recruits there. He spent the next three days with the others in the day coach under the eye of the sergeant, sleeping curled up in the seats, and his valet luxuriated in the drawing room all the way down.

You Try One

An Educator Wafer, Buttered

Exquisitely crisp and thin.

A flavor that's sweet and rich—the natural sweetness of wholewheat—Nature's most perfect food.

I make this whole wheat Wafer as my father made it—guarding jealously his standard of pure food quality—the standard he set for all

EDUCATOR CRACKERS

The Cracker of Character and Luxury

But the baking—there's the secret. Good old-fashioned ovens bring out a richness of flavor, a delicacy of texture—delightfully different from anything you have ever known.

They're truly the original all **whole wheat Wafers**—a crispy treat you will never forget.

And I personally sample each batch. I insist on absolute perfection—so that you may enjoy **Educator Wafers** just as my father originated.

Get Educator Wafers from your **grocer to-day.** Look for the name EDUCATOR. Serve them for dinner tonight. Tell your husband to butter some for them. He'll say, "They're simply great"—all men do.

If your grocer cannot supply you, send ten cents and his name for large trial box.

Rambler Motor Cars

The Rambler Cross Country—$1650

With Self-Starter, Top, Top Envelope and Wind Shield, $1815

Here Is a Story of Real Comfort

Here is a car that appeals to all your senses. Graceful in lines, distinguished in color, long and low hung—it's pleasing to the eye. Step in and you will marvel at the feeling.

Settle down in the deep cushions at the big eighteen inch steering wheel—stretch out your legs and know what comfort is.

Start the motor and you will sense its silent dignity and power. It runs without vibration.

Ride in Careless Ease

Take to the open road and at the first release of the clutch its silent action deceives you for the moment. You wonder if the motor has stopped. Open the throttle and away it springs with eagerness. You ride on and on in careless ease and the farther you go the satisfaction of comfort grows.

This is a car for relaxation—for perfect ease. The wheel base is 120 inches, the wheels and tires 36x4, and the straight line torpedo body swings low between the axles—three inches lower than the ordinary car.

Notice the rake to the steering column. It's adjustable. You can settle down for mile after mile. Your arms are free; your legs not cramped. The wheel is just in the right place to see the road ahead. To steer is but to touch the wheel.

Steer Without Friction

When you hit a stone the wheels don't turn sharply. When you want to turn it guides as without a point of friction. There's no whip to the wheel—no bind—just a pleasing flexibility.

You sink down with pleasure into the eight inch upholstery—yet you never strike bottom—you never reel nor feel a jolt. The rear springs are 2½ inches wide and proportionately thin. The period of vibration of the steel is long. The metal is slow acting—deliberate. You go up and down with the smooth regularity of the pendulum of a clock.

Let Women Decide

It's a car that women most endorse. The seats are low—yet high enough—with sufficient leg room to choose the attitude you like.

Three persons ride with ample elbow room in the rear. The rear seat is four feet wide and twenty inches deep, with thirty-one inches of leg room—enough for the tallest person. The long, easy arm rest is upholstered to the full length of twenty-six inches. There is room for extra baggage in the tonneau, and the robe rail, 34½ inches wide, has five inches of space for wraps.

A Captivating Car

Leather pockets on both rear doors and the left front door are for convenience. The front floor below the cowl dash is not narrowed, but is wide, due to the parallel sides of the torpedo body.

We want you to feel the personality of this car. To see it is to appreciate its charms.

Finished in English Purple Lake, with black japanned guards, fillers and tool box, with high, distinctive radiator, it has individuality without eccentricity.

You will want to prove these things to yourself before you buy. Send a postal today asking for the catalog.

Big wheels and tires help carry you lightly over depressions in the road. It's the bumps that cause fatigue. You don't have to face yourself and hang on in the Rambler.

Ten Other Styles, Including Open and Closed Cars of 38 and 50 Horse Power

Equipment—Bosch duplex ignition. Fine large, black and nickel headlights, with gas tank. Black and nickel side and tail oil lamps; large tool box; tool roll with complete tool outfit. Roomy, folding robe rail; foot rest, jack, pump and tire kit.

The Thomas B. Jeffery Company

Main Office and Factory, Kenosha, Wisconsin

Branches: Boston, Chicago, Cleveland, Milwaukee, New York, Philadelphia, Sacramento, San Francisco

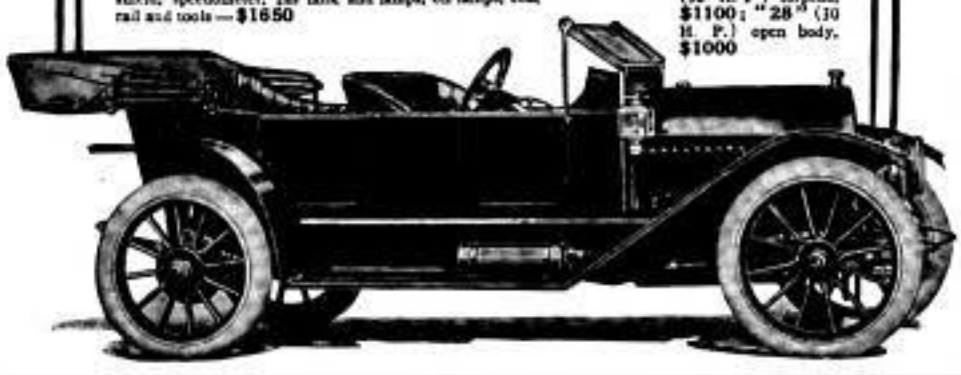
A cushion soft and pleasing even to an invalid. Eight inch upholstery of finest leather and selected long hair—45 double acting steel spring coils. Rich in comfort, finished like club furniture.

Digitized by Google

Jackson

No hill too steep
No sand too deep

45 horsepower;
Long-stroke motor;
***Complete equipment*—$1650**



These are the four biggest facts about the new Jackson Model "45." High power; long-stroke motor; equipment complete; and the price—$1650.

These are the facts we want to impress deepest in your mind.
They tell you of value that is real—value that you can see and feel.
They are the more significant because they are backed by ten years' experience in the making of good automobiles.
Forty-five horsepower—your eager servant.
A long-stroke, enclosed-valve motor—giving you silence, smoothness and flexibility of operation that cannot be surpassed in cars of any price.
Nothing lacking in equipment, even to speedometer and robe rail.
Add to these features the 118-inch wheelbase, with the easy-riding Jackson full-elliptic springs—and at $1650 you have a car whose equal you are not likely to find under $2500.
Examine and ride in the demonstrating car your Jackson dealer doubtless has; or write for literature on the Model "45."

JACKSON AUTOMOBILE CO., 1020 E. Main St., Jackson, Mich.

Model "45"—Five-passenger touring car; 45 H. P., four cylinder, long-stroke motor, 4½x5½ inches; 118-inch wheelbase; 34 x 4 inch tires; full elliptic springs front and rear. Equipment—Top with top hoods, windshield, speedometer, gas tank and lamps, oil lamps, coat rail and tools—**$1650**

Other touring models—"62" (50 H. P.) **$1800**; "32" (30 H. P.) **$1100**; **Roadster models**—"26" (50 H. P.) torpedo, **$1100**; "28" (30 H. P.) open body, **$1000**

THE FEATHERS OF THE SUN

(Continued from Page 9)

ocean stretches with their goods to Fitu-Iva? He, Feathers of the Sun, would tell them why to their faces, in grand council assembled. In their own countries men were too civilized to let the traders make the immense profits they made out of the Fitu-Ivans. If the Fitu-Ivans became properly civilized the trade of the traders would be gone. In that day every Fitu-Ivan could become a trader if he pleased.

That was why the white traders fought the system of paper money that he, Feathers of the Sun, had brought. Why was he called Feathers of the Sun? Because he was the Light-Bringer from the World Beyond the Sky. The paper money was the light. The robbing white traders could not flourish in the light. Therefore they fought the light.

He would prove it to the good people of Fitu-Iva and he would prove it out of the mouths of his enemies. It was a well-known fact that all highly civilized countries had paper-money systems. He would ask Ieremia if this was not so.

Ieremia did not answer.

"You see," Cornelius went on; "he makes no answer. He cannot deny what is true. England, France, Germany, America, all the great *Papalangi* countries, have the paper-money system. It works. From century to century it works. I challenge you, Ieremia, as an honest man—as one who was once a zealous worker in the Lord's vineyard—I challenge you to deny that in the great *Papalangi* countries the system works."

Ieremia could not deny it, and his fingers played nervously with the fastening of the basket on his knees.

"You see, it is as I have said," Cornelius continued. "Ieremia agrees that it is so. Therefore I ask you all, good people of Fitu-Iva, if a system is good for the *Papalangi* countries, why is it not good for Fitu-Iva?"

"It is not the same!" Ieremia cried. "The paper of Feathers of the Sun is different from the paper of the great countries."

That Cornelius had been prepared for this was evident. He held up a Fitu-Ivan note that was recognized by all.

"What is that?" he demanded.

"Mere paper," was Ieremia's reply.

"And that?"

This time Cornelius held up a Bank of England note.

"It is the paper money of the English," he explained to the council, at the same time extending it for Ieremia to examine. "Is it not true, Ieremia, that it is the paper money of the English?"

Ieremia nodded reluctantly.

"You have said that the paper money of Fitu-Iva was mere paper; now how about this of the English? What is it? . . . You must answer like a true man. . . . All wait for your answer, Ieremia."

"It is—It is ——" the puzzled Ieremia began, then spluttered helplessly, the fallacy beyond his penetration.

"Paper, mere paper!" Cornelius concluded for him, imitating his halting utterance.

Conviction sat on the faces of all. The king clapped his hands admiringly and murmured: "It is most clear—very clear!"

"You see, he himself acknowledges it." Assured triumph was in Deasy's voice and bearing. "He knows of no difference. There is no difference. 'Tis the very image of money. 'Tis money itself."

Meantime Grief was whispering in Ieremia's ear, who nodded and began to speak.

"But it is well known to all the *Papalangi* that the English Government will pay coin money for the paper."

Deasy's victory was now absolute. He held aloft a Fitu-Ivan note.

"Is it not so written on this as well?"

Again Grief whispered.

"That Fitu-Iva will pay coin money?"

"It is so written."

A third time Grief prompted.

"On demand?" asked Ieremia.

"On demand," Cornelius assured him.

"Then I demand coin money now," said Ieremia, drawing a small package of notes from the pouch at his girdle.

Cornelius scanned the package with a quick, estimating eye.

Mankato Incubator Co., Box 844, Mankato, Minn.

"Very well," he agreed. "I shall give you the coin money now. How much?"

"And we will see the system work," the king proclaimed, partaking in his chancellor's triumph.

"You have heard—he will give us coin money now!" Ieremia cried in a loud voice to the assemblage.

At the same time he plunged both hands in the basket and drew forth many packages of Fitu-Ivan notes. It was noticed that a peculiar odor was adrift about the council.

"I have here," Ieremia announced, "one thousand and twenty-eight pounds twelve shillings and sixpence. Here is a sack to put the coin money in."

Cornelius recoiled. He had not expected such a sum; and everywhere about the council his uneasy eyes showed him chiefs and talking men drawing out bundles of notes. The army, its two months' pay in its hands, pressed forward to the edge of the council; while behind it the populace, with more money, invaded the compound.

"'Tis a run on the bank you've precipitated," he said reproachfully to Grief.

"Here is the sack to put the coin money in," Ieremia urged.

"It must be postponed," Cornelius said desperately. "'Tis not in banking hours."

Ieremia flourished a package of money. "Nothing of banking hours is written here. It says on demand—and I now demand!"

"Let them come tomorrow, O Tui Tulifau," Cornelius appealed to the king. "They shall be paid tomorrow."

Tui Tulifau hesitated; but his spouse glared at him, her brawny arm tensing as the fist doubled into a redoubtable knot. Tui Tulifau tried to look away, but failed. He cleared his throat nervously.

"We will see the system work," he decreed. "The people have come far."

"'Tis good money you're asking me to pay out," Deasy muttered in a low voice to the king.

Sepeli caught what he said and grunted so savagely as to startle the king, who involuntarily shrank away from her.

"Forget not the pig!" Grief whispered to Ieremia, who immediately stood up.

With a sweeping gesture he stilled the babel of voices that was beginning to rise.

"It was an ancient and honorable custom of Fitu-Iva," he said, "that, when a man was proved to be a notorious evildoer, his joints were broken with a club and he was staked out at low water to be fed upon alive by the sharks. Unfortunately that day is past. Nevertheless, another ancient and honorable custom remains with us. You all know what it is. When a man is a proved thief and liar he shall be struck with a dead pig."

His right hand went into the basket; and, despite the lack of his spectacles, the dead pig that came into view landed accurately on Deasy's neck. With such force was it thrown that the chancellor, in his sitting position, toppled over sidewise. Before he could recover, Sepeli, with an agility unexpected of a woman who weighed two hundred and sixty pounds, had sprung across to him. One hand clutched his shirt-collar, the other hand brandished the pig; and, amid the vast uproar of a delighted kingdom, she royally swatted him!

There remained nothing for Tui Tulifau but to put a good face on his favorite's disgrace; and his mountainous fat lay back on the mats and shook in a gale of Gargantuan laughter.

When Sepeli dropped both pig and chancellor a talking man from the windward coast picked up the carcass. Cornelius was on his feet and running when the pig caught him on the legs and tripped him. The people and the army, with shouts and laughter, joined in the sport. Twist and dodge as he would, everywhere the ex-Chancellor of the Exchequer was met or overtaken by the flying pig. He scuttled like a frightened rabbit in and out among the avocados and the palms. No hand was laid upon him and his tormentors made way before him, but ever they pursued and ever the pig flew as fast as hands could pick it up. As the chase died away down the Broom Road, Grief led the traders to the royal treasury; and the day was well over ere the last Fitu-Ivan banknote had been redeemed with coin.

VIII

THROUGH the mellow cool of twilight a man paddled out from a clump of jungle to the Cantani. It was a leaky and abandoned dugout, and he paddled slowly, desisting from time to time in order to bail.

What These Burroughs Machines *Do*

is what caused the National Bank of Commerce in St. Louis to use only Burroughs machines for 18 years. That is why they have gradually built up their equipment from one machine in 1894 to 81 machines today.

"It has always been the policy of this bank to try every time-saving machine put on the market," says Mr. H. C. Burnett, Assistant Cashier, in charge of equipment. "Notwithstanding that, we now own 81 Burroughs and *no adding machines of any other make.*"

The $18,000,000 concern has standardized on Burroughs machines because they give the best *service*, the *highest efficiency* per dollar expended.

They don't buy *machines*, but what the machines *do*.

Burroughs Service means something tangible—Inventions Service, which, as Mr. Burnett says—"spares no pains or expense to give the user what he wants."

Systems Service, which helps you to make the *most profitable application* of the machine to your bookkeeping or cost work.

Inspection Service, which takes care of you, no matter where you are or how small your investment in a machine may be.

The Burroughs Line is composed of machines for handling every kind of figures. You can standardize your equipment in every department.

Let us show you how, without expense or obligation on your part. Also ask for our service book, "$300,000 a Year."

TO do every reasonable thing that will make every Burroughs User a Booster—that is the end and motive of Burroughs Service

BURROUGHS ADDING MACHINE COMPANY

To the Tired Typewriter Operator and the Shrewd Typewriter Buyer

Learn the Way to More Work at Less Effort—and a Better Machine for Less Money

Write for the Royal Book

We Guarantee

That the Royal Standard Typewriter is made of the highest grade materials obtainable and by the most skilful workmen money can hire.

That it will do work of the best quality for a greater length of time at less expense for upkeep than any other typewriter, regardless of price.

ROYAL TYPEWRITER COMPANY

THE ROYAL is in every way a thoroughly standardized, high-grade typewriter, yet it possesses many essential features which make it *fundamentally* superior to old-line machines. In the first place, the Royal has established a new standard in *standing-up* quality. This is proved by the daily service of thousands of Royals in the strenuous "grind" of railroad, insurance and big corporation offices, as well as important departments of the United States Government.

For another vital point of superiority note the graceful, low-hanging build of the Royal; how all superfluous structure has been eliminated. Touch the keys, and you are charmed by the responsiveness of the action, astonished at its smoothness and speed.

The Royal is Guaranteed

Back of the Royal is an ironclad guarantee. *Read it!* And back of that guarantee are unlimited resources, long experience, and one of the largest typewriter organizations in the world.

New Model 5

***Latest* model of any typewriter on the market—has *Two-Color Ribbon, Tabulator, Back Spacer,* in fact, every worthwhile feature of other machines. In addition, has *Hinged Paper Fingers, Tilting Paper Table, Roller-Bearing Escapement, Dust Shields,* and other practical time and money-saving features found only on the Royal.**

Write Today for "The Royal Book"

An extraordinary book of facts about typewriter service—what it should be, what it should cost, how to get the best. Tells why the Royal is the money-saving typewriter of today, both in initial cost and in economy of operation. *Don't fail to get this book.* **The Royal sells for $75, everything included—no extras.**

A Demonstration! No matter where you are, we have a branch nearby to demonstrate a Royal in your office free of all obligation. Drop a note to New York office and you will receive prompt attention.

ROYAL TYPEWRITER CO., Room 61, Royal Typewriter Building, New York

Branch Offices and Agencies in all Principal Cities of the World

The Kanaka sailors giggled gleefully as he came alongside and painfully drew himself over the rail. He was bedraggled and filthy, and seemed half dazed.

"Could I speak a word with you, Mr. Grief?" he asked sadly and humbly.

"Sit to leeward and farther away!" Grief answered. "A little farther away. That's better."

Cornelius sat down on the rail and held his head in both his hands.

"'Tis right," he said. "I'm as fragrant as a recent battlefield. My head aches to burstin'. My neck is fair broken. The teeth are loose in my jaws. There's nests of hornets buzzin' in my ears. My medulla oblongata is dislocated. I've been through earthquake and pestilence, and the heavens have rained pigs!" He paused with a sigh that ended in a groan. "'Tis a vision of terrible death—one that the poets never dreamed! To be eaten by rats, or boiled in oil, or pulled apart by wild horses—that would be unpleasant. But to be beaten to death with a dead pig!" He shuddered at the awfulness of it. "Sure, it transcends the human imagination!"

Captain Boig sniffed audibly, moved his canvas chair farther to windward and sat down again.

"I hear you're runnin' over to Yap, Mr. Grief," Cornelius went on. "An' two things I'm wantin' to beg of you: a passage, an' a nip of the old smoky I refused the night you landed."

Grief clapped his hands for the black steward and ordered soap and towels for the ex-chancellor.

"Go for'ard, Cornelius, and take a scrub first," he said. "The boy will bring you a pair of dungarees and a shirt. And by the way, before you go—how was it we found more coin in the treasury than paper you had issued?"

"'Twas the stake of my own I'd brought with me for the adventure."

"We've decided to charge the demurrage and other expenses and loss to Tui Tulifau," Grief said. "So the balance we found will be turned over to you—but ten shillings must be deducted."

"For what?"

"Do you think dead pigs grow on trees? The sum of ten shillings for that pig is entered in the accounts."

Cornelius bowed assent with a shudder.

"Sure, it's grateful I am it wasn't a fifteen-shilling pig or a twenty-shilling one!"

Quick Pay

BILL MAC CALLISTER was the leading policeman of Xenia, Ohio. He joined the Elks and became very popular with them. When the Elks gave their annual dance one year Bill was made chairman of the arrangements committee and treasurer.

The night of the dance came. The men who had been out selling tickets turned their money in to Bill. He was all cluttered up with one-dollar and two-dollar bills and silver. Bill had money in every pocket in great bales—about eight hundred dollars all told—and he didn't like to tote it round.

The band, of which Matt Kump was the manager and bass drummer, was about to begin a waltz. Matt, between musical intervals, ran a printing shop and had printed the tickets and the bills and programs for the dance.

The first strains of the music had started and the youth and beauty and chivalry of Xenia were getting ready to glide variously out on the floor, when Bill Mac Callister strode imperiously to the middle of the room and waved his hand at Kump.

"Matt," bellowed Bill, "come here a minute!"

Matt made signs that he couldn't, that the band was just beginning a waltz, and that he would come just as soon as the dance was over.

Bill bellowed again: "Come here, and hurry up about it."

The band stopped. The waltzing couples ceased revolving and Matt hurried over to where Mac Callister was standing. "What is it, Bill?" Matt asked apprehensively.

"Make out your bill and I'll pay it," commanded Bill.

"Pshaw, Bill, there's no hurry about that! I'll come round tomorrow. It's all right."

"Make out your bill this minnit an' I'll pay it," ordered Bill. "I just got to get shet of some of this money. I never knew till now how them millionaires feel totin' round all their cash."

Busy?

unshine of the Traffic Squad

(Continued from Page 25)

urself." She made a tiny furrow ow as she said once more: "To- morning at seven. Now I'll be awake. Good-night, Billy."

npress Stables' groom had been as is word. When young Hopeleigh he express-car siding at six on a holiday morning—he walked to n, arousing no one but the Gordon he hall, which made a half-hearted of wishing to accompany him— man was rubbing down Sunshine, e Traffic Squad, who was sniffing spiciously at the smell of green owing. This was an entirely dif- untry from that where he had oofs before. Perhaps memories days in Kentucky stirred a bit. nts, every muscle was quivering owner approached, slapped him nks with a firm hand that gave and let him hunt and find those sugar that the horse had come to with kind words and a friend.

re is one good-looking hoss," said man. "Look at his feet! They of 'em in the perlice. See, his burned into that off hoof. To hem there hoofs you wouldn't was more than a yearling. And oofs that's the life of a hoss—but ed to tell you that, sir. I've seen polo. You knows hosses."

bundle of nerves this morning," not unflattered by the stable- gnition. For a compliment from knows horses is always a compli- genuine horseman. "Sergeant d me this animal had never seen rass since he was a colt."

And I brought your ng as you told me. They give it e riding academy. The sergeant ook him over before I took him 's dotty on the hoss. He says need the curb unless you chases

But I've put it on. If I was d use it until he was worked out." ght," agreed young Hopeleigh. , Sunshine," he said after the e had been walked up and down e kinks out of his legs, and sad- a final polishing rub, "now we'll ant Hogan told the truth."

oleman watched them start, ad- firm yet half-careless seat of the gave the animal its head at once eared with a pounding of hoofs led almost like one of the run- an had talked of. "Them polo ays ride hell-leather," he said.

n, a half hour later, Sunshine ring back, sweating the least bit ll the nervousness gone, young said: "He's a wonderful horse!" ive the stableman something e him remember that Fourth of time.

, the ex-police horse waited at n where you drive with a mashie nth tee to clear the oiled mac- ere was not long to wait, for came a drumming. "She's nshine," said Billy Hopeleigh, nount pawed understandingly. s one thing Sunshine knew all s other horses. This wasn't the ad put his nerves on edge in the all night long. It was the sound le was being sent out to patrol a than usual, one that he never l having seen before—appar- r even than the one which the nd carriage procession invaded noon, with occasionally a foolish ing frightened and bolting.

orning," called Billy, as Wake- d round the curve. "A merry uly to you, Miss Marriner!"

illy Hopeleigh! Where did you fectly lovely old charger?"

ad the girl he intended to marry about a horse at first glance. it as a compliment, Sunshine," ile Wakerobin was reined to a protesting halt and the two animals poked politely curious muzzles toward each other. "There's a story that goes with the horse, Rheta."

And, sitting at ease in their saddles, with the deserted links stretching on each side, and all the fresh sounds—the little noises that are so pleasant—of the just-begun day surrounding them, Miss Marriner heard, and Billy Hopeleigh told, the story of Sunshine.

"It was fine of you," she said when he had finished, "and I'll take good care of him. I'd trade with you for the ride back, but you're a bit too heavy for Wakerobin, you know. He's a fussy creature and he's been behaving badly of late. I think a groom must have abused him. He shied yesterday—something he never did before."

"I hate to think of spoiling this perfect day," said young Hopeleigh. "Just think—here we are at seven, with things fresh and cool, and in two more hours there will be a string of hooting motors going by, with a handicap-tournament crowd chopping the greens to pieces yonder, and ——" He paused in astonishment, for not very far off he heard the hum of an automobile and, woven through it, a soprano yelping that was unmistakable.

"Heavens!" cried Miss Marriner. "It must be those awful twins! They've followed me. I thought I heard a noise on the landing as I tiptoed down the stairs." Then the hum of the car and the shrieking were augmented by a faint rattle of crackers. They've opened that case of fireworks. They've broken their parole, Billy. They must be punished."

Young Hopeleigh laughed, but inwardly he sighed. He liked those twins, even if Percy Winslow did regard them as fiends incarnate. And now they had plotted to spoil his chance, for he had meant to add a postscript to his Sunshine story.

Describing a devil-may-care arc at the tee turn, the runabout rattled up, Margaret braking suddenly with practiced hand. Both youngsters gave tongue shrilly as they saw their quarry; and Mabel, whose stick of punk was omnipresent, touched off several fresh strings of crackers that depended from the rear seat. Now was the time for Billy to be wrathful; and he might have been had not the antics of Wakerobin claimed his attention and also Sunshine's, who wondered why the foolish black was fidgeting because of the rat-tatting of a few crackers. They were only those harmless things that he'd often seen when he was doing duty along Broadway or the avenue in campaign procession-time. This black fellow would never do for the squad. Sergeant Hogan would soon discover his weakness and weed him out, thought Sunshine.

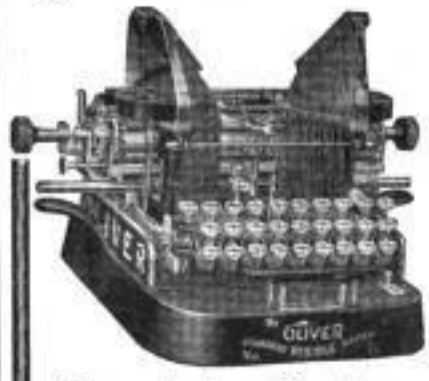
Miss Marriner sat her rearing mount skillfully enough, and even seemed to have him in hand; but her attention was divided between Wakerobin and the children in the runabout.

"Go home this instant!" she ordered. "You've broken your parole. I'm ashamed of you!"

Then Billy heard Margaret shout:

"Don't light a Roman candle, you goose! We're saving them for tonight."

Too late. The energetic punk stick in the rear seat had done the deed. The first red ball from the paper tube—a very pale red by daylight—whizzed so near Sunshine's nose that the wise old horse pranced with indignation. This wasn't playing the game according to police regulations. Where was Sergeant Hogan and his ready tongue, to stop it? Mabel, unhappy author of the crisis, sat spellbound, the hand that grasped the candle rigid, while fire-balls darted at the pair on horseback. Wakerobin withstood the first three; but the fourth ball fizzed close enough to his shoulder to sting. And, with a shudder, the black wrenched loose from Billy's grip and was off like a rabbit scrambling up the low rise, where the highway had been cut through the meadowland. In another second Miss Marriner was careering over the golf links, even her accustomed young wrists powerless to make her frantic animal understand there was no cause for fright.



Even as Billy leaned to gather Sunshine together for the road leap, he heard Margaret scream to Mabel:

"Now we've gone and killed them both! Darn the Fourth of July!"

Billy remembered what Sergeant Hogan had told him about runaways. He touched

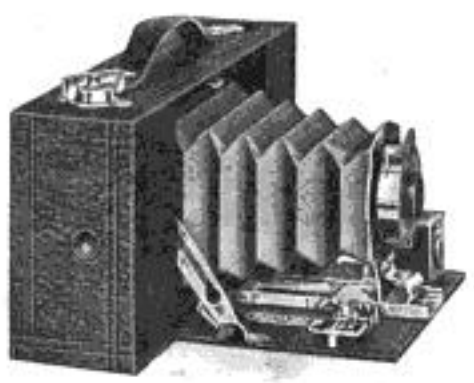
Take along a



BROWNIE

The Brownie cameras are capable and reliable because they are designed and made by men with whom honest workmanship has become a habit. The Brownie price is only made possible by the experience and efficiency to be found in the Kodak factories where they are made.

Like their cousins, the Kodaks, the Brownies load in daylight with Kodak film cartridges, have carefully selected lenses and are simplicity itself in operation. Anybody can make good pictures with a Brownie.

Take for instance the

No. 2A FOLDING POCKET BROWNIE

Inexpensive, devoid of all complications, extremely simple to understand and to operate, this dainty little instrument brings the Brownie into the field of pocket photography.

It slips easily into any ordinary coat pocket, and it will produce good 2½ x 4¼ pictures the all-by-daylight way. Adapted for snap-shots, bulb or time exposures, it has reversible finder, two tripod sockets and automatic focusing lock. The shape of the picture it makes is suitable for any style of composition, and the Kodak Portrait Attachment may be used with this instrument with excellent success. Has our Pocket Automatic Shutter, Meniscus achromatic lens, two tripod sockets, automatic focusing lock, and reversible finder. Carefully finished throughout with covering of imitation grain leather and nickeled fittings.

THE PRICE, - - $7.00.

Other Brownies $1.00 to $12.00.
Catalogue of Kodaks and Brownies free at your dealers or by mail.

Philadelphia

the police horse with his heels and spoke: "Catch them, Sunshine!" And no cross-country hunter ever fenced more cleanly than the veteran of the Traffic Squad which took the road barrier and galloped after the wayward Wakerobin.

It couldn't be a long chase, young Hopeleigh knew. There was fair going for three or four holes, with obstructions that even a runaway might clear; but then there was the "Moundbuilders," a pet hazard of those who like to embroider their sport with baffling details.

The "Moundbuilders" is a series of conical hillocks, with a sandtrap beyond, over which you must pitch to lie dead on the green of the sixteenth hole. If you fail you are lost, for there is no hope in the maze of hillocks and trap, and there is underbrush on the opposite side.

Just once Rheta Marriner looked back—that was as she swept past the fifteenth hole, Wakerobin skimming a low bunker as neatly as if it were in Horse Show competition. Billy, closing up now in earnest as the old police horse put every ounce into his leaps, called to her, but knew that she did not hear. The "Moundbuilders" seemed racing toward them rather than they were plunging toward it. In a moment, unless the crazy Wakerobin swerved, there would be broken bones and worse among the hillocks. And if the black tried to fence them anything might happen—he'd blunder horridly and kick to pieces everything within touch.

Wakerobin had heard the thud of following hoofs at last and wavered, swinging to the left with a lurch that gave the bay the chance to race alongside for an instant. Sunshine's head shot out, the long lips curled far back. It was as if he had given an ugly grin before his teeth snapped wickedly at the black's mane. Then the little hillocks seemed to rise up and envelop Hopeleigh. But he had touched the girl's riding jacket.

When he became slightly interested in things once more he rubbed his eyes and saw Miss Marriner, trying to smile and leaning against the mound facing the one that supported his own shaken frame. Sunshine had stopped in full stride as they reached the hazard, bucking his rider and the girl he was grasping over his head. The bay was a few yards off, cropping more of this fresh grass he found so good. It had been a bit of a race, to be sure; but Sergeant Hogan had taught him that this was the sort of thing for which he got his oats and a rubdown twice a day. After all, it had been good sport—but surely that silly black could not qualify for the squad after today.

"Billy," said Miss Marriner languidly, "tell me, am I all here, every bit of me? I feel like a picture puzzle that some one has shoved off the table."

"Rheta," replied young Hopeleigh, deciding that he, too, would lean against his portion of the "Moundbuilders" a moment longer, "I refuse to answer your question until you answer one of mine. I shan't have another chance. The twins spoiled the one I made. Will you marry me?"

"Billy, dear, haven't you forgotten your prologue?"

"I love you, Rheta. And I'd have told you this ——"

He sank back with a groan. For there was a sound of scurrying beyond the clustered bunkers. The twins were down upon them again.

"There's Billy's new horse!" screamed Margaret agonizedly. "And I saw Wakerobin running down the road. Rheta wasn't on him!"

"We've killed them both!" Mabel shrieked in reply. "I never dreamed we'd grow up to be murderers. Let's not look behind the bunkers right away. They're probably lying cold and dead!"

Apparently Margaret was endeavoring to comfort her sobbing twin. "Anyhow, I'm glad I brought the kodak," she said. "We can take one last picture of them to keep forever. Then we'll telephone Percy Winslow where to find them—he's horrid, usually, but nice sometimes when you're in trouble. And then we'll go off in the runabout and spend our lives among strangers, doing good."

"The darling!" exclaimed Miss Marriner, shakily standing upright.

"I wish you'd call me that," complained young Billy Hopeleigh, staggering to his feet also.

"I wonder if that young woman is trying to find all the sugar in my master's pocket," thought Sunshine, who saw the tableau.

Keep Your Feet Dry Without Cumbersome Rubbers

March with its changeable weather is a month when serious ailments begin if you neglect your health-safety.

Here is the only leather shoe made that will surely protect your feet from dampness—a most important thing in the raw, rainy, sloppy days of spring.

Dr. A. Reed Cushion Shoe
TRADE MARK

is actually insulated against cold and dampness. The soft, luxurious cushion sole receives the foot comfortably, and allows the foot to sink naturally into the yielding cushion instead of spreading out to be pinched and squeezed by the upper. The blood circulates freely, the nerves are not compressed, and the foot maintains its natural temperature. No dampness can possibly reach the sensitive nerves of the foot, to induce colds, grippe, pneumonia, sore throat or rheumatism.

The 1912 spring Oxfords in Dr. A. Reed Cushion Shoes are now ready. Wear these and be sure you know how comfortable an Oxford can be.

Write us today for our Free Style Book, which pictures and tells the many interesting features of these shoes. If your dealer does not sell them we will be glad to tell you who does.

The genuine are identified by the name of the makers woven in the gold cushion.

"Firestone"

Tires hold the world's record for durability and speed.

FIRESTONE'S WAY of getting extra mileage out of a tire is to build extra mileage into it.

That is why "Firestone" Tires cost considerably more to build than others—stouter construction, more durable rubber, more rigid inspection—and why they have never had an off-year.

The small price difference commanded by "Firestone" Tires over tires made the ordinary way is paid back, many times over, in extra miles of service—the Most Miles per Dollar of cost.

THE FIRESTONE TIRE & RUBBER CO.

AKRON, OHIO, AND ALL PRINCIPAL CITIES

SENSE AND NONSENSE

Dugout Ideals

LIEUTENANT HENRY MITCHELL, of the United States Cavalry, tells a story of a woman he once met in Northern Idaho, sixty miles from the nearest habitation. She and her husband were holding down a homestead claim that looked as if at a pinch it might support a herd of goats—that is, if it were not too large a herd and the goats' appetites were not too active—while her home was a sod dugout set up against a cutbank.

When the lieutenant and his companion rode up to the door the woman remarked that they were the first white people she'd seen in eight months' time, then inquired curiously: "Say, where are you fellers from?"

"We're from Philadelphia," the officer answered; whereat the lady of the dugout drew a deep breath, and first exclaiming, "Gee!" added with an air of the utmost pious conviction: "My land, but I'd hate to live so fur away!"

It Sounded That Way

THE ticket agent at a small station down South had gone to dinner, leaving a helper to hold down the job in his absence.

A peppery-looking old gentleman stepped up to the wicket.

"When is the next train for the North due?" he asked.

A regular railroad man would have said it was due at one-fifty-eight; but the youth in charge was green.

"At two to two," he answered.

"What's that?" demanded the old gentleman.

"Two to two! Two to two!" repeated the helper chantingly.

"Young man," demanded the old gentleman irritably, "what are you trying to do—imitate that train?"

A Convenient Code

FRANK I. COBB, chief editorial writer of the New York World, used to be a reporter in Detroit and knew intimately a former governor of the state of Michigan who was renowned, among other things, for his ability as a free-hand swearer.

One night Cobb was dining with the ex-governor and his family. A messenger came in to tell the host that one of his pet political schemes had just been defeated through the bungling of a lieutenant. The old man ripped out a string of dark blue ones.

"Now, pa," said his wife, "you promised me you would quit cursing."

"Maria," said the ex-governor, "I'm not cussing—this is just the way I talk!"

Casey at the Polls

DURING the last city election in New York a bunch of trained repeaters marched into an East Side polling-place.

"What name?" inquired the election clerk of the leader, who was redhaired and freckled, and had a black eye. The voter glanced down at a slip of paper in his hand.

"Isadore Mendelheim," he said.

"That's not your real name and you know it!" said a suspicious challenger for a reform ticket.

"It is me name," said the repeater, "and I'm goin' to vote under it—see?"

From down the line came a voice:

"Don't you let that guy bluff you, Casey. Soitinly your name is Mendelheim!"

Some Liar

SENATOR SHIVELY, of Indiana, can tell a story. A coterie of his Hoosier constituents surrounded him in a Washington hotel recently and one remarked, naming a statesman who had failed to secure an appointment for a friend, that the statesman was the biggest liar he ever knew.

"You should have known a man who lived in Logansport," replied the Senator. "He was always talking about a fine horse he said he owned, when as a matter of fact he never owned a pound of horseflesh in his life; but he talked about it so much that he got to believe it himself—until one day he went to Indianapolis and bought a saddle and bridle!"

"Autocrats" of the Road

There's as much solid comfort in the two-passenger Touring Roadster and four-passenger Tourabout as there is in our seven-passenger cars.

The contour of seats and cushions;
the depth and quality of upholstering;
the room allowed for legs and elbows;
the protection from dust;
the arrangements for ventilation;
the wheel-base and drop frame;
the large wheels and tires;
the springs and shock-absorbers;—

plus the long stroke, smooth running engine,—all produce Comfort, in superlative degree.

Formerly one expected luxury and room in limousine and touring cars—but a certain amount of dust and cramped quarters in a roadster. Oldsmobile designers, however, studied the possibilities of these smaller types for a long time, and each year an advance was made, culminating in the Autocrat models shown above;—literally the "last word" in cross-country luxury!

Tourabout $3500
Engine and Chassis the same as for Autocrat Touring and Limousine bodies

Exclusive features worth noting are:—the dust-screened wind-scoop and "sky-light" in the hooded dash; patent Oldsmobile ventilators in fore doors; enclosed, bull's-eye side lights (wired to battery), and the convenient luggage and spare tire arrangements.

Touring Roadster $3500
Equipment absolutely complete and of the highest possible quality

The Oldsmobile catalogue is a handsome book, showing all types and styles of Oldsmobiles. It will be sent gratis, on request.

The growth of ideal heating

Look through the new buildings all about you, in the planning and construction of which there is used the deepest thought for the comfort and convenience of their occupants, and you will find they are one and all thoroughly, economically and sanitarily warmed and ventilated by

AMERICAN RADIATORS & IDEAL BOILERS

But you don't need to wait until you build a new house—why not comfort your present home by this ideal heating outfit? IDEAL Boilers and AMERICAN Radiators are now so easily put in—not one-tenth the muss of papering or painting. Our simple aim—to build up an army of friends—satisfied users—has resulted in an astonishing increase in the annual sales of IDEAL Boilers and AMERICAN Radiators—until we have been obliged by the demand to also build factories in Canada, England, Germany, France, Italy and Austria.

A No. 1-22-W IDEAL Boiler and 422 ft. of 38-in. AMERICAN Radiators, costing the owner $190, were used to heat this cottage. At this price the goods can be bought of any reputable, competent Fitter. This did not include cost of labor, pipe, valves, freight, etc., which are extra, and vary according to climatic and other conditions.

This world-wide manufacturing has enabled us to incorporate into our outfits the cleverest ideas and practices of the skilled and scientific men of these great nations. Nowhere else, in any line, can the public obtain better quality or greater value in heating devices. Investigate now!

At *present low costs* of raw material and freight savings, our prices are most attractive. IDEAL Boilers and AMERICAN Radiators will make every ounce of fuel yield the full volume of heat and distribute it evenly and genially where it is needed in every nook and corner of the building. To learn how to get better heat and more comfort for less money, send or ask for free book, "Ideal Heating."

We have also brought out the first genuinely practical, automatic, durable Vacuum Cleaner. The machine sets in the cellar, and all the dirt it so thoroughly and perfectly gathers is drawn from the rooms through small iron suction pipes leading to big, sealed dust-bucket in cellar. All the housekeeper or janitor has to do is to attach hose to iron suction pipe opening in baseboard of any room, turn an electric button to start the machine in cellar, and with a few gentle strokes of the dainty, magical Arco Wand, you instantly and thoroughly clean carpets, rugs, floors, walls, ceilings, draperies, frames, moldings, fixtures, mattresses, drawers, corners, crevices, etc. The foul germ-laden air, after the dust is removed, is exhausted through piping to the out-doors or up the chimney-flue. Put with utmost simplicity into any kind of old or new dwelling or building. The sole running cost adds but a few dimes to your monthly electricity bill. Ask for catalog of ARCO WAND Vacuum Cleaner.

Sold by all dealers.
No exclusive agents.

THE APPLE OF DISCORD

By HENRY C. ROWLAND

ILLUSTRATED BY WILL FOSTER

RAVENEL O'SULLIVAN sat sulkily in his wicker chair on the broad veranda of the reading room and stared with moody eyes across the dancing waters of the little bay. Two miles southeast of him stretched the Atlantic, and Ravenel wished that he were on it, traveling at about twenty-three knots straight across. A mile and a half in the opposite direction was a broad river mouth just now presenting a wide expanse of mudflats. Ravenel felt that his second choice might be the large and aggressive hotel beyond, whence came daily in boats many pretty girls who looked with awe upon the sacred precincts of the reading room and the colony that flanked it.

Although Ravenel had been but two days in the Chimney Corner, as the community called itself, he was quite ready to leave. His snug little yawl was all equipped for sea, and he needed but to provision her, go aboard and lay a course for the Lizard, if need be. The only obstacle was that he had no money, and such was his unpopularity with his father—as the result of certain expenses incurred during his last year at Harvard—that Ravenel felt it would be the height of bad diplomacy to express himself as anything but charmed with his present quiet and peaceful surroundings.

The Chimney Corner, that *sanctum sanctorum* of a chosen few of the most exclusive descendants of old Colonial families, was a summer resort far up in the corner of the Maine coast. It was pleasantly situated upon a peninsula of rock and moor, almost an island geographically, but more than an island socially. The colony was composed of about thirty families, and held as a limited stock company some hundreds of acres of dwarf pines girt about by low cliffs that sheltered hidden nooks of sandy beach.

The Chimney Corner resembled Heaven in its difficulty of access and in the fact that, once in, no more questions were asked. One's mere presence within the carefully guarded domain was a credential of all the virtues. No member or member's guest was supposed to await a formal introduction before entering upon social intercourse with the other inmates. Ravenel had already been most kindly spoken to by several charming old ladies and two or three elderly gentlemen, but this circumstance had failed to cheer him. He wondered what his father, Major Irwin O'Sullivan, United States Army, retired, could possibly find in the place, and decided that the old gentleman must be in his dotage. Of course it was all right for his sister Clare; she was a young person with rather too much red blood in her veins, and needed just this sort of a cold-storage, blue-blooded atmosphere to keep her out of mischief. Major O'Sullivan had a nice bungalow of stone and stucco in which he and his daughter had spent a number of delightful seasons. But Ravenel was a stranger to the colony. His vacations had been spent either in Europe or on yachting cruises with friends and classmates. An almost ridiculous similarity of character and personality made it impossible for Ravenel and his father to inhabit the same house in peace, although each held the other in highest esteem—from a reasonable distance.

Upon this particular afternoon in July, Ravenel was sitting on the veranda in sulky solitude. He wanted a highball, and the steward had informed him that highballs were against the laws of Mrs. Wilmerding and the State of Maine. Sarcastically Ravenel had asked the steward, who was elderly and wore a bald head, a smooth muzzle and flowing side-whiskers, whether he might be graciously permitted to smoke a profane cigarette. "There is no rule against it, sir," replied the steward, "but Mrs. Wilmerding doesn't like tobacco, sir." To this Ravenel had returned, quite forgetting his station: "Mrs. Wilmerding need not join me then," and lighted up. He did not enjoy his smoke, however, and started guiltily each time that he heard a step on the veranda. Ravenel had never met Mrs. Wilmerding, but he knew that his sister Clare was very fond of her, and Clare had told him that he owed his extrication from his last college scrape to Mrs. Wilmerding's appeal to the choleric major. This had resulted in Ravenel's deportation from Cambridge to the colony, which, by the way, the members spelled with a large "C."

Ravenel sat and wondered how long his period of probation was likely to last. Several members arrived, for it was nearing the hour for the daily debauch of afternoon tea. All had paused to speak to him, each imparting an information that Ravenel did not value and that was to the effect that "the most delightful feature of the Chimney Corner lies in its extreme exclusiveness," which fact was, from the young man's point of view, the principal drawback, as there were good boating, fishing, golf and tennis. One might also enjoy the bathing if one had the circulation of a seal.

A large portly man, who impressed Ravenel as liking the sound of his deep, resonant voice, appended to the stock phrase that "we are like one big family here." Ravenel concluded that it must be true, as a few minutes later an elderly maiden lady fluttered about him like a woodcock coming to earth, finally alighting to express the same sentiment, to which she added with impassioned utterance: "You are sure to adore the Chimney Corner. We are such a congenial community. All who are with us are of us——" and more, until she ceded her place to an absent-minded little man who had got quite past the spot where Ravenel was sitting before it occurred to him that he was neglecting a social duty. Then he paused, blinked, stroked his sandy Vandyke and chirped: "Good afternoon. I hope that you are enjoying the Chimney Corner. It is a delightful spot and grows with acquaintance. The greatest charm lies in its utter exclusiveness. We are like one big family here—h'm—all who are with us are of us." And with a jerky nod he passed on.

Ravenel's soul squirmed like an angleworm as it slides on to the

The Vessels in Question Had Begun to Attract the Attention of Other Eyes Besides Theirs

Digitized by Google

hook. Said he to himself: "If I live to get back to the house, I am going to take a drink of father's private stock for every time that I am told that rot between now and dinnertime."

Having promised his sister to meet her at the reading room for tea, he remained where he was and watched the colonists as they assembled. There were scarcely any whom he knew by name, as the day before he had taken Clare for a sail in the Gull and, the wind failing, they had got in late. Much to his surprise, Ravenel had found that this sister, whom he had always looked upon as a mere child, was almost as good a boat handler as himself. Clare was only eighteen, but all of her summers had been spent on the coast and she had suffered no lack of instruction in affairs nautical. Ravenel had suffered another shock in discovering that she painted and sketched far better than did he, her subjects being landscapes and marines, whereas his were figures. His ambition was to study art, for which pursuit he was admirably fitted, being the only son of a rich parent.

The Chimney Cornerites flocked in, singly or in groups, some with rackets or golf sticks, others carrying books, and two or three in wheelchairs propelled by elderly footmen. Ravenel's eyes, watching the arrivals, were presently caught by an extremely pretty woman with a full though willowy figure and an abundance of chestnut hair. She was exquisitely gowned in a dress of hand-woven linen, with a tunic of filet lace and a simple though effective hat of the same lace. She was alone, and Ravenel found time to admire her walk as she turned into the path leading to the veranda steps. As she came up he observed with deep appreciation that her eyes were of an almost startling blue, dark-lashed, and that her face held an expression of sweetness and the hint of authority.

"At last," said Ravenel to himself, "I have found something in the Chimney Corner that I like. What a figure—and how well interpreted by the gentleman who cuts her sails. She had better not let Mrs. Wilmerding catch her!"

His bold, admiring eyes fastened on the woman as she came up on to the veranda, when to his vast surprise she looked straight at him and smiled, then came forward without the slightest hesitation and held out her hand.

"You're Ravenel, aren't you?" she asked, with a smile that brought a dimple to the corner of her mouth.

Ravenel rose hastily, pawing for the hat that lay on the floor beside his chair.

"Eh—yes, I think so. You have—ah—rather made me forget. I'm unused to being treated so kindly."

She laughed. "I thought you must be Ravenel. You look so unlike Clare that I was sure you must be her brother. She told me to take care of you until she came."

"I—I hope she will not hurry," said Ravenel, beginning to recover himself.

"Now I know you're not an impostor. Your Irish blarney hasn't deserted you. Clare is bathing with Mrs. Stackpole and some others. Are you enjoying yourself?"

"Yes, thank you," answered Ravenel—"that is, as much as Mrs. Wilmerding and the State of Maine will permit."

The dimple deepened. "I can't answer for the State of Maine," said she, "but I'm sorry that Mrs. Wilmerding should interfere—because I'm Mrs. Wilmerding."

"I—I knew it all the time," said Ravenel.

"Indeed? How?"

"They told me that the Chimney Corner was a principality, so I was naturally on the lookout for the princess."

Mrs. Wilmerding slightly raised her eyebrows, and a crooked little smile gave her mouth a most inviting look. Her lips were habitually firm, but turned outward in the middle, showing a pretty margin that was rich in hemoglobin. The upper lip was inclined to quiver almost imperceptibly, but in a manner that many people had found demoralizing.

"The Chimney Corner is not a monarchy," said she; "it is the very essence of Republicanism, so you need not try to introduce court manners or you are liable to be banished."

"A few minutes ago," said Ravenel, "that was the height of my ambition; but now the idea frightens me. What must I do to make my position secure?"

"For one thing, you must not try to blarney the colony's official chaperone," said Mrs. Wilmerding with decision.

"You do yourself injustice," answered Ravenel. "So you are chaperone? You must have many anxious moments with all these giddy young things——" and he glanced at a chattering group of sexagenarians who were harmlessly drinking tea.

"I am no longer surprised," said Mrs. Wilmerding, "that your father wanted to put you to work. I'm afraid that I made a mistake in joining my voice to Clare's to persuade him to stick to the original idea of a diplomatic career." She glanced down the veranda. "Here comes Ada Stackpole. Clare tells me you have met her."

Ravenel looked up to see a very handsome blonde of perhaps twenty-five years of age, who was chatting with a group that had apparently just come from tennis. Her arms were bare, her shirtwaist loosened at the throat, and there was on her creamy skin such a dew as one sees upon that of an overheated child of three or four. She was rather above the average height, beautifully proportioned and of a pure Saxon type. Her eyes were of a cerulean blue and her hair had the luster of ripe yellow corn.

"Ah, yes," said Ravenel, "I had the pleasure of meeting Mrs. Stackpole in Montreal. Divorced, isn't she?"

"No, indeed," answered Mrs. Wilmerding quickly. "We have no divorced people in our colony. Mrs. Stackpole and her husband have agreed to live apart. He was quite impossible, I believe."

"How interesting—sad, I mean."

"Have you met many of our colony?" asked Mrs. Wilmerding.

"Quite a number. Everybody stops to say a kind word of welcome. I was beginning to feel quite tiresomely at home until you came along."

"We consider formal introductions quite superfluous," said Mrs. Wilmerding, ignoring his flippancy. "The same holds true of members' guests. Our members are expected to show the same discrimination in their invitations that they would in proposing persons for membership. You see, Ravenel—for I am going to call you that if you don't mind—the greatest charm of the Chimney Corner is its freedom from all discordant elements."

Thought Ravenel: "Here is where I get my first drink." Aloud he said: "How delightful."

"You are right, Mr. O'Sullivan," said a bland voice at his elbow, and Ravenel looked up to see a clergyman, who had apparently paused in passing for the purpose of saying a word of welcome. "The charm of this sweet haven of repose after the labor of our winter months lies in its absolute freedom from all uncongenial and worldly elements."

Said Ravenel to himself: "I shan't be swindled out of my second drink even if he has altered the text of the gospel." Aloud he answered: "So I have discovered, sir. You impress me as being all one big, loving family here. I might add that I have also been impressed with the idea that in this charming colony all who are with you are of you."

The reverend gentleman rubbed his hands. "I am delighted to see that you have so accurately grasped the spirit of the place," said he, and passed on, radiating peace on earth and good will to all such men as Providence and Mrs. Wilmerding admitted to the Chimney Corner.

"Don't you find it nice to have everybody stop and say a word of welcome?" asked Mrs. Wilmerding.

"Delightful. And there is such a charming unanimity of thought. Here comes an elderly gentleman and two ladies. I can see from their faces that they are going to stop and speak to me."

"Doctor Soper and two sisters, the Misses Soper."

The retired physician paused and gazed benignly over his spectacles, while his maiden sisters, who appeared slightly astigmatic, turned their heads at slightly different angles the better to observe the young man.

"This must be Mr. O'Sullivan," said Doctor Soper.

Ravenel admitted his identity, then paused, nervously eying a Miss Soper, on whose virginal face some great truth seemed struggling for expression. Ravenel, to help her out, remarked on the number of delightful features accruing to the Chimney Corner.

"But the most delightful of all, Mr. O'Sullivan," cried Miss Soper, when her sister cut in with—"is our seclusive social atmosphere."

Thought Ravenel: "Two small slugs in separate glasses. I must begin to duck."

"Quite true," admitted Doctor Soper. "We are an undivided clan here in the Chimney Corner."

"And a *soupçon*," thought Ravenel. "There won't be much left for the major if this keeps up."

"All who are with us are of us," murmured the Misses Soper, and with genial nods and smiles the trio passed on.

"It is really wonderful," said Ravenel, "how you manage to keep this place so socially aseptic. It must require a great deal of finesse at times."

Mrs. Wilmerding knit her pretty brows. "On one or two occasions we have had narrow escapes from admitting what might have proved a disturbing factor——" she began, when there came an interruption. A very young and ravishingly pretty girl came up the steps in three vigorous bounds and, pausing at the top, proceeded to do a sort of Highland Fling that was more characterized by a supple strength of limbs and body than by any conspicuous technic. The elderly gentlemen pricked up their ears and cocked their heads. The elderly ladies looked startled.

"Clare—behave yourself!" cried Mrs. Wilmerding's rich voice, half laughing, half chiding. The girl came to a "first position," and gave a soldierly salute that finished with a ringing slap on the solid anatomical structure beneath her short duck skirt.

"Can't help it—I'm friz!" she cried. "I've warmed about fifty gallons of sea water and my blood's all turned to glue. You don't mind if I do a proper little jig, just to warm up——" and the spectacular young person placed both hands on her hips while the twinkling ankles flew in and out. The clergyman adjusted his spectacles and smiled. There was nothing about the jig to offend the conventionalities, so Mrs. Wilmerding merely laughed. Clare, still jigging, let her deep violet eyes rove over the tea drinkers until they rested upon her brother Ravenel.

"Bless me, if there isn't Misther O'Sullivan!" said she, with a subtle mimicry of an Irish brogue. "And how ever did that mick get past the gate? I suppose that I should speak to our guest, Loretta, now should I not? And what do you think of the Chimbly Cor-rner, Misther O'Sullivan, and does it not remind you of Cambridge, barrin' only the place and the people in it? I'll tell you a secret, sor, though 'tis like enough some one has let it out. The most delightful fee-chure of the Chimbly Cor-rner lies in its utther see—I mean ex-cloo-siveness. We are like one big family here, barrin' only the fights. Now may I have some tay? I'd rather it were a cocktail, but they don't grow here, the climate is that raw——" and with a duck of her auburn hair she skipped into the reading room. The groups on the veranda drew breath again.

"Clare," said Ravenel to his companion, "is a great cross to father and myself."

"She is a wonder!" said Mrs. Wilmerding. "Sometimes she frightens me though. Do you know that she is painting extremely well?"

"She goes at everything with all her arms and legs and carries it through by sheer force of vitality. But sometimes she overcarries. It's a wonder you all stand her chaffing—that about the exclusiveness."

"We come in for a good deal of chaff," said Mrs. Wilmerding, "and some of that from outside is rather malicious. We are not infrequently called snobs and Pharisees, and last year we were accused of something far worse—bad faith."

"Impossible! Who was the viper?"

"Calvert Lanier—the playwright. Do you know him?"

"Only by reputation. What was the trouble?"

"It is a very disagreeable story. Mr. Lanier came in here last summer, cruising on his schooner yacht. Being a member of the New York Yacht Club, he took it for granted that he might land here at the reading room. Mr. Phelps, our president, met him and very tactfully explained that this was all private property, whereupon Mr. Lanier apologized very courteously and put to sea again. It appears, however, that he was charmed with the Chimney Corner, and on arriving at Marblehead he ran up to Boston and made application to my husband, whom he knew slightly, to be made a member. Mr. Wilmerding is secretary of the colony, and after making a few inquiries about Calvert Lanier he took him in quite on his own authority."

"But why not?" asked Ravenel. "Lanier comes from one of the best Virginia families, and from all I've ever heard of him he is a very high-class chap."

"Yes—but he is a playwright."

"But isn't that a respectable calling?" asked Ravenel. "There were Aristophanes and Shakspere and Racine and Victor Hugo and a few others who were well received. His plays and operettas are the cleanest I ever saw. I sat behind a girls' school at the last."

Mrs. Wilmerding looked rather disturbed. "That was all discussed," said she, "and Mr. Lanier might have been admitted but for Mrs. Stackpole. She was most vehemently opposed to him on the grounds of his profession, and pointed out that we might expect him to entertain players. Of course I saw the truth of this argument—so Lanier was refused."

"After being told by Mr. Wilmerding that it was all right? How did he take that?"

"With a very bad grace. The trouble was that, after being told by Mr. Wilmerding that he might consider himself as a member-elect, he picked out his plot on the map in Mr. Wilmerding's office, wrote a check for the amount, and at once went to an architect's office and made all the arrangements for his cottage. He then sailed for Europe and was in London when he received Mr. Wilmerding's letter telling him that it would be impossible to make him a member. Fortunately Mr. Wilmerding had not deposited the check, and the committee offered to defray all expenses in regard to the plans for the house, and so forth."

"How nice of them. What did Lanier say?"

The color deepened in Mrs. Wilmerding's face. "His reply was of a character to make us glad that we had refused to admit him. He said, among other things, that since he had been refused admittance to the Chimney Corner, we might expect to find him on the doorstep. I am sure I do not know what he meant by that. On his return from Europe Mr. Lanier came up here and demanded a personal interview with the committee. He made some very bitter accusations of bad faith and in fact quite routed the men, but Mrs. Stackpole and I stood fast and eventually triumphed."

"Did you see him?"

"No. Mr. Wilmerding was really ill over it. You know my husband is considerably my senior and a semi-invalid. Mrs. Stackpole also was terribly upset. I was surprised at her insistence, but I couldn't help but admire her determination."

Ravenel pursed up his lips and stared pensively out across the water toward the inlet, where a diminutive tug was struggling valiantly to tow in a huge empty barge

Digitized by Google

against the ebbing tide. The young man was reflecting on the story that had just been told him and his mental comments were not flattering to the colony. Mrs. Wilmerding, apparently to change a disagreeable subject, presently remarked:

"See that ridiculous little tug out there with that great barge."

The vessels in question had begun to attract the attention of other eyes besides theirs. The barge itself looked as if it might be the hulk of an old sailing ship, and from the way in which it sat upon the water one could see that it was practically empty. A number of square openings like the gun-ports of an old-fashioned frigate had been cut at intervals, and under them the sides of the old hull were pierced by round portholes. From the starboard cathead hung a huge rusty anchor with a wooden stock.

The towering hulk was black and dingy. An accommodation ladder was down amidships, and over forecastle and quarterdeck were rigged snugly triced awnings of a greenish blue. Two boats were swinging from the davits, and up forward there fluttered from a clothesline the family wash.

As the big hulk drew slowly abreast of the reading room it could be seen that there was a hammock swung under the after awning, from which presently there descended a man in blue clothes. Up forward another man in a black derby, shirtsleeves and side boots stood in a negligent attitude with one foot on the whelp of the old-fashioned windlass.

But that which caught and held the attention of the tea drinkers on the veranda of the reading room was a tarpaulin that hung over the port bow, partly hiding what appeared to be the name, which was painted in bold, white letters at least two feet in height. Of this only THE was visible.

"An odd-looking packet," said Mr. Phelps in his sonorous voice.

"A veritable Noah's Ark. And look at the name on her bow. Did you ever see such a sign? Theodore Roosevelt, perhaps—ha! ha! ha!"

"That windmill in the waist has a Scandinavian look," said Major O'Sullivan in his brisk military voice. "Thelma would be my guess."

"Or Theseus," ventured Professor Pringle, the colony's savant.

The panting little tug had hauled up almost abreast of the reading room at a distance of two or three hundred yards, when suddenly the ears of the watchers were startled by the clanging of the tug's engine-room telegraph bell, and immediately the churning under the stern ceased.

"Upon my word!" cried Mr. Phelps. "He can't have the impudence to anchor here directly in front of the reading room!"

The tug's propeller made several turns astern, thus slackening the towline, when a deckhand, who had been sitting on one of the towbitts, rose to his feet, handled the hawser, and looked toward the barge as if waiting to cast off.

"Bless my soul!" cried Mr. Phelps, "they mean to anchor that thing right in front of our noses! What amazing cheek. I won't have it! Not a bit of it!" He stepped to the window. "Steward!" he called; "fetch me the megaphone. Hurry!"

The elderly servitor bustled out with the megaphone, which Mr. Phelps snatched from his hands. The honorable president was a large man, with a chest which he had amply developed as the result of its owner's enjoyment in the sound of his resonant voice. The breeze had dropped light, and across the still water Mr. Phelps' sonorous tones rolled forth with swelling cadence.

"Aboard the barge!" he thundered.

The hail could certainly have been distinctly heard on the opposite shore a mile away, but so far as one could see it failed to be audible to either barge or tug. Aboard the former the lank individual standing by the windlass did not so much as glance toward the shore, while the man in blue clothes, who was leaning against the high bulwarks, his back to the reading room, leisurely crossed the deck, climbed back into his hammock and began to turn the pages of a book.

Mr. Phelps' ruddy color deepened. He was a man who took vast satisfaction in the exercise of authority, and was unaccustomed to lift his fine voice in vain. Again he raised the megaphone, inflated his splendid lungs, and sent his voice rolling across the water with a hint of impatience in its note.

"Abo-o-o-ode the ba-a-a-arge!"

The hail is excellently formed phonetically for its carrying power, especially when "aboard" is pronounced "abode." Yet in spite of the magnificent note which thus amplified and threatening sent little shivers through more than one elderly spinster on the veranda of the reading room, it might have been the squeak of a bat for all of the effect produced upon the lumbering leviathan. Aboard the tug the deckhand was slowly throwing the turns of the hawser off the bittheads, and even at the distance it could be seen that his unwashed face wore a wide grin.

Mr. Phelps' hearty color deepened to a dangerous purple and the veins of his neck became congested. To the ladies on the veranda he suggested omnipotent Jove about to hurl thunderbolts, and they trembled. But the profane deckhand had cast off the towline, which he of the derby hat was hauling slowly through the port chock of the barge. Once again Mr. Phelps raised his megaphone.

"Abode the ba—a—a—rge!" he thundered, and this time with more success, for a whiskered face and a pair of square shoulders were thrust through the open window of the wheelhouse and a harsh, nasal voice answered in the usual conversational tone:

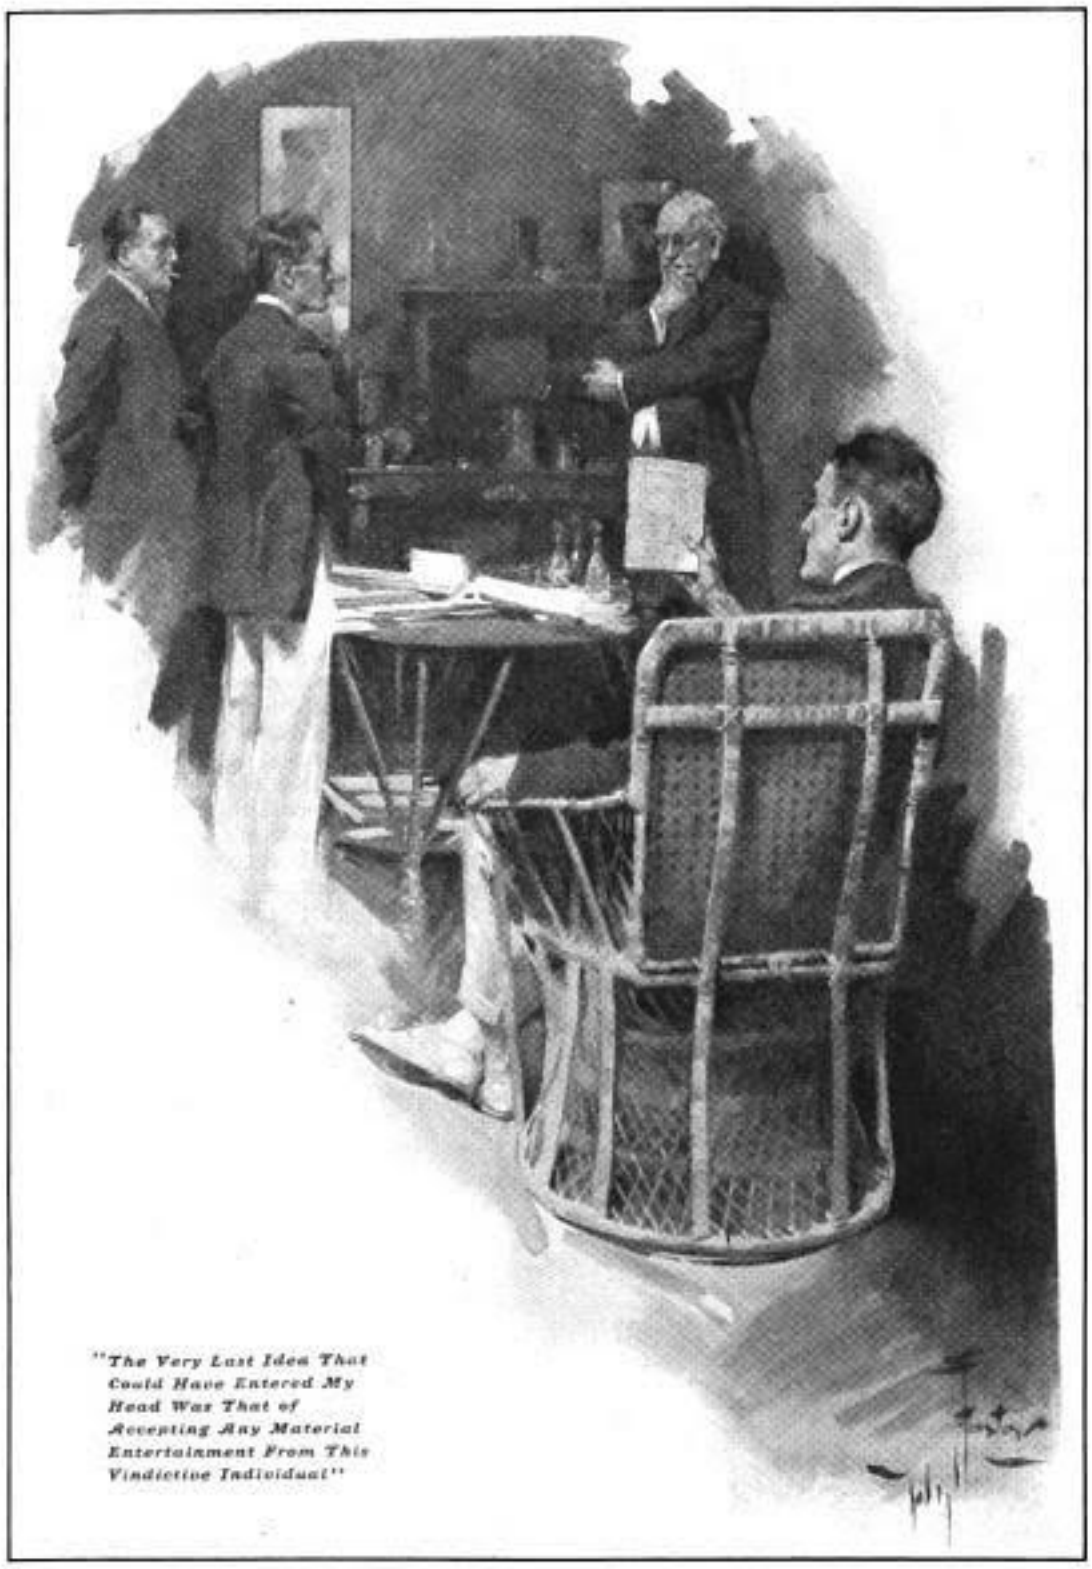
"Wa'al, what d'ye want? No call to holler so—nobody's deef."

"Take that hulk away from here!" commanded Mr. Phelps. "What does that fellow mean by anchoring right out in front of us?"

"Don't know of any law agin it," came the answering drawl. "D'yew?"

Mr. Phelps hesitated, then half lowered the megaphone. For the moment he was unable to think of a suitable reply. He looked at the barge. The tide was running strongly ebb, and the huge hulk, having lost its headway, began to drift slowly astern. The bearded man caught a turn with his hawser, then stepped to the windlass. For an instant he hesitated, as one who gauges the relative position of two points.

"Don't you dare to anchor here!" roared Mr. Phelps in his most impressive tones, losing his head at the sight of the man's evident intention. "This is private property!"



Not so much as a grin came from the man on the barge, though all faces aboard the tug were split in the horizontal line. The man with the black derby was seen to give a tug at a small line. Followed a rattle and a great splash as the big anchor struck the water. For a minute the chain cable clattered out through the hawser-pipe, then, judging apparently that he had sufficient scope, the crew of one stoppered his cable and walked to the rail, where he began to haul at the tarpaulin that obscured the name of the hulk. The man in the hammock appeared to be immersed in his book.

Exasperated beyond all bounds, Mr. Phelps crushed his thick mustache against the mouthpiece of the megaphone. Those watching trembled and the Misses Soper had recourse to their salts. It was evident to all that Mr. Phelps was on the point of becoming very angry. No such excitement had ever before penetrated to the exclusive domains of the Chimney Corner.

"Barge ahoy!" bawled Mr. Phelps. "These are private waters! You are forbidden to anchor here under penalty of the law!"

The man in the hammock read on unmoved. The eyes of the watchers turned from him to the disreputable person who was hauling up the tarpaulin. As the lower extremities of the letters that spelled the name appeared a peculiar hush fell upon the watchers. It was the strained silence of a vague foreboding, and in the tension Mr. Wilmerding's fingers fumbled so nervously with his pursing lips that he let fall his marine glasses, the clatter of which evoked an hysterical scream. At the same moment the last scrap of tarpaulin was jerked aside and there, in huge letters of glaring white, was painted:

THE BROKEN WORD

"The Very Last Idea That Could Have Entered My Head Was That of Accepting Any Material Entertainment From This Vindictive Individual"

II

COSTUMED as though for a lawn party, Mr. Calvert Lanier reclined against a heap of cushions in a large navy hammock and wrote. Or, to be more accurate, he read, for he was at work on the revising of his new comic opera, The Pearl of Panama.

For just a fortnight his big hulk had lain off the reading room, soaking up the best part of the view and outraging the colonists' dignity by its accusing legend, The Broken Word. The vessel had been allowed to swing head out to the flood tide, when a kedge anchor had been carried from the stern, so that the leviathan lay always broadside to the beach. At night a lantern was swung from the cathead over the name. Along the bulwarks presenting to the reading room, a pale green awning had been snugly triced, and behind this screen Mr. Lanier lived and moved and had his mysterious being. Every morning his employee went ashore in a motor-driven whaleboat, but of Mr. Lanier nobody had so much as caught a glimpse. Often, however, the muffled notes of a piano could be heard issuing from the depths of the hulk, these airs catchy or filled with a swinging rhythm which foretold a coming popularity, for Lanier was doing not only the libretto but also the music.

CRAVEN

By LAURA L. HINKLEY

ILLUSTRATED BY W. B. KING

ABOMINABLE pain; fever blotting all things indistinguishably in a hot haze; weariness unspeakable—these were less a memory to me than a hardly withdrawn presence, the painful condition of half-conscious being. I passed into the realization that I was still myself. In that interminable agony I had seemed many persons at once—a gang of galley slaves toiling pitilessly; a party of rescued miners, each mangled, blackened body of whom, as it came to the surface, was mine, whose pangs I suffered without ceasing to feel the pangs of those who had come before. In another phase of the fever, whether before or after I do not know, I believed that my own body was monstrously enlarged to contain the misery it endured, and that its swollen, misshapen immensity covered the bed on which I lay. Now I recognized myself. I had one man's normally formed body. I was Richard Trent, in the twenty-fourth year of my age, with the world before me and my way to make—and presently I should be well.

I opened my eyes and looked about the room. I did not know it. It was large and bare and still and airy. In spite of its bareness it looked subtly expensive—vastly more so than Mrs. Miller's back bedroom—with delicately toned walls, marble lavatory and gleaming brass bedstead. At a trim, white little table in the middle distance stood a white-clad nurse arranging bottles. "They brought me here after the smashup," I reflected. Obviously there had been a smashup. "There'll be a thundering bill to pay!" But I was too tired to wonder how it could possibly be paid. I shut my eyes. Utter weakness possessed me. I thought of my loneliness, of my dead mother. Delirious mists crept back upon me. I thought my mother sat beside me and laid her hand on my forehead, bidding me sleep. Whether I slept or not I do not know; but, a little while after, my mother was gone. I was dreaming another dream—a vague, yearning fantasy of woman's tenderness.

I looked up suddenly. A beautiful woman stood beside the bed, looking down at me, with passionate love in her eyes.

She wore a sort of loose housedress of soft, pale blue, with lace in the V of the neck, where it showed her full, white throat. Her wavy, bronze-brown hair crowned her like a queen. She was pale, with parted, rosy lips and shining eyes. And from her whole sweet, breathless countenance poured upon me the look that all men dream of in their sweetest, maddest dreams.

"Richard!" she cried softly. "You know me, don't you, Dicky? Oh, Dick!"

She dropped on her knees and hid her face against mine.

I thought she was an apparition. Ninety-nine men in a hundred would have done—as I did.

She drew her head back, curving her white throat adorably. Her vivid, exquisite face bloomed and sparkled. Such eyes I had not imagined! Blue and deep as Heaven, misty and radiant with tears and laughter and rapture.

"Dicky! Dicky! Dicky!" she breathed. "Speak to me, Dick!"

I tried to speak, I think. I moved my lips; she misunderstood—or did she? Her mouth met mine again.

It was wrong, of course. I should have said: "Pardon me, madam—I am not the person you evidently believe me to be."

Remember, if you are inclined to excuse me, that I was much too bewildered by sheer physical weakness to formulate even so simple a thought. Remember that I had not spoken rationally for nine weeks. And remember that I took her for some strangely gracious phantom from the grim world of shadows I had labored in so long.

Yet even then a doubt crossed me. My finger caught in the lace at her throat and the stuff turned appallingly real. I closed my eyes, my sole defense against all my weakness could not meet. When I opened them again I caught a last glimpse of her vanishing in a delicate swirl of blue drapery.

The white-robed nurse was bending over me. To my surprise I recognized her.

"Miss Podmore," I asked, "who or what in creation was here?"

My voice startled me; it sounded like a faint, husky echo of itself.

"Better not talk now," said Miss Podmore soothingly, and slipped a clinical thermometer under my tongue.

So it was an apparition! Of course it couldn't exist simultaneously with Miss Podmore, who was freckled and sandy-haired and of the indeterminate age that stays precisely the same for a decade or so. Also, the apparition had called me by my own name. That—and other things—seemed to clinch her visionary quality. Was I, perhaps, about to die and visited by angel ministrants? Could I have deserved such a harbinger of eternal

"Speak to Me, Dick!"

blessedness? Or had I died already and reached celestial —— No—there was Miss Podmore. I gave it up and went to sleep.

Now in this narrative of mine the time sequence of these early memories is badly confused. I have no idea whether days, hours or weeks elapsed before that conversation with Miss Podmore which must have come next. Meanwhile I had thought much of my apparition. I lay with shut eyes and brooded warmly on her loveliness. Several times I saw her briefly. Once she appeared floating in a cloud a little above the foot of my bed. She held a branch of lilies in her hand and all round and behind her flocked a crowd of smiling cherubs whose white wings gleamed against her sky-blue robes. At another time she seemed, in quite mortal guise, to throw me a kiss from a distance.

On a morning when I felt wholly awake and sane Miss Podmore said:

"Why do you hold your right leg so still and wince when I touch it?"

"Why, it's broken—isn't it?" I asked, surprised.

Miss Podmore laughed in my face.

"It's perfectly sound!" she declared. "There isn't a bruise on it. Try to move it. Flex the knee."

I declined.

"It feels broken, anyway. It aches bad enough without moving."

Miss Podmore began gently to massage the limb in dispute. I should have remonstrated had I dared; but one in my position does not argue with the commanding nurse.

"Say, Miss Podmore," I asked between clinched teeth, "what have I been up against anyway?"

"Several things," she returned quietly. "But you're coming out nicely. You've got a great constitution."

"Why were the black fellows sitting on my chest?" I inquired seriously.

"That must have been the broken ribs. We had three."

"And they took my head off," I pursued reminiscently, "and played football with it—the red and black teams. Oh, I know that didn't happen—but what did?"

"You had concussion of the brain, and a good many bruises besides."

"Whew! Was it a wreck?"

"Yes. Nine weeks ago; and even then Doctor Worrall thinks you've done well."

The period of time she mentioned made no impression upon me, but the name did.

"Worrall? I don't know him. Why didn't they get Doctor Kane?"

She looked at me oddly and I saw I had made some kind of break.

"Doctor Worrall is considered the best physician in town," she said primly.

"The best physi——! Say, what burg is this anyway? Ain't I in Glencoe?"

She came and felt my forehead; she spoke calmingly and looked at me anxiously.

"No; you're a hundred miles from Glencoe. You are in Morristown. Better not ask any more questions now. I'm going to give you a sedative."

"One more question!" I begged. "Was that wreck a head-on collision?"

"I believe so. Try not to think about it now. It might raise the temperature."

I disobeyed. I tried with all my strength to think about the wreck—and altogether in vain. I could not recall it in the least. The last thing I remembered—and that with absolute, clear-cut distinctness—was taking a girl home from a dance at the armory. It was Enid White. I recollected bits of our talk—and that was doing well, for it was frothy stuff—sheer chaff and banter. I could see Enid's trim little figure standing on the porch, with the moon shining on the snow and in her brown-black eyes as she waved her muff in farewell. But what came next? Had I been going on a railroad journey? Of course it was possible that Stewart had sent me on some errand—given me a chance. What rotten luck to get smashed up if he had! But why couldn't I remember it? Where was Morristown? I had never heard of the place. I tested my memory on other things—my own earlier life. Scenes, persons, places and events reproduced themselves flawlessly, as I thought; but it all ended with the moonlight sparkling on the snow and in Enid's eyes. I had cared a good deal about Enid's eyes; in fact, I had considered myself quite miserable because I was much too poor to tell her so. What inconstancy lies in man! I had merely passed through an illness—and seen an apparition—and I cared no more. I wondered a little why my apparition had not been more like Enid.

Probably all this raised the temperature. At any rate, after a while I woke and saw Her! She knelt beside the bed, with her head drawn back in the attitude of that first meeting. She was lovelier than I remembered. We looked at each other—it seemed a long time—in a sort of still ecstasy.

"I'm going to be very good, Dicky," she murmured, "and quiet, and not make you delirious."

"But I want to be delirious," I whispered, "and keep on seeing you."

She laughed very tenderly.

"It isn't delirious to see me, Dick. I'm quite real."

"Of course you'd say that," I retorted, unbelieving, "because it's the sweetest thing you could say—and you'd always say the sweetest thing."

She laughed, crinkling up her eyes adorably. I saw the pearly shadows under them and the length of her brown lashes, darker than the clearly penciled brows.

"Are you sure you're not delirious now, Dick?" she asked as if it were a joke.

"I don't know. Better ask Miss Podmore. Of course, a professional opinion ——"

She didn't vanish when I mentioned Miss Podmore, as I feared the instant I said it. Instead, she laughed once more.

"Oh, it's so lovely, Dick, to hear you talk like yourself again!"

Her eyes did not cease to worship me.

"I wish you wouldn't look at me like that," I said. "I—my head isn't very strong; and I'm afraid I'll wake up."

"Your head isn't very strong, is it, Richard?"

She patted my cheek; but she followed the suggestion too strictly. She sat down in a big wicker chair near the window and began sewing—or perhaps it was embroidering—on some small piece of work which she kept crumpled up in her hands or on her lap.

I lay and watched her. Sometimes I tempted the miracle by shutting my eyes, but she was always there when I opened them. Strange ideas began to assail me. Our second interview had approximated the possible so much more nearly than the first. Suppose she were not an apparition after all! Suppose she were a perfect mortal maiden by some inconceivable freak of fate reserved for me! My heart beat so fast it half frightened me; my gaze clung to her avidly.

She flushed; she threw me strange little glances, conscious, divinely shy, telltale—if I could have understood!

"Why do you look at me so, Dick?" she asked guiltily.

"I don't know," I murmured back.

Suddenly she shook out her work and held it up. It was a little baby's shirt.

Completely bewildered, I stared at her. Her eyes, dark and wonderful above the tiny neckpiece, told me that it meant something supreme. But what?

With a sweet cry she fled to me, hiding her blushes and quick tears on my breast.

"Oh, Dicky, don't you see? Don't you understand?"

Her face hidden against mine, she whispered in my ear yet other words.

I understood at last.

A hideous crash—a ghastly wrench—tore the bottom out of things and dropped me to a lower level, sick and shaken, blinded with the dust of defeated thoughts, but

Digitized by Google

rational and whole in spirit. I knew her now for what she was—neither apparition nor maiden, but another man's wife! *At* the same time, as by a flash of baleful lightning, I saw the main outlines of the situation. I had been *falsely* identified after the wreck as the other fellow! I had been taken to his home; and his wife ——

Oh, the horror, the disgrace of my position! I felt *sick with* disgust. My sole desire in that first moment of revelation was to extricate myself from the horrid involution. I wanted to get out—to get away!

"Aren't you glad, Dicky?" she cried softly, lifting a sparkling face. "Why, how you tremble, Dick!"

"I'm thinking—of you!" I gasped.

This was not true. I was thinking very intensely of myself.

What a moment for explanations, apologies! Could I say to that tender, palpitating woman, in that instant so sacred to her—I, with her tears and kisses warm upon my cheek: "Excuse me, madam; I am not your husband!"

Yet I swear I meant to when I began.

"It's all my fault," I babbled—"my misfortune, I mean. It's all so dreadful for you—the shock of it, I mean ——"

"But that's all over now—it's so sweet of you to think of me, Richard! That's all over now! If you had died, Dick, I'm sure I—we," she corrected herself—"we should all have died together! But I never believed you would die, Dick. Never for one minute! Why, Dick, you're crying!"

The shamefully futile, unmanly tears flowed on. I felt so sorry for her, so sorry for myself.

She misunderstood. She wiped the tears away, with cooing words and caresses, with intimate, delicate, wifely sweetness—and I lay and swallowed my shame!

It is hard to explain the thing I said.

"I do love you!" I said. "Always remember, whatever happens, that I did love you from the first instant I saw you." I spoke the words with some insane notion of saving her dignity when she should learn who I was. They were no sooner uttered than they seemed the most revoltingly inexcusable I could have chosen.

"I've told you too suddenly, Dicky," she repented sweetly. "I oughtn't to have done it. I didn't think you'd care so much."

"Care!" I groaned. "Oh, good Lord!" I groped desperately for something to say. "God bless you!" I said. "God bless you anyway!"

After she left me I thought with shut eyes a long time. I do not believe that mental shocks have power to unsettle some types of brain. Mine, on the contrary, was cleared and stimulated. After all, the thing was plain enough. The man I resembled and whose Christian name I bore must have been killed or badly injured in the wreck. I seemed to recall that I had been considerably bruised about the face. That, doubtless, had helped the mistaken identification, and my delirium and folly had done the rest. There remained only to set myself right as speedily as I could.

Miss Podmore had lighted a softly-shaded lamp and settled herself beside it. I reflected that if I tried my story on her she would certainly tell me not to talk now, and threaten me with temperature. Besides, I was tired out. I decided to wait till morning and begin with the doctor.

Doctor Worrall I had not particularly noticed. Mine had been the simple policy of literally shutting my eyes to whatever did not please me, and the doctor had been one of those things. He was a young man, with bright, hard brown eyes, and a nose too big for his forehead. Miss Podmore, at my urgent request, propped me up with pillows; I felt better able to face my fellowman from that slight elevation.

The doctor went through his usual professional patter; I judged him a bad man to throw out of his routine. He pronounced me on the high-road to convalescence. I took the opening.

"And now, doctor, I want to ask you a few things. In the first place—it sounds like a shilling-shocker; but—where am I?"

He didn't look particularly surprised. I guessed Miss Podmore had prepared him.

"You are in your own home, Mr. Craven."

"My name isn't Craven and I haven't any home. I'm Richard Trent, of Glencoe. I'm working on the Herald there. You see, they picked up the wrong man after that wreck. I happen to look like him ——"

I went on to explain the case, encouraged by the doctor's look of absorbed attention.

"One moment," he interrupted. He leaned over to finger my head, inquiring with each pressure whether it gave me pain. He spoke to Miss Podmore about "abnormal symptoms" as if I had not been there.

After an outraged second I caught his drift.

"I know what you think! You think I'm crazy; but I can easily prove my identity. Why, Miss Podmore knows me—that is, she might remember me. Miss Podmore, don't you recall when you were in Glencoe looking after Judge Hendricks? I often saw you."

She looked at Doctor Worrall doubtfully.

"Speak out," he ordered. "He's strong enough to take it."

"I've worked in Glencoe," she said considerately, "off and on for a good many years, but I don't know any Judge Hendricks there."

"But—but ——" I stammered. "Surely you're the same woman! You haven't any twin sister, or cousin exactly like ——" This was so obviously in the shilling-shocker line that I stopped of my own accord.

The doctor took the word.

"It's like this, Mr. Craven. You've been hit on the head in such a manner that certain of the nerve centers in the brain have been paralyzed or destroyed. The association fibers on which memory depends are so involved that a portion of your memories has sunk below the threshold of consciousness—that is, become subconscious. The affected area is probably slight, as you are so nearly normal in most respects, and that gives us reason to hope the aberration may be merely temporary. We have cases in which aphasia, or complete loss of speech, takes place; or even primary conceptions ——"

I could endure no more.

"Rats! I haven't forgotten anything! I remember my whole life. Will you hear my story?"

He pulled out a little red leather-covered notebook and a pencil; this had the effect of unreasonably increasing my anger. I waited a minute to cool off. He was keeping his temper, while I was losing mine; and my case was sufficiently damaged already.

"I am the son of a Methodist minister. I was born in Harpersburg in the year—the year—I can't just recall the year now. No matter! There was quite a family of us—several children. We moved round from place to place the way preachers' families do. The other children died of scarlet fever—poor little tads! I had the fever too, but I didn't die; I was the tough one. My father died when I was—was—a young boy, you know—getting lanky and outgrowing things. Mother settled in Hartsville, took in sewing, and saved every penny of her allowance from the Conference to send me to college. I helped what I could—odd jobs and driving the grocer's wagon. I went to Painter College—surely you've heard of Painter College!" I drew a long breath; the tale was running better now without those unaccountable lapses. "You'll find my name in the catalogues there for the years—the years—I graduated in—I graduated with the class of ——"

I strained for the lost date till my forehead grew damp. It would not come. The doctor made a diversion.

"Never mind," he said gently. "What happened next?"

"Mother died. She lived just long enough to see my sheepskin she'd worked so hard for. Then I couldn't bear Hartsville any longer. I went to Glencoe because my college chum, Henry Milsom, lived there, and got a job on the Herald and—that's about all. Funny I can't think of those dates."

"You don't remember the date of your birth or of your graduation?" the doctor said.

"Not just this minute."

"How many brothers and sisters did you say you had?"

"There was Harold, and Wesley, and Louise, and Katie. I came between Wesley and Louise."

He looked at me keenly.

"How many does that make?"

I stared back blankly.

"I don't know."

"How old were you when your father died?"

"I don't know. Look here, doctor, maybe the figures were knocked out of my head with those association fibers; but I know who I am!"

"How did you come to be on the wrecked train?"

"I don't know! But I know I'm Richard Trent!"

The doctor put up his notebook.

"That's all right. I wouldn't worry about anything, Mr. Craven. You've evolved a rather complete secondary consciousness—a sort of 'control,' as the spiritualistic mediums say. Your lost memories will probably come back gradually—perhaps all at once. We must wait."

The man was cracked on brain. There was no persuading him I wasn't Craven gone nutty! A subterfuge to get an intelligent hearing occurred to me.

"Well, see here; you think I'm Craven, but you'll admit that I have a delusion I'm not. A man with a delusion the size of mine ought to have a consultation. Send for some of your brain specialists."

He pinched his lower lip thoughtfully.

"Under ordinary circumstances I should welcome counsel, but there is one consideration ——" He looked at me measuringly. "You are perhaps not yet aware of Mrs. Craven's condition?"

The blood rushed to my forehead; I could not meet his eyes.

"She believes you recognize her. She thinks you are quite yourself. After what she has gone through already, any additional shock or alarm would in all probability cost her life—and the child's."

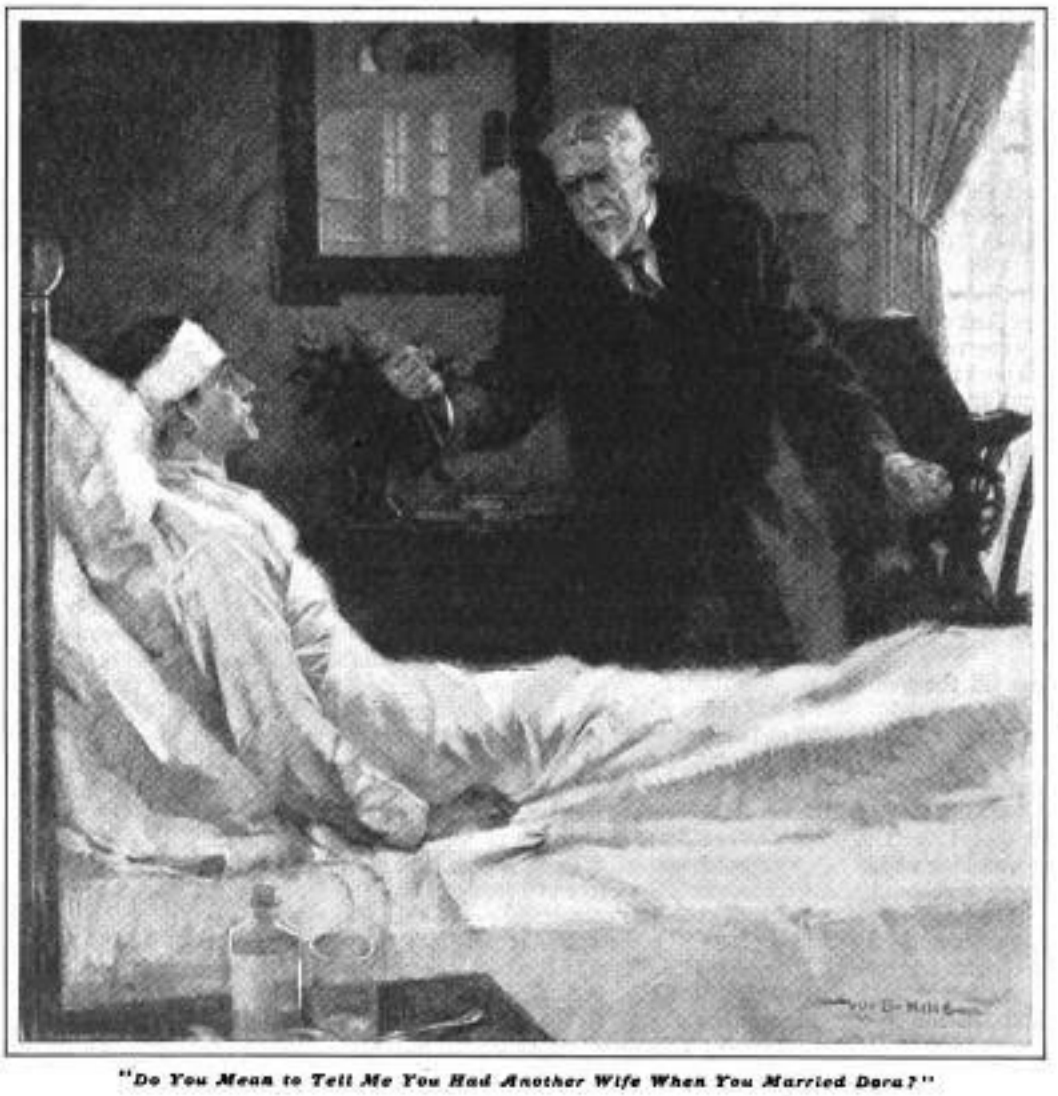
In the pause of his cold, professional tones I heard her soft, earnest voice: "If you had died, Dick, we should all have died together!"

After a hushed minute I asked, with God knows what thoughts:

"Do you think Craven's dead?"

Doctor Worrall smiled.

"No; I think he's only a little out of his head. We must spare Mrs. Craven all we can. We must anticipate time a little. We mustn't let her suspect the extent of the aberration."



"Look here, doctor! I can't go on pretending to Mrs. Craven that I'm Craven! No fellow could. It's rotten!"

"Tut, tut! I assure you there isn't the least doubt in the world that you're Craven. There hasn't been the slightest question of your identity. Mrs. Craven positively recognized you. Now, just anticipate the return of ——"

"I won't! I'm not Craven and I won't go into any dirty masquerade!"

"Then it is my duty to inform you that you must choose between your idea of honor and Mrs. Craven's life—and her child's life." He added, "She hasn't spared herself for you."

There was no use talking any more! I dropped back among the pillows. My honor or her life! The maddening alternative beat back and forth in my brain all day. It drummed down all the other perplexities. I tell the truth in saying that what I utterly desired was my freedom. If I could have taken my

"Do You Mean to Tell Me You Had Another Wife When You Married Dora?"

Digitized by Google

bruised body, my obscure and penniless identity and gone out of Craven's luxurious home and evident assured position, away forever from Craven's adorable wife, without hurting any one but myself, I would have demanded bearers to take me to the charity ward of the nearest hospital that day. I had the infinitely galling sense of being bound hand and foot. And if I struggled and broke my bonds the wrench would come not on me but on the tender woman, the unborn child! All my manhood forbade what all my manhood urged. Toward her my feeling had quite changed that day. She was no longer the exquisite, tender efflorescence of womanhood my irresponsible fancy adored. She was the human being who unconsciously demanded of me the bitterest sacrifice man may make!

When she came to my room that afternoon I could not bear to see her. I feigned sleep. She hovered over the bed a moment.

"You're not asleep, Dick."

I opened my eyes and looked at her. Her own filled. "Poor boy! Is it so hard to bear as that?" I answered nothing. "I wish I could bear it for you!" she murmured.

"You can't. That's one good thing."

I was suffering at the moment from a nerve-rending headache. She seemed to see that without seeing what caused it.

"Let me sit here and smooth your forehead."

"No! Not today. Please! Thank you."

I could speak only those abrupt phrases, harshly uttered. Her tenderness was not hurt. She was only sympathetically acquiescent. She touched my hand with hers—a gesture of soft caressing—and went away.

By nightfall I had determined what to do. I summoned Miss Podmore.

"What was Mrs. Craven's maiden name?"

She looked at me quickly, but answered with her professional placidity:

"Dora Wolfe."

"Has she any near relatives in this town—or has Mr. Craven?"

"Certainly. Mrs. Craven's parents live here. Mr. Wolfe is said to be the richest man in Morristown."

"Will you send word to him that I want to see him privately at his earliest convenience tomorrow?"

She objected of course, but ultimately I convinced her that to allow the interview was better than to refuse it.

Shortly before Mr. Wolfe's arrival Dora drifted in to me where I sat among the pillows.

"Miss Podmore told me you wanted to see papa. Are you sure you're strong enough, Richard?"

I had gained a certain strength from my resolve. I could smile at her as I asked:

"Doesn't he like me?"

"Of course he likes you; but, you know, papa is a little unreasonable sometimes—and you're not strong enough to talk very long. Let me stay and do the talking. You're not worried about business, are you, Dick? It's all right. Mr. Jameson hasn't even come home."

"I am not worried about business," I answered, grinning at myself. "I only want to talk to your father a little."

A few moments later I saw Dora kissing a short, rather portly gentleman, with white hair and a florid face.

"Delighted to see you looking natural again, Richard," he said, shaking hands with me.

I could have told, without Dora's hint, that the relations between Mr. Wolfe and his son-in-law had not been altogether cordial. His large blue eyes were very cold, his face full, his mouth hidden beneath his neat mustache and short, pointed white beard. He was not an easy man to talk to. When I found myself alone with him I had a sense of helplessness at the magnitude of misunderstanding between us. Nevertheless, I plunged at it.

"Mr. Wolfe, I have an explanation to make to you that will surprise and shock and grieve you. I am not your son-in-law."

He turned upon me sharply, his hard blue eyes staring, the brows above them drawn into a black frown.

"What!" he cried harshly.

"I am not your daughter's husband."

The blood surged into Mr. Wolfe's face till the veins stood out on his temples.

"You scoundrel!" he gasped. "Do you mean to tell me you had another wife when you married Dora?"

I kept my temper. I explained the strange and cruel mistake that had put me in Craven's place. I told him my history in much greater detail than I had told it to the doctor. He listened with half-averted face, pulling at his pointed white beard. At the end he turned a solemnly unbelieving face upon me.

"The Lord forgive you, Richard! I always opposed your marrying Dora and this shows how right I was." He glared at me a moment and his exasperation seemed to grow. "You lie there," he cried, "and tell me this cock-and-bull story!"

I swallowed hard.

I Cried a Long Time in the Firelight

"You may not believe it," I urged, "but, for your own sake—for your daughter's sake—put it to the proof! Write to Glencoe! Write to Stewart of the Herald. Write to Henry Milsom. Write to Judge Hendricks."

"Doctor Worrall prepared me for some mental estrangement, but I didn't expect this! You say you're not Richard Craven! Why, I brought you home from that wreck myself. You had on the clothes I'd seen you wear a hundred times. I took your papers out of your pockets and looked them over myself—your papers! Craven's papers! I took off your watch with Dora's picture in the cover. And you lie there and tell me ——"

"I can't explain it," I panted; "but will you write to those people?"

"To convince you, I will!" he said unexpectedly. He took out a fountain pen and wrote carefully the addresses I gave him.

"If you have any sense of decency left, Richard, any compassion, you'll not mention this illusion to Dora. Poor child!"

His voice husked; I saw that he loved Dora.

"Can't you see that it's only for your daughter's sake ——" I cried.

We glared at each other in mutual angry helplessness, and he left me.

The proof of my identity began to seem more complicated than I had thought. How could I have been wearing Craven's clothes? But it was not that which worried me. It was my immediate problem of conduct.

I learned from Miss Podmore that Craven had no relatives that she knew of; nor had Mrs. Craven, besides her parents. Craven's business partner—it appeared he was half-owner of a large shoe store—had gone to Florida for the winter. I battered Miss Podmore with questions. She puzzled me. She cordially assisted me to "recall" every incident of Craven's life she knew of; but whenever I began to talk of Glencoe she treated me in the most exasperating way—as a nervous patient to be soothed at all costs. Yet I convinced myself that she did not in the least remember me, nor any incident of our slight acquaintance.

I was thrust back upon the core of my problem. There was no one else to whom I could make my explanation—to whom I imperatively owed it—but Dora herself. Mr. Wolfe wrote me a note in which anxiety almost conquered stiffness, entreating me to conceal from Dora my "mental perversion." The doctor took occasion to assure me again that if I told Mrs. Craven of my "delusion" I made myself, in all human probability, answerable for her life. And yet —— Are there not some matters of more moment than life itself?

I was alone with her. I was sitting up in bed; and she sat at the foot of the bed in her loose blue dress with the open throat, fair and rose-cheeked and softly smiling. I was cold with pity and horror of the thing I was to do. I meant to do it with a straight, clean stroke, and spare her preparations.

I do not know what light, happy talk of hers I stopped with the words, hoarsely uttered:

"I must tell you something now—something terrible—something you have not thought of!"

If she had flinched! If she had suspected! But she leaned toward me, serious, sympathetic—full of sweet, safe security.

"I —— You ——" I could not do it! I sought for some phrase that should rouse her suspicion, pierce her security—found one, shut my eyes and thrust it at her like a dagger. "You loved your husband!"

I opened my eyes—would she be pale and trembling, her face drawn with prevision of the truth? Her face was close to mine, rosy and laughing. The stroke had missed. Her eyes, darker in color than I had ever seen them, were wonderful with tender mockery.

"So that's it!" she breathed. "You are jealous, Richard—of your son!"

I gasped. Then I rallied and rushed at the opening.

"You care a great deal about—the child. You could live for its sake—without your husband?"

That stroke went home. She whitened to the lips. She caught at her heart, panting.

"Dick—do you mean—you're—not so well?"

"No, no, no!" I cried. "Don't look like that! I'm all right. Let me call Miss Podmore."

She lay back against the bottom rail of the bed, her eyes closed, her breast heaving, one hand pressed tight against her side. I babbled frantic reassurances, undoing what I had so painfully done.

Presently she sat up, still pale, smiling faintly.

"I'm all right now. You—frightened me. I'm not very strong, you know. Go on now, Dick. I won't be foolish again. Tell me what you wanted to say. Of course I know you've had something on your mind. Is it what you wanted to tell papa?" And as I still sat stupidly silent: "You needn't be a bit afraid. I'm perfectly brave now. I don't mind anything in the world so long as I have you."

"It's only," I said after a while, "that I'm a coward and a sneak! It's only that I've no more right—that I'm no more worthy of you than —— It's only that I'm a —— Oh, God knows what I am!"

"But there really is something," she urged. "Tell me what troubles you, dearest dear."

"Just that—that I'm not fit ——"

"I feel that way, too, sometimes," she sighed. "But—you love me, don't you, Richard?"

"Oh, I do love you, Dora! God knows I do! I love you enough to die for you."

"Love me enough to live for me!" she whispered.

"I will. I will live for you alone!"

I yielded to her arms. I drew her into mine. I folded swift, guilty kisses down upon her lips. Something in my soul said: "Men may judge me afterward—as they must!"

So, definitely and consciously, I accepted my ignominy. And I was wildly happy in the hour after it.

II

I REMEMBERED at length that, within two weeks at most, Mr. Wolfe must hear of me from Glencoe. I had a pang of passionate regret that I had made him write. Afterward those Glencoe letters seemed the one tie that bound me to honorable men. I determined to steer my course by them. I would impersonate Craven—I had found that I could do it with brilliant success—until the Glencoe letters should fix my true identity. Then I would put myself in Mr. Wolfe's hands. If he should desire, for his daughter's sake, that I continue the deception until her health should be reëstablished, then I would do so. Would a father wish that?

Since everything hung now on the letters, I dropped other efforts to prove myself me. I did not write to my friend Henry Milsom, or to Stewart, my employer, as I had intended. Having embarked on my career of merciful deception, why complicate it with unnecessary truth? I had, moreover, to reckon on a sick man's lethargy, increased by the constant nervous strain of playing my part with Dora. I merely waited, with daily increasing dread, for Mr. Wolfe's denunciation of my imposture!

One morning, while this suspense was at its height, I awoke after an evening of intense worry over Mr. Wolfe's probable attitude and a night of confused, blissful dreaming—I awoke, I say, with a strange sense of unfamiliarity with myself. The thought crossed my half-dreaming mind: Suppose I were really Craven after all! Suppose the history and personality of Richard Trent were, as they all said, a dream in Craven's mind! I saw my hand lying on the bedspread, and it struck me suddenly as a smaller, slighter, more refined hand than the hand of Richard Trent. I remembered that I had not seen my own countenance since I awoke in Craven's likeness. What if —— I lay still several minutes recalling Richard Trent's features as vividly as I could. Then I sat up in bed and asked Miss Podmore for a looking-glass. The face that looked at me out of the mirror was pallid and gaunt, worn and worried and strained; but, allowing for the obvious effect of my recent experience, it was unmistakably my own. I remembered that Richard Trent had a small brown mole just under the left collarbone; and, grinning at myself in the glass, I looked for the birthmark. It was there.

Some three weeks after I had committed myself to the rôle of Craven, on a certain evening Mr. and Mrs. Wolfe were announced. When I recovered from my sickening

Digitized by Google

sense that the crash had come sufficiently to be aware of what was happening, a dainty, charming little lady, very like Dora, was bending over me, lamenting that her bronchitis had kept her from visiting me before. I perceived that Mr. Wolfe had not told her of my "delusion." She turned to Dora, and while they were petting and cooing over one another Mr. Wolfe sat down beside me. He talked constrainedly on indifferent topics, where I fear I made but a poor and bewildered showing.

It was not until the adieus were being said that I gathered courage to blurt out:

"Heard anything from Glencoe lately, Mr. Wolfe?"

He cast a swift look of anxiety at Dora, who was carefully adjusting her mother's furs, and a long look of displeasure at me.

"I had hoped, Richard," he said sternly, "that we had heard the last of Glencoe!"

I puzzled over that for many days. Had he not written—in spite of his promise? Could my friends have failed to answer? Or had the answer failed to convince my putative father-in-law? Or was he, indeed, convinced, but tacitly acquiescent in the fraud for Dora's sake?

I dared not ask. The thing I was doing had taken possession of me. My soul was no longer my own. Whether it belonged now to God or devil, only God or devil knew!

Meanwhile I was convalescing—with weary delays and dragging weakness. Agitations like these are not favorable for swift recoveries. I spent most of my days now in the big wicker chair, wrapped in blankets, while Dora fussed about me with pillows and footstools, pleasing herself in a thousand dainty little ministrations. It seems incredible that I could have deceived Dora, even for a few days, in so intimate and tender a relation as I could not withhold myself from drifting into. Several things besides her unassailable faith conspired with me.

Chief of these was my mental condition. It was evident that, aside from the "delusion," my mental life was not altogether normal. Numbers and their significance had gone from me. Whenever an arithmetical conception challenged me my mind was blank, though it responded at once to any other association. To illustrate: I could instantly recognize the saying, "Two and two are four," as a familiar catchword connoting absolute certainty; but for apprehending it as a mathematical proposition I was on a par with a month-old infant. Three suggested the Trinity to me, seven a branched candlestick, twelve the apostles, and thirteen an unlucky dinner table. I had to reacquire all abstract conceptions of numbers; and though, after a time, they came swiftly, they brought with them no previous associations—as numbers. Imagine how this confused my thoughts! It baffled painfully my speculations on what must have happened to me. I could not calculate how many days or weeks had elapsed since I left Enid on that moonlit porch, because the implements of such calculations were lacking to me. It was winter then: it was winter still. I knew no more.

This condition, of course, was known to Dora; and whatever I "forgot" explained itself to her as a phase of the same phenomenon. I "forgot" the less because of Miss Podmore's diligence. Acting, I think, under the doctor's orders to jog my memory gently, she talked continually about Craven in Dora's absence—always as if I were he and might be expected to do my own recollecting in a moment. I got a very fair impression of the man whose place in the world I had usurped.

Craven had come to Morristown about ten years before, a shy and quiet youth of some nineteen years. He found employment in the shoe store of Mr. Jameson, where by strict attention to business—for which he showed a decided knack—by quick intelligence, pleasant manners and exemplary habits, he rose at length to a partnership—the latter stages of his rise being materially assisted by his successful courtship of the town's heiress. Socially he was uncommunicative, but not unfriendly. Beginning without friends, money or influence he gradually won the confidence and esteem of such people as thought about him at all. His life held but one high light. Taking his modest part in the social activities of the church he had quietly joined, he met and loved Dora Wolfe. He loved her—but this I gathered from another informant—at first with a dumb, hopeless adoration that touched her gentleness more than the louder admiration of others. I learned as little of Craven's courtship as I could; but it was a long one, alternating between timid hope and brave despair, culminating at last, despite Mr. Wolfe's disapproval, in marriage about a year before the accident. There was nothing in all Craven's record to censure—nothing to excuse the hatred of him that leaped in my breast.

But where was Craven now? Lying in some unmarked grave which my few friends believed to hold the mortal husk of Richard Trent? That seemed likeliest as I grew able to comprehend the time that had elapsed. The newspaper account of the wreck, which I had read, mentioned the bodies of three unidentified men; but later, Miss Podmore told me, all had been identified. Room for error there! Surely if Craven were alive—no matter how broken, disfigured, helpless—he would have sent for his wife long ere this; but suppose he were living without mind or memory, knocked into forgetfulness of his former self? Then, again, darker conjectures occupied me. I could not doubt that I had been found wearing Craven's clothes—nor could I conceive how that could have been, save by Craven's act. Had the inoffensive quietude of his life hidden some evil secret which claimed him at last? Had he noted my personal resemblance to himself and made or seized an opportunity to dress my supposedly lifeless body in his own garments, hoping so to conceal his trail? And had some unforeseen accident thus far covered up the loss of the money or the trace of the woman? The woman? I would look at Dora's confident serenity and remember—No; it could not be that! In spite of all my thinking, Craven might be living and guiltless. He might knock at the door tonight! In some moods I almost wished he would. That was when something in my soul cried out to be delivered at any cost—at any cost!—from the poisoned ecstasies, the rapture-shot agonies, of my relationship with Dora.

I loved her. The more I writhed beneath my horrible position, the more I loved her; and the more I loved her, the deeper pierced the twin barbs—remorse for the shameful thing I was doing; mad jealousy of Craven, living or dead. There were moments when I loved her with a pure and exquisite happiness; other moments when I loved her with a Heaven-defying passion—and black hours of torment when I expiated those!

I was not always in passionate extremes, however. Sometimes, by dint of my own pretense and the unwavering belief of every one about me, I half forgot for days together that I was not really Craven. Then some sudden turn would drive the barbed truth home and my wild moods would puzzle Dora.

She was a creature of the quickest delicacy, the tenderest act. My fits of shame, remorse, passion, jealousy, disgust and rage, smothered and disguised as they had to be, often bewildered and sometimes hurt her, but never failed of her respect, her indulgence—of some subtle feminine comprehension of the heart.

One conversation of ours, typical of many, somehow stays in my memory as a turning-point.

"The plum-blossoms are out," remarked Dora from her little rocking-chair by the window, where she sat sewing. "I think I shall have you out on the porch tomorrow if it stays warm. Miss Podmore says you ought to be able to walk out a little before she goes."

"Life without Miss Podmore!" I ejaculated. "And Jameson comes back Friday!" I went on quite in the spirit of my part. "I'll have to have a long talk with him about business. Nice hand I am for business when I've only got to six times seven are forty-two!" I was relearning the multiplication tables with incredible labor. Never shall I forget the bewilderment that assailed me in the one interview I had attempted with the firm's bookkeeper.

"You're learning beautifully, Dick," returned Dora with earnest ardor. "And you know the store's all right. Mr. Hughes is so capable. And papa keeps an eye on things."

"This fuss of mine has cost an awful lot of money," I mused. "I'll pay that back anyway!"

"What in the world do you mean, Richard?" Dora puzzled. "Do you know, Dick, you're so different since the accident? An entirely different phase of your character shows. You're more—boyish!"

"Is that an objection?" I asked with an anxiety I pretended was mocking. "Do you like me better the other way?" ("Thief! Sneak! Cad!" I said to myself.) "Because, if you do, I can get knocked on the head again."

She ignored the question.

"You're even different," she went on, weaving her needle delicately into her work, "in the way you—care for me."

"How?" I asked.

She looked up smiling.

"How can I tell? Just different!"

I was silent, setting my teeth. Had I not vowed I would not be led that way?

She looked out thoughtfully over the lawn. I searched for dandelions in its greenness as if my life depended on finding them. When, involuntarily, I looked back at her she was biting her lip. Her eyes filled with sudden tears.

I held out my arms to her.

Presently she lifted her head a little way, eying me earnestly.

"Why are you afraid of my kisses, Dick?"

"Am I?"

At length she whispered, with her face very close to mine:

"Aren't you a little bit glad—about the baby?"

So our closest moments always ended. Always the dead hand thrust between!

This time I answered:

"I am glad of anything you are glad of, Dora. I'm nothing but just yours. I belong to you as no man ever belonged to a woman before."

Such half-truths that told nothing I threw as wretched sops to my conscience.

It was that night I dedicated myself to the finding of Craven. As soon as I should regain my strength and might leave Dora I would set myself upon his trail. I would search out every clew; I would have the graves opened! Under the earth or upon it, I would find him! If he were living—and something in me refused to believe him dead—I would drag him to Dora's feet and blot myself out of her life. I felt a fierce joy in that imagined expiation!

As I grew stronger and began to see and talk with people, Craven's social and business associates, I lost the fear I had that some one would surely detect the imposture. My mental condition excited sympathetic interest, but no surprise, no suspicion. What grew upon me was the social hopelessness of my ever righting myself. How many barred and locked doors lay between me and honor! By what miracle should I accomplish the substitution of Craven for myself as secretly as had been the substitution of myself for Craven? Lacking this, what storm of scandalous tongues would break upon Dora? Who would believe that I had behaved as decently as I had? In choosing ignominy for myself, had I not chosen it for Dora too? Then—not for the first time—the devil, clad as an angel of light, would whisper: "Why not—go on? Why make more misery?"

I hung on doggedly to my resolution. I threw myself into persistent efforts to master Craven's business, so that people wondered to see a man still pallid and tottering with weakness, and with so hampering a mental disability, working so desperately. Nothing of Craven's, I vowed, should suffer through my stewardship.

On a certain Sunday afternoon in the late spring Dora and I walked over to the handsome house of the Wolfes. It was not the first time we had gone there together, but I thought it might be the last. As I grew stronger, Dora grew weaker; the anxieties she had suffered were telling upon her. Often I feared in anguish of mind that I myself—what must seem to her my inexplicable perversities—were secretly undermining her strength. On this day, however, we were both in a happy mood; and in a like calm contentment Dora's parents greeted us.

After half an hour of chat, Mr. Wolfe surprised me by saying: "Will you step into the study a moment, Richard? I want to show you something."

I Told Dora the Whole Story of Richard Trent

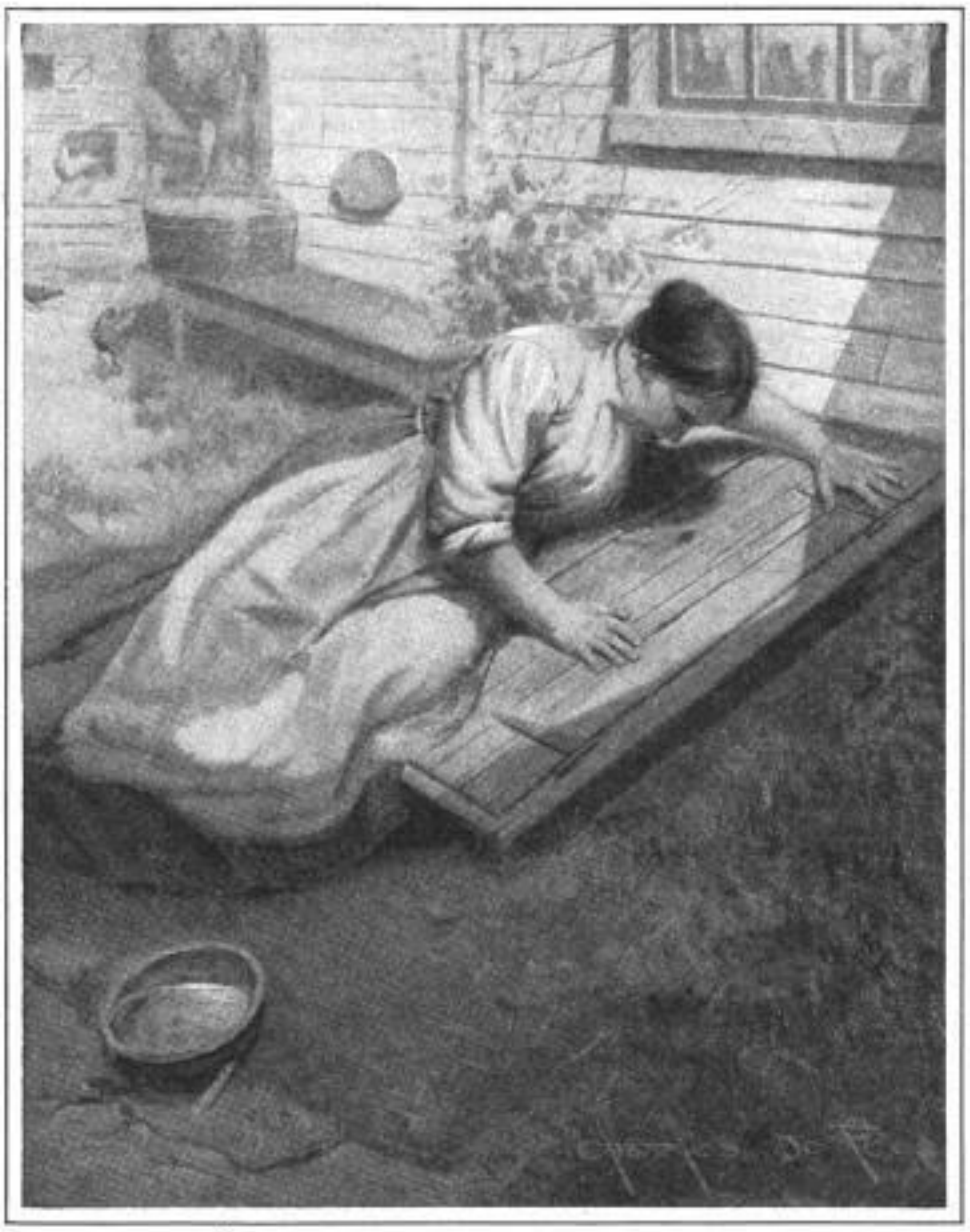
The Suffrage in Millerstown

By ELSIE SINGMASTER

ILLUSTRATED BY CHARLES DE FEO

THERE are few women in Millerstown who take naps or who lie down in the daytime. It is safe to say that no woman, unless she was seriously ill, ever lay down for a whole afternoon; it is absolutely certain that none but Lizzie Kerr ever spent a whole afternoon—and that in November—reclining upon an outside cellar door.

It was not a position which Lizzie chose for herself. In the first place, she had no time for this extraordinary proceeding. When one has a husband and seven children, the youngest less than a year old, and when one is the only woman on a farm where there are fourteen cows, twenty pigs and a few hundred chickens, that need constant attention, one should be busy every moment. In the second place, Lizzie found the position exceedingly uncomfortable. Lizzie was very large and she was accustomed to rest upon a feather bed—not a hard board. Besides, it is apt to be a little cool on the first Tuesday after the first Monday in November; and besides, it is neither dignified nor decent to slam a cellar door upon one's husband and then lie down upon the door.



Of all this Lizzie was thoroughly aware. Her hands were clenched; she answered the muffled voice from beneath her with a voice utterly unlike her own; at the sound of her baby screaming in his cradle in the kitchen she put her hands over her ears; at thought of her bread-sponge running over the bowl and her pies burning in the oven, she groaned. She did not cry, however, though she looked like a tender-hearted person to whom tears came easily. Occasionally she lifted herself into a half-sitting posture, but almost immediately lay down again, feeling it safer to distribute her weight over as many of the flimsy boards as possible. She meant to save Alpheus from committing a great wrong, but she did not wish to crush him to death.

The baby screamed himself to sleep, and woke and screamed again; a stranger, passing in a buggy, asked whether she was ill, and, receiving her lying answer that she liked to sit on the cellar door, looked at her as though she were a lunatic; the prisoner commanded, argued, cajoled, pleaded—she grew colder and colder, stiffer and stiffer. However, for the sake of the morals of Millerstown, for the sake of her husband rushing to ruin, for the sake of her poor children threatened with destruction by the demon rum, Lizzie Kerr continued to embrace her martyrdom. Once she tried to sing Cold Water is the Children's Friend, but she did not get beyond the first line.

An hour ago she had been standing by her kitchen table working her bread, an entirely suitable and becoming occupation for the mother of seven, and Alpheus had faced her as he drew on his husking mittens. Alpheus was a little, energetic man, for whom his wife had great admiration. He was smart; his brothers looked up to him for counsel; the men at the store listened to him with respect; he read the newspapers learnedly and recounted marvelous tales of extraordinary things—of French people making a Christmas dinner on camel's meat, of women demanding the ballot and battering policemen and being battered in turn by them, of evil men blowing up bridges with dynamite. He could argue with the preacher; he could read both English and German. Until yesterday she had been proud to be his wife. She was richer than he—the farm was hers, inherited from her father; but she had been proud to marry so smart a man. Until yesterday she had been content to know no law but his will; until yesterday she had concerned herself with nothing outside her natural sphere. Now, interfering where she had no business, rushing into a situation of which she knew nothing, governed by ridiculous prejudice and feminine ignorance, she had made a fool of herself.

"I was yesterday in the store, pop," she had faltered when she could fill her lungs with enough breath to speak.

"Yes—well?" answered Alpheus. "What then?" He stared at Lizzie suddenly with some alarm; he had never seen her look like that. "Do you feel bad, mom? Do you have it somewhere?"

"Will You Promise Not to Vote for Steiner, Pop?"

Lizzie leaned upon the bread-sponge which rose in great billows about her round arms. With her rosy cheeks and her bright smile, Lizzie was an attractive person—a person to whose company it was good to return after a day's work; but now Lizzie did not smile.

"They talked about the election, pop. They said that Moser was temperance, pop, and Steiner was for the taverns. I said you wouldn't vote for Steiner for the world; and then I came home—and he was sitting here and talking, pop. I ——"

Alpheus was annoyed and disgusted.

"Pooh!" he said as he started for the door.

Lizzie was before him, however. She moved with more agility than one would have expected in a person of her size. Bits of dough clung to her fingers; her face was scarlet.

"You are a church member; you have all these boys to bring up. How will you bring up these boys if there is a saloon in every house, pop? How ——"

Alpheus was more agile than Lizzie; he dodged past her and closed the door. Then, walking briskly across the meadow to the cornfield, he laughed. Women were good for some things, of course; but they had no minds. Lizzie had no mind or she would realize that the temperance question had absolutely nothing to do with this election. Steiner might occasionally take a drink—that was none of the world's business. He was the candidate of Alpheus' party; he had great respect for Alpheus and the influence Alpheus had over his brothers and several illiterate voters; he would bring them good roads and prosperity. It was foreordained that Alpheus should vote for him. Lizzie was crazy!

Contented with himself, amused at his wife, Alpheus worked on. Presently he began to pity Lizzie. He decided that he would explain things to her that evening. He was really very fond of her.

After a long time Lizzie roused herself from the apathy in which she worked to go to the cellar for the baby's milk. The cellar was across the yard; under its slanting door was a steep flight of steps; below, in the cool dampness, stood a dozen brimming crocks of milk.

"I ought to make butter," said Lizzie as she drearily contemplated them. "I am behind with everything. Nothing will ever be right with me again. Oh, my soul!"

Then slowly Lizzie climbed the steps and heated the milk and filled the baby's bottle. Her tears dropped upon him as he lay sound asleep in his cradle. She was disgraced in the eyes of her friends; she was disappointed in the idol of her soul.

It seemed three hours—it was really but one—before Alpheus returned from the cornfield. It was not yet two o'clock and the polls did not close until six; but he said to himself that his brothers might wish to vote early or Steiner might not think him sufficiently concerned. He came whistling across the meadow. At sight of the open cellar door he turned his steps toward it.

"Mom," he called into the depths, "I am going now to town."

There was no answer; Alpheus went toward the kitchen.

"Did you know you left your cellar door open, mom?" he asked.

Lizzie was standing by the table, where he had left her. Whether the cellar door was open or closed made no difference to her.

"Pop," she began, trembling; at which Alpheus remembered.

"When I come home I will talk to you," he said indulgently. Then he patted Lizzie on the shoulder.

Lizzie began to plead.

"Ach! pop, don't vote for Steiner—please, pop!"

"Of course I will vote for Steiner!"

"When you have little children, pop? What if they come in the tavern, pop?"

"*Gek mir aweck!*—Get out!"—mocked Alpheus. "You make me laugh!"

"He takes drinks, pop. And the people in town, they said ——"

"I don't care what they said." Alpheus finished washing his hands at the sink. "Where is my other coat?"

"Ach! but, pop, you can talk with me a little about it, I guess. I am dumb—but I am not so dumb, pop. I ——"

Alpheus slid rapidly into his coat. Then he applied the brush and comb which lay on the little rack by the door. Then Alpheus could not resist a foolish but overwhelming temptation.

"I must be there early," he said importantly. "I always mark the tickets for a couple o' fellows."

"What!" cried Lizzie. Sometimes Alpheus read to her accounts of election frauds and subsequent investigations. In her confusion, it seemed that he, too, was about to commit fraud. The foundation of Lizzie's world was shaken.

"Goodby," said Alpheus cheerfully.

The baby in the cradle began to cry. Alpheus turned back to his wife.

"Shall I fetch you a little milk?" he asked as tenderly as though he spoke to the baby.

Unable to answer, Lizzie started to follow him. She meant to tell him that she had brought the milk and that the baby had the bottle; but her voice choked. She was shocked; she was hurt; she was—though she did not suspect it—furiously angry at Alpheus' superior airs. When she reached the door he had vanished down the cellar steps and she followed across the yard.

Then, suddenly a great, new, overwhelming emotion filled Lizzie Kerr's soul. Never in her life had she done a violent thing. She had disciplined setting hens; she had spanked her children; but it had been done after deliberation, it had been done with dignity. This was done without consideration, without forethought. She leaned over and lifted the slanting cellar door and closed it upon the little man within. Then, partly from pure weakness, Lizzie Kerr, mother of seven, of great size, lay down upon the door.

The first frantic sound that rose from within added the reproaches of a tender heart to Lizzie's already overwhelming emotions.

Digitized by Google

"Mom!" called Alpheus. "Mom! Somebody is shutting me in the cellar! Lock yourself in the kitchen, mom, *and* then lock yourself in the upstairs, mom! And holler like sixty!" His first thought was for her. It was with bursting heart that Lizzie answered.

"*I am* shutting you up, Alpheus. It is Lizzie. Nothing is after me. I am sitting on the door."

"What!" screamed Alpheus shrilly.

"I must talk to you about this, pop, before it goes any farther." Lizzie's voice became more clear. She did not weep—her tears seemed to be forever dry. She prayed for eloquence; she thought of the people in the Bible who had been given tongues of fire. "You see, pop, it is this way: The people say that Steiner has parties and that the people drink. It is not raspberry vinegar, pop, or yeast beer—it is real beer in bottles from the tavern, pop. They sometimes have some of this cha'pagne-water. Suppose these poor little children should get some, pop! Suppose little Lizzie should stay out late in the night, pop; and suppose little Alpheus should come home yelling and hollering, pop! Suppose ——"

The cellar door quivered.

"Get up!" ordered Alpheus. He spoke as he might have spoken to his horse or his dog. Lizzie had never heard that tone addressed to her. Her cheeks flushed, but still she spoke gently.

"Will you promise to vote for Moser, pop?"

"Get up!" commanded Alpheus again.

"Will you promise not to vote for Steiner, pop?"

"Get up!" ordered Alpheus, more furiously.

"Will you promise not to vote for anybody, pop? Will you stay here with me? Will you ——"

"Get up!" said Alpheus in a terrible tone.

For a few minutes there was silence. The door shook slightly again; but Alpheus, though strong, was short—he could get no purchase on the door. Then motion, as well as sound, ceased. Indeed, actual physical paralysis was no more numbing than the sensations that filled the breast of Alpheus. Had the barn fallen upon him and bade him lie still, he could have been no more amazed. Presently silence was succeeded by a more furious burst of anger. He would vote for whom he chose; now he was absolutely determined to vote for Steiner—nothing would keep him from it! If she had not acted the fool he might have listened to her; but he was the boss—nobody could make him do what he didn't want to do.

Poor Lizzie did not answer. Indeed, she did not hear half he said, for another sound penetrated to her ears and filled her with dismay. Presently, when he paused for breath, Alpheus heard it also.

"Your baby is crying!" he shouted. "Go to it!"

Lizzie was wringing her hands. The baby should have gone to sleep at once and slept for hours. He had a bottle and he was comfortably fixed. Had he broken the bottle and cut himself? Was something after him—the cat, perhaps? Had ——

"Your baby is starving!" said Alpheus. "Shall a mother sit on a cellar door while her baby is dying?"

"He is not starving," said Lizzie. "He has his bottle; and, anyhow, he could go without a little while and not starve. He ——"

"Then something is after him," declared Alpheus. "He will die; he ——"

"He will not die while he is yelling like that," said Lizzie hoarsely. Oh, if she only had him in her arms! "That is a mad yell, pop. He is only cross. Oh, say you will not vote for Steiner!"

"I will vote for Steiner!" shouted Alpheus. [He remembered suddenly Peter and George, depending upon his advice, and the incompetents expecting him to mark their tickets. He shook the door. "Let me out! Get up!"

"No," said Lizzie. "No, pop, I cannot."

Fortunately the day was only cool and not cold; fortunately the sun shone directly upon Lizzie's bed; fortunately no one passed but the one stranger; fortunately it did not occur to Alpheus to pretend a fall down the cellar steps, or to remain silent and simulate death, or to take any other means of adding to Lizzie's agony of mind.

He told her he was cold; she advised him to get as close to the cellar door as he could and reminded him that he had a means of escape. He recalled to her her promise to obey; she put him in remembrance of her long years of obedience and suggested the Higher Power, to whom one owed a higher obedience. She quoted Bible verses at length; she reminded him of moral truths and precepts that have little to do with elections. In some strange, unconscious way, Lizzie had allied herself with those unaccountable lunatics known as reformers. Alpheus was certain now that she was crazy. He reproached her with her presumption in setting forth her opinions; and then another dam broke in the long-checked current of Lizzie's mental processes.

"The farm is mine!" said she. "I do half the work. I guess I can have some say, Alpheus."

She had not called him Alpheus for years. It was as though she chose to ignore all the relations of duty and affection that bound them together. Alpheus remembered the smashed windows of London, the dismay of London's mighty men.

"Lizzie," said he weakly, "what will my children think when they see me penned in the cellar?"

"Will you promise not to vote for Steiner?"

"No!" roared Alpheus. "Get up!"

Thus the long afternoon passed. The baby ceased crying and slept, and waked and cried again, the boards under the baby's mother grew harder, the air colder; but Lizzie still lay upon the cellar door.

At length, now, with infinite patience, Alpheus explained to her the political situation. Steiner had nothing to do with the taverns. *(Continued on Page 77)*

The Inner Secrets of a Manufacturer's Rise

By Edward Mott Woolley

ILLUSTRATED BY C. D. MITCHELL

I BEGAN my manufacturing career in a room twelve feet square, doing all the work with my own hands. That year I netted less than five hundred dollars, although I worked ten and twelve hours a day. I was in business for myself, but I wasn't much of a success."

The manufacturer who voiced this utterance is today the chief owner of an immense plant that makes a line of wood and metal goods used in the equipment of factories, stores and offices. He has acquired a large fortune, and in the following narrative he gives concrete instances of the principles that caused his business to grow.

"At the end of that first year," he went on, "I hired a young fellow named Sam Green to work for me. Sam and I were about the same age and had been employed together in a furniture factory. I knew him to be a good cabinetmaker and was willing to trust him with the careful work required in making the office device I had originated. Sam—which of course is not his real name—justified my expectations.

"For a year we two worked side by side and, although I labored no harder than I had done during my year alone, my net profits rose above a thousand dollars, notwithstanding the fact that I paid Sam about eight hundred dollars.

"My additional profit, it is evident, came from the labor of my workman. In contemplating this fact I discovered, ultimately, a fundamental secret that has helped me more than anything else toward success. Aside from the goods, the most vital problem in manufacturing, as well as in business generally, is to pick out profitable workers. The professional man may attain a high degree of success through his own efforts chiefly; the business man cannot by any possibility do so. He is either kept afloat by his employees or dragged under by them.

"I have heard it said that seventy varieties of fungi resemble mushrooms very closely. I know at least a thousand varieties of men who resemble the man who will pay you a profit as an employee. You've got to know the genuine mushrooms from the toadstools and puffballs.

"Sam Green was the real thing, but I regret to say that I didn't fully realize it at that time. My failure to do so cost me a great deal of money during the twenty years that followed—literally millions of dollars. I'm going to tell you a little about Sam Green, but first I want to make my fundamental proposition clearer.

"Sam Didn't Come Home for Six Months"

"Suppose I had not hired Sam Green or any other man to work for me, but had gone on working alone at the bench for thirty years. I might have earned an aggregate profit, say, of fifteen thousand dollars. Plenty of men earn no more than that. But as a manufacturer or merchant I'd have been a failure. It needn't take much argument, then, to convince you that the huge plant my company owns today represents the aggregate profit returned by thousands of workmen during many years. They were not all Sam Greens; if they had been I'd have been richer than John D. or Carnegie. Most of them, however, were profitable to me, otherwise the factory wouldn't be there. I don't care whether you employ one man or ten thousand, the principle is the same.

"But suppose that instead of hiring Sam Green that second year I had hired an incompetent workman, who had turned out such poor product that the claims against me exceeded the profits; or suppose that my markets hadn't justified the expense of a man's wage. In either event my business would have failed right there.

"I have frequently seen this sort of thing done by concerns of all sizes—merchants as well as manufacturers. I have watched young men struggling to get started in business, when I knew they were doomed to failure because they had no conception of the underlying truth that workers must return a profit. The study and development of your workers are the things that will make your business grow.

"Though I partly realized this truth even during my second year in business, I got away from it for a while, not having any concrete mechanism for applying it. You often find business men with splendid theories floating over their heads just out of reach. That was the trouble with me. I knew that workmen ought to pay a profit, but I didn't know how to measure up the individual profits from my employees. Because I hadn't studied men, the difficulties I encountered turned my hair gray at twenty-five.

"My troubles did not come immediately. My third year in business was marked by such a surprising demand for my goods that I not only employed several workmen, but increased my shop area and installed costly machinery. The fourth year was even better, and again I branched out, adding largely to my equipment. Sam Green was now my foreman. He was a queer, quiet sort of chap, who always seemed to have something on

Digitized by Google

his mind that he wasn't telling folks about. Nevertheless he kept the shop on strict discipline and the product up to perfection of workmanship.

"Meanwhile I had made a contract with a firm of wholesale distributors whereby I agreed to turn over to them my entire product for a term of years. They were to do all the selling and I was relieved of the necessity of having a sales department. This I considered a fine bit of management. I was young, remember.

"But when I was on the crest of the wave, as I thought, something happened. It was the very thing that ought not to have happened, and yet I see the same thing occurring all round me today. It was Sam Green who did it. There are plenty of Sam Greens everywhere. The thing Sam did was to quit me.

"I now had thirty-odd workmen and was netting six or eight thousand dollars a year—just a neat little manufacturing business, clean, compact, running like grease. As a group my workers were profitable to me; as individuals I wasn't always able to say. In fact, I had got so far away from my fundamental theorem that I had come to look on my working force as a group—a dangerous thing to do.

"Had I studied the men as individuals, I should have seen that Sam Green was worth more to me than most of the others put together. Had I studied Sam in particular, I should have found out what he was thinking about during all those years. Then I'd have been willing to pay him more than twenty dollars, instead of telling him on several occasions that I could get plenty of competent foremen for twenty a week.

"Well, Sam Green had been holding out a lot of ideas on me, and now he started a little factory of his own and began making a device that was a vast improvement over mine.

"When I was a boy I attended a Sunday School and belonged to a class of ten boys taught by Miss Jones. One Sunday my class contributed forty-six cents to the collection, and the superintendent made a nice little speech in which he threw metaphors at us boys as a group. Now it happened that Bobbie Brown and I had held out our nickels and hadn't dropped anything into the box; we meant to buy peanuts or candy next day. Willie Hawkshaw, who had a rich aunt, had dropped in a quarter. Willie was the genuine mushroom, but the man who ran the Sunday School didn't know it. If there had been a list of the individual contributors Bobbie and I would have shown up as toadstools."

What I Learned From a Man Called Green

"IT WAS the same proposition with Sam Green. I hadn't been wise enough to detach him from the group; I hadn't seen that he was a Willie Hawkshaw with a quarter to drop into the collection box. So Sam got away from me, while a lot of puffballs stayed on my payroll. There was old Hank Slosser, for instance, and Pete Jorgan and Slim Mike. I might have seen that they were holding out their nickels and taking their share of the credit for my neat little business.

"Well, I was pretty mad for a while. Sam's disloyalty seemed beyond belief. I've known a lot of business men who've thought that twenty dollars a week ought to buy an employee body, brain and soul.

"But now that confounded ex-foreman of mine—that twenty-dollar-a-week chap—played his game like a general. He went straight to the wholesale concern that had the exclusive contract on my product. 'See here,' said he to these agents: 'I've got an article of my own that is fifty per cent better than the stuff my former boss is making. I've been studying that stuff a long time and figuring out ways to improve it. Here's the result. I want you to handle it for me. We've got that other stuff bottled up tight. Under your contract it's got to be sold through you, and you can just go along easy with it and give my goods the right-of-way. A few customers will buy his old contrivance, no doubt, but most of them will want mine. I'll make very favorable terms with you and we'll skim the cream off the trade. See?' And that was what they did."

"There Was a Young Chap Who'd Overheard Scraps of Conversation Between Booker and Myself"

The Equipment That Counts

"OF COURSE I went to law—I was just young enough to do that. I hired the lawyer who had drawn the contract in the first place, and told him to go into court and prove that those selling-agents had no right to take Sam Green's goods, but were under legal obligations to handle mine exclusively or else cancel the contract and let me sell my goods to the public myself.

"For two years my lawyer quoted precedents to the courts. For every day he spent in the courthouse I paid him a hundred dollars, and for contemplating the contract in the privacy of his office he got fifty dollars a day. But two of the courts ruled against me, deciding that as long as I manufactured the particular office device in question I must market it through this distributing firm. Nor could I force that firm to push the sale of my device exclusively.

"Then one night I took the contract home with me and sat down under a strong light. If I'd done that in the first place I'd have saved four thousand dollars in cash and two wasted years. I hadn't any legs to stand on—I could see it myself. The contract was a one-sided affair, and I was bottled up good and tight by Sam Green and my selling-agents.

"I woke up. I called off the litigation. It had been the most asinine thing I'd ever done; for even if I'd got loose from the selling-agents, my product was inferior to Green's and would have been difficult to sell. Here's a bit of advice in passing, and I'd like to have it put in a paragraph by itself:

"If you're a manufacturer, don't get into a bottle and let a distributing firm put the cork in. If I were a young man today, starting in any line of business or working on a salary, I wouldn't sit on the neck of a flask for fear I'd slip in. I wouldn't put my goods in a single channel of markets, lest that channel run dry; nor would I place any value on a contract that bound an employer to me for a specified term. Such contracts are delusions. The really live man doesn't need them; he stands without leaning.

"It was when I woke up that I got back to first principles. I remembered my old theorem that every workman ought to pay a profit. If it hadn't been for that primal principle to fall back on I believe I should have quit in despair.

"I now had only ten workmen in the shop. I was heavily in debt; creditors were pressing; much of my equipment was idle because my distributors weren't selling enough of my goods to keep it busy.

"I don't mean to burden these observations with technical procedures, but anybody can see that a machine-tool standing idle is returning its owner a daily loss. It is costing that owner interest on his investment, taxes, insurance, depreciation, rent, office expense, and so on. Likewise, a store counter or shelf that is not being used to its normal capacity in selling goods is surely returning a loss. If this truth were better appreciated in business there would not be so many failures. Half the ruinous losses come from facilities that are burning up expense without giving back a profit.

"The same thing is true in private life. Out at my house I use steam heat. One winter I had a janitor who didn't understand firing. He shoveled coal vigorously at frequent intervals, but he couldn't get steam enough to keep the house warm. A big volume of fire burning slowly will make steam, but you can burn up all the coal in the bin without getting a pound on your gauge simply by feeding in the fuel in small quantities and letting it burn fiercely in the bottom of your heater. This janitor burned thirty-five tons that winter, but my expensive heating plant returned me a loss. The next winter a new janitor kept the house warm on twenty tons. At last the heating equipment returned a profit.

"Night is a Good Time to Get Down to Fundamentals"

"So now I broadened my theorem. I said to myself: 'All this idle equipment is costing me as much as a whole batch of idle men drawing pay. There's only one difference—I'd know just how much of my money the idle men were getting, while I don't know how much the loafing equipment is costing.'

"The first problem in cutting down expenses is to find out what those expenses are; that's plain enough to any manufacturer, merchant or householder. Yet show me a hundred manufacturers, merchants and householders and I'll show you ninety-five who can't give you their itemized expenses. I know concerns that have a strong policy for keeping expense down, but because they haven't located the leaks the policy itself is a tragic joke. As long as you regard expense as a group of undetermined items you will keep a lot of items that correspond exactly to the idle or incompetent men on your payroll."

Why Not Analyze Your Operating Costs?

"HAVING perceived that a lot of expense devils had me by the hand and were dragging me down to perdition, I determined to look each one of those devils in the face separately and not merely face the whole bunch of them. In other words, I analyzed my operating costs. Unless you've got an extraordinary cinch on your markets you've got to do this if you hope for much success. And if you're working for wages you've got to analyze your operating costs just the same, if you want to save money. Householders as well as business men are swamped by operating costs. Until they know just how much they pay for food, clothes, fuel, luxuries, and so on, and just how much they ought to pay for each item, they can't cut expense intelligently or find ways to make one dollar do the work of two dollars.

"However, I want to tell you something else that happened—something tremendously big and important—so I'll not go into detail as to operating costs. I need only say that any man who wants to get at his costs and expenses may avail himself of technical procedures that will do the thing for him with mathematical accuracy.

"While I was engaged in anatomizing the cost of my idle equipment and finding out how much profit or loss each workman was returning me, I called in my foreman—the man who had succeeded Green.

"'Booker,' I said to him, 'we've got to do one of three things: First, quit; second, sell or scrap all our idle equipment and shrink the business to conform with our limited markets; third, cut loose absolutely from our original product, get hold of something else to manufacture, and reach out for markets that we can swing independently. Do you know of any goods we can make profitably with our present equipment?'

"Booker didn't. He wasn't a man of ideas, like Green. Twenty dollars a week was more than he was worth to me. But there was a young chap out in the shop, named Fisher, who'd overheard scraps of conversation between Booker and myself. Now he came to me. 'I've got some ideas,' he said rather modestly, 'and I'd like to give you the benefit if there is anything in it for me. I can go over to Green's factory any day and get a job, and if you don't care to take up my ideas I'd like to see Green about them.

Digitized by Google

He's been after me several times. You see he knows me pretty well; we worked together here quite a while.'

"Now I knew well enough that I hadn't managed Green right, or I might have been making his goods myself instead of fighting him. I didn't intend to be caught the same way twice. I could see that this young chap had ideas up his sleeve, and I needed ideas more than anything else. I was saturated with legal lore and worn to a frazzle with precedents. Precedents make a lot of money for the lawyers, and sometimes are all right in business; but what we fellows need more is original wisdom.

"'I'll tell you what I'll do, Fisher,' said I mighty quick: 'If you've got any ideas really worth while, I'll fix up some deal with you whereby you'll get a fair percentage of the profit I make from them. Don't take any ideas over to Green; remember that I'll treat you right every time.'

"You can't always tell from the size of a toad how far he can hop. Fisher had worked for me several years when I discovered him, and Green I hadn't discovered at all until too late. Neither of these men had been giving me much profit but both had the capacity for doing so. All that were lacking was a little intelligence on my part and the incentive on theirs.

"Fisher had ideas for a whole line of office furniture and special equipment, and some of the things he invented put Green's product in the shade, so it was a case of turn about. Of course Green came back at me with a batch of new products of his own; but at all events I had found goods that didn't have to be sold through the gentlemen who had bottled me so long and kept me out of the running. I organized a sales department and Sam Green did the same. He, too, saw the folly of tying up his markets in one channel.

"Fisher was the first of my workers who really returned me big profits, but since then I've made a specialty of spotting the exceptionally valuable men and leading them on. Once I got the hang of the thing, it didn't take me long to fire old Hank Slosser and Pete Jorgan and Slim Mike. Booker went with them. But Fisher got a rolltop desk, though he didn't sit at it much of the time.

"I won't stand for any bogus mushrooms. But don't misunderstand me—it's not the last pound of flesh that I'm after. I ask no man to work himself to death for me. It's skill and brains that I want, not slavery. I offer the gospel of hope to every worker who comes into my plant.

"Some men find their niches in life without being directed; most men don't. One of my assistant superintendents is a fair example. Twenty years ago he entered my factory as a raw foreign boy. We saw his inherent ability along a certain branch of our work; so we picked him out of the wrong niche and put him into the right one. We gave him special training both in the factory and at a technical night school, and, by giving him the incentive to stay, made sure that he wouldn't get away from us."

Critical Days

"NOW this man, if left to himself, probably would have remained a laborer at a dollar and a half a day. At that wage he would have returned me perhaps a profit of twenty cents a day. At present he returns me a profit of several thousand dollars a year through his daily work and the inventions we have helped him to originate. Besides, he is earning a man's wages himself and is getting a royalty on his patents. It is a fascinating game to lead men up like this, and it pays. Once in a while we strike a bonanza lead.

"I can put my finger on manufacturers and merchants who don't do this. To them twenty dollars a week as a wage looks as big as a house. They'd let the most skillful man go rather than pay him twenty-two, and they never see in the five-dollar apprentice today the five-thousand-dollar executive ten years hence. Yet these are the concerns that have the Slim Mikes. They are running poor-farms without knowing it. It doesn't make any difference how much you pay a man so long as he returns you a profit on that wage.

"I had passed the first crisis in my career and wasn't really looking for another, when, a year or two later, a financial disturbance swept over the country, forcing my plant to shut down absolutely. The buying public had no money to put into my goods. This is not equivalent to saying that the public had no money to spend. I wish to emphasize the distinction.

"Of course it was easy to cut out the bulk of the payroll, but quite impossible to stop paying rent, interest, depreciation on machinery, and so on. Once more the idle equipment! And now came the advantage of our itemized knowledge of operating costs. Although our own product was dead for the time being, we were able to get a lot of contract work by offering to do it at just what it cost us. It was not a question of making a profit, merely a problem of keeping even. We made a lot of patent picture-frames, a big batch of thermometer standards, a novelty line, anything we could get to do. The quantity of contract stuff we turned out during that panic was astonishing. There seemed to be plenty of money that was ready to take advantage of the cost-prices we offered. This fact set me thinking, and not very long afterward something came of it.

"I have known a lot of manufacturers and merchants to throw up their hands and quit because temporary hard times drove their particular products into a hole. Their equipment kept handing them a staggering loss every day, and they couldn't think of any way to keep busy. The solution of this trouble is not so difficult as it seems to the man who contemplates jumping into the river. It is sometimes easier to commit suicide than to think up a plan by which to live.

"Since that first panic I have made it a policy to have a batch of understudy products. It is amazing what you can do with understudies in an emergency. You may sneer at baked beans as a steady diet, but when you are lost in the woods with nothing else to eat a few cans may keep you from starving.

"As I have shown you, narrow markets may mean ruin; and when you combine narrow markets with a narrow product you place yourself directly at the mercy of every passing gale. I know a manufacturing concern that makes a very heavy steel product as its main line, but for an understudy product has a line of light metal goods that go to wholly different markets. During the last financial disturbance the main product was cut off absolutely; but at such times the world does not stop running. This concern's foundry and machine shops were kept sufficiently busy on the secondary product to pay the fixed expense on the whole plant. The far-seeing manufacturer is working out the game on this basis.

"The shrewd merchant, too, works along this plan. Yet only the other day I met a drygoods man over at the club who complained that his store was costing him so much to operate that he was running behind. Business, he said, was rotten. 'Why don't you get some understudy products?' I asked him, and he looked at me in amazement. He'd only heard of understudies at the theaters.

"But in order to follow out the understudy product principle a merchant must pave the way with sound financing. The financing of a business is one of the fundamentals, and before I tell you about drygoods understudies I want to revert to Sam Green. The problem of financing brought me to another crisis.

"Sam Green's company and my own had grown away from mere office fixtures as a product and had taken up a line of factory equipment that had broad possibilities. I don't wish to make public the exact nature of this line—but that's of small consequence. The principle is the main consideration, and the principle is the same, no matter what you make or what you sell.

"Sam was fighting me with an army of salesmen, directed by captains and majors and colonels stationed here and there about the country. He had a fine selling organization—better than mine, I admit. I've never been quite so strong on selling as I have been on manufacturing, while Sam reversed the proposition. I believed, and still do believe, that selling should always be secondary to the manufacturer. This statement may seem strange to you; but you'll see in a few minutes that there's more danger of overdoing the selling end of the business than there is of devoting undue attention to your goods. However, I had a fair sales organization myself and we kept after Sam rather hard, so we had him by the coattail most of the time."

"It Didn't Take Me Long to Fire Old Hank Slosser and Pete Jorgan and Slim Mike"

Sam Green Becomes Dangerous

"THE capital stock of my company at that time was two hundred thousand dollars. We had put up a number of additions to the factory and established several branch plants. All this required a great deal of money, so we increased the capital twice within three years—first to three hundred thousand and then to half a million dollars.

"Meanwhile my plants accumulated an extraordinary quantity of raw material and half-finished stock. Like most concerns, we borrowed from the banks for buying purposes, and sometimes our obligations were very large. It was at one of these times that we suddenly experienced difficulty in meeting our loans. This was due to strategic selling maneuvers on the part of Sam Green. By landing some big and publicly conspicuous contracts that we'd both been fighting for, he not only cut a lot of profitable business from under us but gained a prestige that meant serious future damage. It looked as if salesmanship after all were the chief factor in the game Sam and I were playing.

"It was a fact that a hungry period dawned on our horizon. We were out in the woods without even canned beans enough to go round. All our plants were stocked up with stuff we could not sell and our bank loans were falling due. We had overdone the financing; and the understudy product idea, though all right of itself, was not powerful enough to offset our stress.

"We held an emergency meeting of directors, and most of them clamored for another issue of stock. 'Make it seven hundred thousand dollars,' one of my associates urged. 'That will clear up our obligations and ease off the strain. We're big enough anyway to carry even a million dollars in capital. If we're going to fight Sam Green we've got to have dead loads of money.'

"Now I hadn't slept much the night previous. Night is a good time to get down to fundamentals, when you've got the whole world to yourself and there's nobody to disturb you except the milkman. So I told the directors that it wasn't more money we needed, but less money. We were intoxicated with money. There are more business malpractices committed in the name of capital than there are crimes that get into court. My concern was something like a wagon that's overloaded. The wagon may be able to hold the load and the mules can pull it as long as the road is good; but when it gets into the mud it sticks there. It needs less weight on the load and more in the mules. My company, in other words, had too much money tied up in real estate, equipment and material; it didn't have enough cash or quick assets—the mules that pull a business.

"You'll find this situation very common in all classes of business houses and in the homes of the men who work for those houses. Most men have heaps of quick liabilities, but their quick assets are almost nil. That's why so many fellows are always behind the game, paying the highest prices for the poorest groceries, and so on. It's the worst sort of financing. Quick assets and quick liabilities ought at least to even up; this is a test the banks often put on a man.

"I therefore proposed that we sell the branch factory real estate, concentrate our manufacturing on a more

THE CITIZEN IN COURT

By Melville Davisson Post

DECORATION BY JAMES M. PRESTON

AS ONE may at any time be compelled to resort to the courts in order to settle a controversy, he ought to know what tribunals are open to him and something of their jurisdiction. In the United States there are two distinct departments of justice—one maintained by the Government at Washington and called Federal courts; and the other maintained by each state as an independent sovereign and generally known as state courts. The jurisdictions of these tribunals are entirely distinct. Formerly the Federal courts maintained within the borders of a state were divided into the District Court and the Circuit Court of the United States. The former had jurisdiction over proceedings in bankruptcy and crimes against the Federal Government, such as counterfeiting, revenue infractions, and the like; the latter had jurisdiction over civil controversies between citizens of different states, aliens, and matters involving what are called "Federal questions."

A recent act of Congress, which went into effect on the first day of January, 1912, does away with the United States Circuit Courts and gives the District Courts the entire jurisdiction with respect to all cases or other proceedings heretofore cared for by the Circuit Courts.

The state also maintains a complete system of judicial tribunals for the trial of all crimes and controversies, from courts of first instance to a Supreme Court of Appeals. It will therefore be seen that there are here two distinct sets of tribunals sitting within the same geographical territory, but having no relation to each other. By far the largest volume of business in the courts of the United States is that arising from controversies between citizens of different states. If the amount involved aggregates the sum of two thousand dollars, exclusive of interest and costs, and the parties to the controversy are citizens of different states, the suit can be brought in the court of the United States. Thus it often happens that one has the option of selecting the tribunal in which his controversy shall be tried.

The Rights of Every Man

THE involved interests of our commercial relations between the states are such that a great deal of litigation may be brought into the courts of the United States or into the state courts—as the parties may elect. There is thought to be an advantage to the non-resident in having his controversy in the Federal courts, since he escapes local influence and prejudice; and his case may be carried upon an appeal to the United States Circuit Court of Appeals, instead of the state court of last resort. This appellate court is intermediate between the lower Federal courts and the Supreme Court of the United States, and its decisions are final, except in certain particular cases.

Controversies over great industrial enterprises—railroads and the like—are almost always brought in the Federal courts; and receiverships, and so on, involving such properties are usually instituted there. It should be borne in mind, however, that when the parties have made a selection of the court in which they will try their controversy they must adhere to it. If they begin in the state courts they must permit the state courts to settle the matter. They cannot change from one jurisdiction to the other—except that a citizen of a state cannot force a citizen of another state to try his cause in a state court if the amount in controversy is more than two thousand dollars, merely by bringing the suit, in the first instance, in the state court. The defendant can always remove it to the Federal court. If he does not remove it, however, and submits to the jurisdiction of the state court, he must remain there.

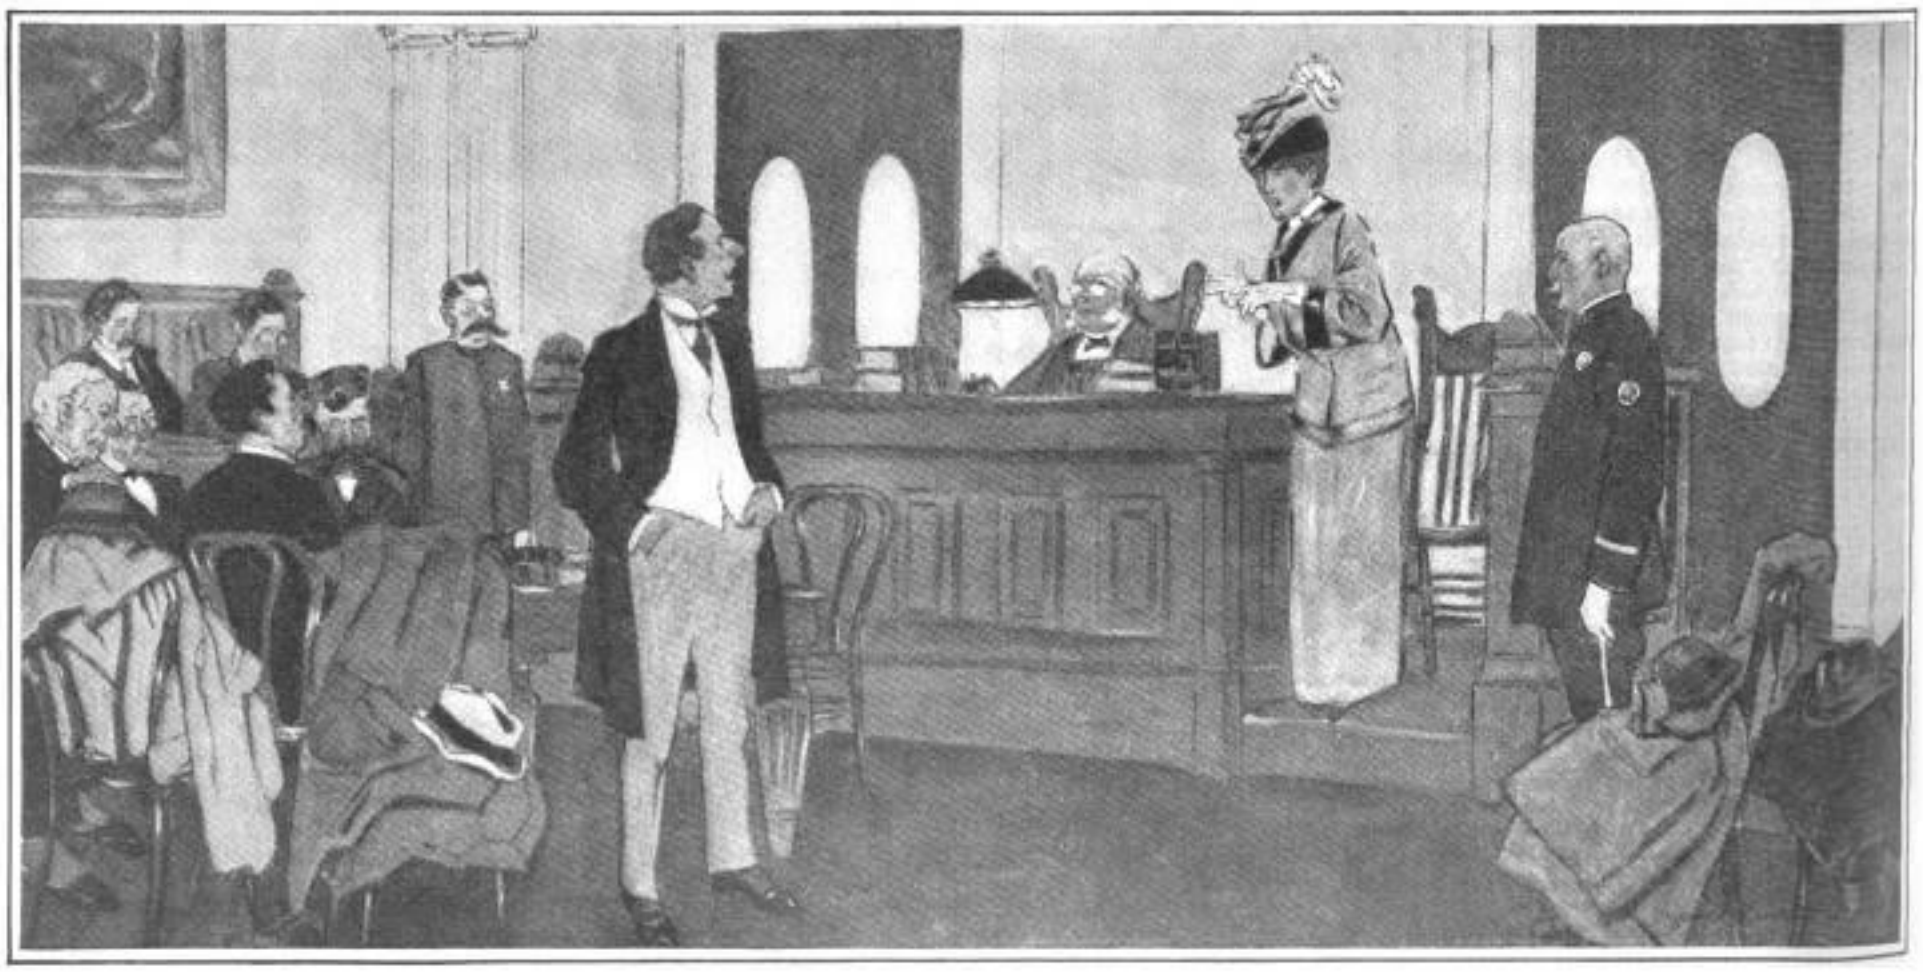
It is always important to remember that the rights of the citizen, guaranteed to him by the Constitution of the United States, cannot be taken from him by the decision of a state court. He can always go to the court of the United States finally to settle his rights, under the Constitution or a treaty or an act of Congress.

Details cannot be given here of the complete jurisdiction of these courts or the methods of procedure; but these general suggestions ought to be known to everybody, because there is a good deal of confusion in the mind of the average man with respect to the courts of the United States and those of the state, and his rights and privileges in relation to them.

When one comes first into the courts he discovers an iron rule that gives him some concern—namely, that he is presumed to know the law, and that ignorance of it is never accepted as a defense. Lord Coke said that the law was the "refinement of reason." There will doubtless be found, in these days of hasty legislation, persons to take issue with his lordship upon that point; but, be that as it may, it is true there are certain aspects of the law which the reason or conscience of the average man is not likely to anticipate. Many of these things, of course, he has learned; but unless he had so learned them he would perhaps, upon his own reason, not have arrived at the conclusion of the law.

For instance, if one owed him a debt or had done him an injury he would naturally believe that his right to recover would remain until it was satisfied; but this is not the case. There are always statutes of limitation, differing in different states, providing a certain time within which one must bring his suit. Sometimes this period is very short; and the right of many a person to recover against a railroad company, or the like, for personal injury has been barred by statutes of limitation of which he was not aware.

Again, one would naturally think the intent with which one commits an act would determine whether or not it was a crime; but this is not always true. A man may carry a deadly weapon with the perfectly justifiable intent to defend his life from some vicious animal or the like; and yet for that act he may subject himself to a penal sentence and his justification would not even be heard as evidence in his behalf.



A school-teacher might undertake to make a system of medals for his school by the use of plaster-of-Paris moulds made over a coin; but if these moulds, bearing the impression of the coin which he used as a model, were found in his possession he would be subject to arrest by the Federal authorities, and could be imprisoned in the penitentiary for a number of years; nor would his explanation of his perfectly innocent intention be of any value to him. On the other hand, it is no crime against the laws of the United States to pass worthless Confederate money, though the Treasury Department has again and again pointed out how certain issues of it deceive the people.

Under the Protection of "False Pretenses"

THE laws of certain states are equally strange to the average man; for example, one who had obtained an estate in land for life would naturally believe that he could use anything in, on or under it for the purpose of support. The surface of the land might be absolutely barren, but it might contain great undeveloped coal deposits, or the like, of enormous value; and yet, in a certain jurisdiction, the person with the life estate could never touch this enormous wealth under the surface. He might die of starvation, but he would be compelled to pass on the riches under his feet to his successor.

The elements of certain crimes, also, the average man would not be likely to anticipate. He has the general idea that all wrongs are crimes, and he goes about his affairs under the impression that he is protected from the rogue by the penalties of the criminal law. This is a profound error. He may be wronged in a great number of ways in such a manner that the act is not a crime for which the rogue could be punished in a criminal tribunal; in fact, almost every crime—including murder—can be committed in such a way that, though the criminal be known and held in custody, the law is powerless to punish him. This is an amazing statement, but it is nevertheless true. Thus a rogue, in certain jurisdictions, may obtain anything

Business—and the Other Thing

By JOSEPH C. LINCOLN

ILLUSTRATED BY CHASE EMERSON

Ostable Outfitters Don't Rig 'Em That Way

MY PARTNER in the Ostable Grocery, Drygoods, Boots and Shoes and Fancy Goods Store, Jim Henry Jacobs, come back from Boston with his head full of ideas and his pockets full of notions and handbills. He'd been to what the advertisements called the Industrial Exhibition in Mechanics' Buildin' up there, and had fetched back every last thing he could get for nothin' and some few that he bought cheap. He had a sample trap that, accordin' to the circular, would catch all the able-bodied rats in a township the fust night and make all the crippled and bedridden ones grieve themselves to death of disappointment because they couldn't get into it afore closin' hours. And he had the Gunners' Pocket Companion, which was a foldin' hatchet and butcher knife, with a corkscrew in the handle; and samples of "cereal coffee" that didn't taste like either cereal or coffee; and safety razors that were warranted not to cut—and wouldn't; and—and I don't know what all. These was side issues, however, as you might say. What he was really enthusiastic over was the Eureka Adjustable Aluminum Window Screen. If he'd been a mosquito he couldn't have been more anxious about them screens.

"They're the greatest ever, Skipper!" he says to me, enthusiastic. "Fit any window; can't rust—and a child of twelve can put 'em up."

"That part don't count," says I. "Nowadays if a child of twelve ain't halfway through Harvard his folks send for the doctor. I may be a hayseed, but I read the magazines."

He went right along, never payin' no attention, and praisin' up them screens as if he was nominatin' 'em for office. Finally he made proclamation that he'd applied—in the store name, of course—for the Ostable County agency for 'em.

"But why?" says I. "We've got an adjustable screen agency now. And they're good screens too. No mosquito can get through them—unless it takes to usin' a can-opener, which wouldn't surprise me a whole lot."

"I know they are good screens," says he; "but there's nothin' new or novel about 'em. And, I tell you, Cap'n Zeb, it's novelty that catches the coin. We want to get the contract for screenin' that new hotel at West Ostable. It'll be ready in a couple of months and there's two hundred rooms in it. Let's say there are two windows to a room; that's four hundred screens—besides doors and all the rest. That hotel will need screens, won't it?"

"Need 'em!" says I. "In West Ostable! In among all them salt meadows and cedar swamps! It'll need screens and nettin's and insect powder and 'intment—even though nobody but the hard-of-hearin' boarders'll be able to sleep on account of the hummin'. Need screens! That hotel! My soul and body!"

Well, then, we must get the contract—that's all. And with the Adjustable Aluminum to start with, and he, Jim Henry, to do the talkin', we would get it. He'd applied for the county agency and the Adjustable folks had about decided to give it to him. They'd write and let us know pretty soon.

A week went by and we didn't hear a word. Then, on the followin' Monday but one, come a letter. Jim Henry was openin' the mail and I heard him rip loose a brisk remark.

"What's the matter?" says I.

"Matter!" he snarls. "Why, the miserable four-flushers have turned me down—that's all. Read that!"

I took the letter he handed me. It was typewrote on a big sheet of paper, with a printed head, readin': "Ormstein & Meyer, Hardware and Tools. Manufacturers of Eureka Adjustable Aluminum Window Screens." And this is what it said:

MR. J. H. JACOBS,
OSTABLE GROCERY, DRYGOODS, BOOTS AND SHOES AND FANCY GOODS STORE, OSTABLE, MASS.

Dear Sir:—Regarding your application for Ostable County ag'y Eureka Adjustable Aluminum Window Screens, would say that we have decided to give ag'y to party named Geo. Lentz, who will give entire time to it instead making it a side issue as per your conversation with our Mr. Meyer. Regretting that we cannot do business together in this regard, but trusting for a continuance of your valued patronage, we remain

Yours truly,
ORMSTEIN & MEYER.

Dic. M—L. G.

"Now what do you think of that?" snaps Jim Henry, mad as he could stick. "What do you think of that!"

"Well," says I, slow, "I think that, speakin' as a man in the crosstrees, it looks as if you and me wouldn't furnish screens for the West Ostable Hotel."

He half shut his eyes and stared at me hard.

"Oh!" says he. "That's what you think, hey?"

"Why, yes," I says. "Don't you?"

"No!" he sings out, so loud that 'Dolph Cahoon, our new clerk, who'd been half asleep in the lee of the gingham and calico dressgoods counter, jumped up and stepped on the store cat. The cat beat it for port down the back stairs, whoopin' comments, and 'Dolph begun measurin' calico as if he was wound up for eight days.

"No!" says Jacobs again, soon as the cat's opinion of 'Dolph had faded away into the cellar—"No!" he says. "I don't think it at all. We may not sell Eureka Adjustables to that hotel, but we'll sell screens to it—and don't you forget that. I'll make it my business to get that contract if I don't do anything else. I'm no quitter, if you are!"

"Nary quit!" says I. "I'll stand by to pull whatever rope I can; but it does seem to me that this agent, whoever he is, will have an eye on that hotel. And, accordin' to your accounts, he's got better goods than we have."

"Maybe. But if he's a better salesman than I am he'll have to go some to prove it. I'll beat him, by fair means or foul, just to get even. That's a promise, Skipper, and I call you to witness it."

"Wonder who this Geo. Lentz is," says I. "'Tain't a Cape name, that's sure."

"I don't care who he is. I only wish he'd have the nerve to come into this store—that's all. He'd go out on the fly—I tell you that! And that's another promise." Maybe 'twas; but, if so ——. However, I'm a little mite ahead of myself; fust come fust served, as the youngest boy said when the father undertook to thrash the whole family. The fust thing that happened after our talk and the Eureka folks' letter was Jim Henry's goin' over to West Ostable to see Parkinson, the hotel man. He went in the new runabout automobile that he'd just bought and was gone pretty nigh all day. When he got back he was hopeful—I could see that.

"Well," says he, "I've laid the cornerstone. I've talked the Nonesuch"—that was the brand of screen we carried—"to beat the cars; and we'll have a show to get in a bid, at any rate. It'll be six weeks more afore the contract's given out, and meantime yours truly will be on the job. If our old college chum, G. Lentz, Esquire, don't hustle he'll be left at the post."

"What sort of a chap is this Parkinson man?" I asked.

"Oh, he's all right; big and fat and good-natured. A good feller, I should say. Likes automobilin', too, and thinks my car is a winner."

"Married, is he?" says I.

"No; he's a widower. That's a good thing too."

"Why? What's that got to do with it?"

"A whole lot. If he was married I'd have to take Mrs. P. along on our auto rides; and—let alone the fact that there wouldn't be room—she'd want to talk scenery instead of screens. Women and business don't mix."

This was a Tuesday. And when, on Thursday afternoon, I walked into the store, after havin' had dinner at the Poquit House, I found 'Dolph Cahoon—our new clerk I told you about—leanin' graceful and easy over the candy counter and talkin' with a young woman I'd never seen afore. I didn't look at her very close, but I got a sort of general observation as I walked aft to the post-office department; and, sifted down, that observation left me with remembrances of a blue serge jacket and skirt, cut clipper fashion and fittin' as if they was built for the craft that was in 'em; a little blue hat—a real hat; not a velvet tar barrel upside down—with a little white gull's wing on it; brown eyes and brown hair, and a white shirtwaist. I didn't stop to hail, you understand; but I judged that the stranger's home port wa'n't Ostable or any of the Cape towns. Ostable outfitters don't rig 'em that way.

I come in the side door, and 'Dolph or his customer didn't notice me. The young woman was lookin' into the showcase; and, as for 'Dolph, he wouldn't have noticed the President of the United States just then. He was twirlin' his red mustache with the hand that had the rock-crystal ring on the finger of it, and his talk was a sort of sugared purr—at least, that's the nighest description of it that I can get at.

I set down in my chair at the postmaster's desk and begun to turn over some papers. Mary Blaisdell had gone to dinner and Jim Henry was away in his auto; so I was all alone. I turned over the papers, but I couldn't get my mind on 'em—the talk outside was too prevailin', so to speak.

"She's a Peach! Ain't She, Cap'n Zeb?"

'Dolph was doin' the heft of it. The young woman's answers was short and not too interested. 'Dolph was remarkin' about the weather and what a dull winter we'd had, and how glad he'd be when spring really set in and the summer folks begun to come—and so on.

"Really," says he, and though I couldn't see him I'd have bet that the mustache and ring was doin' business—"Really," he says, "there's a dreadful lack of cultivated society in this town, Miss—er ——"

He held up here, waitin', I judged, for the young woman to give her name. However, she didn't; so he purred ahead.

"There's so few folks," he says, "for a young feller like me—used to the city—to associate with. This is a jay place all right. I'm only here temporary. I shall go back to Brockton in the fall, I guess."

I guessed he'd go sooner; but I kept still.

"Are you goin' to remain here for some time?" he asked.

"Possibly," says the girl.

"I'm 'fraid you'll find it pretty dull, won't you?"

"Perhaps."

"I should be glad to introduce you to the folks that are worth knowin'. Are you fond of dancin'? There's a subscription ball at the town hall tonight."

This was what a lawyer'd call a leadin' question, seemed to me; but the answer didn't seem to lead to anything warmer than the North Pole. The young woman said, "Indeed?" and that was all; 'twould have been enough for anybody but 'Dolph.

"I'm perfectly dippy about waltzin'," he says. "By the way, won't you have some confectionery? These chocolates are pretty fair."

I riz to my feet. I don't mind bein' a philanthropist once in a while, but I like to do my philanthropin' fust-hand. And them chocolates sold for sixty cents a pound!

I had my hand on the doorknob. Just as I turned it I heard the young woman say, crisp and cold as a fresh cucumber:

"Pardon me, but will your employer be in soon? If not I'll call again—when he is in."

"You won't have to," says I, steppin' out of the post-office room and walkin' over toward the candy counter. "One of him's in now. 'Dolph, you can put them chocolates back in the case. Oh, yes—and you might associate yourself with the broom and waltz out and sweep the front platform. It's been needin' your cultivated society bad for the last two days."

The rest of that clerk's face turned as red as his mustache, and the way he slammed the chocolate box into the showcase was a caution! Then I turned to the young woman, who was as sober as a deacon except for her eyes, which were snappin' with fun, and says I:

"You wanted to see me, I believe, miss. My name's Zebulon Snow and I'm one of the partners in this jay place. What can I do for you?"

She waited until 'Dolph and the broom had moved out to the platform. Then she turned to me and she says:

"Captain Snow," she says, "I understand that your firm here is intendin' puttin' in a bid for the window screens at the new hotel at West Ostable. Is that so?"

I was consider'ble surprised, but I didn't see any reason why I shouldn't tell the truth.

"Why, yes, ma'am," says I; "we are figgerin' on the job. Are you interested in that hotel? If you are I'd be glad to show you samples of the Nonesuch screen. We cal'late that it's a mighty slick article."

She smiled, pretty as a picture.

Digitized by Google

"I am interested in the hotel," she says; "and in screens, though not exactly in the way you mean, perhaps. Here is my card."

She took a little leather wallet out of her jacket pocket and handed me a card. I took it. 'Twas printed neat as could be; but it wa'n't the neatness of the printin' that set me all aback, with my canvas flappin'—'twas what that printin' said:

GEORGIANNA LENTZ

OSTABLE COUNTY AGENT FOR
THE EUREKA ADJUSTABLE ALUMINUM
WINDOW SCREEN

"What?—What!—Hey?" says I.

"Yes," says she.

"Agent for the Eureka Adjusta—— You!"

"Why, yes; of course. The Eureka people wrote you that they had given me the agency, didn't they?"

I rubbed my forehead.

"They wrote my partner and me," I stammered, "that they'd given it to—to a feller named George—that is ——"

"Not George—Georgianna. Oh, I see! They abbreviated the name and so you thought —— Of course you did. How odd!"

She laughed. I'd have laughed too, maybe, if I'd had sense enough to think of it; but I hadn't, just then.

"You the agent!" says I. "A—a woman!"

"Yes."

"But—but a woman!"

"Well?" pretty crisp. "I admit I am a woman; but is that any reason why I should not sell window screens?"

I rubbed my forehead some more. These are progressive days we're livin' in, and sometimes I have to hustle to keep abreast of 'em.

"Why, no," says I, slow; "I cal'late 'tain't. I suppose there's no law against a woman's sellin' screens or anything else if she wants to; but I can't see ——"

"Why she should want to? Perhaps not. However, we needn't go into that just now. The fact is I do want to and intend to. I have secured a boardin' place here in Ostable and shall make the town my headquarters. This is a small community and one naturally prefers to be friendly with all the people in it. So, after thinkin' the matter over, I decided that it was best to begin with a clear understandin'. Do you follow me?"

"I—I guess so. Heave ahead; I'll do my best to keep you in sight. If the weather gets too thick I'll sound the foghorn. Go on."

"I am naturally desirous of securin' the hotel screen contract. So, I understand, are you. I have seen Mr. Parkinson, the hotel man, and he tells me that your firm and mine will probably be the only bidders. Now that makes us rivals; but it need not necessarily make us enemies. My proposition is this: You will submit your bid and I will submit mine. The party submittin' the lowest bid—quality of product considered—will win. I propose that we let it go in that way. We might, of course, do a great many other things—might attempt to bring influence to bear; might—well, might cultivate Mr. Parkinson's acquaintance, and—and so on. You might do that—so might I, I suppose; but, for my part, I prefer to make this a fair, honorable business rivalry, in which the best man—er ——"

"Or woman," I couldn't help puttin' in.

"In which the best bid wins. I have already demonstrated the Eureka for Mr. Parkinson's benefit and left a sample with him. He tells me that you have done the same with the Nonesuch. I will agree to let the matter rest there, submittin' our respective bids when the time comes and abidin' by the result. Now what do you say?"

'Twas pretty hard to say anything. I wanted to laugh; but I couldn't to that. If there ever was anybody in dead earnest 'twas this partic'lar young woman. And she wa'n't the kind to laugh at, either. She might be in a queer sort of business for a female—but she was nobody's fool.

"Well," she asks again, "what do you say?"

I shook my head. "I can't say anything very definite just this minute," I told her. "I've got a partner, and naturally I can't do much without consultin' him; but I will say this, though"—noticin' that she looked pretty disappointed—"I'll say that, fur's I'm concerned, I'm agreeable."

His Machine Hadn't Been Goin' Slow Afore—Now it Fairly Jumped Off the Ground and Flew

She smiled and, as I cal'late I've said afore, her smile was wuth lookin' at.

"Thank you so much, Cap'n Snow," she says. "Then we shall be friends, shan't we? Except in business, I mean."

"I hope so—sartin," says I. "Now it ain't none of my affairs, of course, but I am curious. How did you ever happen to take the agency for—for window screens?"

That made her serious right off. She might smile at other things, but not at her trade; that was life and death for sure.

"I took it," she says, "for several reasons. My mother died recently and I was left alone. My means were not sufficient to support me. I have done office work, typewritin', and so on, for some years; but I felt that the opportunities in the positions I held were limited and I determined to take up sellin'—that is where the larger returns are. Don't you think so?"

"Oh, yes—sartin."

"Yes. I knew Mr. Meyer slightly in a business way. I took the Eureka screen and sold it on commission about Boston for a time. Then I applied for the Ostable County agency and got it—that's all."

"I see," says I. "Yes, yes. Well, I must say that, for a girl, you ——"

She interrupted me quick.

"I don't see that my bein' a girl has anything to do with it," she says. "And in this agreement of ours, if it is made, I don't wish the difference of sex considered at all. This is a business proposition and sex has nothin' to do with it. Is that plain?"

"Yes," says I, considerin', "it's plain; but I ain't sure that ——"

"I am," she interrupts—"and you must be. I wish to be treated in this matter exactly as if I were a man. I wish I were one!"

"I doubt if you'd get most men to agree with you in that wish," I says. "However, never mind. I'll do my best to get Mr. Jacobs, my partner, to say 'Yes' to your proposal. And I hope you'll do fust-rate, even if we are what you call rivals. Drop in any time, Miss Georg—Georgianna, I mean."

We shook hands and she went away. I went as fur as the platform with her. When I turned to go in again I noticed 'Dolph Cahoon starin' after her, with his eyes and mouth open.

"Gosh!" says he, grinnin'. "By gosh! She's a peach! Ain't she, Cap'n Zeb?"

"Maybe so," says I, pretty short; "but I don't recollect that we hired you as a judge of fruit. Has that broom took root in the dirt on this platform? Or what is the matter?"

Jacobs come in late that afternoon.

"Say," says he, "there was a sample of the Eureka screen in Parkinson's office when I was there just now. He wouldn't say who left it or anything about it. When I asked he grinned and winked—that's all. Confound his fat head! Do you know where it came from?"

"I can guess," I says; and then I told him the whole yarn. He was as surprised as I was to find out that Geo. Lentz was a female; but it only made him madder than ever—if such a thing's possible.

"Wants to be treated like a man, does she?" he says. "All right; we'll treat her like one. She may be Georgianna, but she'll get just what was comin' to George."

"Then you won't agree to puttin' in the bids and lettin' it go at that?"

"I'll agree to get that screen contract, all right!" says he, emphatic.

I was kind of sorry for Miss Lentz; but Jim Henry was my partner, so there wa'n't nothin' more to be said. We didn't mention the subject again for two days. However, I did hear from the Eureka agent durin' that time. 'Twas 'Dolph that I got my news of her from. I was tellin' Mary Blaisdell about her and Cahoon happened to be standin' by.

"So she boards here in Ostable," says Mary. "I wonder where."

Afore I could answer, 'Dolph spoke up. "She's stoppin' at Maria Berry's, down on the Neck Road," he says.

"How did you know?" I asked.

He looked sort of silly. "Oh, I found out," says he, and walked off.

The very next evenin', as I was strollin' along the sidewalk, smokin' my good-night pipe, I happened to see somebody turn the corner from the Neck Road and hurry by me. I thought his gait and build were pretty familiar, so I turned and followed. When he got abreast the lighted windows of the billiard saloon I recognized him. 'Twas 'Dolph, all togged out in his Sunday-go-to-meetin' duds.

"Humph!" says I to myself. "So that's how you knew, hey? Been callin' on her, have you? Well, she may not hanker for my sympathy, but she has it just the same. I swan, I thought she had better taste. I'm surprised!"

The followin' mornin', however, I was more surprised still. I had an errand that made me late at the store. When I came in who should I see talkin' together but Jim Henry Jacobs and a young woman—the young woman was Miss Georgianna Lentz. They ought to have been quarrelin', 'cordin' to all reasonable expectations; but they wa'n't. Fact is, they seemed as friendly as could be.

Georgianna sighted me fust.

"Good mornin', Cap'n Snow," says she. "Mr. Jacobs and I have made each other's acquaintance, you see."

"Yes," says I, doubtful. "I see you have. I cal'late you think it's kind of unreasonable, our not ——"

Jim Henry cut in ahead of me quick as a flash.

"Miss Lentz and I have been goin' over the matter of screens for Parkinson's hotel," he says. "I tell her that her proposition suits us down to the ground."

Over I went on my beam-ends again. All I could think of to say was: "Hey?"—and I said that pretty feeble.

"It is very nice of you to do this," says Georgianna. "It makes it so much easier for me. Of course, when I decided to make business my lifework I realized that I might be called upon to do disagreeable things like—like wire-pullin', and so on, which some business people do; but honorable rivalry is so much better, isn't it?"

"Sure!" says Jacobs, prompt. "Yes, indeed."

"So it is all settled," she went on. "Our bids are to go in on the same day; and meantime neither of us is to call on Mr. Parkinson or to meet him—in a business way, I mean."

I nodded, bein' still too upset to talk; but Jim Henry spoke quick and prompt.

"What do you mean," he asks—"in a business way?"

"Why," says she—and it seemed to me that she reddened a little—"I mean that—well, if we should meet him by accident we wouldn't talk about screens or the hotel contract. Of course one can't help meetin' people

Digitized by Google

sometimes. For instance, I happened to meet Mr. Parkinson yesterday. He had driven over and happened to be in the vicinity of the house where I board. I was goin' out for a walk, and he stopped his horse and spoke."

"Oh," says I, "he did, hey?" Jim Henry didn't say nothin'.

"Yes," she says; "but I didn't talk about the contract. Though our agreement wasn't actually made then, I hoped that it would be. Good mornin'; I must be goin'."

She started for the door, but she turned to say one more thing.

"Of course," she says, decided, "it is understood that you haven't agreed to my proposal simply because I am a girl. If that was the case I shouldn't permit it. I insist upon bein' treated exactly as if I were a man. You must promise that—both of you."

"Sure! Sure! That's understood," says Jacobs.

I said "Sure!" too, but my tone wa'n't quite so sartin. She went out, Jim Henry goin' with her as fur as the door. I follered him.

"Say," says I, "next time you turn a back somerset like this I'd like to know about it in advance. I've got a weak heart."

He didn't answer me at all. He was starin' down the road, just as 'Dolph had stared when the Eureka agent called the fust time.

"Say, Jim——" says I. He didn't turn or move; didn't seem to hear me. I touched him on the shoulder and he jumped and come about.

"Eh—what?" he says.

"Nothin'," says I, "only I want to know why—that's all."

"Why?" says he. "Oh!—you mean what made me change my mind? Well, I just thought it over and decided we might as well agree. Agreein' don't do any harm, you know. Hey, Skipper? Ha-ha!"

He slapped me on the shoulder and laughed. The laugh seemed too big for the joke and sounded a little mite forced, I thought.

"Yes, yes! Ha-ha!" says I. "But your changin' from lion to lamb so sudden——"

"What are you talkin' about? I've got a right to change my mind, ain't I?"

"Sartin sure. But you was so set on gettin' that contract."

"Well, I ain't said I wasn't goin' to get it, have I? We're goin' to put in a bid, ain't we? What's the matter with you?"

"Nothin' at all; but your breakfast don't seem to have set extry well! However, it takes two to make a row; and I'm peaceful, myself. What do you think of the rival entry? Kind of a nice-appearin' girl—don't you think so?"

He whirled round and looked at me as if he thought I was crazy.

"Nice-appearin'!" he says. "Nice-ap—— Why, she's——"

Then he pulled up short and headed for the back room.

Nothin' of much importance happened for a while after that. And yet there was somethin'—two or three somethin's—that had a bearin' on the case. One was the change in 'Dolph Cahoon. For a few days after that night I met him on the road he was as gay and chipper as a blackbird in a pear tree—happy even when I made him work, which was surprisin' enough. And then, all to once, he turned glum and ugly. Wouldn't speak and seemed to be broodin' over his troubles all day long. I had my suspicions; and so, one time when him and me was alone, I hove over a little mite of bait just to see if he'd rise up and bite it.

"Seen anything of that Lentz girl lately?" I asked, casual.

"Naw," says he, "and I don't want to, neither! She's a bird, she is! Too stuck up to speak to common folks. Everybody's gettin' on to her—you bet! She won't make many friends in this town."

I grinned to myself. Thinks I: "I guess, young man, Georgianna's handed you your walkin' papers. You won't go down the Neck Road any more!"

And yet, an evenin' or so after that, I see somebody go down that road. I didn't see him plain, but I'd have almost taken my oath 'twas Jim Henry Jacobs. It couldn't be, of course—and yet——

Well, two days later, I took back the "yet." I happened to be standin' at the side door of the store, lookin' across the fields, when I saw an auto with two people in it sailin' along the crossroad from the east'ard. 'Twas a runabout auto—and I looked and looked! Then I called to 'Dolph.

"'Dolph," says I, "come here! Whose automobile's that? If I didn't know Mr. Jacobs was off takin' orders in Denboro I should say 'twas his."

'Dolph looked.

"Humph!" says he—"'tis his. He's drivin' it himself. But who's that with him? What? Well, by gosh, if it ain't that stuck-up Georgianna Lentz!"

"Get out!" says I. "The softness of your heart has struck to your head. It's likely he'd be takin' her to ride, ain't it!"

And then Jacobs looked up and sighted us standin' in the doorway. His machine hadn't been goin' slow afore—now it fairly jumped off the ground and flew. In a minute there was nothin' but a dustcloud in the offing.

He came in about noon. I didn't say nothin', but I guess my face was enough. He looked at me, turned away—and then turned back again.

"Well," he says, loud and cheerful, "you saw us, didn't you? I was goin' to tell you, anyway, soon as I got the chance."

"Oh," says I, "I want to know."

"Sure, I was. Of course you see through the game."

"The game?"

"Why, yes, yes! The game I'm playin'—the game that's goin' to get us that screen contract! Oh, I wasn't born yesterday. I knew a thing or two. This—er—Lentz girl and you and me have agreed not to go near Parkinson till the contract's given out; but Parkinson ain't promised not to go near her! He's been over there two or three times lately, and that won't do. He's a widower, and——"

"A widower!" I put in. "What's that got to do with it?"

"Oh, nothin'—nothin'. Just a joke—that's all. But I realized right away that she and he mustn't be together or he'll make her talk screens in spite of herself, and that'll be dangerous for us. So, says I to myself, 'Jim Henry,' says I, 'it's up to you. You must keep her out of his way.' That's why I've been goin' to see her once in a while and—and takin' her to ride, and—and so on. See? Oh, I'm wise! You trust your old doctor of sick businesses."

He'd been talkin' a blue streak. Seemed almost as if he was afraid I'd say somethin' afore he could say it all. Now he stopped to get his breath and I put in a word.

"So," says I, slow, "that's why you're doin' it, hey? But ain't that—— You know you promised to treat her just as if she was a man!"

"Well, ain't I?" he snaps—hotter than was needful, I thought. "If she was a man I'd make it my business to keep her in sight, wouldn't I? Well, then!"

He stalked off. I follered him; and as I done so I noticed 'Dolph Cahoon duck behind the calico counter. I judged he'd heard every word.

The finishin' work on the hotel hustled along and inside of a month we got word that 'twas time to put in our bid. Jacobs and I figured and figured till we got the price down to the last cent we thought it could stand, and then we sent our proposition over to Parkinson by mail.

"Wonder if Miss Georgianna's sent hers in," I says, casual.

"Oh, yes," says Jim, prompt; "she is goin' to mail it this mornin'."

I didn't ask him how he knew. His chasin' round and keepin' watch on a girl who was as fair-minded and square as she was had always seemed too much like spyin' to please me, and I cal'lated he knew how I felt—at any rate he'd scarcely spoke her name since the day when I saw 'em autoin' together. But now I did say that, so long as the bids was in, it wouldn't be necessary for him to keep his eye on her any longer.

He looked at me kind of queer. "Umph!" he says; "maybe not!" And he walked away to attend to a customer.

That afternoon he took his car and went off on his reg'lar order trip to Denboro and Bayport—and round. 'Dolph Cahoon and I was alone in the front part of the store. 'Dolph seemed to be in mighty good spirits—for him—and kept chucklin' to himself in a way I couldn't understand. At last he says, lookin' back to be sure that Mary Blaisdell, in the post-office department, couldn't hear:

"Cap'n Zeb," he says, "what would you give the feller that got the screen contract for you?"

"Give him?" I says. "What feller do you mean—Parkinson? I wouldn't give him a cent! I ain't a briber and I don't think he's a grafter."

"I don't mean Parkinson," he says, chucklin'. "But suppose somebody else had been workin' for you on the quiet, what would you give him?"

I looked him over.

"Look here, 'Dolph," says I; "I never try to guess a riddle till I hear the whole of it. What are you drivin' at?"

He grinned. "I know who's goin' to get that contract," he says.

"You do. Who is it?"

"The Ostable Store's goin' to get it. Your bid's a little mite the lowest. Parkinson told me so last night."

"Parkinson told you!" I sung out. "How did you happen to see Parkinson?"

He winked.

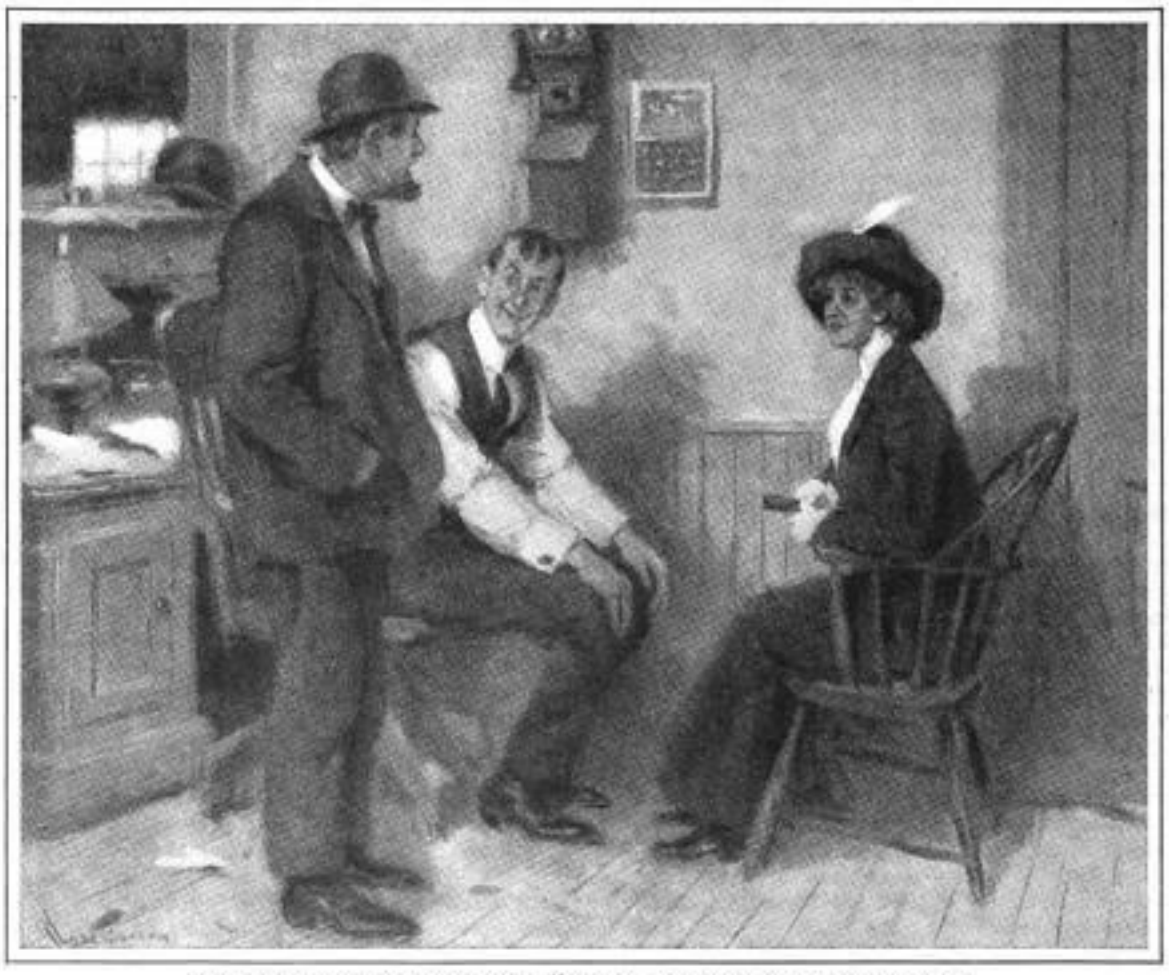
"Oh, I saw him!" says he. "I've seen him a good many times lately. I made it my business to see him. He was pretty stuck on the Eureka till I got after him and I cal'late he'd have contracted for Eurekas, bid or no bid. But I put in my licks; I've drove over to West Ostable four nights and two Sundays in the last fortni't. And didn't I preach Nonesuch to him! He-he! You bet I did! And last night he said he was goin' to give us the job. Oh, I fixed that stuck-up Georgianna Lentz! I got even with her. He-he-he!"

I never was madder in my life. I took two steps toward him with my fists doubled up. "You whelp!" says I—and then I stopped short. The Lentz girl herself was walkin' in at the front door.

"Good mornin', Cap'n Snow," she says, holdin' out her hand. She paid no more attention to 'Dolph than if he'd been a graven image. "Good mornin'," says she. "It's a beautiful day, isn't it?"

I was past carin' about the weather.

"Miss Georgianna," says I, "I'm glad you come in. I've got somethin' to tell you. I've got to beg your pardon for somethin'—that ain't my fault or Mr. Jacobs' either. You and my partner and me had an agreement not to go nigh Parkinson or try to influence him in any way. Well, unbeknown to me, that agreement's been broke."



She stared at me, too astonished to speak.

"It's been broke," says I. "That—that critter there," pointin' to 'Dolph, "has been sneakin'——"

'Dolph's face had been gettin' redder and redder. I cal'late he thought I'd praise him for his doin's; and when he found I wouldn't, but was goin' to give the thing away, he blew up like a leaky biler.

"I ain't been sneakin'!" he yelled. "And I ain't broke no

All I Could Think of to Say Was: "Hey?"—and I Said That Pretty Feeble

Digitized by Google

A Message From Edison to the Man Who Pays the Bills

By Roger W. Babson

ILLUSTRATION BY HERBERT JOHNSON

KNOWING that Thomas A. Edison has some very firm ideas relative to the reasons for the present high cost of living, I recently visited him in his laboratory at Orange, New Jersey. "Mr. Edison," I asked, "have you a message that I can give to the American people through the columns of THE SATURDAY EVENING POST relative to the high cost of living?" He replied: "Yes; I can give you a message, but whether or not the people will take any stock in it is another question. You see the popular thing today is to curse the manufacturers; and our Government, courts and public speakers believe that the producer is at the bottom of our troubles. Now you all are barking up the wrong tree when you lay the present troubles to the producer. If you will carefully collect statistics you will find that the trouble begins at some point between the time when the goods leave the shipping room and when they arrive at the consumer's home.

"If you will take the twelve leading articles that the workingman buys today—such as meats, flour, furniture, crockery, clothing, coal and the like—and will note the difference between the cost of these goods when they leave the manufacturer and when they reach the consumer, you will find it self-evident where the trouble lies. Take the article of furniture, which allows a profit of 100 per cent to the retail dealer, or of foodstuffs—especially vegetable foods—where the profit at some point must be 1000 per cent, and you will see that the difficulty lies, not with the method of manufacture but rather with the method of distribution. The item of coal is the most flagrant illustration. The very best bituminous coal sells in the ground for about three cents a ton, and when it is brought to the surface the coal operator receives only about eighty cents a ton; but when it reaches your town and mine we are obliged to pay several dollars a ton."

This statement of Mr. Edison reminded me of one that Senator Burton made in Washington a while ago. "Innumerable examples may be given of the very considerable difference between the original cost to the manufacturer and the final charge to the consumer," said the Senator. "Some weeks since, figures were carefully prepared in regard to the manufacture and sale of an article of clothing now in very general use. The manufacturer charged $24.90 a dozen. Each dozen included different sizes. The retailer charged from $4 to $10 a garment. The total sales averaged about $6.50 for each, or a total of $78 to the consumer as against $24.90 to the manufacturer. The retailer is not to be blamed. The pressure of population in cities, the greater demands of modern life resulting in higher rents and higher cost for services rendered to him, make it essential that he should charge more for his goods."

Leaks Between Producer and Consumer

"AN ENTIRE revolution in methods of distribution is imminent. The consumer will be brought nearer to the producer. Great warehouses will be substituted for small and scattered shops, especially in the case of staple articles where confidence in the seller and exceptional skill are not essential features. The possible economy of large-scale production and the undertaking by one organization of the various processes, even from the raw material through manufacture and distribution to the consumer, have been demonstrated by some of the great corporations of the country. However much we may decry this tendency, we may be reasonably certain that it will be adopted."

"Of course," said Mr. Edison, "there is a reason for this abnormal leak between the consumer and the producer; and examination shows conclusively the main source of this leak, which is that there are five times as many retailers in every city as there should be. Impossible as it may seem, it nevertheless is true that the more grocery stores in a town of a given population, the higher prices the people in that town are obliged to pay for their groceries, and the same is true of drugs, drygoods and every other commodity. Of course too few stores may cause congestion, monopoly and high prices; but a normal minimum number of stores permits minimum prices, and any additional stores above this required minimum ultimately cause increased prices in any community. Moreover, this is not a foolish Socialistic doctrine, but it is a fact, and can be demonstrated by pencil and paper. Everything passes through too many hands. There are too many useless middlemen."

I then inquired how this state of affairs could be remedied, to which he replied: "It can be remedied only through educating the people and telling them of the real facts. Such papers as THE SATURDAY EVENING POST hold the future of this country in their hands, and it is only by continually preaching a correct doctrine that ultimate good can be accomplished. Legislation is of little use. You know the theory that 'the resultant acts of all legislation cannot be above the average intelligence of the most ignorant legislators.' No; our legislators will never legislate against lawyers and other non-producers, for the majority of them are non-producers themselves.

"Why, on Broadway there are about three hundred men's furnishing stores which should be closed up. Just the rental alone amounts to a fabulous sum, and when to the rent is added the wages of the clerks, bookkeepers and other employees, the waste is simply enormous. Now who pays for this waste? I will tell you who pays for it—you and I pay for it, and the best evidence of this is that on Sixth Avenue we can purchase the same necktie for 25 per cent less than we can buy it for on portions of Broadway; and if the truth could be known, the Sixth Avenue man is probably making 100 per cent as it is. Moreover, you and I are getting off easily. Really it is the poor people who are forced to carry the load. We get our coal for $6 or $7 a ton, but they are obliged to pay $15 or $20. We get our potatoes for 60 cents a bushel, while they are compelled to pay $3 to $5 a bushel for them; and so it is all along the line."

Thereupon I asked Mr. Edison whether a system of coöperative stores, such as exists in England, would not solve this problem. But he shook his head and said: "No; they do not seem to be on a real economic basis. It seems to me that the man who makes a success in a coöperative store would be apt to start in business for himself, with the result that the coöperative stores would in the end be run by men possessing but little real ability. No; I seriously doubt if the coöperative store is the true solution of the problem. The problem must finally be solved through the entire elimination of the middleman, and by the manufacturer and producer coming in direct touch with consumers through the advertising columns of standard publications, aided by a Government parcels-post and warehousing system."

At this point Mr. Edison and I talked relative to the standardizing of goods, which must play a very important part in this great industrial revolution through which we are to pass.

In closing this part of the discussion, Mr. Edison, who certainly seems to have the interest of the workingman very much at heart, said: "Mr. Babson, when I talk this subject over with most men and emphasize, as I do, the necessity of eliminating the middleman, they seem to feel that the saving would not be sufficient to pay for the first hardship caused by such an economic revolution. I therefore wish to impress upon the public that the advantage is twofold; for when the storekeeper quits his job on Broadway he not only ceases to be a parasite on the community and brings about a reduction in the cost of distribution, but in order to live he is forced to the farm or into the factory and made to produce, and thus performs a double service. Furthermore, in reducing the cost of living the workingman is not interested in saving a very large sum, but rather simply desires to keep his expenses within his receipts. You have no idea what a difference of ten cents means to many a laboring man; and this is most forcibly impressed upon me as I see my own men walk four or five miles along the railroad tracks through snow and rain in order to save ten cents a day."

Selling Goods Below Cost

"THESE are the men whom I believe to be worthy of help, and if our charitable organizations would give more thought to reducing the cost of living in order to help such worthy men as these, and less to charity balls and the dispensing of Christmas dinners, the poor would be very much better off. You remember Dickens' statement, which ran somewhat like this: 'Income 20 shillings; outgo 20 shillings 6 pence—result misery. Income 20 shillings 6 pence; outgo 20 shillings—result happiness.'"

After paying his compliments to the middleman, as above outlined, Mr. Edison launched forth on a subject that is very near his heart and in which many economists believe him to be absolutely right, although the doctrine is far from popular. Mr. Edison believes that there is one piece of legislation which, if intelligently enacted, would do much toward reducing the cost of living—I refer to Mr. Edison's plan of preventing manufacturers from selling goods below cost plus a fair profit. Now this could be accomplished in two ways: either by compelling manufacturers to sell goods in all parts of the country at the same prices at the same time, or else by allowing manufacturers of a given article to unite in selling goods at cost plus a reasonable interest on the money, the price being based on expert accountants' figures for the last previous five-year period. Eliminating the effect of increased gold production and the middleman, Mr. Edison claims that the three principal causes of the rise in the cost of living are as follows: First, the elimination of competition in

Digitized by Google

manufacturing; second, the destruction of our natural resources; and third, adulteration in its varied forms. On each of these points Mr. Edison gave me a message that I can pass on to my readers, showing how sane legislation forbidding the sale of goods below cost will greatly aid in providing normal competition, in conservating our resources and preventing adulteration.

As to the effect of such legislation on the encouraging of competition, he continued: "Our so-called trusts are not harmful because they are big. There is no economic harm in great corporations because they are great; in fact, from an economic point of view, the great corporation should be of distinct advantage to the consumer, enabling goods to be manufactured and distributed at a lower cost than could be possible through small corporations. Rather the curse of the large corporation is its ability to sell goods below cost in a certain locality for a certain length of time, in order to stamp out competition in that locality; and then after said competition has been crushed, its ability to raise the prices in that locality and lower them again in some other. In other words, the Standard Oil Company could never have attained a position where it could abnormally raise its prices had it been forbidden to sell below cost.

"Although ruinous competition is in reality as costly in manufacturing as in distribution, yet a limited amount of competition is justifiable and advantageous. The independent manufacturer, however, does not fear the raising but rather the lowering of prices on the part of the great trusts. If the Government should forbid the sale of goods below cost there is a sufficient number of small independent producers in every commodity to keep the cost of that commodity down to a minimum. Of course under such a law it would be necessary to reorganize a great many of our trusts, and much of the water of which their capital is made up would necessarily be squeezed out; but such drastic legislation would enable the independent manufacturer to get a hold, and so long as real, fair competition exists commodity prices will be at a minimum. On the other hand, the present system of allowing the trusts sometimes to sell below cost to crush out competition prevents any independent producer from getting a start. Moreover, you and I who live in some other community are obliged to furnish the trusts with the ammunition with which they are destroying this independent producer, who is our only salvation.

"The secret of restraining corporate greed," proceeded Mr. Edison, "is to hold the big corporations in check by forbidding the sale of goods below the cost of production plus a fair rate of interest. This will keep enough little fellows in the business to hold prices down to a normal low level. When this is accomplished all production and distribution are reduced to the question of quality; then the corporation that produces the best goods and distributes them in the most economical manner is the corporation that will win out. It is only under this method that the cost of living can be truly reduced."

I then asked why such legislation as he suggested would conserve our natural resources. In response his bright eyes flashed when he replied: "Well, take coal, for example. Today thousands of independent operators throughout this country are running our great coal beds simply to keep themselves from bankruptcy. Owing to the sharp competition among coal operators and the fact that the Government forbids all pooling and combinations, there has been a great decline in the price of coal at the mines. Of course you and I have not received much of the benefit of this reduction, because as fast as the operators have reduced the price the railroads have increased the freight rate; but, as you will note from a careful study of the coal situation, the only way that the average independent mine operator can today make a cent a ton profit is by mining his best coal in the most reckless and destructive manner. For every year that our coal mines are allowed to be operated in this prodigal manner the coal supply of our country is being reduced at an increased rate of 100 per cent faster than is necessary. If, however, the coal operators should be forbidden to sell below cost plus a fair rate of interest, they would cease mining their easiest coal and instead would use a proper scientific method, which should greatly lengthen the life of the mines. Therefore, to prevent the robbing of mines the United States Government should have laws regulating the mining of coal. There should also be laws restricting the cutting of timber and other wasteful methods which manufacturers are today compelled to employ owing to forced competition. In this connection I wish to say a word of praise relative to the agitation in favor of the conservation of our resources which has been going on for the past few years. The destruction of our natural resources is a great national problem, a problem that should be grasped and solved at the earliest possible moment; and, personally, I am absolutely sure that the simple solution lies in enacting a law preventing the sale of goods below cost plus a reasonable rate of interest—of course under Government regulation."

I next sought for a statement relative to how such legislation will prevent adulteration; in fact, I suggested that adulteration had been greatly done away with during the past few years. Again his eyes flashed as he quickly replied:

"It is true that there has been a decline in the adulteration of food products, but in order to have adulteration it is not necessary to adulterate food. It is true that they do not adulterate sugar any longer because they cannot purchase for use in the adulteration a white material that is cheaper than sugar; but they adulterate salt with chalk and then charge more for it because it won't stick! But when you refer to food adulteration you touch upon only a very small part of the subject. You do not eat Portland cement; but you can adulterate it with ashes and a number of other things!"

At this point Mr. Edison told a story which, although it has no real bearing on the point in question, is rather amusing. It is a story of a milkman who, being charged with putting water in the milk that he sold, was brought before a judge. The maximum fine for such an offense was $50. The judge, however, instead of fining him $50 fined him only $45. After the case was over one of the attorneys asked the old judge why it was that he fined the milkman only $45. In reply the judge said that as near as he could learn this man's milk was only nine-tenths water, and that he was saving the $50 fine for a man who sells as milk something entirely water. Mr. Edison thus demonstrated to me very clearly that the enactment of a simple law forbidding the sale of goods below cost plus a fair rate of interest will do more toward the elimination of adulteration than all the other statutes that Congress could pass in a generation. A Skipping, Bony Statue Upon a Huge Boulder of Granite

I AM OBLIGED to employ the historical method in this chapter. And by historical I mean that method by which the greater and most important portion of the people concerned are left out of the narrative, and a few men and women become the lay figures of it, clothes-horses upon which the writer hangs only those deeds that reflect the high light of achievement. This is as much a matter of regret to me as it can possibly be to the reader. For we have all observed what a decimating thing, humanly speaking, history is. It reduces every hero down merely to his deeds. A sentence is devoted to his personality and fourteen chapters to what he accomplished. This is why the average person with a natural mental palate finds history so uninteresting. The authors of it so rarely condescend to tell the shape of the victorious general's nose or whether he wore a mustache or was clean shaven. The fault of not putting in more personal portraiture is illustrated by the tenacity with which we cling to it when the least little anecdote of it is included. Has any one who has read the biography of Cromwell ever forgotten that he had a mole on his nose? And no one will deny that the history of the French people is particularly interesting because the French personality is so closely related to comedy and melodrama that even the historians have been unable entirely to expurgate the heroism of its antics and tears. But how much easier it would be to remember all the details of the battle of Waterloo if some of the staccato comments of the French soldiers smeared with mire and blood on that day had found their way into the narrative, or if some historian with real bowels had revealed the fact that the Duke of Wellington was slightly bowlegged and that he was inordinately fond of raw onions. This would have introduced the little mortal deviation from the absurdly perfect that differentiates the man from the mere hero, and it would have insured that little line of caricature without which no human achievement exists or can be set down veraciously. This is why the heroes of history sustain the same relation to the living men they really were that a machine-turned vase sustains to one molded by hand. The former may be had for fifteen cents each, but the latter, thumb-dented by the mind of an artist, is of enormous value.

Still there is some excuse for the historian. It is the same I make for this chapter. There are not enough historians in the world to write the life of even one man, and a volume of a thousand pages would be required to dramatize the life of Ruckersville during the three months that followed the tearing down of the old Joe Rucker mansion, the opening of a stone quarry upon the ground where it stood, the hauling off of the great beams and timbers to be used in that other mysterious building that Jim Bone was erecting on the north of the square. The whole town was in a state of hysteria. When you have been in a Rip Van Winkle trance for forty years you are apt to awaken with a start at the sound of hammer and saw and incessant clinking of stone masons in your very midst. It was as if Bone had poked a long stick into an old hornet's nest and ruthlessly waggled it to and fro. The streets swarmed with excited citizens who buzzed and darted about from one group to another. That which had created even a greater sensation than the new building was the hasty opening of the stone quarry. It appeared that the founder of Ruckersville had chosen a valuable granite foundation upon which to build and had blasted his wine cellar out of the solid rock. And it was a fact that some of the stones that went into the Bone building in the square were soaked and stained with this ancient grape juice. But the people of the town were not so much impressed with the opening of a new industry that insured employment to every idle negro who could blast or strike a chisel as they were with the sacrilege involved. It was as if Bone had broken into the underground mausoleum of Ruckersville and was dragging up the very foundation of its traditions. Even the tombstones in the adjacent churchyard appeared to lean over upon

Digitized by Google

their elbows, aghast. As a matter of fact, many of them had been leaning for a quarter of a century; but the din of the hammers in the quarry, the sudden blasts, the outrageous Casey Jones chorus of the negroes singing in rhythm with the strokes, gave an expression and a meaning to these tumbling monuments, as if the dead beneath had been disturbed and were turning over in their sleep and rumpling their headstones. A sort of indignation meeting was held in the church one Sabbath evening after services, where it was decided to move the cemetery beyond earshot of Bone's devilish activities.

The captain, who was far from being a religious man, was the spokesman who laid the situation before this meeting. And it was an hour bordering upon triumph in the church when circumstances united his heart and interests with those of the good people. There was a gentle stir in the evening congregation, like the rustle of its spiritual feathers, when the pastor, Brother Clark, at the close of the last hymn arose and, instead of pronouncing the benediction, said:

"Brethren and sisters, we have with us tonight Captain Alexander Rucker-Martin, who wishes to say a few words upon a subject very near our hearts."

Brother Clark then stepped back, turned two long, mournful coat-tails to the congregation for a moment, faced about, parted them, and let himself down in his chair at the rear of the pulpit with the air of a man who is sitting down upon the Holy Scriptures and feels utterly unworthy of the privilege. His long white face bore that clean-shaven, chastened expression peculiar to ministers who feel and preach that they are pilgrims and sojourners in this world, which is not good enough for them or any other Christian man.

Immediately the captain arose from somewhere out of the bosom of the congregation, side-stepped his way past a dozen knees, reached the aisle and went down it with his head up, his white shirt swelling out in front like the breast of a pouter pigeon. His mustache bristled; his little white peg goatee worked with the emotion of his chin muscles. He wheeled when he reached the chancel rail like an old military relic on parade, sighted along the gunbarrel of his memories with a fiercely focused expression, and began:

"My friends, it is well known to you that I have not been as good a Christian soldier as I have been just a soldier."

He paused with the air of a veteran addressing the home militia.

"A cankering wound does not fit a man for the millennium so much as it preserves him in the memories of the battle-rimmed past. But"—he drew himself up like a sentry about to challenge his death angel—"I have a duty to the dead. They were my comrades. I am an old stalk left wind-blown but still standing upon a deserted field. I am here tonight in the midst of graves." He waved his hand toward the open windows through which every tombstone glistened, and with the swing of his feeble arm the church vanished, the scalloped rows of men and women before him were instantly outside wandering in their thoughts from one quiet mound to another. "In these graves for forty years men sleep who stood shoulder to shoulder with me in the fog rising from twenty-five thousand Yankee guns in the valley below Missionary Ridge. They outnumbered us nearly a hundred to one. But we stood like a crown of terrible thorns upon that great hill till nearly every man fell. You remember how most of us were brought back home to you, dead and dying, to be buried around this church where we were christened and learned our a, b, ab's in faith. There has not been one hour of my life since when I have not felt out of place above ground." He went on with a sob. "It's a sort of disgrace to survive such men in such a battle, and never till now have I been reconciled, never till now have I understood the strange dispensation of Providence that left me so outraged among the inglorious living. But within these last weeks I have discovered my own faith in the Great Commander. My friends, I am the sentry left to guard the sacred sleep of my comrades. And I am here tonight to call your attention to the unholy clamor by which their repose is disturbed and to propose that we break camp and withdraw beyond the din that has been raised over there!" He pointed indignantly at the quarry, shining white and disheveled like an immense looted sepulcher among the trees upon the knoll on the outside of the churchyard. "I not only propose, I demand that we remove the ashes of our ancestors and our heroes to such a distance from the irreverent new activities of this town as shall insure their repose. The living owe but one debt to the dead, that they shall rest in peace!" exclaimed the old man with a flourish and a passion that implied that the dead may also suffer from a helpless insomnia. He wheeled and marched back to his seat with the air of a veteran who has fired his last shot and is willing to die by the issue.

This was the beginning of an agitation that resulted in the resolution of the citizens of Ruckersville to purchase a cemetery beyond the edge of the town and to remove the ashes of its former citizens to a safe distance from the increasing noise of Jim Bone's enterprises.

"I Myself Have Promised to Furnish an Epitaph in Verse for Each"

But when the captain himself skipped from one block of granite to another round the quarry the next day to where Bone was watching the tamping of a charge of dynamite, and informed him of this decision, he received another shock.

"It's a good idea," commented that worthy without even lifting his eyes to observe the effect of his opinion upon the captain. "The people of this town have been drinking water that seeps and drains through dead men's bones till they have caught the contagion of being dead, to say nothing of the fever we get from it. If you agree I'll buy the church and ground as soon as you move your tombstones and ashes, and I'll pay you enough for it to build another church farther from the quarry—not that I expect to operate it yet on Sundays," he added with whimsical impudence.

The captain balanced himself like a skipping, bony statue upon a huge boulder of granite, waved his cane futilely in the air, batted his eyes with snapping rage, all in vain. Mr. Bone continued to stare down at the man who was gently manipulating the fuse connected with the charge of dynamite.

"And what will you do with the church?" the captain sputtered at last, no longer able to restrain his curiosity.

"Haven't decided yet," replied Bone; "convert it into a factory of some kind. Thinking some of backbands or horse-collars."

"Damme, sir! Would you take the house of God for such vulgar purposes?" exclaimed the captain.

"If anything belongs to the Lord, everything does—this quarry as much as that church. And it's as much a service to man to give him the means of a livelihood in this world as it is to give him the gospel for another. Turn about is fair play. He's had preaching out of that old church for nearly a hundred years. He's been taxed to build it, keep it in repair and support it; now let it shelter an enterprise where he can earn a living."

The captain stood like a man who felt the devil's horns near him, but could not see them. He was silent, reaching this way and that mentally for the forked tail of the argument with the honorable intention of pinching it. But before the captain could get his spiritual fingernails in the right place, Bone took the cigar he was smoking out of his mouth and turned upon the captain a countenance so conscientious with a new and blasphemous kind of morality that the captain almost caught his breath as he listened.

"Understand me," Bone went on; "I begrudge no man his faith; but we are come to the time when we must practice it more and merely sing about it less. That makes hypocrites. It's obliged to make hypocrites. It don't amount to anything, giving all your goods to feed the poor or swapping lies about the heathen; it just impoverishes you and makes you the victim of a sing-song piety. If God made all the stars He's a terrible busy, enterprising God. He's got 'em started and goin' so that the heavenly bodies go on baking and cooling seven days in the week. You needn't tell me the Creator rests on Sunday. It's just a figure of speech. He's stoked His fire so that the oven of the universe goes on baking little biscuit planets clean through the Sabbath. And there's no astronomer that records that any of His shining works pull off their little vaporous shirt-tails on Sunday, put on fresh ones and go to divine worship. The only worship you can see any sign of in the heavens is the obedience to the law of life and growth and death and resurrection again into life, and so on. Nothing religious, bound to God, ought to be idle. That's the trouble here in Ruckersville. You count too much on just redeeming grace and on your missionary collections and church dues. You just know the hymns and Scriptures; you never have noticed the actual ways of God, as you call Him, nor the example He sets along the lines of healthy industry. I'm no preacher, but I'll be danged if I don't believe I'm fixing to be a practical theologian; and if it can be done, I aim to redeem this town."

It is a strange coincidence that the longest, most self-revelatory speech made by the hero so far should be recorded in a chapter devoted merely to the tabulation of certain incidents. And I am myself at a loss to account for it. He entered these pages as a griping lover, and nothing was farther from my mind or expectation than that he should develop the other Doctor Jekyll of his character. But every man has the personality of many different individuals in him. Fortunately most of them die undeveloped; otherwise, every thief would also be an honest man, and every honest man a thief. When God created man He made the ancestor and son of all paradoxes. Jim Bone, for example, might have remained to the end of this tale merely the lover of Sylvia Story and the unattainable masculine ideal of every other unmarried woman in Ruckersville, if he had not attended revival services in the church and caught an unbiased vision of the situation by construing the piety of Ruckersville into an explanation of its dogmatic respectability, its cowardly inertia and pathetically sincere hypocrisies, and then compared all to the life and courage and freedom of the world out of which he had drifted into its eddies. It was a gamble whether the comparison resulted in any action upon his part—heads, he'd kiss Sylvia Story and leave; tails, he'd remain and work out a new solution to the problem in that place where the arithmetic of life had so long been closed. Tails it was, and he was simply giving a vocative demonstration to the captain of what was to him as new a train of ideas as it could possibly be to any man in Ruckersville.

There was once an incorrigible youth who was fitting himself for the gallows with a thoroughness often observed in the wicked and rarely seen in the good. On a certain morning some one gave him a rose. It was not the kindness that impressed him. It was the rose. He was fascinated by the charm of the flower. The creative energies of his mind were stirred. From that day till his death, during a long and harmless life, he engaged in the ambition to develop and grow more and more perfect roses. Something like this had happened to Jim Bone. He was suddenly thrilled and stirred by the determination to breathe the breath of industry, enterprise, commerce, and more animal joy into the dry bones of Ruckersville. It was miraculous, far more miraculous than an ordinary conversion, or than many miracles described under this name in the Scriptures. Mr. Bone was now multiplied into at least three distinct characters: first, the man he had been, which was now fading into something merely biographical; second, the lover of Sylvia; third, the leading citizen of Ruckersville.

XIV

THE conversation that Bone had with Captain Martin at the quarry, taken in connection with Bone's now obvious wealth, led to some queer incidents.

He had opened an office on the square, where he was to be found every morning consulting with his foremen, issuing orders, paying moneys and answering a lot of flaming letter-headed mail. He was barely settled in these quarters before he discovered that every house, every foot of land, every horse, cow and stick of timber in Rucker County was for sale. And for all of these Mr. Bone was asked an extortionate price. Captain Martin came in two days after the conversation reported in the previous chapter, laid his cane across the top of the financier's desk, tipped his heels upon the back of it so that they faced Bone's heels on the other side, and revealed to the said Bone that he could have the Martin mansion for his horse-collar factory if he cared to pay the price. He explained that it was much more adaptable for such purposes than the church. He named an extravagant figure for the same and glared.

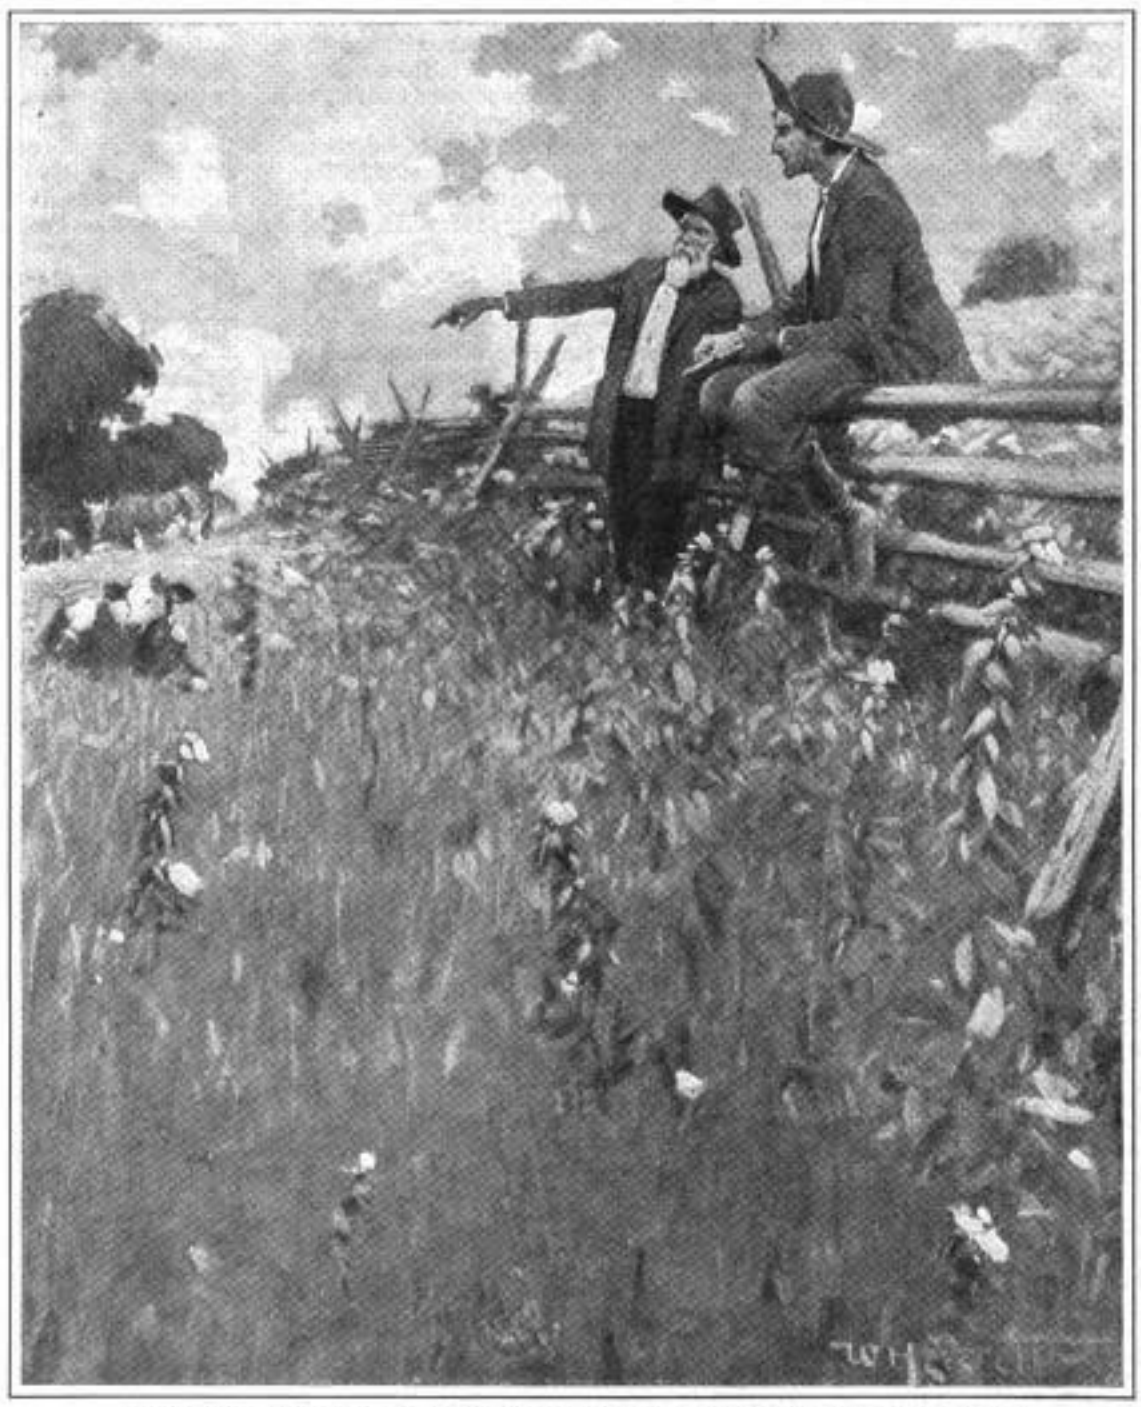
"Captain," said Jim, "I'll take that up with you later. Meanwhile, may I count upon your support, I mean your moral support, in this town?"

"You can!" exclaimed the captain, jerking his heels down, clicking them together as he stood up and offered his hand.

Mr. Bone knew the amenities of such a situation as well as if he were already candidate for Congress. He reached down, opened the little invisible side door of his desk, drew forth a bottle with an honorable seal upon it and passed it to his guest.

On another day, not long after this, Colonel Fanning-Rucker appeared. Fanning was in a predicament, although you would never have inferred it from the appearance he made. He was impressively well groomed, and he had what women call easy manners and what men call "slick." This was really his trouble. He was a promoter in a territory much too small for his powers. This was how he

Digitized by Google



had cramped himself and was now reduced to the necessity of attempting to unload on Mr. Jim Bone. There was a pristine simplicity about the rascality of Fanning's financial operations that caused Bone's face to glisten with a light that the colonel mistook for being complimentary. It seems that he had charge of an estate belonging to a rich old woman. And he had invested this in mortgages more to his own advantage than to that of his client. Personally I have no doubt that the fortunes of many rich men are begun with the insurance money of dead husbands that widows so naïvely trust to any man who tenderly offers to make an investment for them. The trouble with young Fanning was that the old lady had taken a notion that she wanted some of her notes paid. He was embarrassed temporarily, he explained, and he was offering the whole bundle of mortgages, which she had also intrusted to him, as collateral for the thousand dollars she so foolishly and persistently demanded.

He was encouraged to indulge in a frankness in explaining the situation to Mr. Bone that he was destined to regret as long as he lived. It was all perfectly legal. He had power of attorney, which gave him the right to act as he saw fit in the matter. The mistake he made was in selecting Bone for such a transaction. It is a queer circumstance, but it is a fact, that a man so immoral that he is careless of the honor of any woman may at the same time be so moral otherwise that he is incapable of cheating one; and that another man of almost puritanical ideals will drain any widow or orphan of her last cent without a qualm of conscience. This was the psychological phenomenon illustrated by Jim Bone and Fanning-Rucker. The former could not be trusted to resist a pretty woman's good looks, and the latter could not be trusted with her pocketbook. Between the two it is easy to account for all the female tragedies in life. If we escape the one we are always in danger of falling into the ruthless hands of the other.

On this occasion Fanning was standing by Bone's desk with the papers spread upon it, passing an expository finger from one to the other. It seemed that he expected the thrifty old widow, who was now awaiting her third stroke of paralysis, would die before she demanded the payment of another note. That was a gamble, of course, but he took the risk, he said, smiling grimly down at Bone. At this moment the latter arose, side-stepped with much the same expression he had worn the day he dealt with the bull in Clark Story's pasture, caught Fanning by the shoulder from behind, planted the entire length of a booted foot upon the small of his back with such force and moral emphasis that the attorney shot through the open door like the flying and disheveled figure of a young Adonis. He landed upon his knees on the sidewalk, accompanied the next instant by the fluttering pages of his mortgages. This was a new and astonishing experience in the life of Fanning-Rucker, and the celerity of his mental activity in such a crisis was a credit to his faculties. He leaped to his feet with the gallant air of a charming man who confesses to the observer that he has stumbled, dusted the knees of his trousers delicately, gathered up his papers and stepped briskly away in the direction of his own office, without confessing the facts by feeling of the small of his back, which was aching frightfully, and without incriminating himself to his astonished fellow citizens by even a glance backward at the furious figure of Jim Bone.

There is one superlatively dramatic moment in the life of every scamp—the one when for the first time he recognizes himself for what he is in the eyes of another. You may infer his caliber then from the manner with which he accepts the revelation. If he resents the imputation there is still a shallow hope of better things in him; but if he accepts it with the quick-covering modesty of one whose nakedness has been suddenly revealed he is incorrigible. This was the exact conduct of Fanning-Rucker. He looked up and down the street, laughed both ways so innocently that Magnis, who had seen his singular exit on one side, and Elbert White, who had observed it from the distance of Bilfire's saloon, both instantly concluded that they were mistaken in their first sensational impressions.

The incident of the old lady's money is closed, so far as this story is concerned. I have set it down merely to indicate the temper of Mr. Bone. But it does not reveal his real policy in dealing with the citizens of Ruckersville in general, which was conciliatory and, as a rule, delightfully ingratiating, although his patience was often taxed, especially by that class of women in it who had funds of one sort or another to raise and, after the manner of their kind, had the philanthropic instinct highly developed, vicariously speaking. Most women are natural-born mendicants. Their talent for begging has been developed by their long dependence upon man, the money changer. For ten thousand years they have got what they wanted, not by earning it but by asking for it. This does not mean that they have been idle, but their labor has been domestic, maternal, poetic rather than remunerative. No man pays his wife for her services. If he is generous he may be extravagant in his gifts to her, and if he is stingy he may be niggardly, but there is not yet any question of the *quid pro quo* of justice between them. She practices asking and he practices giving—with a kiss or a frown, according to his nature and circumstances. This is why every civilized community is afflicted with that artless and insistent class of successful beggars, respectable and prominent women who prance in and out of business offices or even waylay mankind on street corners with useless tickets for sale at extortionate prices, or with tags for some benevolent object which they coyly pin upon your coat collar for a dime each. The poor creatures desire to do some good in the world; and they have no income of their own, above that needed for Easter and Christmas things, with which to accomplish it. Therefore they beg the necessary funds for charity from other women's husbands and brothers and fathers. It is funny and it is often exasperating.

It Was a Fact That Bone Had Advanced Old Clark Story a Thousand Dollars Upon the Cobalt Expectations in His Cow Pasture

Jim Bone soon discovered that Ruckersville was full of benevolences conducted by women and supported by these involuntary subscriptions. And his growing popularity in the town was largely due to the genial liberality with which he met the female demands upon him for the support of their various enterprises. The Daughters of the Confederacy, for example, took a notion that it would be "nice" to have fresh granite headstones for their soldiers' graves when these should be made up in the new cemetery. It seemed a providential suggestion to them that Mr. Bone should furnish these from his quarry. It was Mildred Percey who waited upon him for this donation. And it was upon this occasion that his masculine diffidence was aroused into a modest suspicion as to the state of Mildred's heart. One sultry Indian summer afternoon she appeared in his dingy office like a full-blown, dewy-lipped rose. She wore a white organdy with a narrow ribbon girdle that looked like the string that tied a fragrant bouquet. He received her in his shirt-sleeves, which was a mistake she observed and forgave with the tender blue skies of her eyes as she leaned gently forward over his desk and laid the matter before him. She had come, she said, to give him the opportunity of rendering a cherished service to the community. She explained that at first there had been some feeling in the town about the opening of a stone quarry in such a place, the intimation being that a proper consideration would have suggested his doing it farther from the sacred center of the residence portion.

"But," replied the offender naïvely, "that is the one place where the granite formation lies in this section."

"I know," she answered as if she were determined to forgive the transgression; "and we all feel better about it now, since it seems quite providential that we can get our tombstones for the soldiers without sending off for them."

"Certainly!" exclaimed Bone, in a perfect agony of benevolence beneath the sweetly bending blue of her eyes. "How many will you need?"

"About fifty, I think. And you would only have the expense of getting them out and having the names and inscriptions cut on them. I myself have promised to furnish an epitaph in verse for each."

"The deuce you have!" was his inward comment, but the meanest miser alive could not have resisted the poetic tremor of Mildred's chin at this moment, nor dampened the brow of her muse with a financial consideration.

"Er—an epitaph is bound to be short, I suppose?" was the nearest he dared come to expressing his anxiety.

"Not more than three or four lines," she thought.

"You couldn't make 'em just two?" he inquired, after a rapid mental calculation of how much it would cost him to have two hundred lines of original verse cut upon granite, not including the names of the dead heroes.

"I do not feel that I could do them justice in less than four lines. You see, they were very brave!"

"That's so!" agreed Jim, as if the idea had taken hold of his convictions and impressed him deeply for the first time.

"Then we may depend upon you for the tombstones?" murmured Mildred, revealing two little pin-point dimples in her chin and hinting with the corners of her mouth at the reward of a smile.

But with his eyes fixed narrowly upon these blandishments Jim had fallen into what is called a "brown study," and made no reply. This was embarrassing. One dimple, then the other, vanished from the surface of Mildred's chin like little stars falling from the opal of a day-breaking sky. The corners of her mouth let go the intended smile and drooped. A mist like April rain suffused her eyes and the blue showed through like hopeless prayers.

Mr. Bone gasped, leaped to his feet, horrified at the impending danger. To be the Jove that

BUSINESS AND GOVERNMENT

By GEORGE W. PERKINS

DECORATIONS BY WILLIAM HARNDEN FOSTER

AT ONE stage in the world's progress people believed that the world was flat; yet the discovery by Columbus was no more revolutionary in its practical effects than man's subjugation of steam and electricity.

At another stage in the world's progress people believed that a person could not be in two places at one and the same time; yet only a few days ago the following incident occurred: Half a dozen men in New York, who were trying to get together on a business trade, met at dinner to discuss their trade. During the course of the dinner one of them was called to the telephone in the next room. He was gone a few moments and then returned to the dinner. In about an hour he was called to the telephone again. On returning and being "jollied" by his companions about his telephone calls, he said:

"The first call I had was from Chicago about a trade I have on out West. I told my associate to consult another associate in Denver and another in St. Paul by telephone, and call me up here and give me their views. The second call advised me that the Chicago man had talked to Denver and St. Paul—that those men were agreeable to the trade, which is also agreeable to me; and the transaction has been closed."

It is a man's mind and not his body that does business. Electricity has given wings to the human mind and made it almost omnipresent, for here is an instance where a man's mind was actually doing business in New York, Chicago, Denver and St. Paul at substantially the same time—and all this was done while he and half a dozen other men were having dinner together and discussing another trade after business hours in New York.

What did our forefathers know of any such methods of trading? And yet this is but one striking illustration out of a countless number that take place every day, all showing how enormously the potential power of the individual—for good or for evil—has been increased through the improvement in transportation and intercommunication of matter and mind. The long-distance telephone alone has wrought as great a revolution in business methods as any revolution at arms ever wrought in a country's political methods.

When Father Was a Boy

SPEAKING of improved intercommunication, the following incident was related to me within the past few days by Mr. I. F. Mack, of Sandusky, Ohio. When he was a boy—in the fifties—his family lived on a farm in Wisconsin. His father decided to send him to school at Oberlin, Ohio. He left his home in Wisconsin by stagecoach; and it took him three full days and two nights to get to Chicago, a distance of a little over one hundred miles. His fare cost him six dollars and fifty cents. On reaching Chicago, he called on a broker to exchange his Wisconsin bankbills for the bills of the State Bank of Ohio. Before the broker could tell on what basis he could make the exchange he had to consult the last issue of Thompson's Banknote Reporter. He examined each bill and then gave the boy in exchange for his hundred dollars of Wisconsin notes ninety-three dollars of the currency of the State Bank of Ohio; and the boy figured that this transaction cost him seven dollars.

This was on Friday afternoon; and the boy asked about the trains going east from Chicago. The broker told him to get his trunk on a dray at the stage office and go with the drayman to the railroad station, so as to be ready to start the next morning—Saturday—at six o'clock, when the train would leave for Toledo, Ohio. At the station the baggageman took the trunk and chalked it with the number of the Toledo station. There were no baggage checks in those days; you simply took your chances. There were four different conductors on the line between Chicago and Toledo, because there were four different corporations or railroads between the two cities. The passenger did not have to change cars, but he had to change conductors and pay each one—about as people do on the trolley lines in New England now. At noon the train stopped thirty minutes for dinner. About five o'clock in the evening the train was nearing Toledo and the conductor went through the train and informed the passengers that the next stop was Toledo, from which place there would be no train until Monday morning; so the boy had to stay in Toledo two nights and a day at some expense before he could go farther—and he had been all day in traveling to Toledo from Chicago!

On Monday morning he took the train at Toledo for Cleveland, Ohio, and found that there were three different railroad companies, independent lines, between Toledo and Cleveland! The train ran about fifteen miles an hour and the boy's trunk was rechalked at Toledo. The cost of transportation for himself from Chicago was more than double what it is now; and, instead of six and one-half hours, it took two days, with a stopover of two nights and a day in Toledo because Sunday intervened.

Changes Since the Fifties

TODAY that same boy, now a man, can board a train in Chicago and reach Cleveland in six hours and a half! He has a check in his pocket for his trunk and there is no possible chance of his losing anything, for the railroad company would have to find that trunk or pay for it and its contents. No time is lost en route and a man rides like a prince! Why? Because those little railroad companies, six or seven in all, between Chicago and Cleveland, were consolidated into one corporation; and, including those from Cleveland to Buffalo, three or four more, they are now represented by the Lake Shore Railroad Company, with its various branches, all under one management, with a fare reduced to two cents a mile.

It has been claimed that some men made money improperly in effecting this consolidation, and it is a matter of actual record that riot and bloodshed took place at certain points when the various consolidations were being arranged, thus showing that selfish, improper methods as well as public opposition were factors in consolidations in those days as well as now. Yet, if some genius who thinks he would do a great service to his country could now introduce a bill into Congress for the purpose of restoring the transportation conditions of 1855, does any sane man think this genius could get a single intelligent vote in the United States for such a proposition?

The foregoing story recalls the fact that in the fifties we had state banks that had no affiliations with other states or the outside world. They were purely local affairs, issuing their own currency, with its local value. In those days we had little local lines of railroad, with the inadequate and poor service that has been described.

The first important broad control undertaken by the Federal Government in business affairs was in connection with our banking system, with the result that now we have national banks all over the land under the complete regulation and control of our Federal Government. No one would go back to the old days of Thompson's Banknote Reporter. Why did the Federal Government undertake this control? Because of the abuses, the failures, the mistakes in the old system; because of the necessity for giving the people a broader and more secure form of conducting their banking business. The aim of the Government was not to break up our banking system into smaller, more competitive units, but to eradicate evils and dangers then existing in the banking business, to preserve to the people the good that existed and to move forward to a broader, bigger, better banking system, which we now have in the form of national banks doing an interstate business, the currency of each bank good at its par everywhere, and these institutions have grown in size under national supervision and control until a bank with one hundred million dollars of deposits is no longer an uncommon thing.

Why the Government Stepped In

HAVING succeeded so well with this form of Federal regulation in the great financial department of our business fabric, what was more natural than that the Government should next consider the Federal regulation and control of the next greatest business undertaking in the country—namely, our railroads? This has finally been undertaken on such a large and important scale, and so completely have the railroads come under Federal regulation and control, that one has to jog his memory nowadays to recall the fact that most of our railroads are, after all, still chartered by individual states. This control bids fair to be as satisfactory to the people as the Federal control of their banks has become—for those who were at one time in favor of this system and those who were at one time opposed to it are alike coming to realize its many benefits; because, though there are certain phases of it still in an experimental stage, enough that is worth while has been accomplished to show that Federal railroad control has decided advantages.

Why did the Government undertake this control of the railroads? Broadly speaking, for the same reasons that it undertook the control of the banks: because of the abuses and the mistakes in the old system; because of the necessity for giving the people a broader and more secure form of conducting their railroad business.

Again, the aim of the Government was not to break up our railroad systems into smaller, more competitive units, but to eradicate evils then existing in the railroad business, to preserve to the people the good that existed and to move forward to broader, more uniform, more stable railroad methods.

In working out this Federal control of our railroads the Government went at least one step farther than it did in the regulation and control of our banks and, by legislation virtually declared itself against ruthless competitive methods in the railroad business of this country. It deliberately took away from the railroads their great competitive weapon—namely, rebates—and in so doing stopped the old destructive competitive methods which had been practiced by the railroads to their own and the people's detriment! No wiser or more helpful commercial legislation than this has ever been adopted by our Federal Government—every one heartily agrees to this. And yet, in its last analysis, such legislation pulled the fangs of

Digitized by Google

competition in our railroad world—for the practical elimination of the rebate evil has left the railroad business in a condition where today railroad men can compete only through having a naturally shorter route or because of having better facilities of one kind or another! In other words, the wasteful, injurious methods of twenty years ago in the railroad business were the ruthless competitive methods, and they have been virtually eliminated through Federal legislation.

A railroad has transportation to sell to the public. Why should it not offer it under ruthless competitive methods if a company selling oil or tobacco or steel is compelled to sell its commodities under ruthless competitive methods? To say that one is a public-service corporation or that it has been given a franchise by the state is not a good enough answer; it is too narrow, too technical in its reasoning. The question is infinitely greater than a mere technical one or a theory of law. It is, at base, a great moral question! The rebate—the railroad's great competitive weapon—stood for secretive methods, for making flesh of one shipper and fish of another, for all sorts of unjust practices; and that is why it was stopped and not because the railroad company was a public-service corporation. Make no mistake about that! The people were the ones who stopped it and they stopped it because they had reached the conclusion that it was immoral and injurious! This whole question of ruthless competition affects our people too keenly, too thoroughly, to be dealt with along theoretical lines; and the whole trouble lies in the fact that the problem is being dealt with almost solely by non-practical men, by politicians, by theorists.

A Governmental Anomaly

WE HAVE seen how the Government took up our banks and successfully applied Federal regulation, and we have seen the immense benefits that have come to our railroad business and the people through the application of a similar Governmental policy. With two such important precedents successfully established, what was more natural than that the Republican party, which had adopted this policy of Federal regulation and control and successfully put it in operation, should, in its national platform of four years ago, declare, as it did, for the Federal regulation and control of large interstate industrial companies, and say that the business world should look forward to some such arrangement as the next logical step in the evolution of business affairs in this country? But presto! Change! In the last three years a complete reversal in the Federal program seems to have taken place. Instead of even attempting to enact legislation to regulate and control our great interstate and international agencies of trade—regulation that would eradicate the evils that exist and preserve to the people the good that exists—the legislative branch of our Government shirked and unloaded its responsibility on the Supreme Court, which was asked to interpret a law passed under ancient commercial conditions in such a way as to fit modern commercial conditions. No more difficult task was ever put up to a body of intelligent men. As a result, our Government has set out to disrupt our great industrial concerns and force them, under the provisions of an antiquated law, to adopt and pursue destructive competitive methods—and the Government is in the anomalous position of prohibiting ruthless competition in the railroad world and demanding it in the industrial world. Yet our railroads are only domestic agencies of trade, while our great industrial corporations are the very bulwarks of our foreign commerce.

Then, too, we are being told that ruthless competitive methods in the industrial world are going to be a blessing to us; that they are going to make business better, cheapen cost to the consumer, improve labor conditions and promote prosperity generally. Yet there is not a man in middle life in this country, familiar with business affairs, who does not remember the awful curse of ruthless competitive methods on not only the business fabric but the individual welfare of the people of this country! What underlies ruthless competitive methods? The desire to supply the public with better goods at a lower price? Is that the moving, impelling force behind it? Nonsense! Ruthless competition is nothing more or less than a titanic struggle between Mr. A. and Mr. B. to cut each other's commercial throats, with the hope of ultimate pecuniary benefit for the survivor! It is an effort to crush out, ruin, annihilate one man for the personal benefit of another man; and the entire path of our industrial progress is strewn with the white bones of just such victims of competition.

There is no logical connection between the evils that have existed in our large industrial concerns and the remedies the Government is trying to apply. In place of regulation we are given segregation and are told that dissolution is the solution—though every practical man knows that dissolution is a mere delusion. Government regulation is all right; but Government repression is all wrong.

The Republican party, in its platform of four years ago, in speaking of the Sherman Law, declared as follows:

"Experience has shown that its effectiveness can be strengthened and its real objects better attained by such amendments as will give to the Federal Government great supervision and control over and secure greater publicity in the management of that class of corporations engaged in interstate commerce having power and opportunity to effect monopolies."

There can be no mistaking the language used. The Republican party expressed itself as being in favor of amending the Sherman Law, and clearly indicated that there existed companies having power and opportunity to effect monopolies, which companies should be supervised and controlled by the Federal Government.

At the same time, the Democratic party declared for a policy that would prohibit the control by a "manufacturing or trading corporation engaged in interstate commerce . . . of more than fifty per cent of the total amount of any product consumed in the United States"; and we are now witnessing the spectacle of the Republican party, which was victorious at the polls, not only failing to carry out the trust plank in its own platform, but actually carrying out the trust plank of the Democratic party, which was defeated at the polls. Could political confusion be worse confounded?

What is the Matter With Business?

IF ANYBODY wants to know what is the matter with business, why we are not so prosperous as we should be, why the country is torn asunder politically, let him contemplate what has happened and he will no longer be filled with wonderment; but he will be filled with amazement that such colossal blundering can take place in such an enlightened country as ours is supposed to be.

Somebody in this country is making a colossal mistake. Somebody is woefully wrong. Is it the theoretical politician or the practical business man? Did our Federal Government make a mistake in adopting a policy of Federal regulation with our banks and railroads, or is it making a mistake in not adopting a similar policy with our interstate industrials? Did it make a mistake in eliminating ruthless competition among the railroads, or is it making a mistake in enforcing ruthless competition among industrials?

Every day we hear it said that we cannot hope to have our business problems seriously taken up by Congress, with the determination to straighten them out, until after the next presidential election. It is distinctly a crime to use as a pawn in the next presidential election a question so vitally affecting the very life of the nation! Must the prosperity of the country, the material welfare of our people, be held back for at least twelve months for the profit and advantage of politicians? Are the people of the United States going to stand for any such program as this? Have we been working since 1776 to build up a country of politics for politicians?

What the present situation needs is immediate constructive legislation; and such a program does not present insurmountable difficulties. Its solution would be comparatively easy and prompt if we could have a little more patriotism and a little less politics. If our legislative friends really want to stop playing politics for personal or party gain and do something of a constructive nature for the country they need but to follow precedents that are already established and that are well understood and approved by the people. No experiments on a large and doubtful scale are necessary. Congress in a very short time could adopt a policy that would give both immediate and prospective relief; and this could be done by working somewhat along the following lines:

Immediate Relief

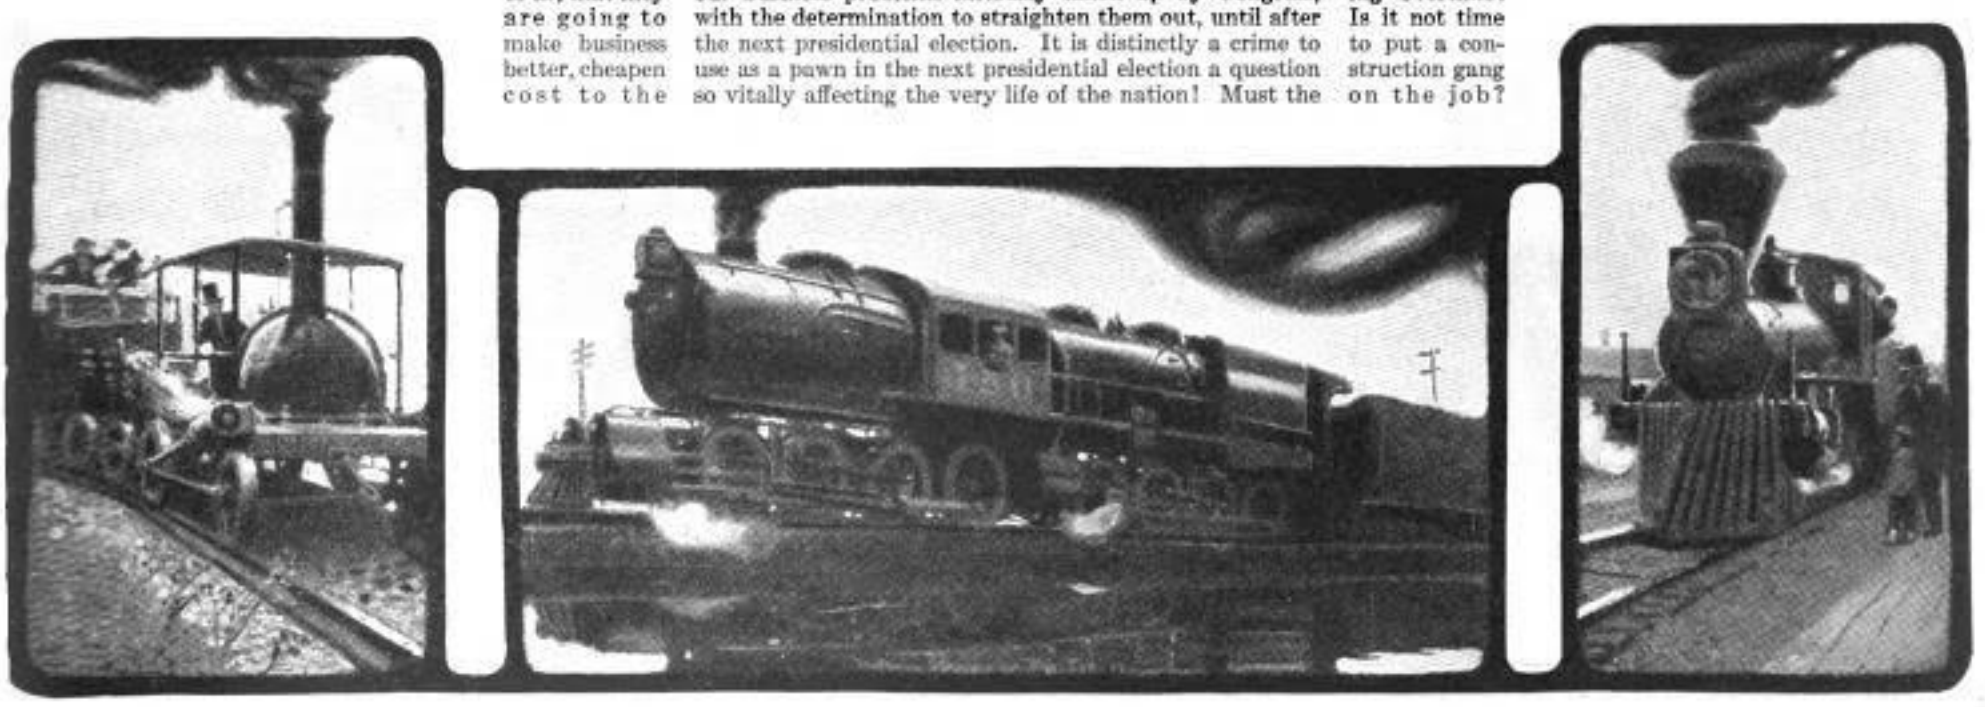
First: Create at once, in or out of the Department of Commerce and Labor, a Business Court or controlling commission, composed largely of experienced business men.

Second: Give this body power to license corporations doing an interstate or international business.

Third: Make such license depend on the ability of a corporation to comply with conditions laid down by Congress when creating such commission and with such regulations as may be prescribed by the commission itself.

Fourth: Make publicity, both before and after the license is issued, the essential feature of these rules and regulations. Require each company to secure the approval of said commission of all its affairs, from its capitalization to its business practices. In the beginning, lay down only broad principles, with a view to elaborating and perfecting them as conditions require.

Fifth: Make the violation of such rules and regulations punishable by the imprisonment of individuals rather than by the revocation of the license of the company, adopting in this respect the method of procedure against national banks in case of wrongdoing.



Prospective Relief

First: The House and the Senate should join at once in appointing a commission to make a careful study of the Sherman Law and the various suggestions that have been made regarding its repeal, amendment and amplification.

Second: Said commission should study and report on the wisdom and practicability of a national incorporation act.

In the foregoing manner immediate relief could be provided. At the same time, the questions surrounding the Sherman Law and national incorporation would be under an investigation that would be proceeding in a calm and orderly manner, with a view to reaching ultimately a wise and permanent solution of the whole question.

A board of control, with power to license such companies as were clearly working for and not against public interest, would take the place of a number of long-drawn-out lawsuits, and would have the effect of placing such licensed companies where they would know they were proceeding along lines not in violation of national laws or Federal authority. Such concerns as could not or did not wish to meet this test would then have no right to complain if they were proceeded against under the Sherman Law. Meanwhile uncertainty would be dispelled simply by working along lines already well understood by the people. The developments of the last few months make it clear that dissolution is no solution! The wrecking crew has been working overtime! Is it not time to put a construction gang on the job?

THE CAPSULE

By HARRIS DICKSON

ILLUSTRATED BY C. E. CHAMBERS

Old Reliable Takes a Capsule and Gets Off at Africa Landing

Sailing away through the boundless day
On a tub of the bluingest blue—
It stretches from here to the Far-and-Near,
Over the rim of the Wonder-Where,
And back again from the Yonder-There.
Gulls dip their duds in the trailing suds
She leaves on the laundry blue.

THE Olga plowed a straight and purposeful furrow. Behind her lay the purple haze of Greece; far ahead, across the Mediterranean, stretched a violet field, whose tawny edge was Africa. Ripples of peacock blue broke across her bow and burst into a shimmer of broken opals. Whirling white bubbles settled down in her wake. All around and about—above, below—there was naught but a vast and vacant globe, a fretted ball of water, with this smoking speck—the Olga—in its very middle.

Old Reliable was not pestered in his mind about the peacock blue, and the violet field troubled him none whatever. It was the vacant globe that bothered Zack. He hungered for the Hot Cat Eating House and somebody who could understand that regular old-timey United States talk. This gibble-gabble on the upper deck and the gibberish amidships made his feet itch to get away. A lonesome, black-faced figure in store-bought clothes and wide-brimmed hat, he wandered from one chattering group to another, smiling in neighborly fashion, but tongue-tied, staked out in the fields of silence, fenced off from his kind. Back and back again he came to the Colonel's chair.

The Colonel had dropped his magazine on deck and was gazing across the blue waters. His mind went straying with Phenician galleys that once had sailed these seas—the Carthaginians, the Normans, the fortunes of Cæsar.

Zack bent over him; "Cunnel, don't you want me to do nuthin' fer you?" The Colonel shook his head; he was dreaming, smiling, drowsing. Old Reliable pushed himself along. "I wish I wuz back home, sick in bed." If he just had hold of the plow-handles he could run a one-sided discussion with the mule.

Up and down the deck he rambled, desolate as a house-dog when the children have gone away—anxious to wag his tail if somebody would only snap a finger.

He did not see a man who watched him intently—Gregory Lykoff, who had caught the Olga at Piræus. How Lykoff smuggled himself out of Russia was an enigma to the police. His affair was urgent. The Government had captured a key to their secret cipher and the Terrorists had to change it. Lykoff carried the new key which was to put them again in communication with comrades throughout the world. Immaculate, languid-looking, with a fastidious black mustache and hands of girlish softness, nobody would pick Lykoff for a man who had toiled in Siberian mines and would dare a second exile. That was fifteen years ago; and today Gregory Lykoff was only thirty-one. It behooved him to be cautious. In the first place, he should have avoided any steamer that flew the Russian flag; but Guinea Ryan, the American boilermaker, brought that imperative order from Alexandria. Even then Lykoff would never have trusted himself on board the Olga if he could have foreseen that the implacable Gargarin—known as the "Bloodhound"—and his shrewdest assistant would climb the Olga's companionway five minutes before she sailed. It was, then, no surprise to find Gargarin assigned to him as a cabin-mate. Lykoff grimly determined to be worthy the tribute that his Government had paid so young a man.

"Hold on! That's the Worst Thing You Could Do"

Lykoff knew there were intercepted letters in St. Petersburg waiting for this key before they could be read; and the lives of men depended upon him. The young Russian had been in serious situations before.

A French novel did not distract his attention from the Bloodhound, who leaned against a lifeboat, with eyes upon the sea. Gargarin wouldn't be squeamish in his methods. Lykoff would be searched before he got to Alexandria—baggage, cabin and person—that was inevitable. Lykoff knew that his Government wanted the key rather than himself; Gargarin knew that Lykoff would carry it in such a way that it could be instantly destroyed—which had happened in several bunglesome arrests. Manifestly Lykoff could not take it ashore, even if he were permitted to leave the ship himself, which was not likely. Neither could he trust Guinea Ryan—Guinea being under strict surveillance. He must get an unsuspected man. From the moment Lykoff set eyes on Colonel Spottiswoode he felt that here was one who could help, but wouldn't. No amount of persuasion or money—neither of which Lykoff lacked—could reach such men. But the black man—the negro? An inspiration! Lykoff had lived in the United States and knew somewhat of these negroes. This black servant would follow his master ashore and pass unchallenged. Once ashore, it was easy for Lykoff or his friends to reclaim his priceless scrap of paper. Lykoff—terrorist, assassin, patriot, what you please—sat placidly in his chair and made up his mind.

. . . . . .

At first it scared Zack shaky in the knees—the abruptness with which that snappy-eyed white man followed him into his cabin and locked the door. There was a command in his gesture which kept the negro from making an outcry. "Your name is Zack?"

"Yas, suh; but everybody, white and black, calls me 'Ole Reliable.'" Zack's smile was feeble, his intentions strong.

"'Zack' is enough; that's easier. Do you want a hundred dollars?"

This reassured Zack mightily; the man talked United States; he said "dollars" instead of those other words which Zack could not understand. "Yas, suh."

"You are going ashore with the Colonel?"

"Sholy, sholy; Cunnel won't lemme git two foot away from him—Cunnel ain't able to do nuthin' fer hisself."

"Very good; I want to send a letter ashore. It is important. Here it is, rolled in this capsule. You must deliver it to the man who will come to you and say 'Zack'—not another single word—'Zack.' He will hand you the other ten sovereigns when you give him the capsule; here are ten now."

It was no dream—that white man put ten goldpieces into Zack's hand, carelesslike, same as if it was nothing but buttons—more money than Zack had seen since Drif quit fighting.

The negro grinned for the sake of better acquaintance. "Mister, how come you knowed so good dat my name was Zack?"

"I heard the Colonel call you 'Zack.'"

"Huh! You knows de Cunnel?" Zack brightened up.

"Heard you call him 'Colonel'—don't interrupt me!" Lykoff spoke peremptorily—Zack loved to hear a white man talk like he meant it.

Suddenly he stopped—a step in the passage; a knock on the door. There was a closet in the cabin in which clothes could be hung—Lykoff stepped inside and closed it as Zack opened the door. "Zack, where are my glasses?"

"I'll git 'em in a minute, Cunnel." And the steps passed on.

Lykoff reappeared from hiding and took out a cigar, a peculiar cigar with a peculiar band. In deep thought he removed the band; it fell to the floor. "Do you understand me perfectly?"

"Yas, suh; sho do."

The Soles of His Shoes Were Ripped Apart, His Purse Unstitched

"You will keep beside your master and never leave him."

"Leave Cunnel? Dat I ain't; who else he got to take keer o' him?"

"Very good. Now, in case anybody tries to get that capsule away from you"—Zack began to show the whites of his eyes—"or if any accident happens, you must swallow it."

Zack gasped. "Mister, dis here stuff ain't pizen!"

"It will not hurt you. I hid it in that capsule so I could swallow it if necessary. Or you can throw it into the sea. It will sink."

"Well, mister, ef it's jes de same wid you, I'll chance it in de water."

"Very good—but only in extremity. One more thing you must not look at me or speak to me. You have never seen me before—remember that." This pleased Old Reliable into a wink and a grin. He loved mystery. He gloried in lodge work; he loved the grips and signs and passwords, which ignorant niggers didn't know.

"Now, tell me what you are to do." Lykoff put him through his paces.

Old Reliable reeled it off like a parrot: "Give dis here pill to de man what calls me 'Zack'—an' I gits ten more dese. Ef anybody acts like he gwine to git it away from me jes drap it in de water. An' I ain't got to let on I knows you."

"Very good." As Lykoff came, so he went—without warning. He did not glance from the door to see if he were spied upon. He must take a chance.

He left Zack standing in his cabin, staring from the goldpieces to the capsule.

"Huh! Dat white man conduck hisself mighty funny about dis pill." Zack tried each sovereign with his teeth, stuffed them deep in his breeches pockets and put the capsule inside his vest. Still in a daze, he picked up the cigar-band that lay on the floor and slipped it on his finger as though it were a ring.

Lykoff and the Bloodhound were having their coffee in the smoking room. Zack passed through and gave his co-conspirator a chill. Lykoff noticed that green-gold ring; the Bloodhound noticed it. Neither one batted an eye. A few minutes later Gargarin examined the steward's stock of cigars. There was none to match the green-gold band; none among the various passengers—the American smoked a distinctly American brand. Gargarin wanted to know how Zack got that cigar band and Lykoff had to account for it. Lykoff waited until the Colonel and Zack were standing at the rail. Zack was restless, looking all around him, missing nothing. Lykoff led the Bloodhound to their windward and casually dropped a band from his cigar. The wind bowled it toward Old Reliable. As Lykoff hoped, the negro saw it coming and picked up the glittering bit of paper. Lykoff said nothing. Gargarin said nothing.

The bearer of the cipher had been none too quick in shifting it to other hands. At lunch he was taken violently ill and carried from the table. The ship's surgeon administered medicines; Lykoff lapsed into unconsciousness

Digitized by Google

When he awoke next morning in the hospital he wore pajamas, his clothes folded on a chair had been searched in every pocket and seam. Not a crevice in his cabin *had been* overlooked, the soles of his shoes were ripped apart, his purse unstitched—Gargarin's scrutiny had been thorough.

"*Luck's* agin me!" Old Reliable mused when his Russian ally showed himself on deck. "Dar's de onliest white *man* what kin talk my sort o' talk—an' I ain't 'lowed to say nuthin' to him."

The Colonel had composed himself for another day of staring at the sea. Zack invented diverting novelties in conversation, but the Colonel wouldn't nibble. The negro straggled off and went foraging for companionship among the third-class passengers. On the forward deck he lingered beside a low platform, carpeted with canvas and sheltered by an awning; four or five bumpy-legged men sprawled beneath this canopy. Maybe they belonged to a sideshow, and they talked aplenty—some kind of bird-store chatter. Zack moved aft. On the open deck amidships he found other men in accordion-plaited skirts and wrapped-up women with curtains drawn across their faces, playing with crazy-looking cards—which didn't satisfy Zack.

It was then that a voice from heaven came unto him saying: "Hello, old man, where'd you come from?"

Old Reliable grinned a noble grin. "Vicksburg, Mis'sippi, suh."

Guinea Ryan, like everybody else, was sprawling in the shade. He wore clothes, but of no describable kind. "What's your name?"

"Zack Foster, suh; but everybody, white and black, calls me 'Ole Reliable.'"

Guinea Ryan's hands, covered with sandy hair, showed how the desert had burned them raw; then they had healed over, but remained raw-colored. He held a stubby pipe with thumb and forefinger. Three fingers were missing from the left hand. Freckles, generously spattered, accounted for his name. Everybody from the Mersey to the Yangtse-Kiang dubbed him "Guinea"—Guinea Ryan, cosmopolite citizen, whose hammer rang around the world, battering rivets from Buenos Aires to Bombay and patching boilers from Vicksburg to Vladivostok. His face cracked open in a noiseless laugh: "How's old Paddy McGill, the b'iler-maker, on Levee Street?"

Zack switched on all his facial illuminations. "Lordy, mister; is you 'quainted wid Mister Paddy? I knows 'im reel good."

"Sure, I knows Paddy; many's the night I've laid flat o' me back in them steamboat b'ilers, holding the hammer while Paddy battered rivets from the outside." Guinea sat up, made a pivot of his middle-rear, swung around and motioned Zack to a seat. "The world ain't no bigger'n a sardine box. Set down. Where are you going?"

Zack's tongue untied itself and went to rattling: "I'm gwine to git off dis boat at Afriky Landin'. I done traveled a long way to larn dese niggers how to plant cotton; and I reckon I knows all about cotton—an' all about niggers too. Now, dar's de Cunnel—yonder he, sleep in dat chair wid dem white clothes on—he's gwine wid me to he'p show 'em how."

"Show 'em how to do what?"

"Make cotton. You see, mister, I got a plantation; an' Cunnel he owns a little lan'—dat's how come dese gent'-men 'vailed on me an' him; dey jes nacherly had fidgets 'til us got started off to Afriky."

"I wonder is that the new Sudan Syndicate?" Guinea spoke aloud, but it was to himself.

"Yas, suh; I heered 'em call dat name, 'Suzanne'—Mrs. Suzanne sumbody or 'nother; we's gwine up on her place. Widders can't never manage dey own property."

Far be it from Guinea to smile and scare off a good thing. But he knew that vast Sudan; and knew the syndicate whose ambition it was to plant fifty thousand acres. "So you are the man that's going to learn them niggers."

Old Reliable tried to be modest. "I'm him."

"Do you think you'll get along with the Shilluks and Dinkas?"

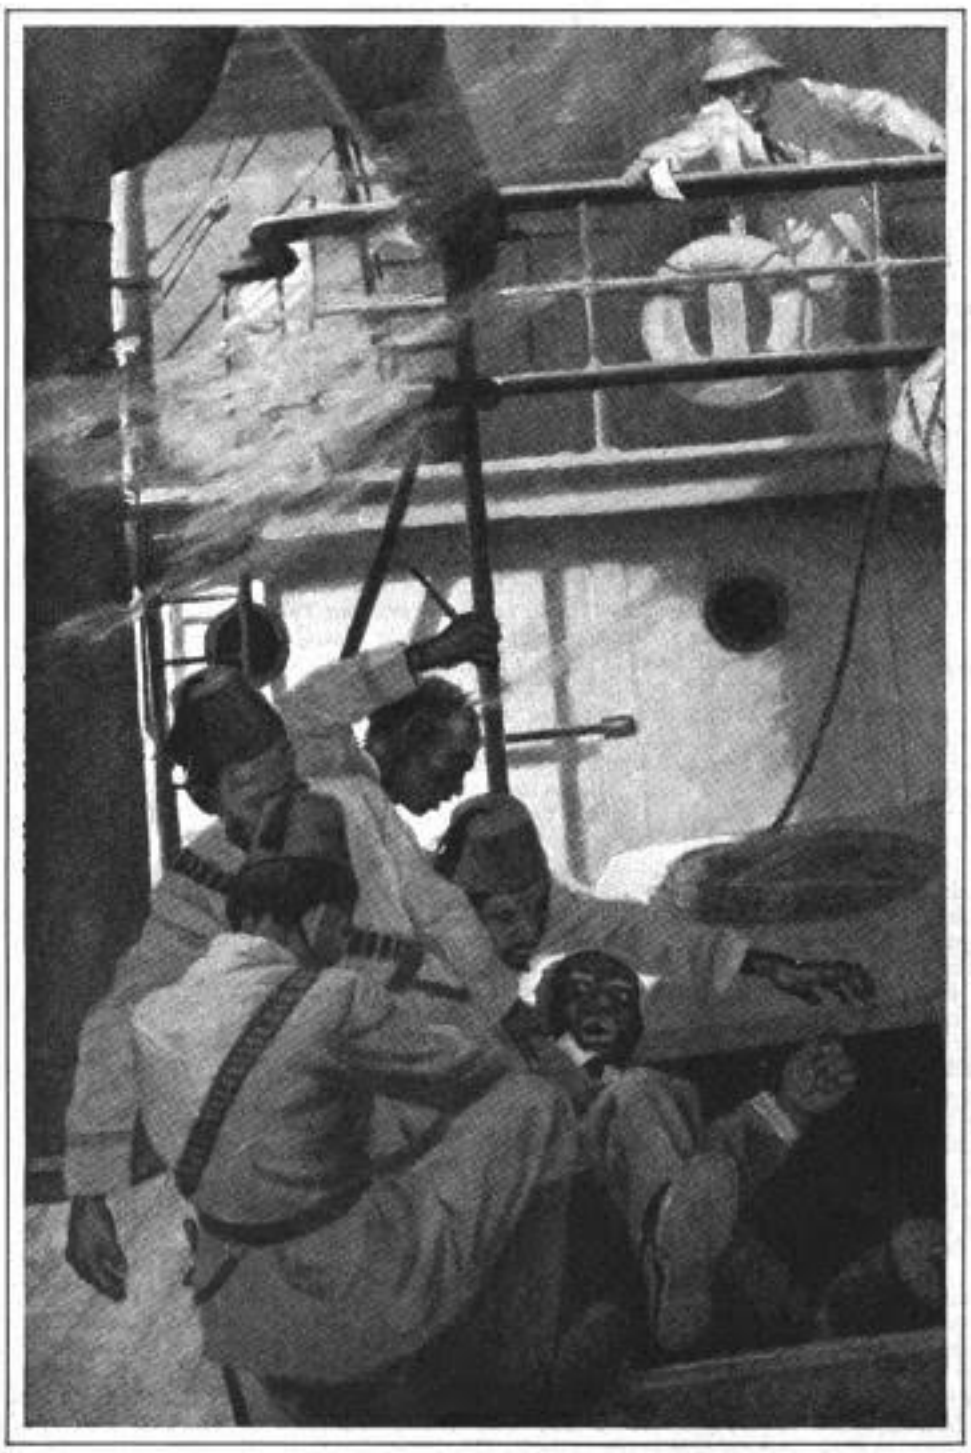
"What's dem?"

"Them's the kind of niggers that live up yonder."

"Lordy, mister; 'tain't no two kinds o' niggers—all of 'em jes de same. Some white folks argufies dat dey's diffunt—but d'ain't."

Guinea drew himself closer. "How are you going to do?"

"'Tain't but one way to larn nuthin' to niggers: Git straight behine 'em every mornin' at fo' 'clock an' hustle 'em out to de field; den foller every track dey make. Dey got to git up when I rings dat bell—no sore toes an' no mis'ry in de back. Sore-toe niggers can't draw no rations on Saddy night. Now dar's de Cunnel! He ain't no more'n a baby. But dem niggers on Sherwood Plantation, dey thinks de sun rise an' set in Cunnel. Ef he say black is white dey sets deir min' by dat, same as dey sets deir watch by dat big clock in de sto'."



The smile at Guinea's mouth lost itself in a wilderness of freckles. He leaned forward and whispered: "Better get your Colonel to tell them quarantine soldiers about you—try to make them believe black is white ——"

"How come, mister?" Zack didn't relish the uneasy way in which Guinea glanced behind him. A negro couldn't feel anything but skittish surrounded by gipsylike men in skirts and women whose black eyes peered at him through a slit in their facecloths.

The Irishman began to talk; his Adam's apple went scampering up and down that scraggy neck. Zack got excited; Guinea might swallow it or let it go. Since Guinea won his fame for single-handed lying he had never cornered such a ravenous listener. He pumped that negro's hide plumb full. Old Reliable leaned forward breathlessly. Guinea gulped and went on with his tale: "Ten thousand folks dyin' every day—cholera—three-fingered cholera—coffins piled up in the street, same as crossties—an' my pardner—Sh! He turned black in the face while I was lookin' at 'im and dropped dead."

"Dar now!"

"Old nigger, did you ever see a Irishman run? This ship was pullin' out—I made one leap an' grabbed them steps. Them Rooshians was goin' to fumigate me."

"Lemme 'Lone, You Yaller Niggers! Turn Me Loose. I Been Black All My Born Days"

"Fumigate! Huh!—War dat all? White folks used to fumigate nigger houses continual in time o' de yaller fever."

Guinea nodded complacently, letting Zack run on.

"At de fust off-startin' niggers tuk on mightily; den got so dey didn't min' it. One smart Aleck he 'lowed he know how to fumigate and kill skeeters. 'Twarn't no trick in dat. So he shet all de do's and winders an' pasted paper over de cracks. His ole gramma had been tuk down wid a mis'ry an' couldn't git out er de bed; he 'low 'twuz all right—jes let her be. She say she could put 'er head under de kivers. Den he sot fire to dem sulphur pans. Huh! Never made nary skeeter cough—but dat fool nigger cost my lodge forty-six dollars dat next comin' Sunday to bury ole gramma."

Guinea pulled deep on his pipe. "That ain't no way to fumigate; they fixes yo' clock over here—fixes it good and proper. See them fingers?" Zack had been wondering how Guinea lost those three fingers. "That's what they done to me in Alexandria. Made me stick out my tongue and squirted a lot o' stuff down my throat with a hoss-syringe; doctor commenced to feel my pulse, started way up here to the shoulder an' kep' afeelin' down. The minute he touched them three fingers he said: 'Whack em off; he's got cholera in 'em!' There wasn't no 'ifs' and 'ands' and 'buts' about it—Gippy soldiers whacked 'em off."

"Uh! Uh!" Zack grunted. "I heered you speak dem words 'bout three fingers o' cholera but never knowed reel good what 'twuz." Guinea's lips twitched; he looked mighty mournful. Presently Zack volunteered in a subdued tone: "When we has quawnteen white folks sets aroun' de edge o' town wid shotguns and won't let nobody come in."

"That part's all right," Guinea admitted. "You wait 'til they git you at Alexandria—this evening. They stuffed me into one o' them tall boxes, like a coffin standing up on one end. Gippies was going to strangle me with sulphur and I couldn't speak a word o' their talk. I hollered out the grand hallin' sign o' distress—and a lodge brother heard it. He come pretty nigh not gittin' me out quick enough. That's what blistered me all over. Look at them hands!" Zack had his mind on the lodge. "I b'longs," he whispered eagerly.

Guinea nodded and winked. "Mighty good thing. Plenty brothers over here."

"What dey gwine to do to me when I gits to Afriky Landin'?"

Guinea looked pained; he hated to say. "Sh! Keep yo' eyes skinned. If you see 'em comin' in a boat, with a yaller flag, look out for snakes. That yaller flag means they are goin' to fumigate. Heap of soldiers come aboard. Sergeant stands at the top o' the steps; doctor goes and makes all first-cabin passengers stick out their tongues, feels their pulse an' gives 'em a certificate."

"I'm fust class," Zack announced quickly.

Then Guinea added: "That's only the white folks—third-cabin an' dark-skinned people they chunk 'em overboard in a barge an' fumigate 'em."

"Dark-skinned? Dark-skinned?"

Guinea explained very clearly: "When a feller catches cholera he turns black ——"

Zack squirmed. "I kin prove by Cunnel dat I always is been dark-complected."

"Better prove by Colonel that you are white."

"Huh! I'm gwine straight to Cunnel wid dat news." His coattails were already flopping against the stair-rail when Guinea jerked him back.

"Hold on; that's the worst thing you could do. When them Gippies commence asking: 'Where's that black man with the widebrimmed hat?' the Colonel he'd say: 'That must be Zack. He was here a minute ago.' Then they'll get you."

The negro sank helplessly on the covered hatchway. When he got his breath again he asked: "What makes 'em fumigate black folks and don't meddle wid white folks?"

Guinea whispered ominously: "This ship sailed out o' the Black Sea."

"My Gawd! My Gawd! Mister, what is we gwine to do?"

"When I see 'em dumpin' bedclothes in them barges I'm going to hide."

PHILADELPHIA, MARCH 16, 1912

Express and Postage

TO SEND a ton of goods by express in this country costs over sixteen times as much as to send it by freight. Express companies protest, however, that their charges are very reasonable, yielding only a modest return upon the investment after operating expenses are paid.

Now the next time you send a parcel by express observe what happens. First, the agent weighs your parcel. Next he consults two or three cryptic rate books to see what the charge should be. Next he writes you a receipt. Next, if you stay to see it, he makes out a waybill, which he copies into his record of forward shipments, and fills up a statement of the forward shipments to be sent to the company's auditor.

Congressman Lewis, of Maryland, enumerates eleven different operations, exclusive of weighing the parcel and the actual forwarding and delivery of it; but if your parcel is of mailable size you can go to the post-office, weigh it and stick on a stamp. The one operation of stamping takes the place of eleven at the express office.

No doubt you have sometimes stood five minutes while the express agent simply figured out the charge on your parcel. There is no good reason for these vastly complicated express tariffs. If the post-office were doing the business probably there would be a few big zones—the proper postage would be ascertained in five seconds, stamps affixed and the business ended.

An Industrial Relations Commission

TAKE the Lawrence woolen mills strike as a typical example: In January a law went into effect reducing the hours of labor from fifty-six to fifty-four. Without prior notice to the hands, wages were correspondingly reduced. A strike followed. Presently there was rioting. A person was killed by a stray bullet. The strike leader was locked up as an accessory to murder. On behalf of the men it was charged that wages were unconscionably low, that mill-owners had filled up their establishments with Italian immigrants, throwing out the higher-priced native labor, and so on. The National Association of Wool Manufacturers issued a long statement, denying all charges and putting the blame on labor agitators.

This is what always happens in case of a strike. In the heat of the fight each side makes interested and passionate charges, denials, counter-charges. Presently one side or the other gives in. Then the public dismisses the episode, without retaining any clear idea as to its cause or effects, and we are no better equipped to deal with the next violent labor dispute than we were with the one just passed. Broadly speaking, we do not deal with labor problems at all, except when a strike-fit is on—which is the worst possible time to study them.

In recommending a Federal Commission on Industrial Relations the President says: "What is needed is some system, devised by patient study in advance, that will meet these constantly occurring and clearly foreseeable emergencies—not a makeshift to tide over an existing crisis." The first step in this direction would be a commission, under authority of the Federal Government, to survey the ground. It is often charged that the union leaders, who are practically the only spokesmen for labor, do not really represent the rank and file of workmen. The proposed commission, going directly to the workmen themselves, would get an expression the validity of which could not be questioned. Working in times of industrial peace and without reference to any particular controversy it would give us a decidedly clearer, broader, more impartial reflection of the relations between capital and labor than we possess at present. If there is any subject upon which clear and impartial light is needed it is exactly this one of the relations between capital and labor.

The Weapon of the Future

THE French government has decided that hereafter no foreign security shall be listed on the Paris Bourse except with the approval of the Cabinet. The recent downfall of Premier Caillaux was brought about by charges that he had entered into secret negotiations with Germany over the Moroccan affair, holding out the inducement, among others, that certain German securities should be listed on the Bourse. Hereafter the entire Cabinet must be consulted before any foreign bond or stock is put in touch with French capital by way of the official stock exchange. Immediately after adopting this new rule the privilege of quotation on the Bourse was withdrawn from the bonds of the Crédit Foncier Cubain—a large private investment institution. The reason was that Cuba had delayed settlement of claims of French citizens for indemnity on account of losses suffered during the Cuban war for independence. The usual remedy in such cases has been a naval "demonstration," equivalent to a threat of bombardment. Now France strikes with gold by shutting Cuban securities out of her investment market. That France brought pressure upon the German government during the Moroccan crisis by withdrawing French capital from Berlin is well known.

For some time it was generally believed if either side in the Chinese civil war were able to borrow money abroad it would win; and Secretary Knox, in a note to the German Ambassador, expressed the sound idea that genuine neutrality in regard to China required Western nations to "look with disfavor" upon loans by their citizens to either side—in short, lending money to either the Royalists or the Republicans with which to buy cannon was as much a breach of neutrality as lending them the cannon.

Every one is familiar with the tables that state the fighting power of nations in terms of regiments and battleships. The table of the future will show a nation's fighting power by stating its bank deposits and gold reserve.

Mr. Taft's Southern Supporters

FROM a Washington dispatch to the Florida Times-Union we learn that President Taft, Secretary Hilles and Campaign-Manager McKinley "were astounded when they found that, in South Carolina, forty-two out of the forty-three counties have negroes as chairmen of the Republican county organizations, and of twenty-five executive committeemen twenty-two are negroes. . . . No statement is to be had from the White House, but it is understood that things are red-hot behind the scenes."

Commenting editorially upon the dispatch, the Times-Union observes: "It will not pay President Taft to be too particular about the color of the delegates that go from the South to vote for him in the Republican Convention. A vote is a vote. If Mr. Taft thinks that by objecting to the preponderance of negro voters he will divide the South he is mistaken. If the President thinks the negroes could not be relied upon to vote for him he should know that they will be as reliable as the whites. Many negro delegates could be bought outright with money, but as large a percentage of white Republican delegates could be bought—only they would take offices or political pull instead of money. . . . The truth is, no Republican candidate can rely on Southern delegates."

The Times-Union, of course, is a prejudiced witness; yet, giving nearly a third of the votes in the nominating convention to delegates who come with no mandate from Republican constituencies, but only to dicker for the spoils, is not a condition that makes for the uplifting of politics. Four years hence we believe the candidates of both parties will be chosen by the voters of the parties.

How Shall We Honor Lincoln?

SOMETHING must be done, of course, to spend the two million dollars Congress has appropriated for a grand memorial to Lincoln at the national capital. Owing to a melancholy paucity of original ideas, recourse will probably be had to the conventional expedient of erecting a large mass of marble and bronze which very likely will be as little inspiring as most of such masses are, and which will have only as much to do with Lincoln as the capital of Nebraska has—that is, it will bear his name. We have the lowest possible opinion of conventional monuments, and our opinion tends to decline in proportion as the size and cost of the memorial rise. What, we wonder, can be done with two million dollars' worth of marble that will penetrate the beholder with a sense of Lincoln as Saint Gaudens' simple statue at Chicago does? The monument will really be to Congress, or to the sculptors. The man who wrote in perfect simplicity that he might soon be pressed to the wall for bread but must go on in the fight against the extension of slavery would hardly find himself in it.

The national capital has plenty of conventional and dull monuments which, however, nobody minds, because they are relatively inconspicuous—scattered in the parks, where lovely foliage invites the eye away from them, or bunched in Statuary Hall, where one can skip by with a few brisk steps. A conspicuously placed two-million-dollar monument that was not a success would be something of an affliction. The chance for success seems doubtful. We can think, offhand, of other ways to spend two million dollars, where the chance for success would be greater and the relationship to Lincoln at least quite as obvious.

Mr. Howells at Seventy-Five

WE REMEMBER very well when many people of good intentions regarded William Dean Howells as a terribly wrong sort of person. His political views were held to be unsound, with dangerous leanings to Socialism. More important than that—for he was even then our foremost man of letters—he was devoted to an insidious scheme for blighting American literature by keeping everything truly noble out of it. A great many young critics imagined Mr. Howells as an ogre lying in wait at the gates of literature, with an ax, for the star-eyed goddess Inspiration. Some of them talked about him as though they had seen his hands dripping with that beauteous personage's gore.

At Mr. Howells' seventy-fifth birthday, however, all the world that knows anything whatever upon the subject knows he was perfectly right. We don't mean with reference to that once tremendously important issue of realist versus romanticist; in fact, we have completely lost track of that in recent years. We mean he was always courageous, always sincere, always and invariably kind. That is as right as it is given to any controversialist to be.

A Protective Suggestion

FOR many years English agriculture has been in a declining way. The amount of wheat produced, in proportion to the amount consumed, has tended steadily to fall. An eminent Englishman puts the case this way:

"Wheat can be grown in the United Kingdom at a fair profit to the farmer when the price is equivalent to a dollar and three cents a bushel. Some years it drops below that price. The farmer then meets a loss and reduces his wheat area; but if he were sure of never getting less than a dollar and three cents he would greatly increase his wheat area because he could always count upon a fair profit. So let the government guarantee that minimum price. If wheat sells higher than that the guaranty will cost the government nothing. If it sells lower the government will make up the difference by a bounty, and the people will know precisely how many pounds, shillings and pence they are paying to protect the home industry."

This is an exceedingly neat and plausible scheme. It gives protection only when protection is actually needed. At the same time it guarantees the home producer a fair profit. Our protected industries say in the party platforms that they want protection only when actually needed and guaranty of only a fair profit; but we wonder how a scheme like this British one, which automatically produced those results, would really strike them?

Unscrambled Eggs Marked Up

THE estimable gentlemen who conducted the Standard Oil Trust did fairly well in the matter of keeping the wolf from the door when they were mostly going on their own hook; but the powerful intervention of the Federal Government in their affairs seems to have started them off in the direction of practically unlimited wealth. Less than a year has elapsed since the Supreme Court declared them a combination in unreasonable restraint of trade and ordered them to dissolve. It was only last fall that the formal dissolution was effected. The shares of the various units into which they resolved themselves have been rising in market value pretty steadily ever since. The last quotation at this writing gives an asked price equivalent to seven hundred and forty dollars for a share of the old Standard Oil Company of New Jersey, which is much more than that stock was worth in its undissolved state. As there were, in round numbers, one million shares of the old company, dissolution seems already to have been worth something over a hundred million dollars to the fortunate stockholders. It should be remembered in this connection that stocks generally are very dull at present, and other leading issues sell well below the best price even of 1911, which was far from a boom year. At this rate it is rather staggering to think what Standard Oil in its dissolution will be worth in a boom market!

WHO'S WHO—AND WHY

Serious and Frivolous Facts About the Great and the Near Great

Louisiana's Hall of Fame

THERE is this to be said for the Sunny South: When they get ready to swat the bosses down where the cotton grows they swat the bosses real swats, not ontenting themselves with the slaps on the wrist that pass urrent for boss-rebukers in other localities. It may be ged it takes them a long time to get ready, but that a boll-weevil come-back and to be classed with other pidopterous retorts.

The kernel of it is that they swat 'em; and the proof of is found in that little affair that recently attracted the tention of Louisiana, where, if you have a smattering of e history of your own times, you know they had bosses ith bark on them, and where they were bossed from orn until what is held to be dewy eve in that vicinity.

primary was responsible for it—a real up-boys-and--them primary—which was one of the first primaries e voters of Louisiana had ever enjoyed—if not, indeed, e first—and positively the first chance the citizens of the ate had had to do a little thinking and voting on their wn account, instead of on account of the bosses and their account.

This is what happened: The men in power had succeeded r years in holding things as they wanted to hold them y invoking the power of regularity. They made a fetish f Democracy. To be irregular was to be un-Democratic, nd to be un-Democratic was some sort of a high crime nd misdemeanor that would surely call down dire disaster n the heads of those who strayed from the beaten path. nd the bosses were the judges of this highly-essential egularity. Inasmuch as the Republican party in Louisiana ffered vague refuge to those who were inclined to revolt, was held to be necessary to be bossed and regular or in the pariahs by leaving the bosses. And the bosses aw to it that the list of pariahs was kept constantly on the anding galleys, ready for instant use.

Meantime a long succession of state officials had had hings pleasantly their own way, and there had arrived a overnor who was even more genially a dictator than his redecessors. He carefully took over all the perquisites in he way of machinery and machinists that he found in orking order when he went in, and added a few little nprovements of his own from time to time, including a hoice collection of workers called game wardens, whose uties were toward the governor's game. All was merry s a Mardi Gras until two young men, by name Thomson nd Ballard, outlanders from Maryland and Virginia, pened up in an afternoon paper they own and began to all attention to various goings on. They called attention ontinuously and stridently. Presently another paper oined in. Then the people took a hand. They began o put a few timid whys. No attention was paid to hese queries naturally, but they kept on asking: and it asn't so long until the timid whys became temerous ow-about-its—and the Hour was at hand!

The Conquest of New Orleans

WHEN the Hour—capital H, please—arrives in politics the next important factor is the Man—capital M. At this exact moment, when the Man was needed, John M. Parker, a cotton broker, with ideas of his own about government, and a reputation as a hunter—indeed, he taught The Colonel how to shoot bears in the canebrake—left his office on Union Street and walked to the center of the town of New Orleans, remarking the while that now was the time for all good men to come to the aid of a new party. So he organized the Democratic Good Government League—and organized it in a statewide sense. This was held by the bosses to desecrate the sacred principle of the primary, for which they had had the desecration privileges for many, many years. The bosses were strong for the sacred principle of the primary, merely exacting that they should run the primaries themselves and profit by them.

John M. Parker went up to Ouachita Parish and stayed there a few days. When he came back to New Orleans he had the man who was to be the head of the insurgent Democracy of the state, by name Luther Egbert Hall, recently elected to a twelve-year term on the supreme bench of the state. Southern Louisiana had heard little of Luther Egbert Hall, but they took John M. Parker's word for it that Luther was the Man; and when John M. showed him in New Orleans they liked Luther's looks and said he would do.

It was no small job to get Luther Egbert Hall into the field. It isn't so easy to live in Northern Louisiana and support a father and mother and rear a family and get far enough along to attain a seat on the bench of the supreme court, especially when all must be done by hard work and

He Selected for His Text, "Down With the Bosses!"

with no unearned increment lying round. That salary of six thousand dollars a year for twelve years seemed about as much to Hall as was necessary for comfort; and, even if he won in the primaries, the salary of governor is but five thousand dollars a year and the term but four years, instead of twelve. Hall had no money. He had practically a life position, and one for which he had shaped his life; but he responded. He said he would make the fight.

The people found Hall a big, blond man—not fat, but big—with hair of that color the old folks call "sandy," pale blue eyes and a ruddy face—a red-blooded sort of person. He was diffident, not used to mixing with men, a slow talker and a slow thinker, and heavily judicial in all his acts. Having entered the race to down the bosses he selected for his text, "Down with the bosses!"—and stuck to that. The bosses knew they were in for a struggle, and they selected their candidates and proclaimed platforms that embodied all the reforms any of them could think of and some they couldn't. Inasmuch as this was the sort of a platform Hall was running on all the contestants stood on the same base as to principles, and the campaign immediately became one of personalities.

There were three candidates. The inquiry by the people was: Which is most likely to carry out the pledges all are making? The candidates went at it, slang-whanging strenuously. They said Hall couldn't be elected because he couldn't make a speech and because his name is Luther. Hall learned to make a speech, and replied that his name was Luther—and that Luther, in his lexicon, meant: "Down with the bosses!" The Creoles of the sugar belt didn't seem to care much for the Luther part of it; and, moreover, somebody had started the story that M. Michel, the candidate supposed to appeal to this vote, wasn't Michel at all, but was Mitchell. And when Michel showed up in the Teche country with a band of performing "Cayjins," and couldn't talk in the vernacular himself it helped Hall a lot.

They shouted that New Orleans wouldn't stand for Hall because he was a Prohibitionist. Whereupon Hall said he favored local option and self-government, drank a few toddies from time to time, and remarked that he intended to down the bosses! They dug up what they said was a most damning letter, that showed dickering with the bosses for support. "If I wrote it I must have written it because I need the votes," replied Hall, "and down with the bosses!" Then they said he gambled in a bucketshop and welshed. "The welshing part of it is a lie!" asserted Hall; "and, as for the rest of it, I speculated some in copper—I was a sucker—I was in good company—and down with the bosses!"

"Ha!" said the men of New Orleans. "He isn't such a chilly, cold, unimpassioned person as we thought. He is a sport and will take a chance." And Hall replied solemnly: "Down with the bosses!" They came to bat with the charge that he owed money on a piano and owed a grocery bill in Monroe. "If," said his supporters, "he had manipulated his high office on the district bench to such profitable purpose as his two opponents have used their offices a few trivial embarrassments like a grocery bill wouldn't oppress him." And Hall replied that, for his part, he would leave it to the grocers of Monroe if he owed them anything—and, in the pulsating meantime, "Down with the bosses!"

Hall stuck to this line; but he proved himself to be a politician, now and then, by taking advantage of all the practicalities that came his way. He was slow, but reasonably sure. And when it came time to vote he was so far in the lead over his nearest competitor that the competitor pulled out, leaving the field to Hall—thus making him the next governor of Louisiana, after the election formalities are completed.

Hall has a great chance. He will be, of course, governor of the whole people and the Democratic governor as well—the head of the party instead of the leader of a faction. If he is big enough to refuse to allow the old system to absorb him he will be a conspicuous figure in the politics of the South. If he isn't, then the newspaper boys, and John M. Parker and the rest, will have to try again—for, and this is a sure thing, the bosses are to be downed and kept down! The road is open before Hall. It is up to him; and his friends say he will not disappoint.

A Dark Outlook

C. C. WALKER, assistant general manager of the Chesapeake and Ohio Railroad, has for cook on his private car an old negro who has been with the Walker family for many years. Recently Mr. Walker was compelled by business to stay in Covington, Kentucky, for about a month; and he lived in his car in the railroad yards there.

Nelson, the cook, grew homesick for Richmond, and wrote this letter to Mrs. Walker:

Mrs. Walker Pleas dont send Mr. Walker no colars nor soks no cuffs no neck ties he has more now than he Will live long enough to youse if he stay out hear if he dont come hoam in a very short time he an I Both Will be brought hoam in a Corph We are Both as near Dead With a Deap could he is Getting Woarse Every Day this C. & O. Will be hear When he an I ar both gone and of all Railroads I love my self Best Please hav him to come at once Love to all yours Nelson T. Elum.

OVER

I am takeing the Best care of him I can his Room lookes like a younge Drug Store With Pills of Every kind But none seams to do no good an I have taken some of Everything in cincinnati an covington an I am Worse off now than When I First started so you know the Rest. NELSON.

A Fast Tongue

ARTHUR W. THOMPSON, general manager of the Baltimore and Ohio Railroad, was riding in a freight engine in the Cumberland division of that road a time ago.

The train was a heavy one, made up of refrigerator cars loaded with the maximum tonnage for the engine. As they approached a grade the engineer leaned over to the fireman and yelled: "Warm her up, old tallowpot, warm her up. Slam a potple into her so she'll be katish to take the big dip for the knob."

"Will you kindly translate that for me?" asked Thompson.

"Why, sure," said the engineer. "I told him to slip some chow to her so she'll razzle-dazzle the hump."

Sooner or Later

A NEW appointee of the Democratic House of Representatives went to Oscar Underwood, the majority leader, and said: "Please, Mr. Underwood, get your people to give me a cooler office. Under that tin roof where I am I'll roast."

"Well," replied Underwood, "you will eventually; so why not now?"

A New Omelet

Four eggs, two tablespoonfuls milk, two tablespoonfuls Underwood Deviled Ham. Beat eggs, adding the milk. Salt to taste. Pour into *well-buttered* frying pan and cook as usual. Warm the ham in cup set in hot water. When omelet is firm but not dry, spread ham on evenly, fold over and serve at once.

TASTE THE TASTE

"You'll Just go *Crazy!*"

WHEN this omelet, golden and smoking, is brought on the table you'll go crazy over the taste. It's the taste of good, old-fashioned ham, steeped with the seasoning of salt and sugar and hickory smoke. Ham that's boiled *en casserole* to keep in this mouth-watering flavor. It's then ground fine and mixed with a dressing of 42 bland spices. Delicious? Well, just *taste* it!

You'll begin using it all kinds of ways—in salads, soufflés, turnovers, croquettes, timbales, scallops, stuffed eggs, rarebits. And for sandwiches—always!

There are recipes for all these easily-made delicacies in our book "Taste the Taste and Some Cookery News." Send us your grocer's name, mentioning whether he keeps Underwood Deviled Ham, and we'll mail you a copy—free. Or, enclose 15c and we'll send can to try.

You can have the best *omelet you ever tasted* for tomorrow's breakfast by ordering some Underwood Deviled Ham *today*.

Made by the Wm. Underwood Company, A-52 Fulton St., Boston, Mass.

UNDERWOOD DEVILED HAM

A BEST SELLER

TO THE majority of novelists this article may have the coloring of a fairy tale; and sometimes it seems to me that tomorrow or the next day I must wake up and leave my hall bedroom, hustle down to the office and begin another day's work poking into other people's affairs. For I began as a reporter, much against my father's wishes. He was not in any way connected with the craft, but he knew many journalists and something of the life they lead.

"My boy, I'd much rather see you a journeyman plumber; there's money in that business. As a newspaper man you generally end with a salary less than that with which you began. It is a life of hard knocks from first to last, full of petty jealousies and temptations. Newspaper work is the one business in which loyalty in the end counts for nothing. You may have fine illusions now, but these will be shorn from you quickly enough. You will learn to drink whisky neat, to play poker, to smoke expensive cigars, to consort with cheap actors and cheaper politicians. Your finer qualities will become callused and true ambition will cease to have a meaning. On the other hand, if it is your purpose to make journalism a stepping-stone to better things you will find no better preparatory school. But get out of it as soon as you can."

"Oh, I don't intend to stick to the business. I want to be a novelist," I replied with all the confidence of eighteen.

My father laughed. "Well, I'll get you a job. But always remember that there's a roof here when they leave you out in the cold. Don't come to it until you are whipped though. It's a rough fight; but don't let any one but your mother hear your whimper when they hit you on the nose. Hit back and keep on hitting back. Put a kick in your work. You'll have to push some good fellows out of the way, but that's all in the game."

He wrote to Chicago to a newspaper friend, and one day the telegram came. My father repeated his advice. I took it, along with a suitcase full of clothes, a Bible—slipped in by my mother—and a copy of the Maurice Leloir edition of The Three Musketeers. The advice and the Bible, I am ashamed to say —— But no matter! I wore out the clothes and The Three Musketeers and saw life on both sides, the seamy and the brocaded. What days of marvel those were, when each morning sent me forth to meet some new change! Never were two days alike. It was very exciting. I learned to stand pat on four of a kind, to drink beer instead of whisky, and to accept all the good cigars that came my way. I learned also the value of keeping my mouth shut and of opening my ears as wide as I possibly could. I encountered some strange experiences, and often I find some one of them quite naturally dovetailing into a novel. I believe that during that year and a half spent in Chicago I "covered" everything: murders, thefts, dinners, balls, blackmailing cases, political crimes—and there were plenty in Chicago in 1891—street-car scandals, wrecks on the lake, prizefights, World's Fair graft—before the buildings were completed—and Heaven knows what else! My, but I was busy!

Mr. Dana's Little Joke

In between times I wrote highfalutin sonnets about the "impenetrable ego of our cosmos." They were terribly profound, so profound that I may have been the innocent cause of many an editor's breakdown. I used to send the poems to Charles A. Dana—and he used to send them back. Once he wrote on the margin of a sonnet that he would gladly remunerate me for my cipher code. It hurt, but I remembered my father's advice about hitting back. I kept on sending. Dana was tireless. One day I turned the whole batch over to our editorial writer, who was one of the best paragraphers of his time and today is one of the most prosperous of our librettists.

"What you need," he said soberly, "is an interview with Eddie Foy. That'll knock this out of your system."

"No good?" I asked with heavy heart.

"Honestly, a young fellow like you ought to be ashamed to write such drivel. I know it's drivel because ten years ago I used to write the same stuff."

"All right. Get me that Foy interview." He did.

Foy was playing Ali Baba. I interviewed him. The next morning when I came down to the office—I was working on an afternoon sheet that has long since gone out of existence—I found one bay-leaf pinned to my future wreath. Funniest story Chicago had seen in weeks, and without malice or rancor! To this day, when Foy visits my town, we shoot a game of billiards; and I am sure he doesn't connect me with that Chicago cub.

In a way I found myself. I began writing comic lyrics, and many of them appeared on the editorial page. Some of them reappeared in that column known as Poems Worth Reading, Charles A. Dana's pastime in the Sunday Sun. I was beginning to have a very good opinion of myself; the rest of the staff called it "swelled head." If there is one place in this wide world where the swelled head is short-lived it is in the city room of the average newspaper. In the parlance of the craft, I blew up one day and found myself out of a job. And I couldn't find another in Chicago. This was not because I lacked ability, but because a peculiar state of affairs existed in those days that I could never quite fathom. Any man who had been fired from one paper was unable to get a job on another. And salaries were a disgrace. On the newspaper on which I worked the highest salary was not over forty dollars. I was getting only ten.

Getting into the Game

I left Chicago in the unknown hands of Peter Dunne, Kirke La Shelle, George Horton, Frank Pixley, John T. McCutcheon and George Ade, all of whom have since become well-known. In those days we used to brush each other's elbows at a dairy lunch counter, where the odor of gas took the flavor out of everything but the cheese. Perhaps we borrowed from each other; I don't remember; but I have a vivid recollection of pawning my watch regularly on Saturdays and of redeeming it on Monday—payday. Few newspapers pay on Saturday, for the obvious reason that printers are often cursed with *Wanderlust*, and when they have money in their pockets Saturday they are likely to disappear for parts unknown.

The blight of the wandering foot fell upon me. Between the years of 1892 and 1896 I worked on dozens of newspapers. I covered drama and book reviews; I became telegraph editor, news editor, city editor, cartoonist who drew and etched his own drawings. I set type, I published a society weekly and lost all my savings, I fell in love and out, and only once in all that time did I send home for money. I wrote a comic opera, and De Wolf Hopper wept in my presence as he handed it back to me. He said that he did not know that it could possibly be done so badly.

From my father and mother—bless them both—I inherited a keen sense of humor, and I suppose that is why I never take my novel-writing seriously. This sense has been a fine buffer; I fell softly where another man might have stayed down, broken. Many a time when I felt like giving up a laugh intervened to save me. Grimly I stuck to jests and jingles, and by-and-by I began to sell them. I became a professional humorist. I made from two to three thousand a year.

All my disappointments, all my discouragements, fell upon those days of joke-writing. At first I used to run up the street to meet the postman; later I let him ring the bell.

It was during the first days of the comic supplements. I used to work out a batch of verses, dialogues, sketches and ideas for illustrations. I had a system. I'd send the batch first to Life, and Mr. Masson would take two or three; then Harry Leon Wilson, of Puck, would retain a few more; and so on down the line. What were left I used in the columns of my own newspaper, so there was never any waste.

I was twenty-seven. One of the boys suggested that I give up the comic-opera idea and write a novel. I began one. Within six months it was completed. Enter the fairy story coloring. Two weeks after its completion the story was running as a serial in a New York paper. For the serial rights, here and abroad, I received seven hundred and fifty dollars. No more jokes for mine!

This May Be Just What You Need

Beyond all question, some of the every-day beverages are harmful to heart, nerves and digestion.

Many mothers refuse such drinks to their children, yet by strange inconsistency use these same beverages themselves.

In consequence, sooner or later, and according to the degree of natural strength of the individual, there comes a time when ill results are surely felt.

Then, it is well to heed Nature's warning.

Every member of the family can drink

POSTUM

with certainty of benefit.

A change to Postum has proven a revelation of comfort to thousands, and the delightful flavour of this wholesome food-drink makes the change easy and pleasant.

"There's a Reason"

Digitized by Google

I have never had a novel rejected by a *publisher.* From the time I wrote my first story up to this day it has been plain sailing. The first publishers to whom I sent the *serial proofs*heets accepted it immediately. I was to exempt the first thousand. As *every*body was selling books by the hun*dreds of thou*sands I figured that my first check would be eighteen thousand dollars. *It* was exactly fifteen dollars. My sensations were similar to those of a man who has had his hat jammed suddenly down *over* his ears. Up to date, in cheap editions, that first novel has brought me in twelve thousand five hundred dollars.

I went at it again. The second book "took the country by storm." I showed the first check to my father.

"Beats plumbing," he admitted.

Publishers all over the country were after me with fat contracts. I remained where I was, and today I am glad I did. An author makes a great mistake in changing his publishers after he has made his first strike. It creates in the second house a vague distrust that the author may change publishers again; consequently the book is not pushed as it should be. The second house hesitates to pave the way for a third publisher. A dozen or more young writers have lost their public through this short-sightedness; and when you lose your public it is something you never can find again. Mine has been very loyal to me.

How Best Sellers are Scored

Every time I complete a book my publishers and I meet and go over the ground thoroughly. We decide who shall illustrate it, whether it shall be dramatized, whether it shall be printed in cheap editions, when it shall be published. Always I leave the date of publication in their hands, for they know far better than I the psychological moment for the launching. And half the game is in getting your book out at the right time. For my part I consider August or September the best time, because the fall book gets the benefit of the holiday sale. One thing we have never done, and that is to put more books on the market than we honestly believed we could sell. As a result, very few authors stand in better with the trade—meaning the jobbers and the booksellers. I am not averse to going in and shaking hands with a bookseller and asking him how the market is going. Why shouldn't I shake hands with him? He's one of the loyalest friends I have.

"Here is a rattling good yarn," he says to a customer. "Know the author. Comes in when he happens to be in town. No Great-I-Am about him—just an ordinary human being like the rest of us."

Shrewd, you'll say. Well, maybe. Business is business. To be sure I do not go round the country shaking hands with the booksellers. But if I happen to go to Pittsburgh or Detroit or Baltimore—and plays take me here and there across the continent—why, I hunt up a dealer, buy some magazines, tell him who I am and talk shop with him.

I used to have fine high ideas about book-writing; but today, after eleven years of it, I look upon it as a business—a clean, honest business—and I am proud of it, for there must be some merit to my stories or I could not hold an audience for a decade. And every penny in the dollar is untainted. No one is forced to buy my books; no one has ever been tricked into buying a copy. Those who buy have bought them from the start. They expect excitement, fun, lots of dialogue, diversity of scenes, mystery, something they may begin after dinner and end at midnight. Problem novels? Divorce? Politics? Sociology? Never in the world! My public wants amusing romances; their problems they have with them always, and my business is to make them forget these for an hour or so. Some day—when I am forty-five—I am going to write the novel I have had in mind these ten years. Its canvas is as big as one of Tintoretto's. The probabilities are, however, that I shall never complete it.

I have had my place in The Bookman every year as regularly as clockwork. I have been first, second and third most of the time—perhaps I have stood third oftenest. But do not let The Bookman's reckoning blind you to the truth that it is not invariably accurate, and this not even the editor himself can deny. Let me explain: If you stand first in any city you are credited with ten points; second, with eight points; third, seven points; fourth, six points; fifth, five points; sixth, four points. Now, just for instance, let me take Birmingham, Alabama. Supposing I stand first there and in Chicago I am fifth or sixth. This gives me a higher standing in the final list; but in Birmingham I may sell two hundred copies, while in Chicago I may sell two thousand. I remember once I stood fourth for the month, and yet in the end sold twelve thousand copies more than the man who stood second, for we compared notes. But The Bookman is a good tonic for the publisher. He wants to get there as well as the author, and only a popular novel will bring him there.

I have never had a first edition of a hundred thousand copies; my publishers have generally limited the advance printing to seventy thousand. Then we wait for the reorders and fill accordingly. Thus you will never find a stack of my novels in a bookshop six or seven months after publication. The sale of a popular novel is made within five or six months; after that it is dead, very dead, unless it happens to be a David Harum or a Cabbage Patch. You never can tell what a book is going to do, however; that is always on the knees of the gods. Advertising pushes a book just so far; after that it has to be pushed by you and by me and by the other fellow.

The English editions of my tales have been annual jokes. Less than a hundred pounds will cover all I have made from the Isles. Germany has paid me five times that amount, and even Italy hasn't been so bad. Once I wrote a historical novel, lots of fighting and sacrébleuing. An Italian dramatist made a drama out of it. I saw it one night in Rome. Everything had been eliminated but the gore. There was so much of that that it threatened to roll over the footlights and extinguish them. I had a great time.

I write one novel a year, rarely anything else. For with me short stories literally are condensed novels. I should lack wisdom—commercial wisdom, if you will have it so—if I sold for five hundred dollars what I could, with a little more labor, sell for fifteen or twenty thousand dollars. I work perhaps six months; then I go fishing, or I pack up and go to Florence or Peking or Bombay or Rio Janeiro. "My office is where I can hang my hat." I am an inveterate globe trotter. I believe in travel; the least it does is to keep the invention fertile; and no one, not even my severest critics, will accuse me of being trite and uninteresting. And I love the work. I would not exchange my happy independence for all of Mr. Morgan's wealth. I am young, I am not forty, I am happily married; and not even the days of adversity robbed me of one truth—that a man is as happy as he wants to be.

A Quick Quarter-Million

I go over a story three times, once roughly, once carefully, and then I take it to the typewriter and add the final polish. I never sketch a scenario. I first find my happy ending; the events and climaxes that lead up to it are practically unknown to me until I get to them. I am often as much surprised as the reader is.

Here is an illustration of the whimsical turns of fate: Some years ago I sent a short story to the editor of THE SATURDAY EVENING POST, but it didn't quite get there. I sent it to a popular magazine in New York. The editor and his readers accepted it, but the publisher himself said no. On rereading it I saw the possibilities I had missed. I made a novelette out of it that sold sixty-eight thousand in the regular and two-hundred thousand in the cheap editions. It will be produced shortly as a play. And, as Henry James says, there you are!

Here is my ledger for eleven years:

Royalties on eleven novels and three novelettes	$180,000
Royalties on dramatizations of same—so far	40,000
Serial rights	16,000
Total	$236,000
Outlay in pencils, papers, and so forth—approximately	300
Total balance	$235,700

Almost a quarter of a million. Quite a tidy sum for a chap who, once upon a time, all but ran his legs off for ten dollars a week. I have forgiven Chicago; it took a long time to do it. Some of the money I have still. I suppose this is due to the fact that it came in quicker than I could spend it. And I herewith forgive the critics, one and all. When I look at those numerals I rather believe I can afford to.

The Cost of Eating

IT is the high cost of eating that is troubling the fathers and mothers of this country.

42½ cents out of every dollar earned by the average family is spent for food—More than is spent for all other necessaries of life.

One hundred thousand grocers and butchers are now protecting their customers and attracting new ones to their stores by using **Toledo Springless Scales,** which **guarantee correct weight.**

When you buy your provisions, look for the Scale with the Sign:

"Toledo—No Springs—Honest Weight"

Mr. Retail Dealer: Some scales are not right and the public knows it. **Customers lack confidence in spring scales.** Changes in temperature affect them. They are seldom in balance. Wise merchants are discarding them.

The scale is the only fixture in your store in which all customers are financially interested. They have a right to know that it is right. It measures the amount of goods they get for their money. Your customers are your greatest asset. Why not please them and attract new ones by using the scale which everybody knows gives honest weight?

The Toledo Springless Automatic Scale deals justly on both sides of the counter. It will get for you every cent to which you are entitled. It will give your customer every ounce due him. It will increase your trade and add to your profits.

It stops overweight—loss of goods.
It stops shortweight—loss of customers.
It contains no springs, and is always reliable.
Its superiority is universally recognized.

Seventy-two styles and sizes. Price, $30 and upward. A better scale for the money than you can get from any other source. Liberal allowance for your old scale and easy monthly payments. Illustrated pamphlet free to retail dealers upon request.

Thousands of grocers and butchers will not see this advertisement. They may be now thinking of buying new scales. Do your butcher and grocer a favor by signing and giving him the coupon below. It will help him to solve one of his most difficult problems and will save him $5.00.

TOLEDO COMPUTING SCALE COMPANY

Makers of Honest Scales **Toledo, Ohio, U. S. A.**

Coupon-Value $5.00

This coupon, when signed by customer and merchant, will be accepted by the Toledo Computing Scale Company, any of its seventy branch offices or two hundred and twenty-five agents, as a $5.00 payment upon the purchase of any Toledo Scale, the price of which is not less than $100. Only one coupon accepted on each scale purchased. This coupon good until June 1, 1912.

Two Charming Dresses

At Money-Saving Prices

350175—An Exquisite Frock of sheer imported Lingerie, rich Brussels lace insertion and exquisite Swiss Eyelet Embroidery. Waist surplice style trimmed by Brussels lace insertion, piped with Satin Messaline, carried down below girdle, and ending in two loose tabs. Same idea carried out in back. Short sleeves of embroidery and lace. Crossover effect both front and back of crochet and Valiance insertion and messaline piping. Body of waist trimmed with crochet insertion to match. Skirt tucked in clusters at top, and made of skirt of Brussels lace and Swiss embroidery, trimmed at bottom with white fringe and a fold of messaline. Girdle is of satin messaline. Dress fastens in back. White only, with messaline trimming, either King blue or Am. Beauty color. Special Price, mail or express charges prepaid $12.48

No. 350175 $12.48

350180—Smart Little Summer Dress of imported White Cotton Corduroy—a splendid new material, resembling Piqué, weave and launders beautifully. Broad Gibson plaits over shoulders to yoke depth in front extending to waist line in back. Front is exquisitely embroidered in eyelet design and has a stitched fold effect as pictured. Low neck finished with Dutch collar of heavy Venise lace. Material is cut away beneath lace. Elbow sleeves, fancy cuffs, trimmed with braid ornaments. Skirt is made in shaded tunic effect with stitched fold down front and is trimmed with braid ornaments. Dress fastens in back. White only. Special Price, mail or express charges prepaid . . $6.98

No. 350180 $6.98

Sizes of Dresses—Regular sizes 32 to 44 bust measure, skirt length 40 inches. Also in proportions to fit Misses and Small Women, 32 to 38 bust measure, skirt length 36 inches. All dresses are made with deep basted hems so that length can be adjusted by ourselves if necessary.

Effect of Gold Production on Security Prices

By ROGER W. BABSON

IF BY some magic method each yardstick in the world should increase ten per cent in length during a night it would be necessary for all merchants using yardsticks in the sale of goods to increase their prices the next morning ten per cent; and yet this increase would mean no real increase in the cost of the goods to consumers! Now this illustrates the principle underlying the increase in prices due to the increased production of gold.

Gold is the standard of value in the same way that the yardstick is the standard of measurement; and as this standard of value is increased or decreased, prices must necessarily increase or decrease correspondingly. Therefore, if the small investor will grasp this first fundamental principle he will learn the relation between the increase in gold production and the increase in merchandise prices.

The following table shows the production of gold during the past fifty years; and in a broad way the world's price movement for raw materials, merchandise and labor corresponds thereto.

If freed from outside arbitrary and artificial factors, especially the impetus to speculation caused by increased gold production, prices of raw materials and merchandise should correspond to the changes in the value of gold, or rather of credits, with great exactness.

PRODUCTION OF GOLD IN FINE OUNCES

*Estimated

Of course, theoretically the extension of our bankcheck system and the velocity with which our checks, bills, and so on, circulate have the same effect in raising prices as has the increase in our gold supply. In the last analysis, in fact, prices are dependent upon the factors shown in the following formula, which has been worked out by Prof. Irving Fisher, of Yale University, who has carried to completion some admirable work by Professor Kemmerer, of Cornell:

$$MV + M^1V^1 = PT \qquad \text{Therefore: } P = \frac{MV + M^1V^1}{T}$$

In this formula

M = Money in Circulation
V = Its Velocity in Circulation
M^1 = Deposits Subject to Check or Credits
V^1 = Their Velocity of Circulation or Activity
T = Volume of Trade
P = Price Level

We see, therefore, that, as the factors M and M^1 or V and V^1 increase, P also increases and the price level advances. As V is fairly constant, this means that the increased price level of today is practically due to the increase in money, M—including gold, banknotes, and so on; to the increase in deposits subject to check, M^1; and to the increased velocity of circulation of these deposits, or V^1. The resulting increase in M^1V^1 is largely reflected in the great increase in bank clearings.

Therefore it will be seen that gold itself is only one factor and that an increase in credits of any form—that is, bank deposits subject to check—and especially an increase in the velocity of circulation of said moneys and credits, are also real factors. This last is very important, for certainly one dollar circulating twenty times a year has the same effect as twenty dollars circulating only once a year or ten dollars circulating twice a year. As to Professor Fisher's correctness there can be no doubt, so far as his reasoning refers to raising the general level of prices throughout the world.

However, it should also be remembered that it is not the raising of the prices of everything that is causing the present acute dissatisfaction, but rather the abnormal increase in the prices of certain necessities. In other words, as money gradually depreciates in value there should be no social disturbance so long as wages, interest, rents and every commodity increase correspondingly; but when wages do not correspondingly increase there is dissatisfaction. In the same way, though Professor Fisher correctly diagnoses the causes of the present uplift of the world's price level, yet the above equation may not satisfactorily explain the abnormal increase in the prices of a few necessities that have increased above the general price level. For the causes of inequality of such price increases one may well refer to the writings of Professor Laughlin, of the University of Chicago. In brief, he states these to be as follows:

1. Credit and Prices
2. Changes in Expenses of Production
3. Tariffs and Taxation
4. Wages and Unionism
5. Changed Agricultural Conditions
6. Monopolies and Trusts
7. General Extravagance
8. Speculation

As labor is in reality a commodity, the same as cotton, iron and foodstuffs, the price of labor should increase proportionately with the price of raw materials and commodities. Therefore, theoretically, the clerk and laboring man who reads THE SATURDAY EVENING POST need give no thought to the gold theory or the increased production of gold. I say "theoretically" because, theoretically, as gold abnormally increases in amount and consequently depreciates in value, and the prices of groceries, provisions and clothes increase, so wages should increase in like proportion. In other words, so long as the laboring man's wage increases correspondingly with the increase in the price of provisions, drygoods, rent, and so on, he is neither worse off nor better off than before. Consequently I say that, theoretically, a salaried man has nothing to fear from increased gold production and the increase in prices coming therefrom.

Unfortunately, however, this is where there is a difference between theory and practice. Owing to the organization and central control in business, the price of groceries, meats, drygoods, and so on, are

Hot

Gingerbread

and maple sugar sauce

Made with Crisco

ONE of the most delicious Southern desserts is gingerbread, served as soon as baked, with a thick, maple sugar sauce.

Make the gingerbread, using Crisco where you have used butter. It is better than when made with butter, and of course there is a saving in cost.

Butter is nearly one-fifth water; Crisco is *all* shortening. Crisco makes the cake richer, gives it a more delicious flavor, a finer, softer texture. As there is no water in Crisco, gingerbread made with it does not dry out; it stays fresh twice as long.

Crisco is entirely vegetable. It is made from the finest edible oils, rich in food value. It is as digestible as olive oil.

Wherever you have been accustomed to use butter in cake making or in pastry, or butter and lard, or lard alone, use Crisco and see how much better are the results.

Start with the hot gingerbread. Make it tonight and learn how delicious it is.

GINGERBREAD

½ cup sugar
*½ cup Crisco
1 egg—white and yolk beaten separately
¾ cup molasses
¾ cup milk (sour if possible)
1½ cups flour
1 level teaspoon salt
2 level teaspoons ginger
1 level teaspoon powdered cinnamon
2 level teaspoons baking powder or 1 of soda
½ teaspoon cloves

Bake in a moderate oven 30 to 45 minutes.

SAUCE

1 cup (½ lb.) maple sugar
1 level tablespoonful Crisco
1 egg
1 cup boiling water

Dissolve the maple sugar in the boiling water. Rub together the Crisco and the flour. Add gradually the boiling syrup; add lastly the beaten egg. Then cook to the fire and stir briskly until thickened.

*Crisco costs only one-half to one-third as much as butter

Packages 25c, 50c, and $1.00, except in the Far West

Crisco never varies—it is always the same

On request, we shall mail a fully illustrated booklet showing many other advantages of Crisco, the new, and heretofore unknown, strictly vegetable product for frying, for shortening, for cake making. Address

The Procter & Gamble Co., Dept. K, Cincinnati, Ohio.

immediately adjusted to any change in the *standard* of value—namely, gold; but, owing to the blindness of labor and the fact that many of our labor leaders so little *understand* fundamental economic principles, the price of labor does not rise so rapidly as the prices of commodities. Moreover, this especially applies to non-unionized labor—such as bookkeepers, clerks, schoolteachers and other inside employees. Of *course*, in a way, labor is very highly organized; but it is organized on the same principle as is the Russian Empire—namely, *through* the autocratic efforts of its rulers. To accomplish good results, however, something besides force and arbitrary rule is needed to accompany organization. Russia is infinitely more organized than America; but give me America as the place in which to live!

Therefore in connection with the discussion of this gold theory I wish to take this opportunity to urge all readers of THE SATURDAY EVENING POST who are members of labor organizations to insist on electing educated leaders—men who understand the fundamental principles of economics. Moreover, I wish that every Central Labor Union in our large cities could have classes in applied economics, in order that it might understand certain fundamental principles relative to prices, wages and interests. This would enable labor more often to row with the tide instead of so often bucking up against the tide!

Why Money Rates Should Rise

The reason why the capitalist or merchant is so often able to take advantage of the laboring man is simply because the capitalist raises his prices when fundamental conditions warrant it; and he lets his prices sag when he sees that lower prices are inevitable, rather than arbitrarily hold them up. In other words, many labor organizations, not understanding these fundamental laws of trade and prices, miss the real opportunities of obtaining increased wages or better conditions, and very often strike at psychologically the wrong time. This is one reason why the price of labor has not always fluctuated correspondingly to the average price of commodities, and why so many people that are working on salaries are suffering today from the increased production of gold.

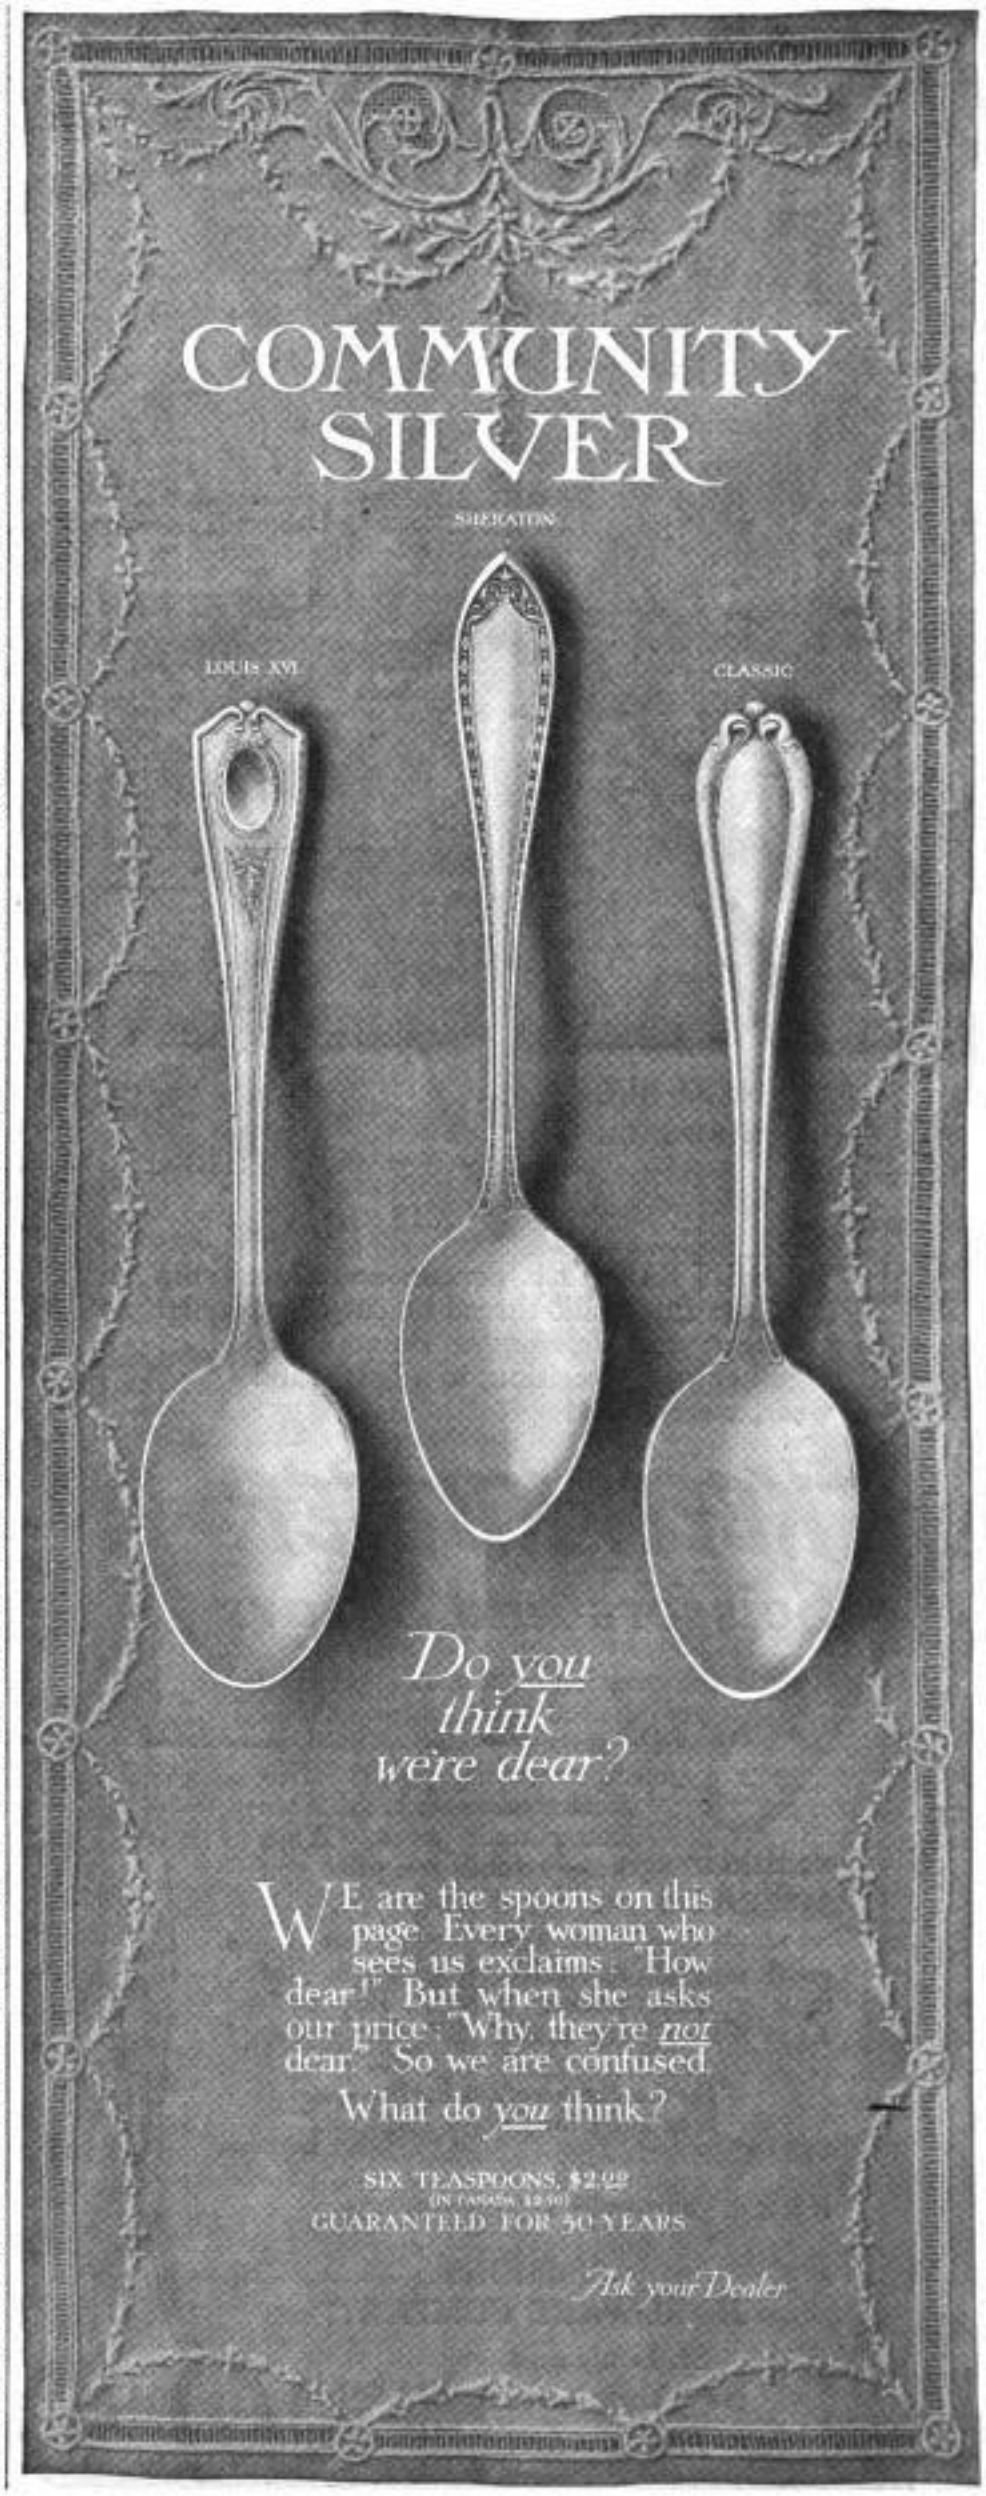
Money, also, is a commodity, the same as cotton, iron and foodstuffs. Consequently, if increased gold production increases the price of these latter commodities interest rates must also increase, or the purchasing power of the income on a given amount of capital will diminish. This is nothing more than right and fair. For instance, a woman who is living on her income, if obliged to pay more for her groceries, rent and clothes, will need a higher rate of interest or rent for her money. Therefore interest rates must increase with these other commodities; or the person who is living on the income from his investments will come out at the little end of the horn. Therefore it is fair to assume that, so long as gold continues to depreciate in value, capitalists will endeavor to increase the rate of interest proportionately. Now, granting that the rate of interest will gradually increase, it is a simple matter to think how this will affect the prices of bonds and fixed interest-bearing securities.

For instance, the 4 per cent bonds of the average large city of the Central West are now selling approximately at par, so as to yield investors 4 per cent on their money; or, in the parlance of the trade, these municipal bonds are now said to be selling on a 4 per cent basis. Now if the gold production—and I admit that this contemplates a large "if"—is to continue to increase abnormally, and interest rates for such loans increase from 4 per cent to 4½ per cent, then these cities some years hence will be obliged to pay 4½ per cent on these bonds in order to sell them at par. In such a case their 4½ per cent bonds will be selling at par; but this change will affect all of their issues, so that all of the bonds of said cities will then be selling on a 4½ per cent basis.

Now if a bond is today selling at par and on a 4 per cent basis the same bond must sell below par in order to yield 4½ per cent. This means that all bond issues of said cities now outstanding may, some years hence, be selling for less than they are today.

Now whether or not this will happen depends on whether or not gold is to continue to increase abnormally and depreciate in value; and it is not within the province of this article to discuss this subject. Therefore readers must be careful to note that I do not say that bonds are to decline in price; in fact, so far as the immediate future is concerned I believe that certain highgrade bonds will tend to increase in price. Nevertheless, the thought underlying the theory is that, as the production of gold abnormally increases and thus depreciates in value, the price of commodities and interest rates should likewise increase; and the price of bonds and other fixed interest-bearing securities should decrease.

According to this, the price of preferred stocks should likewise decrease in value, though this, of course, includes only such preferred stocks as now pay their full dividend and are thoroughly established and distributed. So far as this applies to certain high-grade preferred stocks, such as Union Pacific Preferred, Boston & Maine Preferred and similar seasoned stocks, this doubtless may be true; and if bonds decline in price these high-grade, low-yielding preferred stocks should likewise decline in price. I do, however, feel that it will be a good many years before this law applies to such preferred stocks as United States Steel Preferred, American Sugar Refining Preferred, and other preferred stocks now yielding from 6 per cent to 7 per cent.



When it comes to a discussion of the effect of increased gold production on the prices of the common stocks of our leading railroads and industrials two other factors must be considered—namely:

1. If, owing to abnormal gold production, the price of money is to increase, a railroad which a few years ago, when interest rates were low, issued some one-hundred-year bonds at 3½ per cent interest—as did the New York Central & Hudson River Railroad Company—will have a distinct advantage over competitors who must continue to borrow at high rates. Even now the New York Central must pay fully 1 per cent more than it paid when the 3½ per cent mortgage was issued; and, if the expectations of the exponents of the gold theory are to be realized, the time may arrive when corporations like the New York Central must issue 6 per cent bonds in order to sell at par. Therefore it will be seen that, if gold is to continue to depreciate in value, the investor should purchase only short-time securities, while railroads and industrial corporations should borrow for the longest time possible.

The Dividends of the Future

For instance, assume that a railroad has one hundred million dollars of 3½ per cent bonds which it issued some years ago at par, and also has one hundred million dollars of stock upon which it now pays 5 per cent. Assume that a competitive line some years hence must issue one hundred million dollars of bonds, but, owing to the depreciation in gold, must issue them as 5½ per cent bonds instead of 3½ per cent bonds. Now, if all other conditions are the same and if both roads are now able to pay 5 per cent on their stocks, the first-mentioned road, which already funded its debt at 3½ per cent, should in years to come be able to pay 2 per cent more on its one hundred million dollars of stock than the competitive road will be able to pay on its one hundred million dollars. In other words, if gold continues to depreciate abnormally in value, though the stocks of both roads are now paying 5 per cent it is easy to imagine that the time will come when the first road, with a funded debt on a 3½ per cent basis, will pay 7 per cent, though the second-mentioned road, with a funded debt on a 5½ per cent basis can still pay only 5 per cent.

In view of this fact, it is the common stocks of our railroads that will be helped by this depreciation in gold; and such stocks—instead of declining in price, as in the case of bonds—should increase in price, or at least hold their own. I add this latter phrase because—according to the theory in the foregoing paragraph—if this depreciation takes place the 7 per cent stocks of the first-mentioned road will then be selling for only what this 5 per cent stock is selling for today, owing to the fact that all interest rates have increased correspondingly. In such a case, instead of the stock of the first-mentioned road selling higher some years hence, this will simply hold its own; while the stock of the second-mentioned road, which has not yet refunded its indebtedness at a low rate, will decline in price.

2. Not only should the corporations which have already refunded their indebtedness at a low rate receive an increased income therefrom but they should be allowed to increase their rates in accordance with the increase in everything else. If the prices of raw materials, manufactured goods, wages and interest all increase, there is no reason why freight rates and passenger rates should not be allowed also to increase. As prices and prosperity increase there is no reason why railroads should not be allowed to share this greater prosperity with others, and there is no doubt they must do so to a certain extent. It is believed by some that increased gold production causes a certain abnormal speculative atmosphere, and takes the appearance of general increased prosperity and also increases gross earnings, which in turn should still further increase the value of corporation common stocks. Of course, theoretically, a very large amount, if not all, of this increase will be absorbed through operating expenses, as more must be paid for materials, more for labor, more for real estate and every other item purchased. You cannot beat the laws governing this universe, which are fundamentally based on Newton's great law: "Action and reaction are equal." The mechanical engineer can increase the diameter of any wheel to increase the speed of the machine of which it is a part, but as that speed increases the power at the circumference of the wheel decreases.

The Situation Reversed

Therefore, to my mind, there is doubt as to whether the advantage which the enthusiastic supporters of the gold theory anticipate will come to the common stocks of our large railroads and other corporations. Law is law, and no way has been discovered yet whereby it is possible to obtain more than one hundred cents from one dollar. The purchaser of common stocks may see his dividends increase if gold depreciates in value, yet I fail to see why the price of these stocks should materially increase, though they should hold up much better than certain preferred stocks. In other words, as far as I can see the only advantage a holder of common stocks can receive is that he will not be affected adversely if gold abnormally increases.

With certain industrials which have large supplies of raw materials, such as the United States Steel Corporation and some of the fertilizer companies, this is a different proposition.

Rising prices for commodities may not interfere with the earning power of corporations that sell commodities the prices of which are not limited by law; in fact, these corporations are in many cases gainers by this influence, which tends to advance prices.

It may be added that railroad companies which own valuable coal lands, and so on, may find that, in case of a great use in commodities, such property may be a great factor in increasing the prices of their stocks. The railroad company, then, may be considered as preëminently a seller of transportation, and has been so regarded in this article.

Most corporations, however, whose products are subject to regulation by law, such as traction, gas and electric lighting companies, are subject to practically the same influences that operate against the prices of railroad stocks. Their cost of production advances easily and inevitably, and the selling price remains fixed or advances with difficulty and under protest. I should like to elaborate here and show the possible effect of Government control of large industrial corporations on the possible increased prices due to too much gold, but lack of space forbids.

Instead of gold abnormally increasing in production, what if it should abnormally decrease? This certainly is something worth thinking about. Every mine has a bottom just as truly as every apple barrel. Hence the day is coming when every gold mine will become exhausted; certain of the best mines are now approaching this point. Of course new discoveries are being made in Alaska, Canada and other portions of the world; but is it not as legitimate to assume that fifty years hence the production of gold will be abnormally small as that it will be abnormally great? The practical answer to this question, so far as we can be interested during our lifetime, depends upon whether or not the very lowgrade ores can

Will not Leak
in the pocket or when writing

No, sir, it *absolutely will not* leak, no matter in what position you hold or carry it, flat, up-side-down, in coat pocket—even trousers pocket. It's built so it *can't leak!* Nor will it blot or drop ink when writing.

That's half of the story of

Conklin's Self-Filling Fountain Pen

The other equally important half is that it *fills itself* (and *cleans itself* at the same time) by simply dipping pen in any ink anywhere and pressing the little "Crescent-Filler." It's a wonder-pen!

$2.50, $3, $4, $5 and up—at leading dealers everywhere. Write today for catalog and two of the cleverest stories of pen satire and wit you ever read.

This Cake of Ice

With the Watch in It

—stands for the South Bend Watch—the famous watch that keeps perfect time even when *frozen in ice.*

This marvelous accuracy is not accidental.

It takes, sometimes, a *full year* to make *one* South Bend Watch. For a South Bend isn't finished until it has run 700 hours accurately.

"The South Bend Watch"

Each is inspected 411 times in the making. There are over 100 operations on the dial alone. This merely *indicates* the care exercised in the construction.

But these are the reasons why South Bend owners are proud to take their watches out of their pockets and say, "This is a *South Bend.*"

Note what this owner says of his watch:

South Milwaukee, Wis., Nov. 11, 1911
South Bend Watch Co., South Bend, Ind.

Gentlemen: I thought you would be interested in a grade No. 217 which you shipped me about eleven weeks ago. It is the most wonderful watch I ever had in my possession.

This watch has not been set for eleven weeks. For seven weeks it has been O. K. every morning when I get time. Not three seconds off or one second off—but so close that I can catch no difference. I am carrying it in my pocket and give it no favors.

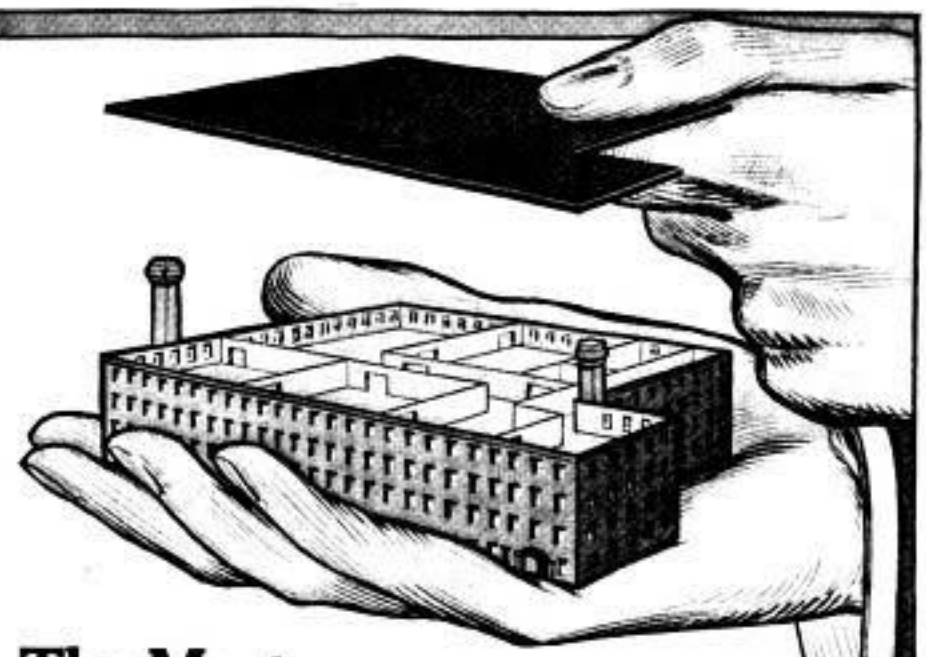
Yours truly,
J. M. Hughes.

Such a watch *in your pocket* would be a permanent source of satisfaction. You can get a South Bend Watch at prices ranging up to $75 (in solid gold case).

Go to your jeweler and ask him about the South Bend Watch. Ask about the South Bend plan of selling watches only through the *retail* jeweler. Ask about the regulation to the *buyer's* personality that *every good watch needs.* First write for the free book, "How Good Watches Are Made." It tells a lot of interesting things—things that you'll like to know about watches in general.

Ask to see South Bend Watch Cases in which we mark the amount of gold they contain.

The South Bend Watch Company
3 State Street, South Bend, Indiana (94)



be used. As is known, seawater contains a certain percentage of gold; and there are hundreds of thousands of acres of gold lands throughout the states of the South that contain about one hundred cents in gold to a ton. Moreover, the land upon which the new home of THE SATURDAY EVENING POST, in Philadelphia, stands assays about thirty cents to the ton in gold. At the present time no ore can be treated that runs less than about two dollars a ton; but if some new method is discovered to extract these lowgrade ores, then the production of gold will suddenly abnormally increase, and it will be accompanied by an increase in the price of commodities, wages, rents and interest rates. This will be accompanied by a decrease in the prices of long-term bonds and certain preferred stocks, though the prices of railroad stocks may temporarily increase; and the prices of certain industrial shares of corporations not subject to Government control and the prices of speculative commodities should increase.

On the other hand, if no method is ever discovered whereby these lowgrade ores can be extracted at a profit and no further discoveries of consequence are made, our present mines will gradually become exhausted, the production of gold will become abnormally small and the reverse will happen. In this case, the present holder of long-term bonds will have the laugh on everybody else; for wages, commodities, interest rates, and so on, will all decline—but he will have a fixed income at a rate much above the market. In short, it is entirely possible to imagine that things may work around in this unexpected way, and that fifty years hence the New York Central & Hudson River Railroad Company and other roads may be able to issue bonds at 2½ per cent interest. In this case the bondholder who now has these roads "tied up" at 3½ per cent for one hundred years will have the best of the bargain.

The Results of Over-Production

Therefore, in closing, I submit these conclusions which have been prepared by Mr. Byron W. Holt, who has probably made a more exhaustive study of this subject than any other person, with the possible exception of Senator Burton, of Ohio, and Prof. Irving Fisher, of Yale University.

1. Both the output and supply of gold are likely to increase rapidly for many years.
2. Therefore the value of gold will depreciate as the quantity increases.
3. This depreciation will be measured by the rise in the average price level.
4. A rising price level, if long continued, is accompanied by rising or high interest rates.
5. High interest rates mean low prices for bonds and all other long-term obligations drawing fixed rates of interest, dividends or income.
6. Rising prices increase the cost of materials and of operation, and tend to decrease the net profits of all concerns the prices of whose products or services either cannot be advanced at all or are not free to advance rapidly.
7. Rising prices tend to increase the net profits of all concerns that own their own sources of materials and supplies.
8. Rising prices of commodities tend to cause the prices of all tangible property to rise. This includes land, mines, forests, buildings and improvements.
9. Rising prices of commodities and property tend to increase the value of the securities of corporations holding commodities or property.
10. Rising prices and cost of living necessitate higher money wages, though the rise of wages will follow some distance behind the rise of prices.
11. As rising prices do not mean increased profits to all concerns, many employers will not concede higher wages without strikes.
12. Rising prices and wages, therefore, mean dwindling profits and troublous times in many industries, with complete ruin as the final goal.
13. Because wages will not rise so fast or so much as prices and the cost of living, there will be dissatisfaction and unrest among wage and salary earners.
14. Rising prices of commodities and property encourage speculation in commodities, stocks and real estate and discourage honest industry.
15. Thus rising prices, by diminishing the incomes of safe investments in gilt-edged

The Most Important Part of Your Building is the ROOF

It PROTECTS all the valuable property you have beneath it!

And if you select the *right* roof you will never have to replace it—because the only roof you want is the one that will *last as long as your building!*

It is a poor time to learn what kind of a roof is on your building only when leaks and other trouble occur. The time for serious consideration of the entire roofing question is *before you select a roof.*

More than 25 years ago Philip Carey began placing on buildings of all kinds—on roofs both flat and steep—the composition roofing that is today so famous for service and durability.

And there are thousands of factories, warehouses and business and farm buildings which *for 17 to 25 years* have been—*and are today—perfectly protected by*

Carey's Flexible Cement Roofing

Note the diagram and description below, showing why Carey's Roofing is the most suitable and durable material ever produced for roofing purposes—giving *permanent protection* from the elements.

And here's an exclusive and remarkable feature:

When the Carey Roof is laid, the Carey Patent Lap (an extension of the Burlap along the edge of the rolls) covers over the nails along the joins, and when cemented down, forms a perfect, water-tight join. This makes the Carey Roof a *solid sheet* over the entire top of the building.

Thus its heart of asphalt cement is *hermetically sealed in* and its *life and flexibility* are perpetuated. As a result, the Carey Roof *cannot dry out, crack or deteriorate,* but will last as long as the building it protects!

Carey's Roofing is *made in the factory*—*not* on top of the building! Workmen who lay it *cannot alter* its construction or skimp materials, thus lessening or ruining its durability. And it is easily and quickly laid. We do not ask building owners, superintendents, and architects to select Carey Roofing off-hand, but we do urge investigation of the Carey roof and *comparison of all roofings before* a roof is selected.

Our complete Carey's Roofing booklet, and a GENEROUS SAMPLE *of Carey's Flexible Cement Roofing gladly mailed on request.*

bonds and stocks, and by increasing the profits of speculators, encourage extravagance, recklessness and thriftlessness.

16. As rising prices decrease the purchasing power of debts, and thus aid debtors at the expense of creditors, they discourage saving and thrift.

17. Rising prices, then, by promoting speculation and extravagance, increase consumption, especially of luxuries—and therefore stimulate production.

18. Rising prices result in what is real prosperity for many industries, but what is for a nation, as a whole, artificial or sham prosperity—the result of marking up prices rather than of increasing production.

19. With prices, wages, rates and industries always imperfectly adjusted to the ever-depreciating value of gold, and with instability and uncertainty throughout the financial world, there cannot but be a great shifting round of values and of titles to property.

20. As this shifting is to the advantage of the debtors—the rich—and to the disadvantage of the creditors—the great middle class—it results in rapidly concentrating wealth in the hands of a comparative few.

21. For all of these reasons, a prolonged period of rapidly rising prices is reasonably certain to become a period of unrest, discontent, agitation, strikes, riots, rebellions and wars.

22. A rapidly depreciating standard of value, then, if long continued, not only produces most important results in the financial, industrial and commercial world, but is likely to result in changes of great consequence in the political, social and religious world.

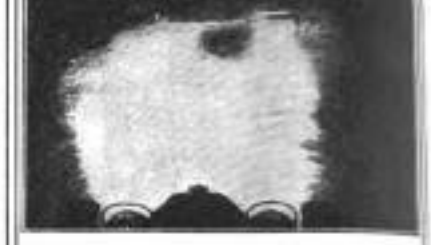
My personal opinion, however, is that the chances are about even as to whether the gold supply is to increase abnormally or whether it is to decrease abnormally; in other words, I believe the chances are that conditions may so adjust themselves that the gold factor need not be seriously considered at the moment. Therefore I believe that the small investor had better forget all about the gold theory, so far as it applies to investments, and devote his energy to seeing that his wages are adjusted in accordance with the cost of rents, clothing and foodstuffs.

The gold theory, as a theory, is absolutely sound; but which way it is going to work nobody knows. It is perfectly safe for me to say: "If it is going to rain tomorrow you should be sure to take a raincoat and umbrella." This is sound theory; but what you really want to know is whether it is or is not going to rain tomorrow—and this neither I nor any one else knows. The temporary trend of prices may be correctly ascertained by a study of such fundamental subjects as bank clearings, foreign trade, immigration, failures, crop statistics, and so on; but what the gold supply is to be nobody knows.

Therefore, as above suggested, my advice to the small investor is to forget all about the gold theory until some new development takes place.

Imperfect Impostors

TODAY there is no hope for the impostor successfully to simulate deafness in one ear. The physician will test him with a binaural stethoscope or some similar instrument.



The tubes, several feet long, are placed in the ears of the person to be examined. The test is then conducted from behind the patient.

The tubes are so arranged that either of them may be closed at the will of the examiner without the knowledge of the subject, so that the impostor cannot tell when the sound reaches him whether it comes through the good ear or through the pretended defective ear. Consequently he does not know when he ought to hear and when he ought not to.

An attorney in a case in Brooklyn unmasked an impostor by a clever trick. The man was testifying that he could hear the tick of a watch when it was held on one side of his head, but not when it was held on the other.

The attorney took out his own watch and asked to make the experiment. The man testified that he could hear the attorney's watch perfectly on one side, but could not hear it on the other side. The attorney then opened the watch before the jury and showed that there were no works in the case!

Prest-O-Lite

When You Buy Your Car—

then is the time to get Prest-O-Lite—the best of lighting systems.

Don't take an unsafe, unreliable generator or imitation gas tank.

One accident due to poor light will cost ten times the charge for a *good* light.

The Senator's Secretary

AMPAIGN managers are so thick in Washington one can hardly avoid epping on them or falling over them, and e cutest one is Mr. Taft's. That one is ly-poly William B. McKinley, of Champaign, Illinois, formerly the Congressional ristmas tree, but now retired as such d devoting himself to the enthusiastic omination of Mr. Taft on the first ballot Chicago next June, the enthusiastic turn of a Republican majority in the ouse of Representatives, the enthusiastic listering of the sacred principle of protion, and the enthusiastic epilation of olonel Theodore Roosevelt.

Mr. William B. McKinley has been in ngress several terms. He has the most naign smile that ever escaped from Illinois. kewise, he is thickly upholstered with oney, having attained for his own use and ofit various suburban trolley lines in his ate, and knowing how to run them so vidends are regular and sizable. He is a id-hearted man, is Mr. McKinley. He es to do things for his friends—and the tire population of this terrestrial globe places in this category. When he first me to Congress he gave dozens of big ners, and two or three times he chartered amships and took a lot of the boys for g sea trips. Little junkets—at his exnse—were common. He certainly was a od provider and a generous.

He didn't do it for show, however. He d it because he is a kindly man and likes have his fellowmen have fun; and he is lling to pay the freight. Being a kindly an, it seemed meet to Mr. Taft to annex n; for the truth is there haven't been any kindly men in the scope of the Taft dion for some time now. Mostly they ve been distinctly unkind. And Mr. cKinley was too tender-hearted to refuse. e felt a strong sympathy for Mr. Taft, alized his isolated position and said he ould take hold. Taking hold, with W. B. cKinley, means a good many things. One that he has the wherewithal with which take hold, and another is that he knows ere to get the wherewithal if he hasn't ough himself.

The Taft outfit was in hard straits. other Charley had not only refused to much more in the way of financing a mpaign, but he had added a sort of a ld and unfeeling aspect to the refusal by inting the fact in the paper. Of course other Charley didn't mean it exactly, d he might have printed what he did out the grip he was maintaining on his rsonal pursestrings so others who might d inclined to contribute wouldn't think ere was no use of it because Brother arley was ready to produce. Anyhow, ter the advent of Mr. McKinley as campaign manager and the advent of Myron Herrick as Ambassador to France, ere was some heft to the campaign exequer; and they know where the postage amps are coming from now.

The Champaign Smile

McKinley is the smilingest, softest-oken, most lovable campaign manager ere is. He radiates all the time. Still, would not be well to mistake his radiation r a sign of obfuscation, for that would be grave error. He knows a heap of things, es Mr. McKinley, and a good many of ose things have to do with politics. He s hired a set of rooms and is hard at it; d, first crack out of the box, he claimed ne hundred and eighty votes for Taft the first ballot, and says it is his opinion at Mr. Roosevelt is for Mr. Taft and working as he is working for strategic rposes. This gave the anti-Taft people mark to shoot at, and gave Mr. Roosevelt something to shoot at too. Anyhow, e selection of William B. McKinley to n the Taft campaign is the first step rward the Taft people have taken in a ng time. It shows some gumption, for r. McKinley is a wise person and an de one.

Other campaign managers are scattered ickly about. Fred Dubois, former nator from Idaho, is managing the Champ lark boom; and Senator Bankhead is oking out for Underwood. The Wilson ople have a covey of wise persons guarding Wilson's interests, including the expert d efficient Thomas Jefferson Pence. The armon men have their place and their anagers, and several other campaign directors are maintaining their headquarters under their hats until the contributions pick up. Altogether, there is enough presidential politics in Washington to satisfy the most fastidious—and, with it all, more piffle than any similar situation in the past twenty-five years has adduced.

Governor Aldrich, of Nebraska, one of the noble eight or ten, or whatever number of governors it was, who issued the loud, clear cry—the loud, clear, clarion cry for T. Roosevelt to come out of the high grass and save the Republican party and the nation and them—rather put it over his clamoring colleagues by not waiting until he got home before announcing himself as a candidate for vice-president with Mr. Roosevelt when that gentleman shall be nominated at Chicago—if he is. This was not clubby of the governor. Everybody knew, of course, that each governor, separately and individually, considers himself the proper person to run as vice-president with The Colonel; but there undoubtedly was a tacit understanding that the Man should await the Event. Not so with Aldrich. He is no event-awaiter. He makes the event himself, and he took time by the forelock—and also his brother governors—and announced himself, getting first into the limelight, much to the disgust, no doubt, of the tardy others. Of course Governor Stubbs, of Kansas, didn't care. He wants to be senator from his state; and he announced that when it came his turn to do the announcing. Undoubtedly it would have been worth going miles to hear Governor Hadley, of Missouri, express his opinion of Aldrich's act.

Not in good form, I should say. The call from the people should have been required. Still, those Nebraska people often do their own calling when the people stutter and hesitate.

When the District Votes

Once in four years the citizens of Washington and of the District of Columbia have the inestimable privilege of walking boldly up to the ballot box and casting their free and untrammeled ballots into said box, the occasion being the quadrennial primaries for the selection of delegates to the national conventions.

This is as far as the citizens of Washington and the District of Columbia can go in the matter of casting ballots. Of course there are numerous people in Washington who retain voting residences elsewhere; and when there is a president to vote for, or a governor, or some important person, they go home and vote like all other male Americans above the age of twenty-one and not disqualified. However, there are in the city of Washington and in the District of Columbia a good many people who were born there and who have arrived at voting age. They pay taxes and obey the laws and function naturally and legally under the Constitution, but the only chance they get to vote is when delegates to the national conventions are needed. The Republicans have their voting day and the Democrats have theirs. Then they lapse into their regular taxation-without-representation attitude and wait until the time comes again for a national convention.

Naturally there isn't much excitement in this sort of exercise of suffrage, and naturally there isn't much interest. About one-third of the population of Washington is negro. The negroes cast ninety-five per cent of the votes at these elections. The other five per cent is cast by the politicians of the city, who get a chance to operate once in four years, and who operate then with all the trimmings that were found in the ward politics of the old days.

They begin weeks before the date set for the primaries, these local politicians; and into the campaign they compress all the vigor and all the politics that are scattered over four years in every other community in the United States. The campaigns are fierce while they last, and the local papers give the news of them with as great attention to detail as if they really were important. Inasmuch as the colored brother is the great voting asset, the attention of the few white men who fuss with the politics of the District is directed to the colored brother. The colored brother takes his voting very seriously. He knows his chance comes but once every four years,

"Now will I make them as beautiful as they are practical," said O. H. L. Wernicke—the father of Sectional Bookcases—when he became president of The Macey Company.

Macey

Book Cabinets

Do Not Look Sectional-
But They Are

They have the style of Old Master Furniture. You can see it yourself; it stands out so you can't help seeing it.

You may have them in Colonial, Chippendale, Sheraton, Artcraft or Mission design, any size; any finish; and they actually cost less than *ordinary* bookcases.

You would like them in your home!

Macey Book Cabinets are on sale with merchants in every locality and are warranted to give complete satisfaction.

A 52-page style book and price list, which is full of helpful information, may be had for the asking, by addressing the designers and makers, *The Macey Co., No. 940 S. Division St., Grand Rapids, Mich. "The Home of Good Furniture."*

News Announcement to the Dealer in Automobile Tires

With the tire *user* an *equally* interested party

HERE'S the question for you to weigh carefully before the season opens:

"Which tires will be the most popular with the motorists this coming year?"

The more thought and study you give to this question now, the better able will you be to anticipate the makes and designs that will give you a lion's share of the year's business.

We here submit to you some new, important and conclusive selling factors whose power you will quickly recognize. You will read in them ample reasons for making

PENNSYLVANIA VACUUM CUP TIRES

your most special offering to tire buyers this year.

1. **Unparalleled Anti-Skid Guarantee**
   We guarantee any purchaser of a set of Vacuum Cup Tires that if the car so equipped skids on wet or greasy pavements, or if the tires, after reasonable trial, do not fulfil every claim we make as to their Anti-Skid qualities, they may be returned and the full purchase price refunded without argument.

2. **4,000 Mileage Guarantee**
   The above specific and unqualified Anti-Skid guarantee will be in addition to our exceptional service guarantee of 4,000 *actual* miles. The surprising service qualities of the Vacuum Cup Tread in dry weather as well as wet, which have been so widely discussed, are due to the unique wear resisting ability of the heavy cup shaped knobs. These wear down very slowly, and when they are done, leave a tread of more than standard thickness to give additional service equal to a new ordinary tire.

3. **Distinctive Design**
   The Vacuum Cup design is absolutely distinctive and cannot be confused with the many varieties of non-skid treads. So that the large and increasing numbers of Vacuum Cup Tires in use are correctly recognized by every one at sight. This constitutes a definite and powerful advertising influence. The Vacuum Cup idea is highly appealing. We ascribe its rapid growth in popular notice in largest measure to the interest aroused by the tires on cars and by the unique Vacuum Cup tracks which continually criss-cross on city pavements and popular roads.

4. **Unusually Effective Publicity**
   In this publication and in others having most influence among tire buyers, there will appear throughout this coming season by far the most striking, convincing and frequent Vacuum Cup Tire advertisements we have had. No effort has been spared to assure that every advantage will be taken to bring to the highest possible fruition the natural demand for Vacuum Cup Tires, which has proved so tremendously responsive right up to this time.
   One of the strongest of our 1912 advertising and selling factors is the

5. **Reductions in Prices Made Possible by Growth in Production**
   This will enable you to sell Vacuum Cup Tires at the same prices asked for non-skid tires offering far less strong and liberal guarantees. We have been enabled to accomplish this by an increase of over 100% in manufacture. This, of course, will prove the greatest single factor in increasing the sales from now on. Another highly important feature is the

6. **Reliability and High Standing of Our Distributors**
   Marketing Vacuum Cup Tires as we do, through the very largest, most progressive and reliable jobbing houses in the tire trade, as well as through our own branches, you have the utmost assurance of prompt service in shipments, and immediate and unquestioned backing up of our guarantees.

Add the stimulating influence of these new powerful selling factors to the remarkable success which Vacuum Cup Tires have already secured on merit, in the face of necessarily higher cost and without the aid of special guarantees.

And we believe you will see the opportunity they offer you of making yours the most desirable class of tire patronage for 1912.

Just write us now that you are interested or put it any way you choose.

An Independent Company with an Independent Selling Policy

and he demands and receives full consideration for the strategic position he occupies.

Usually the delegation to the Republican National Convention, which allows the District of Columbia two delegates, is made up of a white man and a negro. Perry Carson, a gigantic negro who wore a pearl-colored frock coat and a high hat of the same shade with a big black band round it, was the Republican leader among the negroes for many years, and always went to the convention as a delegate when he could. Once, when it came time in the convention for the delegations to hand up the names of their choice for national committeemen, Perry arose and said: "Mistah Chaihman, I ask that the District of Columbia be passed ovah tempohrar'ly." Perry pointed to his white colleague. "This yere gem'man an' myself have not agreed. He votes foh hisself an' I vote foh myself; an' we is at a deadlock foh th' time bein'."

This year the Taft managers picked out two men for delegates and at the last moment two others announced themselves as candidates, the assumption being they were anti-Taft in their proclivities—though one of them was Sidney Bieber, the Republican national committeeman at present. The voting began at sunrise and continued until sunset. Practically all the votes cast were cast by negroes. The white Washingtonians paid no attention to the contest.

The Battle for the Ballots

Whereupon, under the shadow of the dome of the Capitol, as we say when desiring to indicate a certain proximity to the seat of government, they pulled off an election that would have been a disgrace to any backwoods district in the United States. At two o'clock on the morning following the election, headquarters was surrounded by a big crowd of negroes, split into two factions. One faction, having heard that the Taft delegates, Aaron Bradshaw and Calvin Chase, a negro, had triumphed over the Bieber-Wilder combination, was anxious to find Bradshaw and Chase and impress on those distinguished delegates-elect their conviction that they had won by fraud. The other faction, so far from admitting they had robbed the Bieber-Wilder adherents, was constrained to assert that all persons claiming this had been other than a fair and free election were liars; and after a few hours of this sort of thing the police chased them home—just in time, by-the-way, to prevent the destruction of all ballot-boxes, records and ballots, in order that neither side might have any tangible evidence to support its contention. Of course there will be contesting delegations. There never was a time, in the history of Washington politics of this kind, when there were not from one to six contesting delegations.

In Anacostia, which is a suburb of Washington across the river, the poll officer accused one of the candidates of "fiercely attacking my person, wresting therefrom the ballot-box, shaking it in a queer manner and taking it downstairs." The police were in doubt whether the candidate shook the indignant poll official's person and took it downstairs, or shook the ballot-box in a queer manner and took that below. It was finally discovered that the box was meant, and the box was recovered and placed in position again to receive the snow-white ballots that were being so intelligently cast. Another man made a clean getaway with a ballot-box. He was convinced the side he championed had fewer votes in the box than his opponents, and he sought to rectify that omission by taking all the ballots with him to some convenient place where he might examine them at his leisure and correct any errors into which the voters might have fallen. The police got him and the box. They took both to the police station. Then word was sent to Republican headquarters, and the officials went to the station house and counted the votes there.

There was more of this sort of thing all over the city, and as much of it when the Democratic delegates were selected. And it all goes to show several things. One is that when you deprive the people of a community of the voting privilege, except once in four years, they never will get interested even in so—alleged—important a matter as selecting delegates to a national convention; and another is that those who do want to vote attempt to make up for the indifference of the others by voting as many times as they can.

Mind is Master of the Body

but a well-trained body is more easily managed than an ill-trained one.

The mind has more time to engage in the higher pursuits of life when the body is running smoothly.

Wear

O'Sullivan's

HEELS

of

New Live Rubber

Keep the body in smooth running order by wearing rubber heels, and save the brain from unnecessary jars and jolts, just as you save the automobile and its occupants by using rubber tires.

These heels are made of new *live* rubber—rubber with the spring in it. The mechanical action of walking becomes a pleasure and a source of benefit both to body and mind.

Your body can do more work with less effort; your mind can accomplish more without fatigue.

Worn by efficient, quiet people everywhere.

Say "O'Sullivan's" to your shoemaker and

Walk on Easy Street!

THINKING STRAIGHT IN BUSINESS

The Shortest Road to Money Making

By H. D. KATHVIR

EDISON, who has made a success of his business, tells us that one of his first major inventions was an automatic voting machine for use in state legislatures and similar assemblies. He devoted many working days, of almost twenty-four hours each, to the perfection of this instrument, and spent all his ready cash upon it, only to find in the end that if there is one thing the politicians do not want it is a quick, automatic, indelible-registry method of voting. Thereafter, the great modern Thomas assures us, before devoting either a minute or a cent to any invention he first ascertained if a ready market existed for it.

Straight thinking in any phase of business is the shortest line between poverty and affluence. It is such an uncommon faculty that those who possess it are soon given an awe-inspiring rating in Bradstreet.

Contrast with Edison the thousands of men who invent such things as leafturners for sheet music. They waste time and money, and in the end grow indignant that the world does not welcome their brain-child. A little thought on the leafturner, for example, would show that, of the three classes of people it might interest—that is, artists, amateurs and home talent—the artists do not use notes in concerts; the amateurs of even moderate attainments can read several bars ahead of where they may be playing and so can easily turn the page; and the home talent, scrambling over the keys, is only too glad of any interruption.

The first step in straight thinking is an earnest desire for the present-day truth about a matter. And the truth usually sounds like knocking. So here we have, at one glance, the explanation of the fact that the few people in this world who can think straight have success at their command—a laurel wreath waiting to crown their simplest effort.

Every day some business man starts to think straight about the business he is engaged in. Ten to one, at the next directors' meeting, an old friend, after hearing his views, rises and says: "Well, if that's what you think about this business and about your associates, you had better sell your stock!" The thinker thereupon subsides. No longer does he call attention to the fact that their commercial child has bandy legs, weak eyes and a cough. So the business jogs along as do other concerns that are the apples of the astigmatic eyes of their owners. The great opportunity goes glimmering; the child never grows up—the practice of straight thinking is taboo.

The Profit of Duplicating

It is only the exceptional man who persists, who puts aside all the gentler feelings—even as must the surgeon—who turns a deaf ear to criticism, and who, having first defined the exact end sought, then snaps out the correct course.

There are two ways open to the man seeking to make money—to sell merchandise or to sell service.

Suppose we seek a pair of shoes. On a prominent corner of any city we can find a great shoe store—which its advertising man fondly calls an "emporium." Its shelves are filled with goods; its aisles are thronged with customers. The proprietor is fast growing rich; but we must leave the busy street and turn to some obscure location before we can discover a custom bootmaker who will take an order for a pair of shoes. In most cases, he is just a few laps ahead of the sheriff. The ready-made-shoe dealer has laid hold of one of the great underlying principles of moneymaking, which is duplication. The bootmaker has failed to understand that his one chance of success lay in selling his own personality.

All over this broad land are pianomakers who are amassing tidy fortunes. In the simplest word, why? Because if a lady wanted the black keys on a piano to be red they would request her—politely, of course—to seek elsewhere. All pianos are fundamentally alike. If customer number one does not fancy the instrument it can be sold to customer number two or three. Duplication, achieved through unceasing effort to standardize every detail, spells dollars. Look at the sister industry that sells service—the pipe-organ trade. After tremendous thought, the new English organist of Saint John's Church lays out his scheme for the new organ. It is to cost, perhaps, three thousand dollars. Yet he insists upon those special stops found only in great cathedral instruments. There is a viol d'amour stop, which he heard in Saint Alban's when he was a boy—that he simply must have. Sometimes he cuts out the most fundamental things in order that he may have an echo organ, chimes, and so on.

By the time this organ is built and set up, the English organist has fallen foul of the vestry and is only a fragrant memory. The organ, before being paid for, must be approved by the new organist—and he is a German, of the Kapellmeister model! He runs his fingers over the keys, reels off a few yards of Bach, begins to build up the volume of tone by pulling out the various stops—and then comes as near fainting as his sturdy physique will permit.

A Bird in the Hand

The man who is selling service is often forced to do half his work over through no fault of his own; and woe be to him if he fails to leave a wide margin for whims.

The goal of success lies about twenty year-miles downstream. A powerful swimmer by constant strokes can reach it through the still water that lies near shore; but if a man can only push into the swift current in the center of the river he may turn over on his back and float serenely to his destination, even admiring the scenery as he goes. Given a fine store, in a good city, on a prominent corner, with a big stock and a competent staff of clerks, the stream of trade will do the rest. Marshall Field knew this. Two of his great competitors years ago tried to make money by moving on a side street. One never did come back to the trade center, and the other crawled back after a few years looking much like the jackdaw of Rheims after the cardinal's curse took effect. Yet the center of the trade stream, the heart of the current, is not more crowded than the reaches of the backwater.

In struggling enterprises we often find conditions that a first-class firm would not tolerate for a moment. In great path-breaking houses we find the keen ideas. One unusual example of such a house is a tremendously successful bargain store that does not use checks; that never heard of notes, but pays the actual currency for every article delivered at the time of its receipt. Think what the reputation earned by the practice of this beautiful system means in securing low prices! A wholesale drygoods merchant was "stuck" on cloaks. He sent for the owner of this bargain store and showed him his tables of ladies' garments. Then he began the family history of each lot of goods. After listening a moment, the bargain-store man broke away and, walking swiftly up one aisle and down another, ran his hand through each pile of garments. In almost no time he returned and, stepping over to the elevator, muttered:

"Twenty-one thousand dollars for everything on this floor."

The merchant hesitated—began with, "But, see here ——" And, as his buyer stepped into the elevator, he closed with a stammering "I'll take it."

The goods were piled on the wagons and in one hour the drygoods merchant was busy counting a suitcaseful of greenbacks.

Careful reasoning points out the wisdom of approaching as closely as possible to the methods and conditions of winning institutions. This puts a damper on visionary ideas and makes it very hard in the beginning; it puts the test before the candidate now. Would you go into business for yourself? You must have capital.

The chance to borrow a large sum is not in the least the same thing as money that

12,400,000 Germs In a Bottle of Baby's Milk!

And THAT would be "CLEAN MILK," Madam—as clean as you can buy—for this is the *"certified"* standard. Not *all* of these are disease germs. Millions are not. But nearly *all* milk *contains* disease germs. See what it would mean if you let *one* germ *multiply*, as germs *do* in some "ice boxes."

In 24 hours, unless checked, an ordinary germ in milk breeds nearly 7,000 more. Milk is usually *48* hours old when received from your dairy, and in *that* time *each* of these 7,000 may multiply *7,000 times*. So *one germ* in that milk may make it *deadly*. *Heat* and *dampness* make germs multiply. They will multiply slowly at *50 degrees*—not only in milk but in *all* raw food.

In an outbreak of infant diarrheal disease in a New York hospital the milk *supply* was found to be *perfect*. But the *refrigerator* was tested and, though *full of ice*, had a temperature of *70 degrees!* The germs in that milk had simply *multiplied beyond all estimation!*

Now there's a *patented refrigerator* in which germs in *new* milk *don't* multiply—germ multiplication even in *old* milk is almost *completely arrested* by it. It's the Bohn *Syphon* Refrigerator. It maintains a sanitary cold of from 42 to 48 degrees. *Salt* kept in it stays *perfectly dry*. You can strike a *match* on its walls. Germs multiply *slowly* (sometimes not at all) in perfect dryness and cold.

Both dryness and cold are *"Bohn Syphon" features*, due to the *syphoning* of pure, cold, *dry air* throughout every square inch of each food compartment. This air collects every impurity and deposits it on the *ice*, from whence it goes *off* through the drain pipe. This pipe is *in front*, where it's easily cleaned. But "clean pipes" and "clean walls" don't mean "Clean Refrigerators." *Clean air* must *circulate*.

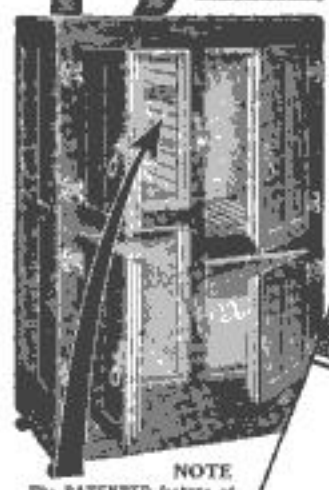
A Bohn Syphon Refrigerator is a *machine* in which there is *constant action*. "Ice boxes" that lack positive circulation of air are practical *breeding grounds* for germs.

You ought to know more on this subject. We have written a book that tells all about it, called "Scientific Food Keeping." Every housewife and mother should have one. It is vital to health in the home. It reveals some astonishing facts. It is *guaranteed scientifically accurate* by the ex-commissioner of one of our great *Boards of Health*. You won't realize, till you read it, the risks that you run today.

We'll send you this book and the Bohn Catalog for the coupon below. We'll send also extracts from a pamphlet by the Illinois State Food Commission on "Care of Milk in the Home." They will bear out what the book will tell you.

You owe this knowledge to your children, madam, so send the coupon now.

To the *Man* of the House



A *good-looking* "ice box" can be made and bought *cheap*. You must pay a little more for a *Bohn Syphon Refrigerator*. You keep your *valuables* in a *safe*. You should keep the health of your family in a "safe" that *germs* cannot "jimmy." A *Bohn Syphon Refrigerator* IS such a safe.

THE WHITE ENAMEL REFRIGERATOR CO.

Makers of the Famous **1500 University Ave., St. Paul, Minn.**

BOHN SYPHON Refrigerator

Used Exclusively by the Pullman Co. and by All Railroads

Any dealer who sells Bohn Syphon Refrigerators can give you these things if you'll call at his store. He'll also gladly show you the *Bohn*—how it is made—why it weighs 30 pounds more than some refrigerators that sell for the *same money* and *what that means*. Examine also the Bohn non-porous, hard, white, "bath-tub" enamel, sanitary lining.

Send the Coupon Now

NOTE

The PATENTED feature of the Bohn Syphon Refrigerator is easily identified by the "open-throat syphon wall" between the food compartments and ice chamber, as shown. Bites for every house.

DEALERS—WRITE FOR AGENCY PROPOSITION.

Paint *Now* and Paint *Right*

HERE are two ways to *throw* away money: Neglect painting—let the old paint be entirely worn away, the wood become almost like a sponge ready to absorb paint by the gallon. Another—buy adulterated paint which is likely to crack and scale off and to need burning and scraping before it can be re-coated with good paint.

Don't waste your money. The man who is "paint wise" paints as soon as he discovers the need and uses the best paint—paint made of

Dutch Boy Painter
Pure White Lead

and pure linseed oil. There is a peculiar affinity between white lead ground fine and linseed oil which makes a combination of the two a perfect paint for both outside and inside use. White lead paint penetrates the very pores of the material covered and holds there without crack, blotch or streaking, till the surface is actually worn away by slow degrees.

Tell your painter you want your house white-leaded—then look for the Dutch Boy Painter on the package containing the white lead; he is your guarantee that you are getting the pure service-giving materials. White lead paint can be tinted any conceivable color.

Let Us Send You Our "PAINT POINTS"

is actually your own—dollars that you have saved by the strictest self-denial. A loan must be paid; and when it is made upon a hazardous enterprise, like a new business, it must be paid, with the addition of a heartbreaking charge for interest. Not but what a loan or loans, on top of one's own capital, are good. Rockefeller is pointed to as the world's best borrower. The only time to borrow money, however, is when you don't really need the cash, and the only time to be under obligations to a friend is when he recognizes the fact that, in a pinch, you could get along without his good offices.

Turning to those who sell service, we find that almost everything hinges upon personality. Doctors, lawyers, agents of all kinds, actors and numerous other classes receive the most varying prices for practically the same service. All such persons may charge what they please for their service provided the price be stated in advance or generally known. A poet may charge one thousand dollars for a set of verses. If the purchaser who contracts for them is not satisfied with their quality, and protests the bill, the testimony of other poets is taken in court. And what show does a sordid moneygrubber stand when such a delicate question is left to riders of Pegasus from Podunk and other well-known literary centers!

Men Who Could be Kings

Provided one has the personality, selling service is the simple and direct method of making money; but for one great lawyer or actor there are a thousand who can hardly make a living. It is generally conceded that the Chicagoan who received the greatest cash reward for his services was the late Dr. Nicholas Senn. This great surgeon earned thousands and thousands of dollars a year, though he scrupulously devoted half of his time to charity. A line of patients was ever waiting outside his door. He could remove an appendix in less time than it takes to carve a chicken. A bill for fifteen minutes of work by him for six hundred dollars was sent back by a well-known merchant, who thought it was too little—that it must be a mistake—he had his mind so firmly set on paying one thousand dollars for the operation. The doctor said: "Oh! let it go—the bill is made out." But how many doctors are working themselves to death, rushing hither and thither, day and night, with no better prospect ahead of them than leaving an estate consisting mostly of a frock coat and an assortment of uncollectible bills!

However, since we are not interested so much in the results as in the thing itself—straight thinking in business—we must admit that the sandbag, in a denatured form, perhaps, is still a most efficient means of annexing funds. The word "king" does not mean noble or good—it springs from the same root as our verb "can." Noble families point to the founders who a few hundred years ago took the romantic equivalent of a piece of lead pipe—a sword, and sallied gayly forth, to return in due time with the spoils of the chase—that is, the household effects of some weaker neighbor. The same thing goes on in a thousand diluted forms today.

We see fortunes being accumulated by "good business men" in the same sense that the famous Kelly was a "good ball-player." Kelly, you may remember, was so tricky that no sooner was a baseball rule passed than he found a way of smashing the spirit of it into smithereens. The rule to the effect that a player might at any time be taken from the game and another substituted was promptly taken advantage of by Kelly in this fashion: One day, while sitting on the bench, a foul ball was knocked in his direction. Kelly immediately sprang to his feet, waved out of the game the player who was vainly pursuing it, caught the ball himself and broke into the game—this to the amusement of the thoughtless fans, the disgust of lovers of fair play, and the acute horror of the framers of the baseball constitution.

Some years ago a young man down South had a new baking powder on his hands. Of course it wouldn't sell. He had no money to advertise it; and in the light of what followed it may be surmised that his credit at the bank was nothing to boast of. How to make that baking powder sell—that was the question. Simple, too, was the solution. He artlessly placed a nickel in the bottom of each can. Did it work? "Honey, de way dat baking powder

Through hard, soft or knotty wood the IRWIN Auger Bit bores swift and true

A MAN wants a perfect tool when he buys an Auger Bit. Men who *live* by their tools buy the original IRWIN for its unequaled efficiency. There are imitations cheaper than the IRWIN. They are too costly for the expert. He must get the work right the first time.

Why Freeze Out the Little Fellow?

It was A. T. Stewart who first had the nerve to establish the one price plan.

Before the war, merchants sold their goods for all they could get. The wiser the buyer, the lower the price. Stewart started a brand new plan. He made one price to all, tagged his goods and sold them at the price marked on the tag. Today that's the common system in all good stores.

But in selling goods to the merchant himself, the old order still prevails. There's usually one price for the big store and another for the little store. This is known as the "quantity price"—the larger the quantity the merchant can buy, the lower the price. This means that the small dealer must buy more than he needs—more than he can really sell—to get the lowest price and to compete with the rival store.

There's no "quantity price" on Kellogg's.

A case or a carload, the price is the same. The man who sells one hundred cases gets just one hundred times the profit that the dealer gets who sells the single case, and *no more*. Your neighborhood grocer and the little store on the corner get just the same profit on every package they sell as their more pretentious rivals. They buy only as they need—that means no loss from stale goods, fair, honest profits for them and fresh goods for *you*.

W. K. Kellogg

The Original has this Signature for *your* protection

sold was sumthin' scandalous! Go 'long, dar!" Later, when one Southern state passed a law prohibiting putting money in food or household packages, it was shown that some colored cooks used a can of this baking powder for every plate of biscuits that appeared on their masters' tables.

The Northern folks, however, need not smile in a superior fashion at this anecdote—not while coal is being sold on its present basis in some of our greatest cities. Some coal merchants have discovered the best beeline to the exchange of bags of coal for bags of gold. It is to have themselves elected tax assessors. Many a merchant, having his taxes arranged "on a fair scale" on Monday by a coal merchant, is not so heartless as to refuse to buy coal of his good and official friend on Tuesday.

One more example of the lead pipe—up-to-date—will suffice. In the center of a city block there is a gorgeous mansion. The owner is a high official in a great corporation; but his salary has never exceeded twenty-five thousand dollars a year. Did he amass his fortune by strictest economy? Well, hardly! Years ago a clerk in his corporation stole a few hundred dollars. The acute brain, recoiling in speechless indignation at the spectacle, immediately founded a company to bond clerks. No more chances of loss through the dishonesty of employees in that company! And, as the years went by, every one of the thousands of employees who could even squint in the direction of a nickel belonging to the corporation was forced to pay an annual premium to this company.

A little later our straight thinker was touched by the poor success of the lowly workers on the payroll. So he got out an encyclopedia in six volumes on How to Advance—price fifty dollars. It is said that even the lowliest Hun, when the matter was properly explained to him in his own tongue, perceived that the first step in advancement was to sign a purchase order for the official's book. Thereafter his salary was one dollar short each week for a year.

What Pays the Salesman's Salary?

As an aid to straight thinking it is well to remember that only up-to-the-hour facts count. Facts won't stay put any more than a crooked politician will stay bought. Yesterday flying was impossible; today, with the evolution of the gasoline engine, it is almost commonplace. Yesterday a plan to make a small store in the corner of a large old-style corner store, and thus double the income of the property, would have been laughed at. Today it is the usual thing.

The study of business has evolved many interesting questions. Two that have been widely debated are:

1—Who pays for the advertising?

2—Who pays the salesman's salary?

Not long ago the first question would have been answered: "The advertiser." Since advertisers do not put in any new capital to pay for the advertising, and since their profits are larger than those of concerns that do not advertise, this answer can hardly be correct. Some people say: "The public pays for the advertising"; but if these very persons want good merchandise at a reasonable price they join the crowds on the way to the advertiser's door.

The second question, Who pays the salesman's salary? would have been considered absurd twenty years ago. The old-time merchant would have roared: "I do—and I am sick and tired of paying four thousand dollars to a lazy chap like Jones!" Today, however, that same merchant knows better. He has learned by experience. Every time he discharged a Jones, said Jones took his trade with him. The new man, Smith, the first year, usually sold about half as much as Jones; and if he worked up to Jones' figures in the course of three years he invariably demanded the same four thousand dollars for his services. On the other hand, the idea that the customer pays the salesman's salary is not tenable, for the reason that the house with the highest-priced salesmen is practically always headquarters for values.

Perhaps these academic questions are propounded incorrectly. Instead of Who pays for the advertising? and Who pays the salesman's salary? should it not be: What pays for the advertising? and What pays the salesman's salary? If asked in this form the answer is obvious—these and other items of the modern merchandising enterprise are paid automatically by the general efficiency of which they are outward signs. In a word, they are paid for by straight thinking in business.

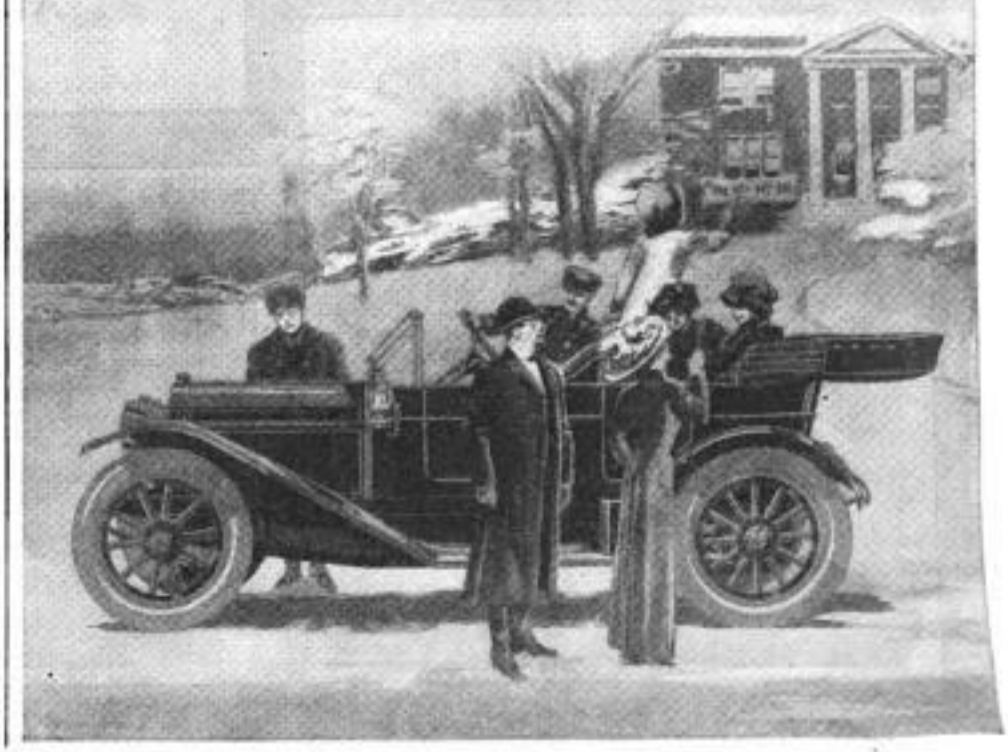
Abbott-Detroit

THE Abbott-Detroit "44" Fore-door Demi-Tonneau is a car which you instinctively feel has the potential energy to do everything well.

¶ It is the athlete of the Abbott-Detroit family.

¶ It has the reserve strength, the speed, the hill-climbing ability, the elasticity under all conditions that vigorous, out-door people like and appreciate.

¶ It is a car that will carry you long distances quickly and safely without a murmur or perceptible effort.



¶ Built upon the same chassis as the well known Abbott-Detroit "44" Touring Car, it has a 4½-inch bore by 5½-inch stroke motor; 36 by 4-inch tires with demountable rims; dry plate clutch; full floating type rear axle, nickel steel construction with Timken roller bearings; all high duty forgings, double heat treated; cellular tube radiator; chrome nickel steel transmission; latest type ventilated fore-door body. Price $1775.

¶ Other models including roadster, touring cars, coupes and limousines $1275 to $3000.

Dynamo Equipment for electric lighting, $90.00 extra
Hanna Self-starter, including gas tank, $50.00 extra

What's the Matter with a Fountain Pen when it Leaks?

SOMETHING very simple—*Ink In The Feed Tube.*

When you set an ordinary fountain pen in your pocket, *all* the ink doesn't run to the bottom. Some always stays up in the little, straight feed tube leading to pen point.

And when the pen gets warm from your body heat—98 degrees—the *air* that is always in pen barrel expands. It forces up through feed tube, forcing the ink out on end of pen. So, when you remove cap to write, you get ink smeared.

Simple, isn't it?

Now, the Parker Pen does *not* leak, because there is *No* Ink In The Feed Tube.

Capillary Attraction gets rid of it. You see, the Parker feed tube is *curved*,—the Lucky Curve. The *end reaches* inside of barrel. This touch causes Capillary Attraction, which sucks all ink out of the feed tube the instant pen is turned upright, leaving it *empty* when the warm air ascends.

Why the Parker Pen doesn't leak is simple too, isn't it?

Parker Pens never hitch, skip or blot, because pens are 14k gold, tipped with polished Iridium; and the Parker Spear Head Ink Controller keeps ink from flowing too fast or slow.

Standard style Parker Lucky Curve Pens $1.50 to $250.00, according to size and ornamentation.

New Parker Jack Knife Safety Pen

cannot leak in any position—even carried upside down. *Pen knife size for ladies.* Prices $2.50 up.

New Parker Disappearing Clip

holds on to your pocket like a bull dog, and *disappears* into its kennel when you want to write.

Money refunded if any Parker Pen doesn't please. We protect dealer. If your dealer doesn't keep Parkers, send us his name. We'll send you complete catalog and sell to you direct.

Get ink off your fingers by getting Parker Pen today.

Make this "touch" test your-self, and prove it won't leak.

OUT-OF-DOORS

The Mail Carriers of Far Countries

MOST city people are used to getting their mail three or four times a day, and if the postman is late with his letters at the breakfast table the average man feels himself obliged to kick on the service. Even the man who lives six or eight miles out in the country is accustomed, these days of free rural delivery, to getting his mail at least once a day without any trouble on his part. The old habit of going to the post-office and waiting for the distribution of the mail is now passing into disuse. Supposing a man lived a hundred miles or a thousand miles from the post-office, it would be still more inconvenient than it is in the average small town, where the custom still obtains.

Yet mails are delivered regularly to persons who live a hundred or perhaps a thousand miles from the nearest post-office to their home. One of the great problems of the Government, a problem intimately connected with the advance of civilization and the welfare of humanity, is that of getting the mails through. Sometimes that simple-sounding proposition costs a great deal of money. Under the process of reasoning used by Postmaster-General Hitchcock in his campaign for higher magazine postage, it might seem reasonable to suppose that the man who lives a hundred or a thousand miles from the post-office ought to pay more for his postage than one who lives just round the corner. Most governments have recognized the difficulty of adjusting postage on the basis of distance, and most nations lump the matter and carry their mails as cheaply as they can and as many of them as they can. When the time comes that the reader must pay more postage than the advertiser, or vice versa, we may perhaps expect wilderness dwellers to pay more for their postage than they do today. As matters now exist, you and I can get a letter through for two cents, crossing a continent or so and an ocean or two; and we are mostly willing to throw in what we might otherwise save in order to get mail out to the poor chap who hears from home only once a month or once a year. The whole idea of the mails is to serve humanity in a broad way.

There are long reaches of uninhabited country owned or controlled in this or that part of the world by almost every civilized nation. The United States, France, Germany, Great Britain—all have to carry the expense of getting mails across wide reaches of mountain or desert, over arctic ice or tropic sands. The full story of the carrying of all the mails which go from civilization to civilization's outposts in the wilderness regions would make many an interesting industrial romance.

How to Reach a Whaleship

One of the longest mail routes of the world is that of the Far North of this continent, which serves the scattered individuals who maintain the fur trade over the enormously difficult region of the subarctic country. The Hudson's Bay Company carries this mail in the wintertime and limits the amount to six hundred pounds. That weight has to cover all the Christmas presents which get into the entire country from Edmonton to the Arctic Ocean—all the newspapers, all the letters, all the little parcels from all the corners of the world that may want to communicate with the factors or clerks, white men or half-breeds and their families, who live in a country where a thousand miles scarcely carries you into your neighbor's dooryard. It is hardly necessary to mark on a package intended for delivery on Herschel Island, in the Arctic Ocean, "Don't open until Christmas!" because the letter that starts in the early fall cannot possibly get there until next April.

Perhaps you want to write to some man far down the Mackenzie River, and your letter is the very item which makes the total mail weigh over six hundred pounds. In that case your letter does not go, but waits until the next mail, which may not go up until next spring. Last fall the total amount of northbound mail at Edmonton, Alberta, amounted to six hundred and ninety-two pounds. The authorities cut out ninety-two pounds of it, mostly newspapers, catalogues and the like.

Lac La Biche is the first stop of the mail to the Far North, and up to that point teams and sleighs make the transport fairly easily. Beyond that point the Hudson's Bay dog teams are relied upon to finish the delivery. The mail last Christmas included twelve hundred and forty-nine letters and fifty-seven postal cards, the bulk of which will be traveling perhaps some time after these words shall appear in print.

From Lac La Biche the dog teams took the mails to Fort MacMurray, then up the Athabasca River to Fort Chippewyan. The next stop beyond that was at Fort Resolution. This is the Great Slave Lake country; and if the ladies living there got their cards by Christmas they were in luck. Any Christmas mail north of that could not be delivered this winter—perhaps not until almost next Christmas. Ultimately, however, the mails will pass down the Mackenzie River to Fort McPherson and on to the Arctic Ocean. In this way officers and crews of the whaleships wintering at Herschel Island perhaps can get a letter or so more quickly than they can by going to the post-office via Bering Sea or Greenland. Remote and difficult as that is, the dog teams count on getting the early winter mail from Edmonton up to Herschel Island by April. This will be the first mail those men will have had since last July.

A Pack of Forty Pounds

Perhaps on the wall of your den you may have as curiosities, collected by yourself or given you by some friend, a gayly ornamented dog whip, or dog collar, or dog blanket from this Far Northern country, where the mails go even in the wintertime. Perhaps you may have a pair of snowshoes or a lynx robe or a rabbit blanket from that country—curious things to look at; yet more curious if they could talk and tell their own stories. However, not even the snowshoes, with their mended thongs, can give you any idea of the countless weary miles over which their wearer ran, following his dogs, thousands and thousands of miles in all, carrying the mail which perhaps he himself could not have read, but which he delivered safely. "O. H. M. S."—On His Majesty's Service—is the franking inscription sometimes written on certain classes of English or Canadian mail. On civilization's service or on humanity's service is the real reason the mails are carried so far and so cheaply and so promptly all over the world.

What is true regarding the delivery of the mails in the Canadian fur country is true in large part regarding winter mail delivery in Alaska. When the boats do not run the dog teams do. When the railroads can operate no farther, wilderness transportation takes their place and the mails get through usually with astonishing regularity.

In the Rocky Mountains, winter changes the whole face of Nature more than most men can realize who have never seen the mountains at that season. Sometimes three feet or more of snow will fall in one night. You will pass on your snowshoes over snowdrifts where it may be from sixty to a hundred feet down to the ground. The general passenger agent of the Yukon & White Pass Railway in Alaska once asked some friends to guess how many feet of snow fell at the summit crossed by his road. They could not guess it, and were surprised when he said it was one hundred and forty-five feet. If you have camped out in the mountains in the wintertime, and had your campfire melt down through eight or ten feet of snow to the solid earth, you will see the strata representing the different snowstorms clearly defined in the walls of your little prison.

Snow packs and settles a great deal, so that down at the bottom of the little well in which you lie you will see perhaps a couple of feet of snow represented by only a couple of inches in the packed product; but all this snow as it falls is loose, so loose that a man cannot get through it without snowshoes. Hence the mail carrier of the remote mining camp, where not even dog teams can go, must travel on webbed shoes, or skees, and carry the mails on his back. He is asked to carry only forty pounds on any one trip, and for this reason perhaps the Christmas newspapers sometimes come

The Winning of

Western Canada

Is Creating Countless Opportunities for You

There are more square miles in the four provinces (states) which comprise Western Canada than there are in all the states east of the Mississippi River. It's the winning of this "Kingdom of Wheat" that is attracting the attention of the civilized world and creating countless opportunities for you.

Vast areas of timber, mineral and 40-bushel-to-the-acre wheat land are being opened to the lumberman, miner and farmer by the building of the

Grand Trunk Pacific Railway

from ocean to ocean. 350,374 settlers came to Western Canada last year; of this number 131,114 came from the United States, making a total of more than a million Americans who have answered the call of the Last Best West. In the

Hundreds of New Towns

on the Grand Trunk Pacific Railway merchants, manufacturers, investors, professional men, mechanics, clerks and so forth, will find OPPORTUNITY and a *warm welcome*. Get in—get in early—get in right. It's

Village Yesterday—Town Today—City Tomorrow

in Western Canada. One of the greatest services rendered by the Grand Trunk Pacific Railway Company to those who desire to identify themselves with the onward movement of the Canadian West is the Company's policy regarding townsite property. Merchants, manufacturers and investors may purchase Grand Trunk Pacific townsite property at prices ranging from $100 up to $250 per lot, on very easy terms—no interest. For you this means a store, factory or home site at a low cost; or it may open the way for you to invest a small or large sum in property—getting it direct from the Grand Trunk Pacific Railway Company. However, it is not necessary for you to buy property in order to receive any assistance we can give: so place your problem before us. Act quickly, *decisively*. Through our authorized agents we will point out the best towns and opportunities for you—individually. Tell us what you want to do. Let us bring you in close touch with leading wholesale houses, commercial clubs, boards of trade, industrial societies, newspapers and individuals. This service is cheerfully given and entirely free. Your correspondence will be treated confidentially and individually. Write to us, also ask for free, illustrated book—

"A Chain of Opportunities"

It is full of valuable information. Learn about the wonderful growth of new towns in Western Canada; about the town in which the merchants did $700,050 worth of business in the second year after the town was established. Ask about the town in which a lot bought from the Grand Trunk Pacific Railway Company for $325 sold less than a year later for $1,442.50. Let us tell you about Mirror—"The City Beautiful"—and many other towns wherein lie opportunities. Write tonight. Address:

HANSEN'S Gloves fit the *hand* and fit the work in hand. Ordinary gloves are a hindrance to work; *Han*sen's are a help. They give perfect protection with freedom of movement—ready fingers, nimble knuckles and limber wrists. There are no binding seams, no rivets to scratch.

HANSEN'S GLOVES

"Built Like a Hand"

are made of best horsehide leather, tanned by special process and guaranteed never to shrink or shrivel, harden, crack or peel.

Motorists and motorcyclists should always wear one of the many HANSEN styles. The railroad man—engineer, fireman and brakeman—the lineman, lumberman, doctor and hunter—all professions, trades and sports—every man finds in the Hansen line the glove that precisely suits his own specific needs.

Every Hansen is soft as kid, but strong as rawhide, heat, cold and steam-proof, impervious to water—"made-to-order," but ready to wear. When soiled, wash in gasoline. Nothing makes them lose their shape or softness.

in a little late, first-class mail having precedence over the bulkier sorts.

Some of these mountain mail carriers in the Rockies are among the boldest and hardiest men the country produces. There is always risk in following this calling, especially toward the close of winter, when the snowslides begin to run. An acquaintance of the writer, who once carried mails into Telluride, Colorado, in the winter season—a trip which he said took him all day to make going up and five minutes to come down on his skees—was once caught and carried some distance down the mountain in a snowslide. He said that the only direction that he knew was up; but, between him and his friends, he managed to get out, as he happened to be buried but a short depth. He did not get scared until several hours later, when from a comfortable cabin door he looked out into a frozen night, lighted only by rather chilly stars. Then he got so scared all at once that he quit the job.

One of the most interesting mail routes of the Rockies formerly lay between Gardiner, Montana, and Cooke City, northeast of the Yellowstone Park, the route crossing the park by way of Mammoth Hot Springs and Lamar Creek. The man who had this contract some fifteen years or so ago was named Church, a plucky, red-whiskered chap of whom it was said he had never failed to bring the mail through on time and never had been known to complain about the weather or to utter a profane word. As do many of these winter mail carriers, he took chances every time he started out, for no man who has not seen it can have any idea of the character of a genuine mountain snowstorm.

When this man started out he used a light wagon as far as he could going up the big hill east of the Mammoth Hot Springs. When a wagon grew impossible he left his vehicle and hitched to a sled, which he left within reach. Once on the summit he had a wide plain to cross, and then a very bad descent down what is known as Devil's Gut, before he got to his first landing-place at Yanceys. These narrow defiles would drift full of snow, and perhaps no other man in the world excepting Church could have gotten a team and sled over such country. His horses learned to wallow through somehow, though their driver often had to dig them out and always went prepared for such service.

Like Pilgrim's Progress

Resting at Yanceys perhaps over night, and thawing most of the icicles out of his whiskers before the next morning, this mail carrier would worry along with his sled up Lamar Creek until he got into more difficult country. Here he would unhitch his team, blanketing and tying out in a sheltered spot one of his horses and riding the other as far as he could. When he had gotten as far as possible on horseback he tied out this horse in similar fashion, and then took to the snowshoes which he had left on his previous trip. By the time he got through with his mails, he had behind him a string of conveyances and rolling stock scattered at different intervals over, say, fifty miles. He picked these up in reverse order on his way back to the railroad. This was his daily routine. Any man trying to travel with him, for even one day, would find his work cut out for him.

It chanced that one winter the writer had a little experience in covering this particular Rocky Mountain mail route on skees. It was hard enough, with the thermometer twenty or thirty degrees below zero; and more than once our party was obliged to "hole up," not venturing to travel in snowstorms which came so thick and fast as to blot out the back trail a few minutes after it was made. As it chanced, with an interval of no more than two or three weeks, I found myself on a little sailing schooner with a mail carrier running from Galveston to Smith Point, on the Gulf Coast. Here the weather was mild and balmy, too warm for comfort almost, and with a wind entirely too gentle for any sort of speed. We lay becalmed for several hours out in the bay, and for once the United States mails did not advance very rapidly. The mail carrier was very philosophical.

"Pshaw!" said he. "I don't suppose any of them letters or papers amounts to much nohow; and, besides, 'most everybody in Smith Point will be out duck hunting by the time we get there."

In other parts of our possessions, however, the mails are sometimes carried by

Rubber Heels that STAY ALIVE

They are unlike any rubber heels you ever heard of.

The first ten steps you take on them, you'll *feel* the difference.

And the longer you wear them the more apparent that difference will be.

SPRING-STEP Rubber Heels

start with more "spring" than anybody ever thought could be put into a rubber heel.

There's a LIFT to them that can't be described.

They're tough and strong and full of wear.

But the really new and great thing about them is that they retain their life and buoyancy right down to the last day you walk on them.

Wear them to a wafer—they're still ALIVE.

We've done it with pure rubber treated by our special process.

Into this heel we have inserted the Patented RED "Can't-Slip" Grip—

You can't slip on Spring-Steps if you try.

Ask to see them at your nearest repair shop.

50 Cents put on.

Grandma on a Visit

ONE of her first cares is to see about her little granddaughter's teeth.

Naturally so.

Her own teeth are perfect—good as ever—and she knows what that has meant, more and more with passing years, in health, good looks, well being.

"I use Dr. Lyon's Tooth Powder night and morning. Mama taught me to."

"Yes, dear, just as I taught your Mama to, and just as my Mama taught me."

With millions of the best families it is a tradition to use

Dr. Lyon's
PERFECT
Tooth Powder

prepared for almost half a century by a doctor of dental surgery.

Three generations have been brought up to its use with increasing faith. It has an honorable place apart from ordinary tooth preparations. The best dentists prescribe it as they have always done.

Because Dr. Lyon's is a perfect dentifrice in POWDER FORM, having no gelatine, glucose, glycerine, or honey to leave sticky masses between the teeth to encourage decay.

It cleanses and polishes the teeth, removes discoloration and tartar, WITHOUT CHEMICAL ACTION, and imparts a natural fragrance to the breath. Use it thoroughly night and morning—*above all at night.*

What Dr. Lyon's does not do should be entrusted only to your dentist to do.

SOLD EVERYWHERE

The brush never touches this can

boat where the other extreme obtains as to wind supply. There is no more dangerous coast than that of Alaska; but daring little schooners, manned by some of the pluckiest sailors in the world, manage to get in and out of the remote ports of that far-off country, even in weather that would make a Gloucester fisherman look down his nose. The steamers that go north of Frisco and Seattle carry the mails to the larger settlements on the Alaskan coast, and thence they are distributed by schooner, packhorse, man pack or dog team. The population of some of the Alaskan coast country is rather cosmopolitan—some of the sailormen are Russian, others Scandinavian, yet others full or half-blood Aleut, with a sprinkling of English and New England Yankees. Wild and bold enough chaps they are, too—good pilots and good sailors, in fair or foul weather. They do their part simply and unpretentiously in getting the mail through to the outlying settlements.

Five years ago I was up in Northwestern Alaska and there met a Russian, one Pete Petrovsky, who then and there promised to send me an Aleut whale-harpoon. This contrivance is only about four feet long, and could be sent by mail, as he supposed. It took us two years to discover that one harpoon had been sent, only to disappear somewhere in parts unknown. In another year I got word back to Pete that his first venture had failed. This winter, two years later, I got another harpoon in good condition, with many writings on it. This is a rather longer time than I find necessary to communicate with another friend of mine by the name of Clarke, who lives on the Peace River, almost a thousand miles north of the American line. And now and then I get a postal card or chance letter from another wandering friend who writes from New Zealand, Heidelberg, Paris, Sydney, Nairobi, Honolulu, Nagasaki, St. Petersburg—or wherever else he happens to be. For the most part, these communications come through in astonishingly short time. You can get from New York to Nairobi, for instance, and started on your elephant hunt, in something like thirty days or so, if my memory serves.

The Lion's Share

This friend, who breaks the monotony of his life with an occasional lion hunt or the like, sometimes has occasion to put a letter in a split stick and hand it to a fuzzy negro two or three hundred miles inland from Nairobi. Such communication reaches New York, Chicago or San Francisco with practically unvarying certainty, unless a lion eats the bearer. Even in this case the lion does not always eat the letter; so some one else is pretty sure to get it through.

United States Army officers in the old days very often used Indian runners as mail carriers. Varying stories have been handed down regarding the distance which a native runner can cover in a day. Dog runners, back of their teams in the fur countries, are credited with fifty-five, sixty-five and even seventy-five miles in a day's run. As a man cannot do seventy-five miles a day on snowshoes, the explanation seems to be that he hops on and takes a ride once in a while. He could, perhaps, do forty or fifty miles, however; and a man on skees could do twenty or twenty-five miles in the Rockies on a day's journey without being extraordinarily skillful or powerful. In the earlier days, before Indians got fat or had learned the delights of whisky, their young men could do extraordinary distances on foot when the going was good—no doubt, sixty miles a day; and army officers have credited them with a hundred miles in a day of twenty-four hours.

The Indians of the dry Southwest seem to have been the best runners, and there is one tribe of Indians in Mexico who are noted for their extraordinary speed and endurance on foot, who could get over almost or perhaps quite a hundred miles in a day. Sometimes these runners carry a letter in a split stick as do the African savages. General Fremont once rode a hundred miles in one day of twenty-four hours, using two California horses; but when it comes right down to animals a good man is the finest animal of them all, and will go where no other can and do what no other can. It is these men, simple and sometimes ignorant, but the hardiest, shrewdest and most enduring animals of all the earth, who get the messages of civilization through to the outermost dwelling-places of the wilderness.

Municipal Building

Des Moines

The City of Certainties Has Made Good

Two years ago we began this campaign of advertising Des Moines—the City of Certainties.

In each advertisement we explained that the Greater Des Moines Committee is devoted to public service, that its function is to act as a bureau of advice and counsel between the interested outsider and the city of Des Moines. It is virtually a clearing house of information; its purpose is to aid and direct the growth of Des Moines.

Everything we have said about Des Moines has been found to be exactly true.

Every visitor to Des Moines has learned that our statements and our figures are facts.

If you are a man of energy, of initiative, of ambition, and of capacity, with an industry or enterprise which naturally should have part in this business field, you owe it to yourself to know about

Des Moines

Des Moines today does not supply more than one-third of the insistent demands of its trade territory.

Why not let us at least tell you about Des Moines? We have answered thousands of inquiries in these two years. Many men have come here and are glad they did. Des Moines has profited 150% on the expenditures of the Greater Des Moines Committee. Tell us frankly your desires and let us tell you what there is here for you in your own business sphere—and what there is here for your family, what kind of a city this is to live in.

Either write us now, or fill the coupon below and mail it.

All railroads give stopover privileges at Des Moines. It will interest you to spend half a day or so here and see things for yourself.

The Lubricant for Your Car

Flake Graphite is acknowledged an ideal lubricant because it produces on bearing surfaces a marvelously smooth and durable veneer that actually holds the metal surfaces apart. Friction is reduced to a minimum—bearing surfaces can't cut or seize—when you use Dixon's Motor Graphite, a wonderfully unctuous graphite of extraordinary softness and lubricating qualities.

Dixon's Motor Graphite increases the lubricating value of oils and greases. Only a very small quantity added regularly is necessary to keep bearings in perfect condition. Unlike oil or grease, it is unaffected by heat or cold—can't be squeezed out of bearings.

DIXON'S Motor Graphite
(Pulverized Flake)

Add a little Dixon's Motor Graphite in dry form to the oil in your crank case or blow it in the spark plug hole. It will increase compression and give you more power from a smoother running engine.

Mix it with your own choice of lubricants or we will do it for you, as we manufacture a full line of greases containing Dixon's Motor Graphite.

Ask your dealer for Dixon's Graphite Lubricant No. 677—a highest quality mineral grease scientifically combined with Dixon's Motor Graphite. Fine for differentials or transmissions. More economical than plain oil or grease.

Send name and model of car for free book, "Lubricating the Motor."

D X N TRADE MARK

The deeds of the old pony-express riders, who crossed the continent before the railways, have passed into history, almost unbelievable as they are. A rider has made a forced ride of a hundred and fifty miles—continuously in the saddle—in that service. We do it rather more easily now with our fast mail trains; but who can tell all the romance of a mail packet which starts, say, from the center of the city of New York? The pneumatic tube, the electrified railroad and the river tunnel help start this packet on its westbound way. Then it begins to travel a mile a minute until it reaches countries of slower railroad facilities. The trolley car now takes up the journey; after that perhaps the stagecoach, the buckboard, the rural free-delivery wagon; then, perhaps, the rider with mail-bags back of his saddle, or the footman with the mail on his own back; the snowshoer, working hard to make ten miles a day uphill; the sailor, who takes more care of the mails than he does of his own life when he goes out in a storm; the ox-team mail driver; the mail carrier of the Far South, who goes on his way in a narrow sassafras dugout, or the one who rides a melancholy mule. They say that ere long we shall be carrying mail by airships—and that may be. It is a far call from the methods of the frontier when the mail was sometimes packed on the back of a dog.

Itinerant Postmasters

One way or another, the mails get through at small cost in cash for each item carried, but at an enormous total cost, both in scientific and industrial skill, and in sheer human pluck, strength and hardihood on the part of individuals. It is on the king's service—and that king is yourself. You love the wild places, no doubt; but you do most to conquer and alter them when you buy a roan stamp for two cents and start it for Tincup or Nairobi, for Fort Herschel or Paris, knowing that it will go through.

You can get a flavor of the wilderness by a glance at any post-office gazetteer. Perhaps you yourself may have felt the touch of other days when, in the middle of an apparently edgeless Western plain, you have seen a lard can or a cracker box acting as a post-office, once in a while receiving mail and once in a while sending out mail—by no discoverable human agency. Uncle Sam is methodical in his ways, and no doubt thinks that when once he has located a post-office it stays there. Such is by no means the case, for many a Western postmaster considers that he is the post-office, and that mails should be received from him, wherever he happens to be.

There used to be and still is a post-office in Wyoming called Fourbear. It was once located at the ranch of old Colonel Pickett, a noted grizzly killer of the Greybull Valley. The colonel sold his ranch and left the country and the post-office dropped down to another ranch, but the name remained the same. Last summer it had moved down to Meeteetse, fifteen or twenty miles farther—or, at least, Fourbear mail was all delivered at Meeteetse.

There used to be another postmaster in that same part of the world who regularly used to drop down out of the mountains when the snow came, some twenty-five or thirty miles, taking his post-office with him in his hat. The arrangement suited him and everybody else; for, after all, men are like other animals, and there is no use looking for them if the snow has driven them all out of the mountains.

In some way or other, however, whether by exercise of skill, courage, ingenuity or common-sense, the mails get through. Sometime we shall have a parcels post—and ought to have; but if it ever gets to the place where you can send a cookstove by mail it is going to be hard for the fellows who deliver by dog team or snowshoe at Herschel Island, Cooke City or Tincup.

Short but Sweet

SENATOR JOHN W. KERN, of Indiana, put on his high hat and his long coat, combed his justly famous paint-brush whiskers and visited New York.

An affable stranger approached him on Broadway. "Doctor," he exclaimed, grasping Senator Kern by the hand, "I am glad indeed to meet you. I have often had the pleasure of seeing you in the pulpit."

"The deuce you have!" said Kern, and the interview terminated.

Here's a hot favorite

A REAL East India dish; blended as skillfully as in its native clime. When your appetite needs a little extra "spur" and your palate longs for "something different," just try

Campbell's MULLIGATAWNY SOUP

Then you'll realize better than ever what a pleasing and distinct variety is included in our wholesome "21 kinds."

Chicken, rice, chutney and other condiments, fresh fruits, apple, citron, cocoanut and the finest imported curry all help to give this soup its distinctive and inimitable flavor. And those who like a naturally hot soup like this the best of all.

Why not get acquainted with it *today*?

"Teacher: 'Twas an extra plate Of *Campbell's Soup* that made me late."
"Good excuse; and bounteous larder. Now you'll study all the harder."

21 kinds
10c a can

Asparagus, Beef, Bouillon, Celery, Chicken, Chicken-Gumbo (Okra), Clam Bouillon, Clam Chowder, Consommé, Julienne, Mock Turtle, Mulligatawny, Mutton Broth, Ox Tail, Pea, Pepper Pot, Printanier, Tomato, Tomato-Okra, Vegetable, Vermicelli-Tomato

My Ideal of a Car

Built to Justify Men's Faith in Me

By R. E. Olds, Designer

Reo the Fifth—My Farewell Car—in every detail marks the best I know. And I have spent 25 years in this business. If any man can build a better car, he's a better man than I.

Not for $1,055

Many able designers say the best in a car can't be given for $1,055.

And I almost agree with them.

Reo the Fifth was not designed to sell at this altruistic price. I fear that this price, in the long run, is impossible. It will doubtless be advanced.

But this much I assure you:

So long as I direct the making, this car will embody the best I know, regardless of price or profit.

It Decides My Fate

I have spent 25 years in winning my place as a designer of automobiles. I have designed 24 models, and built tens of thousands of cars.

It has been a long, hard road. And I, like other men, take pride in what I have accomplished.

Reo the Fifth marks the climax. I have spent 18 months to make this car the capsheaf of my career.

All I have gained in a lifetime of effort is at stake on this car's performance. And for this season, at least, I have complete charge of the making.

So you may be sure that Reo the Fifth won't be skimped to meet a price.

Price Not Fixed

The last car I designed—a car smaller than this—sold for $1,250. And that was considered a marvelous value.

The cost of materials has fallen since then. New machinery has cut our factory cost.

We figure this new car will double our output—and it will. We also save a great deal now by building only one chassis in this enormous plant.

By thus paring our costs, then our profits, we got the price down to $1,055. And we take pride in this amazing price as evidence of our efficiency.

But this price is based on ideal conditions, and on cost for materials the lowest we have had in years.

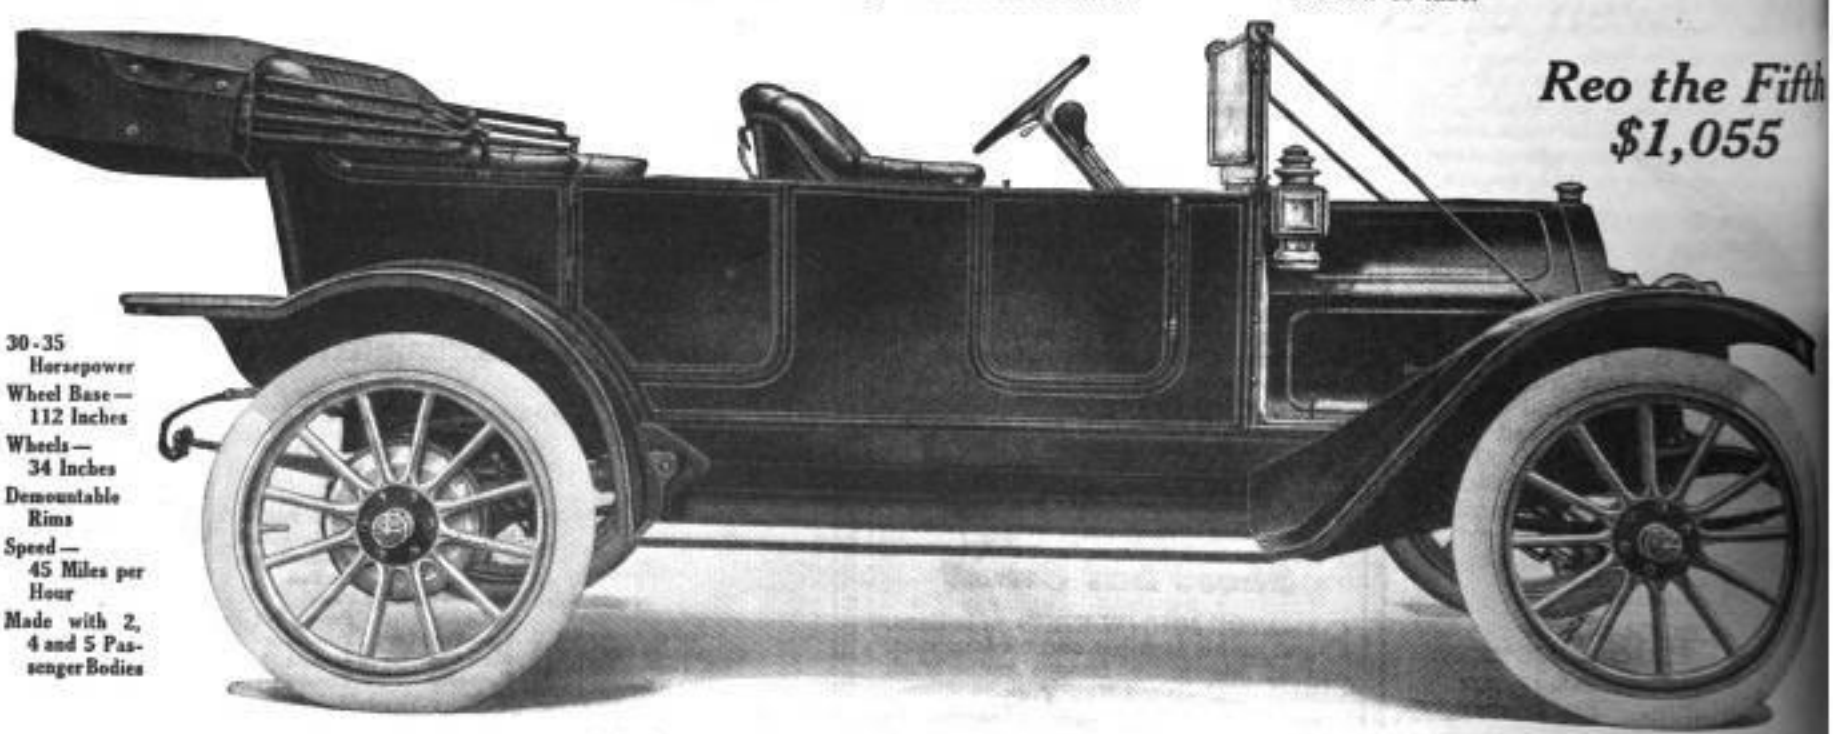
So this price is not fixed. Any added cost must be added to it. Our contracts with dealers all provide for advance.

We announce this to avoid future misunderstanding.

Our Model Factory

We have built up here what men regard as a model automobile plant. Engineers from everywhere come here to inspect it.

The labor-saving machinery is largely of our invention. It was built in our shops.



It gives us utter exactness. It makes like parts interchangeable. And it has cut labor cost to the minimum.

In this model factory we build the whole car, so no profits go to parts makers.

Our output is enormous, which means small overhead expense. Our system is perfect. Efficiency here has been worked out to the finish.

Then we are not overcapitalized—have no bonded debt. So that factor in cost is eliminated.

We ought to give more than others give for the money. We expect to, and will. But this initial price, in my estimation, is too low to last.

Reo the Fifth
$1,055

30-35 Horsepower
Wheel Base—112 Inches
Wheels—34 Inches
Demountable Rims
Speed—45 Miles per Hour
Made with 2, 4 and 5 Passenger Bodies

Top and windshield not included in price. We equip this car with mohair top, side curtains and slip cover, windshield, gas tank and speedometer—all for $100 extra. **Self-starter, if wanted, $20 extra.**

Judge for Yourself

If a Car Can Be Built Any Better

The Standard Car

There are cars larger and smaller than o the Fifth. I have built all types myself, to six-cylinder sixties.

But Reo the Fifth, in my estimation, typi- s the car of the future. More and more, perienced motorists are coming to this ndard type.

It is not too large nor too small, too light r too heavy. It has ample power for any quirement. It is large enough to be a omy car for five.

Cars over-powered and over-sized cost too uch for upkeep. Undersized cars grow to em insufficient.

The popular type is the 30 to 35 horse- wer, four-cylinder car. Cars of this type e sold all the way up to $2,500. So I opted this type for My Farewell Car. And is factory now turns out no other model.

I don't claim, of course, that oversize cars ed not be more costly. But I know of no way, a car of this type, to add one iota of value.

Margins of Safety

The best I have learned in 25 years is the ed for big margins of safety.

I have learned this by watching tens of ousands of cars, with all sorts of drivers, der all road conditions.

It is not sufficient to have parts strong ough. They must have several times the eded strength.

So my axles and driving shaft, wheels d springs are all much larger than neces- ry. So is every part where weakness ever velops.

I use Nickel Steel for axles and driving aft—Vanadium Steel for connections. My differential was designed for a 45-horse-power car.

I use roller bearings—Timken and Hyatt—instead of the usual ball bearings. There are only three ball bearings in this whole car, and two are in the fan.

Unusual Tests

To make utterly certain that parts are right I use very unusual tests.

Each lot of steel is analyzed to make sure it accords with my formulas. The slightest variation causes me to discard it.

It is usual to test gears with a hammer. I have built a crushing machine of 50 tons' capacity, to prove to exactness what each gear will stand.

I put magnetos to a radical test which only two makes tested here will stand.

Inspection here is carried to extremes. Engines are tested again and again against unusual loads.

We use the same clutch as $5,000 cars—the same grade of springs—the same efficient type of brakes.

I ran one of these cars for ten thousand miles—night and day, at top speed, on rough roads. I did this to learn if any part of the car would fail to meet any requirement.

Then we took the car to pieces and examined every part. We could hardly discover in any important part the slightest evidence of wear.

All this is done to make sure of perfection in this, My Farewell Car.

Outer Attractions

Another thing I have learned is that men—and women—want a classy and beautiful car.

So the design of this car shows the last touch of up-to-dateness. The body finish consists of 17 coats. The upholstering is deep. It is filled with hair. The covering is genuine leather.

The lamps are enameled, as per the latest vogue. Even the engine is nickel trimmed.

The wheel base is long, the tonneau is roomy, the wheels are large, the car is over-tired. There are ventilators in front which open and close. There are demountable rims.

You will find no shortcomings when the car is compared with the costliest cars on the market.

Close to Finality

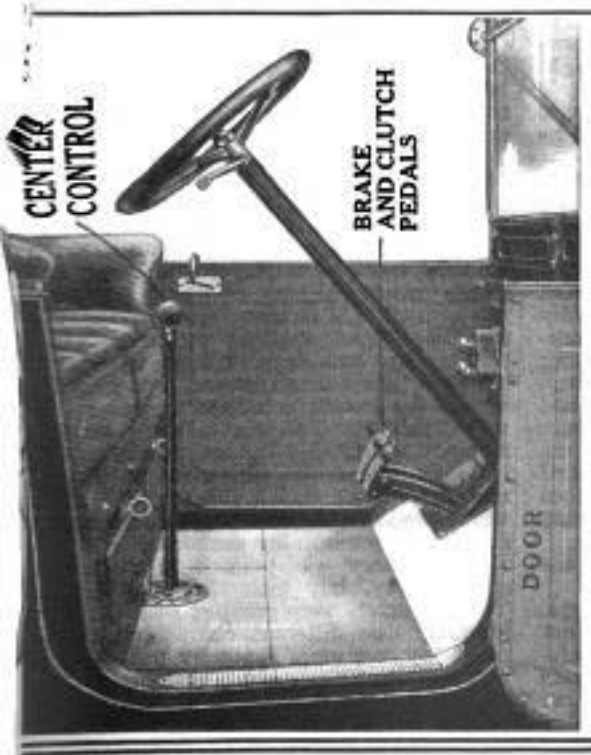
I regard Reo the Fifth as pretty close to finality. In every detail it marks the best I know. And I do not believe that this plant or others will ever build a much better car.

Better materials are certainly impossible. Tests and inspections cannot be carried further. The features and devices are the best yet discovered, and there appears little chance for improvement.

Fashions may change in some minor details, but no designer, in my estimation, will ever get more of real worth in a car.

Ask for Our Book

Our Book shows the three styles of body—touring car, demi-tonneau and roadster. The roadster sells for $1,000.



It pictures all of the details, so you may compare them with higher-priced cars.

You should know these facts, for Reo the Fifth is the most interesting car of the season.

Write today for the book, and we will tell you where to see the car. Address

Canadian Factory, St. Catharines, Ontario

New Center Control—Exclusive Feature
No Side Levers—No Reaching

Reo the Fifth brings out, for the first time, our new center, cane-handle control.

All the gear shifting is done by this convenient lever between the two front seats. It is done by moving this lever less than three inches in each of four directions.

No noise, no grinding, no reaching. Just a slight, easy motion.

Both brakes are operated by foot pedals, and one of the pedals also operates the clutch.

So there are no side levers to get in the way. The entrance in front, through either door, is as clear as the tonneau entrance.

This arrangement permits of the left side drive, heretofore possible in electric cars only. The driver sits as he should sit, close to the cars which he passes and on the up side of the road. He sits where he can look back in making a turn.

The operation of this car is simplicity itself—as simple as an electric. Your wives and daughters can drive it. This center control is the best new feature brought out in any car this year.

Yet this is but one of the details which reveal this car's up-to-dateness. When you see them all you will say with me that Reo the Fifth comes pretty close to finality.

A Long Step Forward!

The firm which for 25 years has set up the big progress-marks in roofing history, now presents a really artistic roofing for residences—fire-resisting, and at a moderate price. The house shown above is roofed with

NEPONSET PROSLATE ROOFING

Look at it. Wouldn't you like a roof as attractive as that on your house? NEPONSET Proslate comes in distinctive red and green colors. It is a re-adaptation of the sturdy, long-life roofing materials which we have been making for years, combined with a colored surface. It is the biggest idea that has ever been launched in the roofing business. More attractive than shingles, and practically fire-proof—while shingles quickly catch fire, NEPONSET Proslate will make the ideal roof for your house. If you would know more—

Send for Our Booklet on Roofing

and the name of a NEPONSET dealer near you. He is reliable. Send postal today.

F. W. BIRD & SON (Est. 1795) **11 Neponset St., E. Walpole, Mass.**

New York Chicago Washington Portland, Ore. San Francisco
Canadian Plant: Hamilton, Ont.

Remember that we are the makers of NEPONSET Paroid for nearly 15 years the acknowledged standard of high-grade roofing.

Ex-Pres. Roosevelt Says—

"Good road-building makes in a nation those stable qualities which tell for permanent greatness." And Mr. Roosevelt is *right!* Good roads mean increased land values—the ability to "get there" easily, quickly and comfortably. But the roads must be *built right.* Ditches badly placed, and weak, leaky culverts, are simply money wasted. Save money by using American Ingot Iron Corrugated Culverts. Heavy loads can't break them—frost can't crack them.

American Ingot Iron Culverts

(99.84 Per Cent Pure Iron)

are strong, durable and easy to transport and place. Leading railroads use them in place of concrete, brick, tile and stone. First cost low—upkeep nothing.

These Culverts are *not made of* steel, but *American Ingot Iron—guaranteed 99.84% pure.* Steel, on account of its impurities, rusts and corrodes quickly. American Ingot Iron, due to its purity, resists rust for many years. This is why American Ingot Iron Culverts outlast steel culverts.

The triangle trademark is on every section of genuine American Ingot Iron Culvert. These famous culverts can be obtained only from the manufacturers named below.

Send for full particulars. The book, "Culverts," will pleasantly surprise you. Write to-day. You will receive it by return mail.

AMERICAN INGOT IRON ARMCO

PLATES, SHEETS, ROOFING, FENCE WIRE

THE APPLE OF DISCORD

(Continued from Page 5)

Absorbed in his work, the playwright had scarcely given a thought to his outraged neighbors. There was design in his act, but for the moment this had been forgotten in the interest of his work. He spent the whole of his time in studying out the details of his operetta, either lying in his hammock or sitting at the piano or in moving manikins about his model stage.

Swung from the lashing at the head of his hammock was a bunch of ripening bananas. Now and then the author reached back to twist off one of the small yellow fruit, which he devoured at a gulp, all but the last two inches, this piece being offered to a large green parrot perched in a ring at one side. These bounties the parrot received in one extended claw, remarking in a dulcet tone, "Thank you, darling."

Directly under the hammock, which was as near his master as it was possible to get, a small dog of mongrel type and intelligent expression was crouched on the deck, his alert head turning this way and that, while at least one bright eye returned with unabated interest to the evolutions of a large and handsome raccoon that was fishing about with one paw in a bucket of water. Forward of the awning where the sun streamed across the deck, a black cat with green eyes was watching the gambols of a family of kittens remarkable for heavy fur and ringed tails. The lambent eyes of the mother went frequently toward the raccoon, continuously fishing in the bucket with the patience lent by its species to such pursuits. At these moments the narrow black slits of the cat's pupils opened wider.

Entirely engrossed in his work, Lanier failed to notice the approach of a rowboat that put off from the landing of the reading room. He could not in any case have seen it, but even the swash of oars and the slight jar, together with murmur of voices at the staging of his accommodation ladder amidships, failed to capture his preoccupied attention. Or possibly he may have been subconscious though unheeding, for the story of The Broken Word had found its way into the press, and not infrequently boatloads of summer visitors from the garish hotel at the rivermouth would pass gayly round the battered hulk to a chorus of profane laughter directed toward the frozen groups upon the reading-room veranda.

Intent upon his work of revision, Lanier did not look round until his caretaker, who had approached him in a stealthy and dubious manner, laid his hand on the tense hammock lashing. Roused suddenly by the vibration Lanier squirmed about like a cat that has just received a charge of shot.

"What is it?" he snarled. "How many times have I got to tell you that I'm not to be disturbed when I'm at work?"

"Beg pardon, sir, but there's four parties from the clubhouse wants to see you."

"Where are they?" Lanier twisted his lithe, beflanneled body still farther and his angry eyes fell upon a little group standing in the waist. Preëminent in stature was Mr. Phelps who, catching Lanier's eye, swelled out his chest and appeared about to advance toward the break of the quarter-deck, when the curt tones of the playwright forestalled him.

"Show the gentlemen below," said Lanier to his caretaker, "and say that I shall be down directly."

The words were quite audible to the four visitors, respectively Messrs. Phelps and Soper, Major O'Sullivan and Professor Pringle. Mr. Phelps appeared slightly at a loss, swelled his chest, then slowly exhaled the invigorating sea air through his puffed cheeks. Major O'Sullivan, a slightly built, dapper man with an enormous mustache and a very resonant bass, squared his shoulders, tugged at his mustache and glared in the direction of Lanier, who had returned to his reading and of whom only the top of a black head was visible over the rim of the hammock. Doctor Soper rubbed his hands, hemmed a little and glanced at Professor Pringle, who was gazing abstractedly toward the distant horizon.

"Confound his cheek!" muttered the major. "Let's go back ashore."

The president looked rather vague. "Now that we are here ——" he began, but was interrupted by the harsh-featured caretaker, who came down into the waist with a curt "This way, gents," and a manner more suggestive of a Yankee mate showing their billets to a batch of raw hands than one conducting guests to the saloon.

Mr. Phelps filled his lungs afresh, puffed out his cheeks and followed the man. Professor Pringle started, looked [illegible] dazed—for the dancing blue of the [illegible] had suggested the ancient Ægean and [illegible] mind was some twenty or thirty centuries behind the movement. Doctor Soper [illegible] trotting in the wake of Mr. Phelps, rubbing his hands and smiling nervously to [illegible] Major O'Sullivan alone appeared to [illegible] tate about obeying the summons [illegible] below, but the fact that the others [illegible] already started made a refusal awkward, wherefore he brought up the rear, [illegible] savagely and tugging out a handkerchief at every step.

Ushered by the laconic caretaker, the visitors went down such a flight of [illegible] might lead into the attic of a New England farmhouse and found themselves [illegible] within an apartment somewhat singular in the belly of a ship. To begin with, the gangway first landed on a sort of [illegible] that ran athwartships and extended [illegible] and aft along the sides, ultimately [illegible] appear in the gloom. Below this was another balcony of the same sort, and below this was what seemed to be the floor of a spacious and comfortable [illegible] There were oriental rugs, divans, [illegible] big lounging chairs, a handsome Renaissance buffet and a grand piano. Between the galleries the rough pine ceiling was covered by many posters, some of them representing frivolous young women conventionally clad and bearing such profane inscriptions as Folies Bergères and Tabarin. Others less dangerous to the elderly eyes of the Chimney Corner element portrayed pretty young things [illegible] through pan-pipes or teasing little [illegible] These bore the name of Calvert Lithe with boastful statements concerning the number of presentations.

The whole place was well lighted by roomy ports cut between the galleries and two big spar-deck skylights. Fore and aft galleries and orlop deck faded into the gloom, though the main [illegible] seemed partitioned off by portières of tapestries hung from the main deck to what was left of it.

Arrived below after a considerable descent of ladder steps, the Chimney Corner Peace Commission looked about with some bewilderment. To the eye of a shipbuilder it would have been at once apparent that Lanier had secured a hulk converted from the hulk of an old merchantman and made of the amidships section a practical musical and dramatic studio with very little expenditure so far as the vessel was concerned. The rough, exposed portions of the skin had been ceiled with pine and the side ports and skylights cut out, and that was about all. Lanier apparently lived in the vast, roomy studio, for there was a bed made up on one of the divans and a dressing table in a small recess beside a port. What the rest of the hulk might or might not contain was shrouded in mystery.

It was not until the quartet had reached the foot of their slightly perilous descent that the most striking feature of the place became apparent. Just under the level of the halfdecks was a miniature stage, not so excessively miniature, as the puppet dolls that graced it were constructed to scale not less than half that of the [illegible] and the stage itself filled in width the whole amidships section of the ship. It was in fact a stage upon which a piece might actually have been played, and at a glance one would have said that a piece was even at that moment being presented for the bright sunlight striking down through the amidships skylight illumined the *décor* like a limelight and brought vividly the prettily costumed figures of the waxen players. The *mise en scène* at the moment presented a tropical garden overlooking a bay strewn with islands. In the middle distance was a fortification from which flew the American ensign, and beyond it a naval squadron lay anchored.

The scenery was painted in a [illegible] splashy way, but with charming effect. The doll actors were grouped with exact harmony, the different characters designated by costumes sketchily painted on blank paper, then cut out and pasted on the manikin. Looking closer, the astonished visitors saw that the stage was perforated with numerous holes of about an inch in diameter and perhaps two inches [illegible]

We've Doubled the Durability of The OLIVER!

Model 5 With Its Steel *Coat*-of-Mail Gives Utmost Limit of Service

Built into the new Model 5 Oliver Typewriter are many exclusive devices for saving time and effort. We have even improved the type itself—and all the world now knows PRINTYPE.

Each of the refinements and added conveniences is a link in the "endless chain" of *completeness*. But equal in importance to these *combined* advantages is one that has scarcely been mentioned in print.

—An improvement that actually adds years to the life of the machine.

To deliver to the purchaser not only the highest *working-efficiency* but to *hold* that efficiency at the highest point—for a long term of years—is the problem worked out in Model 5.

Printype — OLIVER Typewriter

The Standard Visible Writer

This Masterpiece Model is made with a steel coat-of-mail, which protects the important working parts from dust, dirt and damage from accident.

The mechanism works freely in a framework of solid steel, without the vibration and "rattle" so characteristic of typewriters.

This wonderful *stability* makes for *precision* and practically eliminates *wear*.

It gives to The Oliver Typewriter that marvelous *staying power* for which it is justly famed.

Endurance Plus Speed

The speed possibilities of Model 5 keep pace with the most exacting demands. The light touch and easy action tempt the fingers to move swiftly. The smooth precision of the machine gives speed without conscious effort.

Speed Plus Versatility

Model 5 is as notable for its *versatility* as it is for speed and endurance. Its various devices, for special uses, are simple, responsive and *practical*.

The Vertical and Horizontal Line-ruling Device, the Tabulator, the Back Spacer, the Interchangeable Carriage, etc., widen the scope of its uses to the utmost practical limit.

Versatility Plus "Printype"

PRINTYPE, the beautiful new type face originated for The Oliver Typewriter, was designed exclusively for Model 5. The shaded letters of PRINTYPE give distinction and character to typewritten correspondence. PRINTYPE makes a typewritten letter as readable as the best printed magazine or book. Its attention value adds to the effectiveness of selling letters. It aids and rests the eyes.

To Purchasing Agents of Corporations

When placing your next order for typewriters, we suggest that you give special consideration to these important advantages of Model 5:

—Unlimited durability—No appreciable cost of maintenance—Unparalleled speed—Wide range of uses—Beautiful and novel PRINTYPE TYPE—Simplicity (several hundred less parts than other standard typewriters).

The same qualities that have won for The Oliver Typewriter the favor of the world's greatest firms and corporations, appeal with equal force to the one who buys a machine for personal use. Model 5 is an investment that pays handsome dividends in service and satisfaction, year after year.

Art Catalog and Special Demonstration for the Asking

On request, we will forward a copy of the new catalog and a specimen letter written in PRINTYPE. A personal demonstration of the machine itself will place you under no obligation to purchase. Details of our 17-Cents-a-Day Purchase Plan gladly given. A $5 cash payment brings this $100 machine—*you can pay the balance in pennies!*

The Oliver Typewriter Co.

844 Oliver Typewriter Bldg., Chicago

Each manikin was fitted with a peg and could thus be placed at any part of the stage. Those occupying the scene at the moment represented soldiers, sailors, señoritas and a few tourists. The grouping was exceedingly effective, and the whole, surveyed through half-closed eyes, gave a perfect illusion of the theater.

Major O'Sullivan, an enthusiastic devotee of the Muses as worshiped across the footlights, uttered a sharp exclamation of surprise and pleasure.

"Upon my word, so that's how it's done. Most interestin'—looks like the Philippines."

"Allee same Panama," said a bland voice at his elbow. "Mist' Lanee makee opoletta Panama. Plenty sing-song dance. You likee dlink?"

Without waiting for a reply, the intelligent Celestial slithered across to the buffet and carried to the center table a heavy tantalus containing three most inviting cut-glass carafes. Four tumblers were produced from thin air, and a siphon opaque with the cold rime of the icebox.

Mr. Phelps was pompously protesting that they desired nothing, but the Chinaman did not appear to understand such language. Major O'Sullivan started to protest, then checked himself and glanced at his watch. He was feeling rather ill at ease, and besides it was half-past four. Doctor Soper was rubbing his hands and examining the little actors and actresses, while Professor Pringle, having sighted a long row of closely filled bookshelves, was being lured in their direction with fatal persistence but bashful hesitation until, his eye being caught and held by a whole row of Greek plays in the original text, the Œdipus Tyrannus of Sophocles, some tragedies of Æschylus and Euripides and about half a fathom of a beautiful edition of the comedies and satires of Aristophanes, he promptly became oblivious to time, place and the business in hand, and retired to a wicker lounging chair beside a port, to become absorbed and entirely lost to sight and sound.

Meanwhile the smiling Charlie had laid a box of cigarettes beside the tantalus, and smilingly indicated the contents of the three decanters with the tap of a fingernail that would cause the pupils of a manicure to dilate. "Ol' lye—velly stlong, no can get Amelica, velly good an' cost plenty dolla'. Velly, velly good. You tly." And with a positively Celestial smile Charlie had flitted off into the gloom beyond the portières.

Major O'Sullivan's keen military eye rested with appreciation on the different shades of amber reflected from the carafes. He tugged at his fierce mustache and looked at Mr. Phelps. The president of the Chimney Corner Association filled his chest and looked back. Both gentlemen then looked at the tantalus. Doctor Soper rubbed his hands, then broke the ice by taking a Turkish cigarette and lighting it in a perfectly natural manner.

"Since the object of our errand is to arrive at an amicable understanding," said he, "I see no reason why we should reject the hospitality offered us. These are excellent cigarettes. I happen to know that they are to be had only in London."

The faces of the other two lightened. Each man felt that he had never, until that moment, quite appreciated Doctor Soper. Between the major and the president there was that bond sometimes to be found between lawbreakers. Both gentlemen were in the habit of infringing daily, at exactly half-past four, on the laws and statutes of Mrs. Wilmerding and the State of Maine. An accessory before and several times after the fact was the entirely respectable steward of the reading room.

"Soper is quite right," said the major.

Mr. Phelps slowly exhaled a large volume of carbon dioxide between his cheeks.

"The very last idea that could have entered my head in coming here this afternoon," said he, "was that of accepting any material entertainment from this vindictive individual who has caused us so much annoyance. But, as Doctor Soper has very justly observed, the whole object of our visit is an attempt to ——"

"Precisely," snapped Major O'Sullivan, "and it is nearly a quarter to five. Mr. Phelps, I believe you prefer the rye. Personally I happen to know something about this Bourbon. As the mess boy quite truthfully remarked, it is the very good stuff and not to be had for love or money. If it is the real thing, I am afraid that we have made a mistake in barring this man Lanier." He took the decanter from

"You're the man I want!"

PRESIDENT: "You're the man I want! And I want you to know why I chose you from among the 40 men who were after the job."

YOUNG MAN: "I would like to know, sir."

PRESIDENT. "There were several men with records just as good as yours, but—you are the cleanest cut man of the bunch. I want to have men like you around me, and I'm not ashamed to have your kind represent the house. My rule is, *clear the way for the man with the clear record and the clean look*. Remember that, young man, remember that, if you want to get ahead."

There you have it! Promotion to the "clean cut" man; the man with the clear skin. Is your skin clearer, cleaner and more wholesome than the average? Don't be content with soap-and-water cleanliness. Be "Pompeian clean." Discover for yourself how Pompeian Massage Cream makes a healthy, attractive skin because of its marvelous powers to cleanse the pores and exercise the facial muscles. Read test below. Get trial jar.

POMPEIAN Massage Cream

AT 50,000 DEALERS, 50c, 75c and $1.00

WOMEN

Pompeian corrects the past and protects the future. Clip coupon!

"Don't envy a good complexion; use Pompeian and have one."

MEN

Make yourself "the man he wants." Clip the coupon now!

This shows style of package sold by dealers; not size of trial jar.

Here is the test that has made millions of enthusiastic users of Pompeian. Get your face just as clean as old-time methods will permit. Then apply a pinch of Pompeian to your face. Rub it gently, but firmly. It disappears into the pores. Massage a moment longer. Out comes the Pompeian, and with it comes the hidden pore dirt. The darkened, dirt-laden cream astonishes you. That was the dirt which soap and water couldn't reach.

Make the test. If it doesn't convince you of the merit of Pompeian and its necessity as a complete cleanser of the face pores, then we have nothing more to say. A skin which is "Pompeian clean" means a clear, clean, fresh complexion. "Clear the way for the man with the clear record and the clean look. Remember that, young man. Use Pompeian." **All dealers. 50c, 75c and $1.00.** Magazines and Books for Library Slips. One in each package.

TRIAL JAR

Sent for 6c (stamps or coin). Find out for yourself, now, why Pompeian is used and prized in a million homes where the value of a clear, fresh, healthy skin is appreciated. Clip coupon now.

Cut along this line, fill in and mail today

Notice who Smoke Them

The cigar with the reputation for sustained quality, and the quality for sustained reputation—

La Preferencia

"30 minutes in Havana"

The biggest selling 10c Cigar in the World

We have received so many letters regarding the Preferencia Cigar that it has been utterly impossible to keep pace with inquiries, but all letters are being answered as promptly as possible.

In the matter of the sale to individual smokers we desire to say that the offer in our first advertisement to ship an introductory box direct to the consumer was made for the purpose of acquainting the smoker with the cigar and to insure his future supply through his own dealer.

La Preferencia brand is sold in more places in the United States than any other cigar—and we refer our friends and customers to the retailer.

Only three shapes were mentioned in our first "Post" advertisement. This brand is made in a variety of sizes.

Preferencia quality is always the same

HAVANA-AMERICAN COMPANY

the case, removed the glass stopper and scented the aroma of the contents. "It is. Doctor Soper, this will do you no harm. Permit me to fill your glass. Fancy the chap drinking stuff like this under our very noses!"

Doctor Soper rubbed his hands and fell to the suggestion of the major. Nobody thought of Professor Pringle, who was already deep in the Medea of Euripides.

Major O'Sullivan was explaining with a certain amount of warmth to Mr. Phelps that after all the Chimney Corner Association had a burden of unpaid obligation to Mr. Lanier, when there came an interruption. A rubber-shod foot paddled with catty lightness on the ladder, and before the visiting committee had realized it a slender, white-clad figure had glided past and seated itself at the piano.

Major O'Sullivan merely stared. Doctor Soper leaned forward, rubbing his hands. But Mr. Phelps, recognizing the playwright from a former and not entirely pleasant meeting, rose to his feet and inflated his chest.

"H'm!" He cleared his chest. "H'm—Ah——"

A crash of chords from the piano drowned his speech. Another crash, then the opening of a gay, laughing theme, which had the same relation to the first melodious outburst as might a shower of blossoms to the ensuing perfume. There was a catchy lilt to the refrain that quickly sent their feet a-tapping. Even Professor Pringle wove his scansion to the meter. Doctor Soper found himself repeating:

The roads should blossom, the roads should bloom,
So fair a bride to leave her home——

And then suddenly the music broke off abruptly, and a young man with intent, dilated pupils and a very clear skin swung about on the piano stool and stared at them.

Mr. Phelps observed that the musician was immaculately dressed. Major O'Sullivan was more conscious of the wide forehead, dark eyes and peculiar droop of the head between the shoulders. It was a queer, questioning poise and the words that followed it were even more disturbing.

"Do you think it's got the right swing?"

Quite naturally there was no response. The guests were a bit upset, barring only Professor Pringle, who had started The Choëphori and was feeling sad.

"How do you like it? It's quite new, so you probably won't. Plague these reminiscent tunes! Charlie——"

The Chinaman flitted out of the shadows like a white moth.

"Have you some champagne on the ice?" snapped Lanier.

"Hab got, sar."

"Then bring it—and hurry!" Lanier looked with a sort of abstract intentness at Mr. Phelps, who happened to be nearest.

"I hope you will excuse me for keeping you waiting," he said with a sort of defensive irritation. "I was going over the lyrics of my new piece when you called, and all the while that I was touching up the words of a love song that air was bothering me. Did you ever notice that sometimes when you are intent on doing one thing the idea of another will strike you with more force, even, than if that were the one you were trying to concentrate upon? It's that way with my work; when I'm writing songs the music often strikes me—and the reverse. Once a tune I caught made its own words——" he turned to the piano and began to finger the keys, staring at something that lurked in the shadows between the decks just over his head. Still staring, he began to play, modifying the theme as he proceeded and molding it into the semblance of a refrain. It was like a sculptor squeezing a mass of wax into the effigy of something that might ultimately be anything, yet unusual of its kind.

Meanwhile Mr. Phelps appeared to be taking a sort of exercise for the development of the lungs. Major O'Sullivan had started to say something, then thought better of it and was sitting back in his chair, staring at Lanier under his bushy, grizzled eyebrows. Doctor Soper was placidly smoking and waiting for somebody to say something, and Professor Pringle, after a rather vacant stare that lingered longest on the Chinaman, as the only person who appeared to have any concrete objectivity, even though a material one, had returned to his classics. He was skimming Hippolytus with the rapture sometimes to be found as a combination existing in the kiln-dried scholar, who

ELASTICA

FLOOR FINISH

Makes Floors Like This

WE want to know—and we want you to know—all about *your* floors. We want to show you, as we daily show so many others, how inexpensive and how easy it is to end permanently all your floor troubles.

ELASTICA is a floor varnish which will give you positive, satisfactory results. It is trade marked like this—

STANDARD VARNISH WORKS

TRADE ELASTICA MARK

FLOOR FINISH

Look for this Trade-mark on a Yellow Label. Beware of imitations.

Whether your floors be old or new, of soft wood or hard wood, painted or unpainted, stained or unstained, ELASTICA will protect them with an elastic, bright, durable, waterproof finish. ELASTICA can be used just as well over linoleum or oilcloth.

Send for Book 84

"How to Finish Floors"—Home Edition. Profusely illustrated, rich in suggestions for making and keeping floors beautiful. Also ask for a set of *exquisitely colored post-card* showing floors and some interiors, which will be sent with our compliments.

gets, as it would seem, a dual benefit, first in the academic perfection of the composition, and second in a sort of vicarious warmth while basking in the reflected passions of such a lady as Phædra may have been. Of all the people there, Professor Pringle was undoubtedly the happiest. Mrs. Wilmerding and other vexations were for the moment forgotten.

Lanier was playing with a sort of irritable intensity, a frown on his forehead and his beautifully cut features drawn into an expression of discontent. He was singing softly to himself as he played. Suddenly he swung about on the piano stool.

"The air is all right, isn't it?" said he, "and the words are good enough, but it needs something else—some sort of melodious interruption ——"

Without waiting for an answer he played over the same air, humming the words as before. It had a catchy lilt, and Mr. Phelps, whose old rye was beginning pleasantly to disseminate itself throughout his expansive system, found himself unconsciously humming in company. As already observed, Mr. Phelps was possessed of a fine baritone voice and was not without vocal pretensions. It was not infrequently that he regaled his friends with some few choice selections, Tosti's love songs being easily his favorites.

Wherefore, it is not surprising that, given one adult's dose of a celebrated rye and a tune that was destined to be ground from every hand-organ in the country within the next two or three years, Mr. Phelps felt moved to lend a certain amount of courteous support to the effort of Mr. Lanier. Even Major O'Sullivan so far relaxed in his curious scrutiny as to tap the measure with his foot.

Lanier was playing slowly, introducing slight variations at the intervals, but evidently dissatisfied. He was apparently on the point of turning from the instrument in disgust, when there came from the darkened recesses beyond the loud report of a popping champagne cork.

"Ah!" cried Lanier sharply, and as if by instinct one quick finger ran up the keys while his tongue clicked in perfect imitation of the gurgle proceeding from the neck of a bottle. So perfect was the imitation, coming just as it did, and so aptly it lent itself to that part of the song, that the major leaned forward, clapping his hands.

"Capital!" he cried. "There's a finishing touch for your song!"

Lanier swung about, his face eager and his eyes alight.

"Isn't it, though?" he cried. "What a chance for orchestration—that *t'luk—t'luk—t'luk—t'luk—*" he imitated the sound with tongue and keys, his eyes on the major and Mr. Phelps. "Wouldn't that make a hit? Charlie!"

"Light away, Mist' Lanee." The Chinaman, bearing a quart of vintage wine in a silver cooler, glided between the portières and across the room, setting his burden on the buffet.

"Get another bottle," snapped Lanier.

"S'ppose you dlink one piecy bottle——"

"Do as I say, confound you!" cried Lanier, so furiously that his visitors were startled.

"All light," answered Charlie.

"Get a move on you!" the playwright shouted at him. "Don't wait to cool it. Bring it here."

Another quart was immediately forthcoming. With a sort of feverish impatience Lanier ripped off the seal and loosened the cork. Major O'Sullivan, observing the label, opened his eyes. The next instant Lanier had stepped to him and placed the bottle in his hands.

"When I come to the interval, let the cork go just as before, will you, please?" said he. "Then both of you make that *t'luk—t'luk—t'luk* sound. I want to see how it works in. Wouldn't wonder if it would be a corker."

"Or an uncorker," ventured the major, who was beginning to enter into the spirit of the thing.

"Good—might use that too. Now then, here goes——"

This time the song opened with a splendid swing, Lanier singing the words out in a rich baritone. As he neared the end of the stanza he looked back over his shoulder at the major. The song was of a farcical character and supposedly sung by the chief engineer at the banquet attending the opening of the Panama Canal.

Major O'Sullivan was tightly gripping the sizzling cork, his eyes fixed earnestly on Lanier. Mr. Phelps, carried away by the

Boston New York Chicago Philadelphia St. Louis Chattanooga, Tenn. Portland, Ore.

rollicking air and the magnetism of the singer, had joined in the refrain, taking a tenor part. Doctor Soper was beating time with his lighted cigarette.

The verse neared its end, fortunately for the major, who was getting red in the face through his efforts to control the cork.

—We dam the waters as we may,
We do our little best,
Amber bubbles drown our troubles—
Here's to East and West——

A nod at the major. Pop went the cork, then as Lanier tapped the keys—*"T'luk—t'luk—t'luk."*

The playwright sprang from his stool, his face aglow.

"That'll do it," he cried. "The orchestration can make that great—and a few dummy bottles and popguns in the wings. That's what the song wanted—just that sort of catchy trick. Thanks awfully. Come, we can't let all this good fizz go to waste." He stepped to the buffet and brought over the cold bottle and some cut-glass tumblers.

"But, my dear sir——" began Mr. Phelps.

Lanier waved his hand. "It can't hurt you. It's very awful extra dry. You mix lots worse stuff in a champagne cup and think nothing of it. Let's have a friendly glass and forget the unpleasant features of our last meeting. I've acted a bit nasty, I'll admit. Well, all you've got to do is to put yourself in my place. It doesn't require any great effort of imagination."

Mr. Phelps was beginning to puff himself out preparatory to some sort of peroration when the major cut in.

"Look here, Mr. Lanier," said he, "what is your game, anyway? We've tried to make what amends we could for Mr. Wilmerding's error."

"Yes," Lanier assented, "it is quite true that you have done what you could. I think that I understand the situation. The trouble seems to be that I am opposed for membership by a very influential feminine contingent. It is rather hard on me, because I feel that I should not prove an objectionable member of the colony. I learned only today the true state of affairs."

"Who was your informant, may I ask?" said Mr. Phelps.

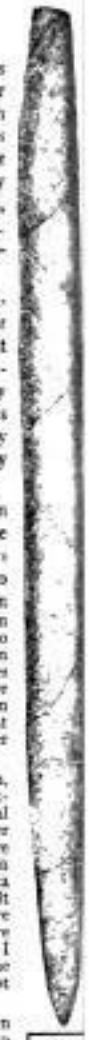
"I learned indirectly, through a letter from a friend who corresponds with one of your colony. This being the case, I do not feel justified in obstructing your view any longer. I will admit that what I did was the result of extreme irritation. However, it would not be decent of me to annoy the whole colony out of spite at my unfortunate unpopularity with two ladies."

"Then you mean to go away?" asked Doctor Soper.

"From your immediate neighborhood, yes. But I like the climate and surroundings, and am just now too busy with my new piece to go to the trouble of getting towed to some other locality. For the present, I will merely slip my cable, buoy it, and drop down with the tide and lie to a kedge anchor near the entrance to the inlet. In this way, I shall no longer obstruct your view." He reached for the cold bottle. "Let us wash away past unpleasantness with some of this special vintage. Permit me to fill your glasses."

Ignoring their protestations he poured out the liquid, sparkling amber. His guests, feeling perhaps that the successful accomplishment of their delicate mission warranted certain concessions on their part, allowed themselves to be coerced, after which libation they arose with the extreme dignity which might be expected to result from a combination of old whisky and vintage champagne, and made their courteous adieus. Lanier escorted them to the gangway, where they descended the accommodation ladder with studied care.

Halfway to the reading room Mr. Phelps, who had been humming softly to himself the Champagne Chorus, looked back. From the barge came the sound of hammering.



"Look," said Mr. Phelps triumphantly, "his deck-hand is tacking a piece of canvas over the name." He threw back his head and sang jovially:

Amber bubbles drown our troubles—
Here's to East and West——

"T'luk—t'luk—t'luk—t'luk——" joined in the major and Doctor Soper in chorus, at which Professor Pringle looked up in mild surprise from the copy of Hippolytus thrust upon him by his late host.

(TO BE CONTINUED)

Why I am Not the "Cigar King of America"

My method of selling cigars makes it absolutely impossible for the man who buys cigars through regular trade channels and sells them over the counter, to compete with me in the matter of quality or price. This is not a boastful, or exaggerated claim as I see it. It is a plain statement of economic fact.

The reason why the vast majority of smokers do not buy their cigars from me by mail is that buying cigars by mail means buying by the box instead of singly or in twos or threes. Custom is hard to change. Not in many years will smokers as a class buy a box of cigars at a time.

Yet all the arguments are in favor of buying by the box. The man who keeps a box of cigars at home, or in his desk, or who puts a box in his suit case when he starts on a trip, smokes a uniform brand of cigars and does not have to depend on the quality and condition of the cigars offered in the retail stores wherever he chances to be. I have about 20,000 customers who have been convinced by trying my cigars that my selling plan can offer a better cigar for the money.

The filler of my Panatela is clean, long Havana leaf—not shorts or cuttings and not "seed" Havana but real Havana grown in Cuba. The wrapper is genuine Sumatra. I manufacture this tobacco into hand-made cigars in my clean, wholesome Philadelphia factory, employing only skilled adult men cigarmakers. My customers are not cigar dealers. My customers are the men who smoke the cigars that I make, who buy them from me by the box at as near the actual factory cost as it is possible to buy cigars.

My Panatela shown here is the ten cent cigar of the retailer. I sell it to you for $5.00 per 100.

Here is my offer: I will, upon request, send 50 Shivers' Panatelas on approval to a reader of *The Saturday Evening Post*, express prepaid. He may smoke ten cigars and return the remaining forty at my expense, and no charge for the ten smoked, if he is not pleased with them: if he is pleased and keeps them, he agrees to remit the price, $2.50, within ten days.

In ordering please enclose business card or give reference and state whether you prefer mild, medium or strong cigars.

THE INNER SECRETS OF A MANUFACTURER'S RISE

(Continued from Page 15)

modern layout and get down to sane finance. This plan we put through, but not in a hurry. The banks approved the conservative trend in our management and gave us time to work it out. The way to get round the banks is to have a sound proposition. Then we began to establish a reserve fund—not a surplus to put back into the business, but a separate thing. This brings me back to the subject of understudy products for a drygoods house, for my plan was copied directly from the policy of successful merchants I knew.

"One of these merchants always set apart a quarter or a half of his net profits. This money he invested in gilt-edged bonds and savings-bank deposits, and the fund thus created he never disturbed, except to use the securities as collateral for bank loans when he saw chances to make big extra profits.

"During a dull season, for instance, he saw a chance to buy a stock of merchandise at fifty cents on the dollar for cash. He took his reserve securities to his bank, put them up as collateral and borrowed a hundred thousand dollars. With this money he bought goods really worth two hundred thousand dollars—many of them quite foreign to his legitimate drygoods line. These goods were real understudies, playing the rôle of drygoods for the time being. This merchant knew that people had to live in hard times as well as in good, and he knew—as I had discovered long before—that a lot of people had money stowed away and were looking for bargains in necessities at just such times of depression. So when his store equipment threatened him with the losses that come from idleness, he kept it working with his understudy products. He had the store building, the fixtures, the elevators—all the facilities; he made them work at a profit all the time. Perhaps you've noticed that some men have this mysterious power of buying up bankrupt stocks for a song; and that other men have an equal facility for going broke whenever the wind shifts to the north. It isn't chance in either case.

"Well, I built up a comfortable reserve fund in my manufacturing business and it grew until it had five ciphers attached to it. Then we were often able to make money in big chunks with it. We were now using many iron and steel parts in our factory product, and some of them we could buy more cheaply than we could make them. It often happened that when foundries and machine shops were slack we were able to get very low prices by having the cash. We never touched our reserve fund directly, but followed the plan of the drygoods man."

When the Cat's Away

"Have you ever been hungry for real money? If so you know how big it looks sometimes even to foundries and machine shops.

"We always knew that we could meet the loans thus incurred, or renew them if we wished. The man who knows he can do this is ahead of the game every time. It is the sort of financing that makes an old man young and not a young man old.

"But business is a queer game, and the man who thinks he has mastered all its artful dodges frequently goes to California to spend the winter or up into the north woods for the summer. When he gets back he finds that some funny kink has tied his affairs into a reef knot. I never went away for more than a month at a time, and then I kept the telegraph wires and cables pretty lively. I always had a long-distance sight on Sam Green.

"Of course when a man gets ready to retire it's different. Then he can shed his harness and kick up his heels—provided he's got his own personal reserve salted away in securities that have no connection with his business. I know a nice old gentleman who retired after forty years devoted to building up a successful manufacturing house. But the trouble was that his money didn't retire when he did; it stayed right there in the business and dwindled away. What was left blew up last year in a puff of financial vapor, and today the old gentleman is trying to get a fresh start at seventy.

"I've known merchants—a lot of them—who boasted that they were making heaps of money and putting it all back into their business. Now I've always tried to look the truth in the face. It's sometimes agreeable to hoodwink yourself, but not profitable. When you make a thousand dollars in clean profit and put that thousand dollars back on your shelves in the form of merchandise, it's a sort of legerdemain to call it profit. When you go away for your four-months vacation something happens to that merchandise—perhaps your store takes fire and your insurance doesn't cover the loss, or you haven't bought wisely and can't sell the stuff, or somebody invents something better and you have to sacrifice at fifty cents on the dollar.

"Oh, yes! that thousand dollars is profit after a fashion. I know all the arguments. Yet when you get right down to the naked truth it isn't profit. In order to make it actual profit you've got to get it out of the business absolutely and into something as safe as a government bond.

"Business is a tolerably sure game when it's played by the man who knows; but let that man be laid up for six or eight months with typhoid, and who's going to play it then? On the other hand, a government bond will work for you whether you're off on a vacation or sick in bed. Not that I advocate taking all your profit out of your business. No, indeed! If I'd done that I never would have grown and got rich. But get out a part of it as you grow; that's the part you can honestly call profit."

What Sam Green's Trip Cost Him

"I want to say a few words more about Sam Green, and that brings me to still another crisis. These crises keep coming; I expect them now. It's a pleasure to take off my hat to them, shake hands with them and then throw them out of the window.

"Sam Green went to Europe, intending to be gone only a few weeks, but when they got over there he and his wife decided to go on round the world and have a year or two of travel and leisure. It was a most natural thing that Green's business should begin to sag as soon as he was far enough away so that cable tolls began to cost two or three dollars a word. Green had always been the one personality in his concern. Of course he had a lot of able men under him, but there was nobody who approached him in power and virility. This was a weak point in his management. I had seen it all along and felt sure that something would come of it. It's all right for the head of a concern to be the top in reality, but he doesn't want to be a mountain-peak among a collection of sand-dunes. That's what Sam was. He developed his executives just so far, and there he held them. He got a profit from them, but not the full profit. His was the sort of business that begins to slide downhill the minute the spotlight upon it goes out.

"What happened was bound to happen anyway; only if Sam had been home the thing we did would have been harder to put over. There had been forces at work in my own organization for a long time that meant a revolution which nothing could stop. Sam might have taken advantage of it if he'd had the right sort of organization. In a word, we had been at work secretly on inventions and new ideas designed to put both Green's product and our own into oblivion. We were convinced that times were ripe for the burial of old methods and mechanisms. My ablest executives had studied conditions with the keenest analysis. I don't wish to reveal my identity, else I should tell the public exactly what we did. But I can illustrate it by referring to the typewriting machine—which we did not manufacture then and have not since. I cite it purely as a concrete example in line with my own methods. Everybody knows that a few years ago there was hardly a visible model on the market. Somebody conceived the idea that the times were ripe for a machine that had visible print. Now the old product is being steadily superseded by the new.

"Well, we did just that thing to Sam Green. It was bound to come, either from Green or from us. Now these revolutions in product are not so much matters of mere mechanical skill and inventive genius as they are matters of viewpoint. Sam didn't

We also manufacture a complete line of Direct and Alternating Current Fans—Ceiling, Desk, Ventilating, Exhaust—for Home, Office or Factory.

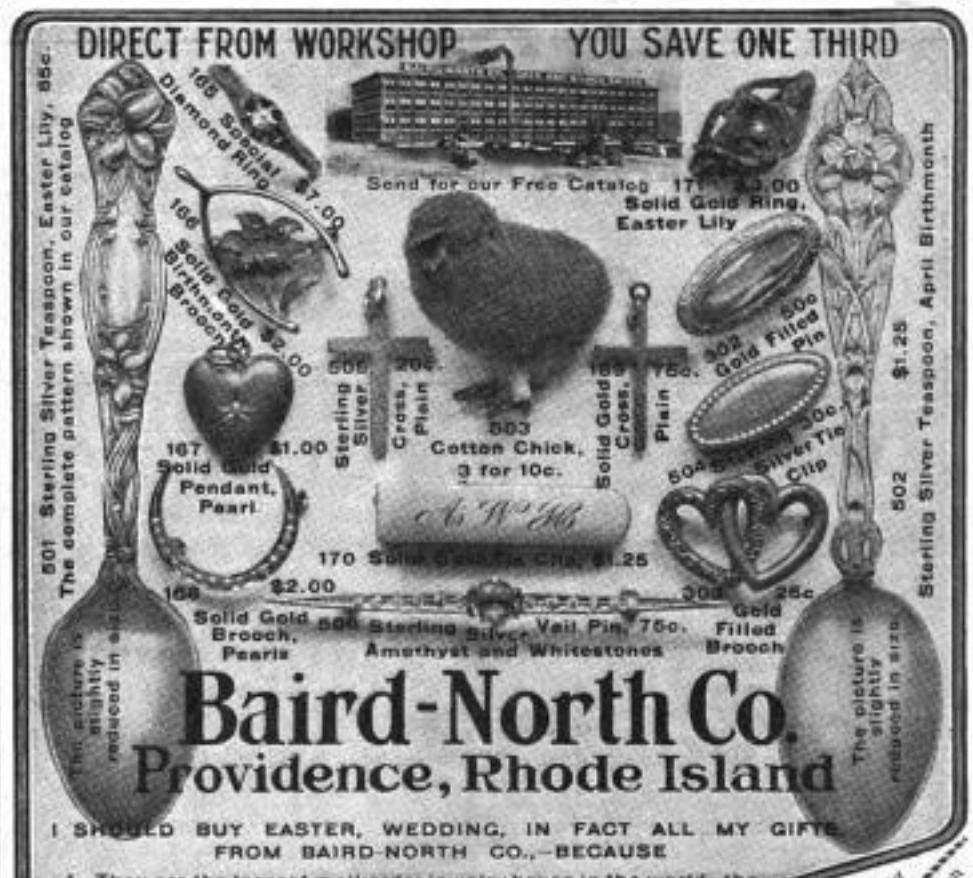
Saving Millions for the Users of Small Machinery

Economical "Standard" Small Motor *Makes* Money by *Saving* It

In countless factories, offices, workshops and stores where small machinery is used the Robbins & Myers "STANDARD" small motors are performing a marvelous mission of economy by *conserving power!* Scientific management demands such a motor. For, wherever a "STANDARD" motor drive is installed, power leaks are plugged.

Robbins & Myers "STANDARD" Motors

On all machinery requiring up to 15 h. p. the efficient "STANDARD" motor serves as a watchful guard to power consumption. No more delays for repairs.



The only power you pay for is the actual power *used*. *Allow our engineers to advise you free as to greater power efficiency.* Write us regarding your power problem. We will show you how Robbins & Myers motors will save *YOU* money just as they are saving for thousands of others. Write today.

A "Hoosier Cabinet" Makes a Model Kitchen and Saves Miles of Steps for Tired Feet.

War on Out-of-Date Kitchens!

6,000 Women Get Hoosier Cabinets This Month on Paying One Dollar

Today 450,000 American women prepared dinner with the aid of a Hoosier Cabinet. They saved miles of steps. They got through quickly. Their kitchens are wholesome—clean.

You, too, can join this army of Hoosier Cabinet owners. Put in your kitchen the cabinet that is absolutely sanitary—the cabinet you can open up and let sunshine in. Insure your husband and children clean, safe food. Make this most important room in your house a model for convenience and good health—today.

Hoosier Club Plan in Detail

A limited allotment of Hoosier Cabinets to be sold on the famous "Hoosier Club Plan" has been made to each of the 3,000 Hoosier Agents (leading furniture merchant in each town). To join the club you pay merely $1.00 membership fee; the balance in a few weekly dues of $1.00. The cabinet is delivered immediately.

Thousands Join—Sales Limited

Thousands of women buy Hoosier Cabinets every month. With this great club offer the demand doubles, yet the number of Hoosier Cabinets on the Club Plan for each town is limited. Only one woman in five who wanted Hoosier Cabinets could get one in some towns where this plan was tried first. Those who want a Hoosier Cabinet should enter their names early.

Low Fixed Price Protects You

Hoosier Cabinets the world over have a standard low price based on great volume of sales, and no Hoosier Agent can sell a Hoosier Cabinet for one penny more or one penny less than the established price.

Get a "Model Kitchen Book" Free

Write today for the valuable text book on "Model Kitchens." It tells where you can see the Hoosier. It tells a great many facts you should know about your kitchen. Twenty-five illustrations. Simply write a card saying, "Send me the Model Kitchen Book free."

THE HOOSIER MANUFACTURING CO.

123 Sidney St., New Castle, Ind. Branch, 223 Pacific Bldg., San Francisco

3,000 furniture merchants who believe in our policy of many sales at small profits display this license sign. They are good men to know.

SEE YOUR AGENTS FOR HOOSIER KITCHEN CABINETS

have that viewpoint; his organization didn't have it. His concern wasn't broad enough, or daring enough, or imaginative enough, to put behind it every tradition and strike out into the unknown. He had no Edisons among his executives; I had a whole group of them among mine. An Edison will not work for a man who holds him down to a sand-dune. I am only too anxious to concede that these men, rather than I myself, saw the signs of the times. They convinced me. It has always been my organization that has done the big things in my business. My own part has chiefly been to develop that organization and hold it together.

"We hadn't intended to spring the thing for a year or two, but while Green was in India we let it go. We got our first patents and started the ball rolling. For a long time we had been drawing in on our old stuff, while Sam had been expanding under the belief that he had us hoodooed. Sam didn't come home for six months, although of course he got wind of the thing. It was reasonable that he shouldn't get the viewpoint way off there on the other side of the world when he hadn't seen the indications while he was at home.

"If his organization had been paying one hundred per cent his men would have made him see the situation and got him home in a hurry. But Sam merely sneered by cable, and his concern sneered in person and went on turning out vast quantities of the old product. You've seen that happen before and since. You remember plenty of folks who said the visible typewriter was only a fad. Give them the good old machine that would stand up under real use! In the end Sam Green's concern went to the wall.

"There's only one thing more I'd like to say, and in a way it's most important of all: The chief underlying element in business—deeper than any of the principles I've spoken of—is the truth that the goods put out by a permanently successful house must be of real benefit to mankind. Sam Green went under because his goods ceased to be a benefit. My business lived because we kept abreast of the world's progress and saw that our products must adjust themselves to the generations."

Editor's Note—This is the third of a series of articles by Edward Mott Woolley. The fourth will appear in an early issue.

A Message From Edison to the Man Who Pays the Bills

(Concluded from Page 19)

Space does not permit me to give any further details of the very interesting talk I had with this most wonderful man. Furthermore, at the present time I am not convinced beyond doubt that this great solution so strongly emphasized by him is the correct one; but I do state with all my heart that this new phase of the subject upon which he dwells is worthy of the most thoughtful consideration. I will add, moreover, that the more one ponders on this question the nearer one is to being convinced that Mr. Edison has hold of a big principle, which can be applied with great advantage not only to manufacturing but also to capital, to railroads, and last but not least to labor. Carrying this theory to a final conclusion, one must accept as economically correct the principle of the minimum wage which is being preached at present by Professor Taussig, of Harvard University.

In fact, as Mr. Edison says, "we are all of one body—the manufacturer, the railroad company, the laborer and the consumer." Nothing can do real harm to any one of us that does not ultimately harm all of us—the crushing of the independent manufacturer, the restricting of railroad development, and the payment of low wages upon which body and soul cannot exist, all come under the same category and we all suffer thereby. In the same way any act for real good, whether it be by capital or labor, ultimately results in the good of all. We are all bound together with iron bands; we are all brothers, one of another; there are no family lines, state lines or national lines that God, the Ruler of us all, recognizes for a moment. Only as we each forget our selfish desires and keep in mind the final good of all concerned shall we reduce the cost of living and solve our great social and industrial problems.

Ask Your Dealer About "CREX"

If he be posted, he will tell you that the genuine "CREX" floor coverings are a boon to discriminating housekeepers—that from a sanitary view-point, "CREX" products have no equal—that for constant cheerfulness, natural cleanliness and durability, they are in a distinct class by themselves.

Your dealer may also truthfully add that "CREX" coverings are ideal for the summer home—especially for the living porch. They produce an effect of cheerfulness and hospitality. Rain and dampness do not affect. They never curl.

For bed chambers, closed during the hot hours, "CREX" coverings impart a delightful, refreshing odor to the room when opened up.

You cannot appreciate all the numerous advantages of "CREX" products, unless you know the whole story. Write for our illustrated, descriptive booklet and catalogue of patterns, dimensions and actual colorings.

All grass floor coverings are not "CREX." Look for the trade-mark on every rug. Sold by dealers generally, at 50c to $20.00, according to size.

CRAVEN

(Continued from Page 9)

The study was upstairs. Mr. Wolfe carefully closed the door before he sat down at his desk—a solid, heavy, sharp-cornered piece of furniture—and drew from a pigeonhole a handful of letters.

"I have been gratified to observe, Richard," he said with pompous approval, "that your delusion has died a natural death; but Doctor Worrall thought there could be no harm in showing you these."

He put the letters into my hands. They were sealed and unopened, and slightly soiled and worn as if they had passed through many hands. They were addressed to my friends in Glencoe; and on the face of each was stamped a purple hand pointing to Mr. Wolfe's card in the corner, with the words "Return to writer" running along the pointing finger.

I stared at them with whirling brain. Then the explanation flashed upon me. I laughed dizzily and pointed with a shaking hand.

"You sent them to Glencoe, Illinois!" I cried. "My town was Glencoe, Nebraska! I had no idea when I talked to you that day that I was in Illinois."

Mr. Wolfe frowned heavily at my renewed perversity.

"That's easily disposed of!" he retorted.

From the bunch of letters he selected one and laid it before me. It was the one addressed to Stewart, editor of the Herald. Across this some official had written: "Try Glencoe, Neb." It bore the Nebraska postmark and a second, smaller hand, pointing to Mr. Wolfe's name—and across one corner, stamped in purple letters, "Unknown."

I sunk my head in my hands. There was nothing to say! However, I said something. "That explains Miss Podmore!" I exclaimed aloud. "She was thinking of the other Glencoe!" But I was acutely aware that it explained nothing; it deepened a stupefying mystery. Stewart, the editor of Glencoe's only daily—six months ago the town's most active and conspicuous citizen—"unknown" there! I went home with Dora, doubting all things, bewildered, stunned!

Was I Craven? Were it not more rational to believe myself mad than all the world raving? Moreover, the unbroken, unchallenged assumption that I was Craven had subtly undermined my own sense of identity. If I were not mad now, in believing that I was not Craven, what would prevent me from soon becoming so, believing that I was? As I asked myself the question, I knew that Dora would. With her I was always sure of my own identity; remorse and dread kept consciousness awake. The one person for whose sake I had indued the personality of Craven was the one who held me inexorably to my own.

Seldom have I wanted anything more fiercely than I wanted that night to take the next train for Nebraska, to prove or disprove my sanity. The reasons I did not are sufficiently obvious. I was quite without a man's ordinary subterfuges. How could I allege a business errand when every one about me understood my business better than I did? Was it likely that a man physically feeble and mentally abnormal would be permitted by his family and physician to follow an impulse which to their minds clinched his insanity? And if I went by stealth or violence, to what possibly fatal misery should I leave Dora?

I did the next thing—I wrote. The inquiry was a delicate one, for I wished to avoid causing curiosity or suspicion of the truth. I wrote as Craven, inquiring for one Richard Trent, said to have been on the staff of a local paper. I described him rather fully and asked if he were supposed to have perished in the railroad tragedy I named. To make sure of the letter's coming to a certain and safe hand, I addressed it to the postmaster at Glencoe. I knew the man well.

Within a week my self-addressed envelope came back. It inclosed my own letter, indorsed, in a hasty scrawl: "Person described not known."

After that I could only wait and contemplate the net in which I was wound. Hitherto I had assumed that Nature's period to my waiting would be decisive; but suppose that were not true? Suppose the child died and Dora clung to me for comfort? Suppose she were left a permanent invalid? I had known such cases.

Dept. S, BALTIMORE, MD., U.S.A.
Makers of the remarkable Faultless Patent Neb-Gard Shirts.

Faultless SINCE 1881

The COZYDOZY Kind

One thing only was certain. I could not go on living with Dora as I had lived when no physical frailty of mine or hers should stand between us. Suppose I proved myself mad and all my Trent-memories a lie! What then? Suppose I found Craven—rotting in his unknown grave? What then? What then?

"Dick," said Dora, "promise me—if I should die—you'll be very, very fond of the baby!"

"Die, Dora!" I exclaimed, shocked. "What makes you think of dying? You can't die!"

She shook her head at me, laughing with tear-bright eyes.

"Don't evade the question! Will you promise?"

"I'll do my best, Dora," I said at length. "I'll see that it has every care, every right —— I'll do my best. But you mustn't die!"

"I don't intend to," she said; "but—you can't always—tell!"

You can't always tell! While I chafed against the waiting, suddenly Nature set her terrible period. Death knocked at the door for Dora. Death and Craven, it seemed to me, were allies—were one. Craven's dead hand stretched from his grave to strike Dora down. An endless time I waited outside the room where Death and Craven fought for Dora—and endless times upon that.

At last they brought me Craven's child. I would not look at it—and they whispered—it was natural; the mother had suffered so! Dora, they told me, was barely living—beyond speech, beyond consciousness. They would not let me see her, lest I break the hair her life hung by.

A week of suspense went by—a week of noiseless footsteps and held breath. Then, one evening in the firelight, the old doctor told me that Dora was likely to live. I broke down and cried. He patted my shoulder embarrassedly and went away. I cried a long time in the firelight; and at the end of my tears I came upon a clear and certain sense that now Dora was really mine. It puzzles me still to account for it, because I was at the same time fully aware that in a few weeks I must take up the search which might part me from her.

During Dora's illness my anomalous position had fallen into the background of my thoughts. I had felt as her husband would have felt. As she slowly recovered, my situation returned upon me, but never with the old restless rage. I had somehow attained a calm and steadiness that surprised me, nor did I fear any evil greatly since Dora lived. Neither did I hate the child. I had expected to, but I couldn't. It was too small. I could fashion no hate within me that would stick to anything so little. The baby was four weeks and three days old the day these events drew toward their conclusion. Dora reclined languidly in the wicker chair—large-eyed and thin and pallid—with the baby sleeping on her lap. I sat opposite her, wondering if it were time yet to speak of the Western trip I meant to make soon.

"Isn't she whitening out beautifully?" said Dora, gazing adoringly at her daughter. "Dick, she's got the funniest little birthmark! I'm afraid it will bother her when she wears evening dress. Look!"

She drew the garment away from the baby's throat and pointed to a spot below the left collarbone. There, on the rosy flesh of Craven's daughter, was an infinitesimal brown mole!

I bent and kissed it. I could not speak and I wanted to hide my face from Dora. I had never kissed the baby before and she was greatly pleased. I saw that, even through the bewildering emotion that possessed me. Nothing had moved me like this—that my mark should be stamped above the baby's heart! "This settles it!" I said to myself. "I am Craven—I am a madman, not a scoundrel!"

As it strangely happened that very day, not more than an hour later, I was called to the telephone. It was Mr. Wolfe's voice that came over the wire. Even in my perturbation I recognized an extraordinary note in it; it was shaken, astounded, almost apologetic.

"Will you come over to the house just as soon as you conveniently can, Richard?" said Mr. Wolfe. "Er—the most amazing thing has come up—the most amazing thing! Come over just as soon as you can!"

"I'll come immediately," I said, and hung up the receiver.

(Continued from Page 58)

I was still too much absorbed in the miracle of the baby to care much about Mr. Wolfe's amazing thing. My mind hung near the breaking-point of wonder.

Mr. Wolfe and Doctor Worrall were waiting for me in the library; but they both stood back while a third person came forward to meet me. It was a woman—young, with a small, trim figure, prettily dressed, and with sparkling dark eyes. She stretched out both hands to me without speaking and her look demanded that I know her; but I did not—and yet I did!—or some one like her! The gay alertness of her look was familiar as breathing; and yet—I did not know her. She smiled with a sudden flash of her dark eyes.

"Enid!" I gasped. "Enid!"

Then the cup of wonder overflowed! I staggered to a chair beside the library table and sank upon it. All I felt was an overwhelming desire to sleep.

. . . . . .

I came to myself lying on the sofa. At first, as I sat up, I felt ashamed of making such a fuss; then, for a minute, I went under a wave of bitter and horrible regret. Not Craven then! The wife and child I loved so—not mine, after all! Now, to face the music!

I turned to Enid. I could not think what had so altered her looks. She might have passed through as devastating an illness as mine.

"Enid," I said, "you went to the armory dance with me?"

"Yes. Do you remember what happened next?"

I shook my head.

"Not after I left you on the porch."

"Well, you went on toward the railroad tracks. Do you remember that high culvert beyond the lumber yard?"

"Sure! The one Mackenzie said would make a good hiding-place for thieves' swag."

"Well, it was a hiding-place for thieves' swag! A gang of boys had hidden some stuff there. You know that tough lot—Sam Price and Joe Kurtz and Pete Lundberg—that set?" I nodded. "Well, they were sneaking off in the lumber. You stopped on the culvert and they thought you had discovered them. One of them threw a stone that hit you on the head—Sam Price told all this before he died. You fell down into the bottom of the culvert—on your head, Sam said. They thought you were dead and they were frightened almost to death themselves. They didn't dare let you stay there; so they put you into an empty freight car on the siding. Sam said one leg dangled broken when they lifted you, and that scared him more than all the rest. The car was taken off somewhere that night. The boys swore each other to secrecy and no one knew what had become of you until Sam died. He'd had it on his conscience, you know. Then Henry remembered reading in a Chicago paper, about the time you disappeared, of the finding of a young man bruised and unconscious in a freight car, who was taken to a hospital; but he never thought of connecting that with you. People supposed you'd just got tired of Glencoe and gone away. You hadn't been there very long, you know."

"But I don't get that about the hospital," I interrupted. "My train was wrecked, you know—the wreck where Craven was killed. Was he killed?"

They all looked at one another. Enid opened her lips to speak, glanced at the doctor and shut them again. He edged forward importantly.

"Perhaps you have said enough for the present, Mrs. Milsom."

"Mrs. Milsom!" I exclaimed. "Why does he call you that?"

"Because," she answered swiftly, "I married Henry."

This could delay me a moment, even in the quest for Craven.

"Good work!" I cried, grasping her hand parenthetically. "Congrats! Wasn't it sudden? . . . But Craven? You all know! I see you know. Was he killed? Is he dead?"

Again they looked at each other, those three unmysterious faces, charged now with the knowledge that was life or death, honor or dishonor, Heaven or hell, for me!

It was the woman who answered.

"He wasn't dead," she exclaimed with a little half-hysterical gasp, "fifteen minutes ago! He was here!"

"Craven was here? In this room?"

"Yes; while you were—asleep!"

Ford

Henry Ford wrote a great prescription for the removal of dead weight in automobiles when he prescribed Vanadium Steel. It is the most expensive—and the toughest steel. Scientifically heat treated, this steel defies shock and vibration. It doesn't crystallize.

By the use of Vanadium Steel the weight of Ford Model T has been reduced to the minimum—60 pounds to the horse-power. At the same time it is the car that has no equal in the world for cheap maintenance and no rival in durability.

Ford branches and dealers in all cities, towns and villages are at your elbow with Ford Service for Ford Owners.

Ford Model T Touring Car, 4 cylinders, 5 passengers, fully equipped, f. o. b. Detroit	$690
Ford Model T Torpedo, 4 cylinders, 2 passengers, fully equipped, f. o. b. Detroit	$590
Ford Model T Commercial Roadster, 4 cylinders, 3 passengers, removable rumble seat, fully equipped, f. o. b. Detroit	$590
Ford Model T Town Car, (Landaulet) 4 cylinders, 6 passengers, fully equipped, f. o. b. Detroit	$900
Ford Model T Delivery Car, capacity 750 pounds merchandise, fully equipped, f. o. b. Detroit	$700

The ONE chassis with different bodies.

The Howard Watch

THE U. S. Postal Mail Service is the backbone of the rapid delivery of letters in this country.

The Mail Trains are veritable "post-offices on wheels."

They collect mail from practically every post-office in the United States—and they sort this mail while traveling on express schedule—*HOWARD time.*

The whole American business system is built up on the saving of minutes.

The man who is unsuccessful is very likely one who is never sure what's o'clock.

It is the difference in temperament—in habit of mind—and in *watches.*

Now and for all, the HOWARD is the watch for the man whose time means money.

A HOWARD Watch is always worth what you pay for it.

The price of each watch is *fixed* at the factory and a printed ticket attached—from the 17-jewel *(double roller)* in a Crescent *Extra* or Boss *Extra* gold-filled case at $40, to the 23-jewel at $150—and the EDWARD HOWARD model at $350.

Not every jeweler can sell you a HOWARD Watch. Find the HOWARD jeweler in your town and talk to him. He is a good man to know.

Admiral Sigsbee has written a little book, "The Log of the HOWARD Watch," giving the record of his own HOWARD in the U. S. Navy. You'll enjoy it. Drop us a post-card, Dept. N, and we'll send you a copy.

E. HOWARD WATCH WORKS, Boston, Mass.

1912

THE YALE'S advanced and distinctive features for the new year furnish the basis for your judgment of a **real** 1912 motorcycle.

YALE construction shows more drop forgings than are in any other motorcycle.

You will find only in the YALE, all of these new and vital marks of a 1912 motorcycle:

2¼ in. Studded Tires, Eclipse Free Engine Clutch, Eccentric Yoke, Full High Forksides, Triple Anchored Handlebars, and Muffler Cut-Out.

Ask for detailed information about the four YALE 1912 models, ranging from 4 H.P. to 7 H.P. YALE Twin.

GUNN SECTIONAL BOOK CASES

Write for our "Book of Designs," beautifully illustrated in colors, showing our Sanitary Clawfoot, Mission, and Standard bookcases and how you will save money by placing them in your home. The handsome designs, the rich finish, the removable, non-binding doors, the absence of disfiguring iron bands, make them far better than the old-fashioned kind.

Our prices are lower than others and high quality is guaranteed. Sold by dealers or direct. Address Dept. M.

GUNN FURNITURE COMPANY, 3 Victoria St., Grand Rapids, Mich.

"Here!" I cried. "Then he's here now! He's in the house. Call him in—I want to see him. I want to see him now!"

The unexplained look passed again from one face to another of the three.

"I want to see Craven!" I repeated passionately. "What's he hiding for? Why are you hiding him? I can look him in the face! You all know whether I've been square with him. Let him look me in the face! Where is he, I say?"

Half mad with pain and pride, I advanced furiously on the two men.

Enid laid her hand on my arm.

"Dick," she said, "that armory dance was twelve years ago!"

. . . . . .

I woke out of a second swooning lapse, and they told me that he who knew himself as Craven had spoken with my lips and looked out of my eyes a second time. They told me that, at my first loss of consciousness, he had cried out with horror at the actual mental presence of the wreck—which to him was still happening; that he had been told of me and all that had happened since the wreck, and was as passionately desirous of meeting me as I of meeting him. Even as they spoke, the irresistible drowsiness swept over me—and the scepter of life we held between us passed to Craven.

. . . . . .

These alternations of personality continued, growing shorter and shorter. The briefest and most baffling phase of my search for Craven had begun. It was as if each of us in our desperate eagerness to meet overleaped the other. Whenever I grew hot on Craven's trail he burst into the circle of consciousness and banished me; whenever he hung on the verge of perceiving me I thrust him out of existence. Then, in a phase of outward stupor, we came face to face.

I had vowed I would find Craven. At last, in the depths of being, I found him, and grappled with him for life or death. It was not in the least as if one man strove to regain lost portions of memory; it was two entirely different men enforcing irreconcilable claims. Death for one or both of us seemed the only solution and infinitely easier than continuing the painful combat—but which must die?

If Trent slew Craven would Trent not become in reality the thief and adulterer he had so agonized not to be? If Craven slew Trent he must sacrifice his passionate, secret desire to repossess a normal past. In each of them was a love of life not to be yielded, subtly sustained by the love of Dora. About Dora their fiercest fight raged. There, too, lay the seed of their ultimate reunion. When, at last, the image of what Dora was to Trent began to melt into the image of what she was to Craven, their reconciliation had begun.

I, who write these pages, am Craven. Craven's was the name and outer personality which, for obvious reasons, I adopted. In my inner self I am, to an equal degree, the man formed by the memories, impulses, emotions—the whole conscious life of Trent. There were weeks and months of readjustment before these two warring phases of consciousness settled down side by side. Gradually I pieced my whole past together; gradually I saw the characters of Trent and Craven blend together into one personality, no more contradictory than is humanly normal.

It was nearly a year later, and our daughter was toddling from my knee to her mother's outstretched hand, when I told Dora the whole story of Richard Trent.

She listened intently, asking a quiet question now and then. At the end she lifted her blue eyes to mine.

"I knew it, Dick! Not at first! Never all of it! But I saw you couldn't remember *anything!*—not until after Baby was born. Poor boy! You worried so!"

"Didn't you worry?" I asked. "Did it seem all right to you?"

"Well," she mused, "I had you anyway!" Suddenly she blushed and dimples played in the pinkiness of her cheeks. She raised sparkling, shy eyes to mine. "Do you know, Dick, you've fallen in love with me three separate times! And the best was the last. You've made desperate love to me since Baby was born."

Perhaps I reddened in my turn.

"That was so you would forgive me," I explained, "when you knew how I'd deceived you and pretended to be your husband when I was not."

"It wasn't exactly deceiving," murmured Dora. "And, Richard—truly—I always knew that you were you!"

"That's a Tough One!"

Only one point needed to win, and not a ball in sight. Ever-changing situations such as the constantly new problems that call upon all the skill of hand, eye and brain, account for the intense fascination of Billiards and Pool.

Do you play? You can do so now, without frequenting a public poolroom. You can have in your own home a

BURROWES Billiard & Pool Table

and play while you are paying for it.

Burrowes Tables are scientifically correct in every detail—angles, pockets, cushions, etc.—and adapted to the most expert play. Some of the leading professionals use them for home practice.

Sizes range up to 4½ x 9 feet (standard). Tables may be set on dining-room or library table, or mounted on their own legs or folding stand.

$1.00 DOWN

The prices are $6, $15, $25, $35, $45, $55, $75 and up. Tables are sold on easy terms of $1 or more down, and a small amount each month.

FREE TRIAL—NO RED TAPE

On receipt of first installment, we will ship table for trial on it one week. If unsatisfactory, return it and on receipt we will refund your deposit. Write today for illustrated catalog giving prices, terms of payment, etc.

BUSINESS—AND THE OTHER THING

(Continued from Page 17)

agreement, neither. You and Mr. Jacobs agreed—but I never. I see Parkinson on my own hook; and if it hadn't been for me he wouldn't be goin' to give you the contract."

There 'twas, out of the bag. I looked at Georgianna. Her pretty face went white. That contract meant all creation to her; but she stood up to the news like a major. She was plucky, that girl!

"Oh!" she says. "Oh! Then he has given you the contract? I—I congratulate you, Cap'n Snow."

"Don't congratulate me," says I. "The contract ain't been given yet, though this pup says it's goin' to be; but, as for me, if I'd known what was goin' on I'd have stopped it mighty quick! I'm honorable and decent, and so's Jacobs; and we don't take underhanded advantages."

'Dolph bust out from astern of the counter.

"You don't, hey!" says he. "I want to know! How about Jacobs' takin' her to ride and callin' on her, and pretendin' to be dead gone on her? What did he do that for? You know as well as I do. 'Twas so's to keep a watch on her, and not let Parkinson see her and be influenced into buyin' Eureka screens. You know it!"

My own face got red now, I cal'late.

"You—you ——" I begun. "You miser'ble liar ——"

"'Tain't a lie," says he. "I heard him tell you with my own ears. He said all he was beauin' her round for was just that. If that ain't a underhanded trick then I don't know what is!"

I wanted to say lots more; but, afore I could get my talkin' machinery to runnin', the Lentz girl herself spoke.

"Is that true, Cap'n Snow?" says she.

I was set back forty fathom.

"Well, miss," says I, "I—I ——"

"Is that true?" says she.

I got out my handkerchief and swabbed my forehead.

"Well, Miss Georgianna," says I, "I'll tell you. Jim Henry—Mr. Jacobs, I mean—did say somethin' like that; but—but —— Well, you wanted to be treated like a salesman, and—er—Mr. Jacobs would have kept his eye on a man, you know; and so—and so ——"

I stopped again. 'Twas the shoalest water ever I cruised in. All I could do was mop away with the handkerchief and look at Georgianna. And she—well, the color, and plenty of it, begun to come back to her cheeks. And how her brown eyes did flash!

"I see," she says, slow and so frosty I pretty nigh shivered. "I—see!"

"Well," says I, "'tain't anything I'm proud of, I will admit; but ——"

"One moment, if you please. You haven't actually got the contract yet?"

"No. As I told you, all I know is what this consarned fo'mast hand of mine says. For what he's done, I'm ashamed as I can be. As for Mr. Jacobs, I know he did keep to the letter of the agreement anyhow. For the rest —— Well, all's fair in love and war, they say—and there's precious little love in business."

She looked at me with a queer little smile about the corners of her lips, though her eyes wa'n't smilin', by a consider'ble sight.

"Isn't there?" she says. "I—I wonder. Goodby, Cap'n Snow. You might tell Mr. Jacobs not to order those Nonesuch screens just yet."

Out she went; and for the next five minutes I had a real enjoyable time. I told 'Dolph Cahoon just what I thought of him—that took four of the minutes; durin' the other one I fired him and run him out of the office by the scruff of the neck.

Then Mary Blaisdell and me held officers' council, and that ended by our decidin' not to tell Jim Henry that the Lentz girl knew why he'd been so friendly with her. It wouldn't do any good and might make him feel bad. Besides, the contract was as good as got, 'cordin' to 'Dolph's yarn; and 'twa'n't likely he'd see Georgianna again anyway. When he come back I told him I'd fired Cahoon for bein' no good and sassy, and he agreed I'd done just right.

When I said good night to Jim he was chipper as could be; but next day he was blue as a whetstone—and the blueness

Concerning Character & Purpose in 1912 Regal Shoes

THERE are 53 *different* Shapes ("Styles," or "Models") of *Regal Shoes* for Spring 1912.

Every *one* of these has a definite *Reason* for its existence,—a definite *Purpose* to serve—a definite *kind* of Foot to fit,—a definite *Expression* to impart.

Not *one* of them is an "Accident."

And, here's the rub!

Among these 53 different characters, (or models), of Regal Shoes there is *one* particular model which will fit *your* foot, and suit *your* Purpose *better* than all the rest,—probably better than *any other Shoe in existence.*

That "100% Model" *won't cost you a cent more* than some other Model which suits *your* Foot and Purpose 50% less.

So, it is up to *you* to *select* that 100% Model.

We are in the Shoe Business *to stay.* We realize that the degree of *our* success ultimately depends upon the degree of *Satisfaction* we give *to Consumers.*

Therefore, we endeavor to fit each person's *Purpose and Ideal*, in addition to fitting his *Feet.*

So,—we have taken the trouble (and expense) to carefully *define* the Character, Expression, Purpose, and Service of *each* 1912 Regal Shoe Model, in a very unusual "Style Book"—for Spring.

A brief idea of some Regal Shoe "Models," therein *defined*, here follows:

1st.—"David Harum" Model.—Characteristic—*Solid Comfort*, at some small sacrifice of appearance.

2nd.—"Cushion Sole" Model—a smart Felt-*insoled* Shoe which is *springy* and *insulated* under foot.

3rd.—"Arch Support" Model,—to brace the weakened foot muscles of People who *need* this Service.

4th.—"Low-Instep" Model—for Folks whose feet are so narrow, and fine, that the average Shoe cannot be laced tightly enough *over instep* and lets toe slide forward too far, in walking.

5th.—"Uniform" Model—a hard-wearing, *easy-walking* Shoe, for Policemen, Postmen, and others who are much on their feet, and who need *maximum* wear for the money.

6th.—"Professional" Model—for Doctors, Lawyers, Preachers, Teachers (and people whose callings resemble these,) *Dignity* and *Conservative Style* being its Characteristic.

After these (in Style Book) comes definition of 47 *other* Regal Models—in Men's and Women's Shoes—*each* Model having its *distinctive* Character and Purpose clearly indicated, such as—

—The "Roundup" Model (for Young Men)—having "dash," ginger and some eccentricity of Style.

—The "Gotham" Model for quiet elegance with much Comfort and unusual fitting qualities.

—The "Aristocrat" Model—with high-grade "*Custom Made*" (London and Paris) expression.

—The "Arcadian" Model—being "the Last Word" in English-Walking-Shoes,—flat-soled, low-heeled, athletic appearance, with plenty of *comfort* and good-sense withal. (See picture of this below.)

Also—

—"Dorcas" Model (Women's Shoe), dignified, comfortable and with high-grade "custom-made" effect.

—"Norma" Model—for the dainty "Fritzi Scheff" type of woman.

—"Spanish" Model—for willowy grace—imparting *slender* ankle-effect.

Now, in order to know *which* Model will *best* Suit *your* Purpose, and fit *your* Ideal, as well as *your* Pocket-book—write *to-day* for a free Copy of this 1912 Regal Shoe "Style Book."

With it we mail name of your *nearest* Regal Shoe Store or Agency.

There are now 893 Regal Shoe Stores or Agencies in U. S., Canada and Great Britain.

But for the new Regal Shoe Style Book address the Manufacturers, viz.—Regal Shoe Company—269 Summer St., Boston—

NATIONAL BISCUIT COMPANY

EVEN the derivation of the name of these delicious Sugar Wafers is an assurance of their goodness.

Sponsored by the makers, whose name is always associated with baking perfection, how could Nabisco Sugar Wafers be other than the perfect dessert confection?

Chocolate Tokens—Another dessert sweet with a coating of rich, creamy chocolate.

Jim Henry stood up. "You'll excuse me," he says, sharp. "I'm busy."

He started to go, but Georgianna stopped him.

"No," she says; "I want you both to hear what I've got to say. Mr. Parkinson gave me the contract yesterday; but I have decided not to take it."

We both looked at her.

"You—you've what?" says I. "Not take it? You want it, don't you?"

"Yes," she says, quiet but determined, "I want it—or I did want it very, very much. It meant so much to me—now—and might mean a great deal more in the future; but I can't take it."

This was too many for me. I looked at Jacobs. He didn't say a word.

"I can't take it," says Georgianna, "under the circumstances. I don't feel that I got it fairly. We agreed, you and I, that no personal influence should be brought to bear upon Mr. Parkinson; and I"—she blushed a little, but kept right on—"I have seen Mr. Parkinson several times durin' the past week!"

I thought of her bein' to ride with the hotel man, but I didn't say anything. Jim Henry, though, started again to go. And again she stopped him.

"Wait, please!" she went on. "I didn't go to him—you must understand that! But after what you, Cap'n Snow, and that Mr. Cahoon told me the other day I was hurt and angry. I felt that you had broken your agreement with me. So when Mr. Parkinson came to see me I didn't avoid him as I had been doin'. I—I accepted invitations for drives with him, and—and —— Oh, don't you see? I couldn't take the contract. I couldn't! What would you think of me? What would I think of myself? No, my mind is made up. I'm afraid"—with a half smile that had more tears than fun in it—"that my experiment in business hasn't been a success. I shall give it up and go back to stenography—or somethin'. There! Goodby. I'm sure that the Nonesuch screen will win now. Goodby!"

And now 'twas she that started to go and Jim Henry that stopped her.

"Wait!" says he, sharp. "There's somethin' here I don't understand. What do you mean by what the Cap'n and Cahoon told you the other day? Skipper, what have you been doin'?"

I wished there was a crack or a knothole handy for me to crawl into; but there wa'n't, so I braced up best I could.

"Why, Jim," says I, "I ain't told you the whole of that business I fired 'Dolph for. Seems he'd been seein' Parkinson on his own hook and pullin' wires for the Nonesuch. 'Twas a sneakin' mean trick, and I knew 'twould make you mad same as it done me; so I didn't tell you. 'Twas for that I bounced him."

Jim Henry's fists shut.

"The toad!" says he. "I wish I'd been there. Wait till I get my hands on him! I'll ——"

"But you mustn't," put in Georgianna. "I hope you don't think I care what such a creature as he might do. When I fust come here he —— Oh, why can't people forget that I'm a girl!"

I could have answered that, but I didn't. Jacobs asked another question.

"Then, if it wa'n't 'Dolph, who was it?" says he. "Parkinson?"

"No!" with a flash of her eyes. "Certainly not. Mr. Parkinson is a gentleman; but—but I don't like him—that is, I don't dislike him exactly; but ——"

She was dreadful fussed up. Jim Henry was between her and the door, though, and he kept right on with his questions.

"Then what was the trouble?" he said, brisk.

I answered for her.

"Well, Jim," says I, "there was somethin' else. You see, 'Dolph got mad when I sailed into him, and he come back at me by tellin' what you said about your callin' on Miss Lentz here—and takin' her autoin' and such. How you said you was doin' it so's to keep a watch on her—that's all. I couldn't deny that you did say it, you know—because you did!"

Jim's face was a sight to see—a sort of combination of sheepishness and shame, mixed with another look, almost of joy—or as if he'd got the answer to a puzzle that had been troublin' him.

The Lentz girl spoke up quick.

"Of course," she says, "I understand now why you did it. Then I was—was—— Well, it did hurt me to think I hadn't seen through the scheme, and for a while I felt

The Glasses that Keep You Looking Young

The old-fashioned conspicuous double-vision lenses are badges of oncoming years. It is no longer necessary to wear such freakish glasses so ruinous to good looks.

KRYPTOK LENSES

(Worn by over 250,000 people)

are the most perfect double-vision lenses made, yet they look exactly like single-vision lenses.

Your optician can supply you. If he will not, write us for the name of an optician who will. A glance reveals how different Kryptoks are from all other two-vision lenses. They are smooth to the touch. They can be put into any style frame or mounting, or into your old ones.

Write for Descriptive Booklet

fully explaining Kryptok Lenses and containing facts of interest and importance to those who wear glasses.

that you hadn't been true to our agreement; but, now that I have had time to think, I understand. You promised to treat me exactly as if I were a man; and, as Cap'n Snow said, if I were a man you would have kept me in sight. It's all right! But"—with a sigh—"I realize that I'm not fitted for business—this kind of business. I don't blame you, though. Goodby. I must go!"

Lettin' her go, however, was the last thing Jim intended doin' just then. He stepped for'ard and caught her by the hand.

"Georgianna," says he, eager, "you know what you're sayin' isn't true. I did tell the Cap'n that yarn about watchin' you. He'd seen me with you and I had to tell him somethin'; but it was a lie—every word of it! You know it was."

She tried to pull her hand away, but he hung on to it as if 'twas the last life-preserver on a sinkin' ship. I cal'late he'd forgot I was on earth.

"You were keeping your promise," she said. "You were treatin' me as you would if I were a man! Please let me go, Mr. Jacobs; I have told you that I didn't blame you."

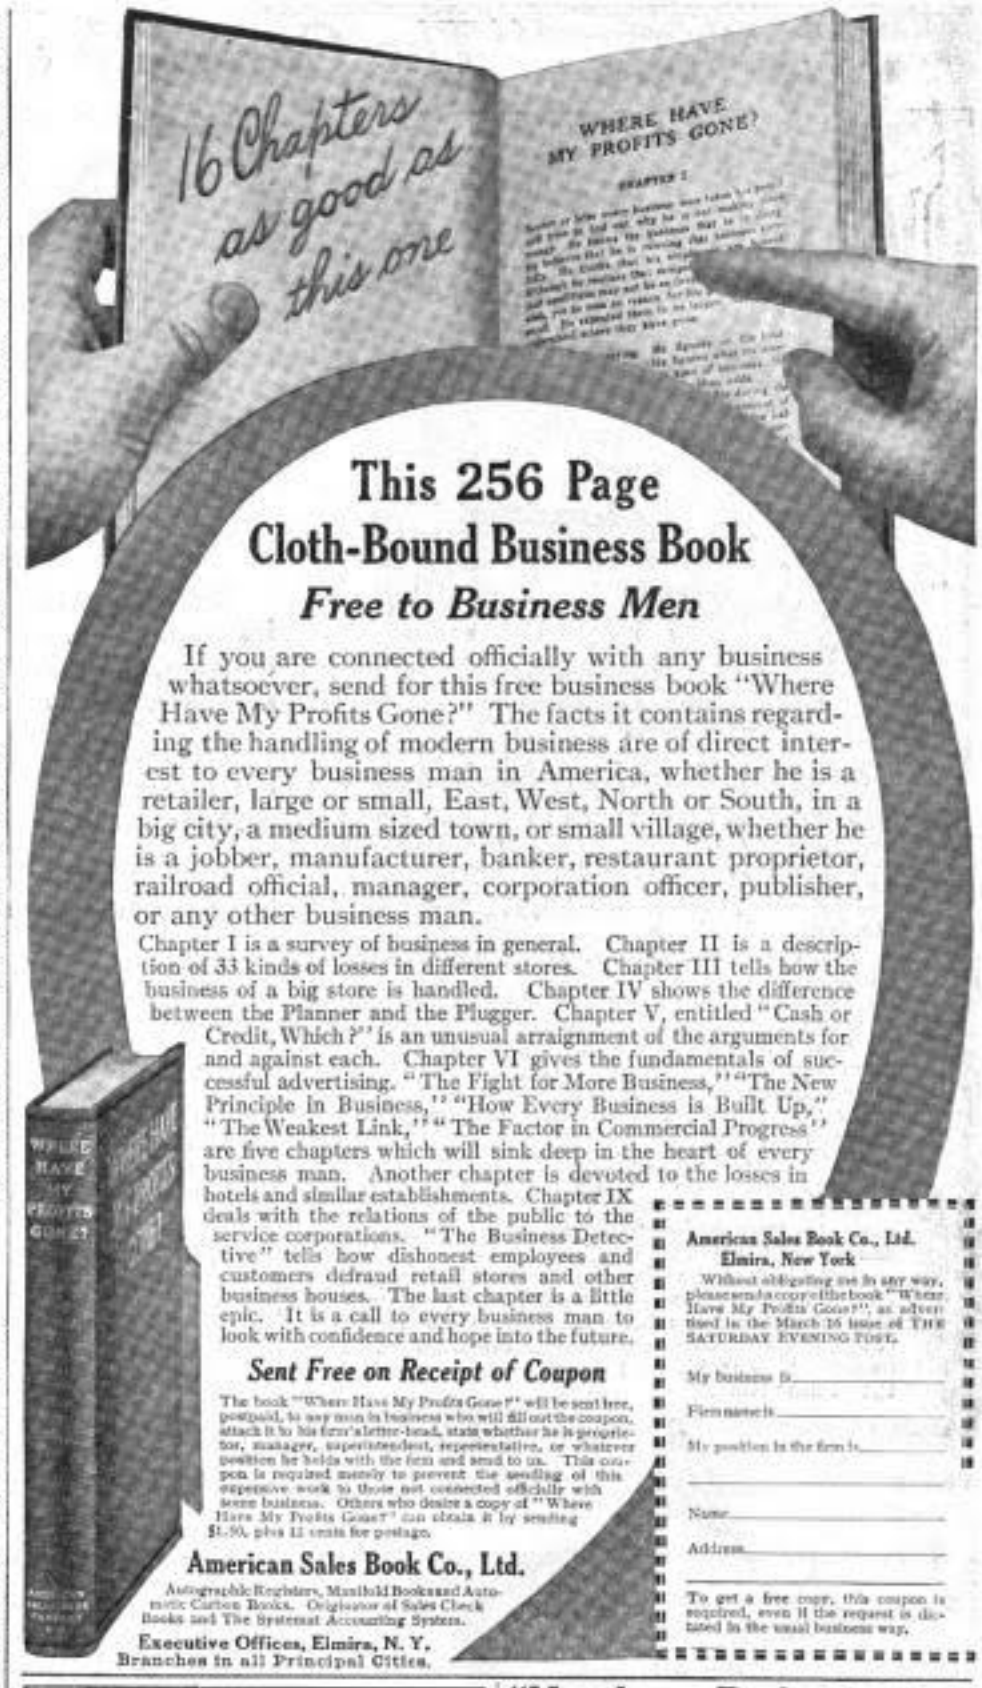
"Nonsense!" says he. "If I had done that I ought to be hung! A man! Treat you like a man! Do you suppose if you were a man I should ——"

That was the last word I heard. I was bound for the front platform, and makin' some headway for a craft of my age and build. I have got some sense and I know when three's a crowd!

I didn't go back until they called me. I give the pair of 'em one look and then I shook hands with 'em up to the elbows. Georgianna was blushin', and her eyes were damp but shinin' like masthead lights on a rainy night. As for Jim Henry Jacobs, he was one broad grin.

"Well," says I, after I'd said all the joyful things I could think of, "one thing ain't settled even yet—who's goin' to get that screen contract? There ain't any love in business, you know."

"Humph!" says Jim Henry. "I wonder!"



"Why," says I, "that's exactly what Georgianna here said t'other day—she wondered!"

True Charity

A SCORE of years ago a group of girls in New York organized the Sunbeam League of the Babies' Wards of the Post-Graduate Hospital. They agreed to support a bed by their subscriptions and to visit the wards regularly at specified hours. They aided and relieved the trained nurses; they amused the convalescent children, playing with them and trying to make them happy in their strange surroundings. Incidentally the several members of the Sunbeam League absorbed a great deal of information about the care and feeding of children and about the treatment of convalescents, which has been most useful to those of them who have since married and had families of their own.

A little earlier a group of ladies, also in New York, were shocked by the conditions under which the female employees of certain large department stores were forced to labor. These ladies organized the Consumers' League, which drew up a list of improved conditions with which they asked that the large stores should comply. As soon as a sufficient number of adhesions had been secured the Consumers' League published a White List, containing the names of all the houses that approached a proper standard in the treatment of their workpeople. Year by year this White List has lengthened, though the conditions of "a fair house" have been steadily made more stringent; and there is now scarcely a single important department store in New York that would not feel disgraced if it did not appear on the White List. From New York the idea of the Consumers' League has spread to nearly all the other large cities; and the movement has resulted in an immense amelioration of the conditions of thousands of working girls.

A little later two daughters of a New York publisher discovered that the blind were eager for work, and that, even when they were supported by charity, they greatly preferred to work for their own support if only the opportunity were provided. As a result of the earnest efforts of these two ladies the opportunity has been provided, and there are now scores and hundreds of the blind of both sexes no longer dependent upon alms, but earning their own living by the labor of their hands.

This 256 Page Cloth-Bound Business Book

Free to Business Men

If you are connected officially with any business whatsoever, send for this free business book "Where Have My Profits Gone?" The facts it contains regarding the handling of modern business are of direct interest to every business man in America, whether he is a retailer, large or small, East, West, North or South, in a big city, a medium sized town, or small village, whether he is a jobber, manufacturer, banker, restaurant proprietor, railroad official, manager, corporation officer, publisher, or any other business man.

Chapter I is a survey of business in general. Chapter II is a description of 33 kinds of losses in different stores. Chapter III tells how the business of a big store is handled. Chapter IV shows the difference between the Planner and the Plugger. Chapter V, entitled "Cash or Credit, Which?" is an unusual arraignment of the arguments for and against each. Chapter VI gives the fundamentals of successful advertising. "The Fight for More Business," "The New Principle in Business," "How Every Business is Built Up," "The Weakest Link," "The Factor in Commercial Progress" are five chapters which will sink deep in the heart of every business man. Another chapter is devoted to the losses in hotels and similar establishments. Chapter IX deals with the relations of the public to the service corporations. "The Business Detective" tells how dishonest employees and customers defraud retail stores and other business houses. The last chapter is a little epic. It is a call to every business man to look with confidence and hope into the future.

Sent Free on Receipt of Coupon

The book "Where Have My Profits Gone?" will be sent free, postpaid, to any man in business who will fill out the coupon, attach it to his firm's letter-head, state whether he is proprietor, manager, superintendent, representative, or whatever position he holds with the firm and send to us. "The Car With a Thousand Less Parts"

KING "36"

These Features Have Made the King "36" The Talk of the Automobile World

The engineering features of the King are not to be found in the ordinary American car. They represent the study and experience of America's pioneer automobile designer, Chas. B. King, after two years of close investigation in the leading automobile factories and centers of Europe.

The result is a designed car—with each part carefully adapted to its work—and every part refined and simplified to an extent not found in American cars, except, perhaps, in those selling at topmost prices.

These points of superiority are not visionary. You can understand their importance if you will read carefully our description of them below.

The Simple Extra Long-Stroke Motor

The King is known as "the car with a thousand less parts." It has fewer parts than any car in the world. This simplification has been achieved by a judicious combination of several members into single effective parts, wherever possible, as well as by the elimination of useless parts.

Much of this simplification is seen in the King Motor.

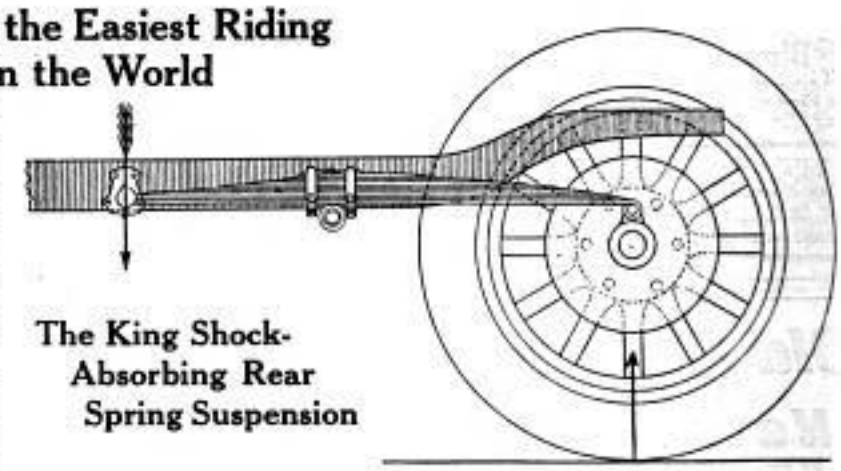
The four cylinders, measuring 3 13/16 bore by 5½ stroke, are cast en bloc, **guaranteed to develop 36 h. p.** Do you realize the importance of that extra long stroke? Designers of the leading high-priced European and American cars do. They know that this gives *steadiness of pull*, and great driving power.

Extra heavy, two-bearing crank shaft; very wide valve openings, with valves placed on angle in the head of the motor, opening directly into the cylinders—any man who has studied motor car construction can see the value of these points.

In looking at the King Motor, you will be struck by the fewness of exposed moving parts. Practically everything has been enclosed in the motor case, and the motor when running is remarkably free from noise. There is good reason for calling this car the "Silent King."

The King is the Easiest Riding Car in the World

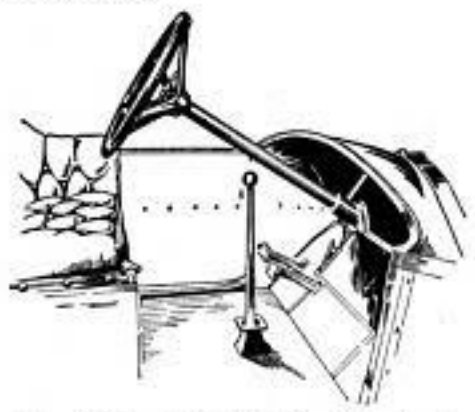
That is a broad statement that we would hardly care to make, if we were not prepared to prove it.



It is the result of our shock-absorbing, rear-spring suspension, a patented feature found only on the King.

In the illustration the arrows show the line of shock.

The spring is pivotally supported near its center, on the frame. Its forward end is also supported on the frame.



The rear end operates in shackles which are mounted on the rear axle.

In passing over the rough spots of the road the shock, instead of being transferred to the occupants of the car seated above, to their great discomfort, is taken up by the lever action of the spring and thrown downward again.

The King Shock-Absorbing Rear Spring Suspension

This means not only increased comfort to the passengers, but longer life for car and tires.

The Simplified King Control

The King is an easy car to drive. The steering post is placed to the left, a position which is rapidly becoming recognized as the only practical one.

A single hand lever placed in the center of the footboard controls three speeds forward and reverse. This lever is directly at the right hand of the driver, and takes up no room that could be used for anything else.

You can get in or out easily, and there are no levers on the outside to mar the fine, racy lines of the car.

Body Designed by Chas. B. King

The King Coupé is a car of elegant appointment, artistic in design, and of surpassing convenience and comfort, equipped completely, **$2165.**

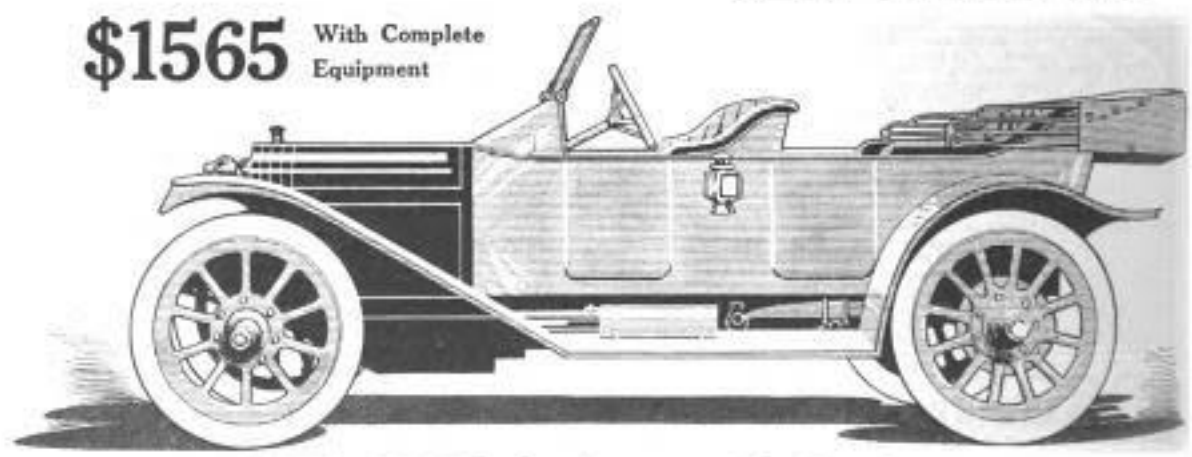
Other King Features That Are Distinctive

We have mentioned but a few of the points of design that are causing other American manufacturers to copy the King. Let us briefly mention a few more.

When you go to see the King car, as you surely should at the first opportunity, notice how low is its center of gravity. This means comfort, safety and racy appearance.

Note also the long, comfortable wheel base, and its snappy, stylish appearance—its air of completeness and refinement in every detail.

Go into its construction, and see how accessible and how simple is every mechanical feature.



Have the man explain the thermo-syphon cooling system and our special system of lubrication.

Price of King Touring Car, with $300 worth of equipment $1565

A snappy roadster, with full equipment, at the same price.

SELF-STARTING

$1565 With Complete Equipment

A Word With the Automobile Dealer

Owing to the great demand for the first King cars, we have selected our dealers with great care. Moving into a new plant March 1st, with a capacity of 5,000 cars per year, so increases our manufacturing facilities for 1912 as to enable us to make a few more dealers a very attractive proposition and we are in a position to allot some excellent territory to those who can assure us of their ability to properly represent the King. Full details and information regarding available territory sent promptly on request.

vas an almost windless day—blue, surable, unflecked on sea or sky. olonel's finger pointed straight ahead. , Zack; yonder is the land of Egypt."
k could see something—something dusty fog that lay flat against the ut not his idea of mysterious Africa. arbaric glamour did not appeal to

n from somewhere—Zack hadn't it before—there came the "Put-put- of a tugboat; he saw its blunt nose, alligator, rushing straight at them—a yellow flag. Zack choked; his stopped.
ck," the Colonel said, and the negro d; "Zack, is the baggage ready?"
s, suh; ready, suh."
t it up and keep close to me."
s, suh."
off listened with satisfaction. He is advantage over the Bloodhound, nderstood no English. Suddenly t sick. Zack pulled something from t pocket and dropped the capsule! had almost sprung forward when icked it up again and the Russian inwardly. The black must be an plished diplomat; his face never be- him. Nobody could have suspected apsule. The fact was, Zack had about it. Blindly he stumbled down oon steps. Everything below rattled fusion. Porter and stewards jostled ther, dumping trunks into the main e—black-whiskered Russians, who be glad to chop his fingers. He got h safe to the Colonel's cabin and came panting like a lizard, with the bags. t yellow flag was coming with all Things began to happen exactly as had foretold. Zack shivered behind olonel. The ugly little boat bulged

He could make out white faces, faces, yellow faces—all kinds of looking straight at him. The Olga d anchor and lowered a shaky flight s to the water. From the prow of arantine boat a brown-skinned giant reached out with a long stick that had hooks on the end. That must be to snatch folks off the rail and pull 'em down into the boat! The giant lowered his hook, grappled the Olga's steps and made fast alongside. A slimmish white man, with a face like suncracked leather, marched up the steps. Cold blue eyes glinted underneath his helmet—Zack saw no mercy. This man took his stand at the head of those steps on a little platform overhanging the sea. Then he beckoned for his file of mulatto soldiers, with red caps. It was just as Guinea said.

Two other white men came up—in white clothes and white helmets. That terrible Russian captain didn't even try to stop them; it appeared to Zack that the man was bluffed. He took off his hat to that little fat fellow and gave him a lot of papers. While they were reading those papers Zack made a sneak to the other side of the ship. Guinea was right again. Two barges had been made fast to the Olga; a long stepladder reached down to their decks. A soldier stood guard on the top platform. Zack was almost scared to look for the fumigating box—there they were, right there, two of them, made of boards, exactly big enough to stand a man up inside and smother him.

First-cabin white folks assembled in the smoking room. That fat doctor was calling names from a paper. Every time he spoke somebody stuck out a tongue and let him feel a pulse. Zack didn't see any fingers whacked off, but folks looked mighty skittish.

That thin-legged sergeant crossed over to the other side and took his stand at the head of the steps. He shouted something to his yellow soldiers. They scattered along the lower deck and began shoving folks toward the stairway.

The sergeant thrashed his own legs with a rawhide whip. Once in a while he tapped a fellow over the back to keep them hustling. Some of the steerage passengers came voluntarily; some had to be toted bodily. The sergeant counted every one and checked them on a paper.

Zack caught a whiff from the bucket which a soldier carried; it smelled like carbolic. "Huh! Ain't gwine to let 'em squirt none o' dat down my throat." He saw Guinea Ryan cross the lower deck with a bundle and disappear down the hatchway. Old Reliable endured the strain to the last limit of negro nature, then he ducked. Fright got into his legs—his knees wabbled backward and forward, outward and inward; but he succeeded in dodging past the Colonel without breaking into a run. Having got down the main staircase he doubled a corner and there was nothing to hold him until he reached that open space. He tried to saunter carelessly across the lower deck; at the hatchway he dropped out of sight, like bucket into a well.

The sergeant went on counting and shoving, and swearing and waiting. His barges filled with an indiscriminate mass. "One-fifteen," he counted—"should be one-nineteen."

"One-sixteen," corrected Guinea Ryan. "Check me off, Danny; but I won't take your barge today." Guinea smiled and produced his health certificate.

"Hello, Guinea!" laughed the sergeant. "Couldn't stay out of Egypt? Haven't been gone a week. Get along into the barge—all third-class health certificates canceled."

"What's the bloody row?"

"Orders changed; cholera everywhere. Promenade along, down the steps."

Guinea had seen too much of the Far East to argue with a British sergeant about his orders. "Hard luck, Guinea," laughed Danny. "Now we've got to smoke out the hideaways—only three today." The boiler-maker grinned and said nothing. He wormed himself into a position on the barge where he could witness what happened to Old Reliable.

Colonel Spottiswoode had waited inside the smoking-room door. Catching a few words of English, he looked out, glad to speak his own language with somebody. "Well, sergeant, I see you are on troublesome duty."

Danny tipped his helmet. "Beastly nuisance, sir! They hide to get out of the fumigation. Can't keep these Russians clean," nodding toward the muckheaps of men and women on the barges.

Lykoff leaned against the stair-rail in the smoking room. He could look below and

The Hamilton Watch

The Railroad Timekeeper of America

Engineer C. W. Goodall in the cab of his "Gates Special" engine which made the record run of 181 miles in 146 minutes.

For a number of years Mr. Goodall has carried a Hamilton Watch, and **nearly 56% of the railroad men on American railroads where there is official time inspection do the same.**

The Hamilton Watch Company also makes phenomenally accurate and very beautiful thin model watches for men and women in all walks of life.

Ask your jeweler what he knows about the Hamilton. Prices complete, beautifully cased and in mahogany boxes, vary according to size, movement and casing, from $38.50 to $125.00.

Your Jeweler can supply a Hamilton Movement for your present watch case, if you desire.

Hamilton 12-Size Thin Model

Write for "The Timekeeper"

"The Timekeeper" is the name of our book which tells about Hamilton Watches and illustrates the various sizes, etc. We gladly send it to any one interested in the purchase of a watch.

Delight Our Ancestors Never Knew— Tyden Locks on Extension Tables

Great-grandmother kept her dining table covered, for there were gaps between the leaves. Today, even the dividing pedestal can look like a solid pillar, because a Tyden Lock closes the gap and keeps the table from sagging, or pulling apart.

Another lever will press together the halves of the top, or lock in one, two or three leaves. At the same time it automatically centers the enlarged top over the pedestal, relieving the strain on the slides and adding strength and durability to the table.

The pleasure taken in polished oak, or rich mahogany is not qualified, nor the pride in showing it to guests destroyed by disfiguring, sectional gaps when one gets a Tyden Lock. The modern dining table, its improvements, and some helpful suggestions for dining-room service given in "Tables Beautiful," are well worth the study of anyone contemplating the purchase of a table. This booklet is free. Ask for Tyden Locked Tables at your dealer's.

out of either door. Not a muscle of his face suggested his anxiety: "Where is that black man?"

The Dutch doctor began stammering over another name which sounded like "Zack Foster." Colonel Spottiswoode hurried in and found the doctor's pudgy finger pointing to Old Reliable's name. "Zack was here a minute ago." He leaned over the stair-rail and called: "Zack! Oh, Zack!" No answer. He shouted out of the port door—ran to the starboard side and called. No answer; no Zack. "It's just like that nigger to go off when we need him."

Lykoff saw all, heard all, understood all. He was absorbed in cutting the end from a fresh cigar. Zack was not in the cabin or the saloon. The Colonel hurried to the forward deck and did not hear an uproar that broke out amidships.

Sergeant Danny had accounted for the last hideaway. He was standing on the shaky platform checking up his list. "That's all of 'em," he remarked, and was about to give orders for the barge to cast off. Suddenly he heard a yell from his Gippies—not a casual, accidental yell, but a business yell. He ran back to the railing which overlooked the lower deck.

"Lemme 'lone, you yaller niggers! Turn me loose. I been black all my born days—ax de Cunnel. Lemme go! Lemme go!" Six stalwart Gippies jerked Zack into the open. "Whar's my hat an' my gripsack?" The Gippies did not smile—this was their daily job and had lost its humor.

Sergeant Danny shouted a curt order; his Gippies hoisted Zack up the stairway and rushed him along the narrow deck. He grabbed the rail. A Gippy whacked him over the knuckles; he suddenly remembered how Guinea lost three fingers—and stuck both hands in his pockets. Zack might just as well have argued with a sandstorm. The sergeant nodded; four men shoved him out on the wobbly platform. He caught on with both hands, for fear of tumbling into the sea. A Gippy cast his gripsack into the barge; Zack saw his hat go sailing after. "Turn me loose, yaller nigger! I kin walk." The steps shook mightily as Zack climbed down. The sergeant nodded; the tugboat cast off her lines. Zack stood bareheaded, gazing up at the Olga's rail. He saw the Colonel struggling through the crowd, trying to reach the sergeant. "Here I is, Cunnel! Here I is! Stop dis boat. Stop 'er!"

The Bloodhound leaned over the Olga's rail. He smiled to himself and gave the negro no further thought. Lykoff turned away from the hubbub and looked bored.

Sergeant Danny had turned to his gasoline launch when Colonel Spottiswoode shouted: "Sergeant! Oh, sergeant! One moment, please. That negro is my servant—he's a first-cabin passenger."

The sergeant's face lighted up. "That accounts for it; I had one too many."

"He belongs up here with me."

"Why was he hiding in the steerage?"

"Nobody knows about a negro. Can't you stop your boat and put him off?"

"Sorry, sir; he's been with those suspects and I hardly know what to do with him. I'll send him to your hotel, sir, if you like."

"But I don't know where I am going to stop."

The distance was fast widening between the barge and the ship; the gasoline tooted her whistle impatiently. "It's late, sir," apologized the sergeant; "and we've got all these people to fumigate. Here's my address. Send a carriage for him."

Zack kept shouting until the sergeant descended to the launch and Colonel Spottiswoode went back into the cabin. "Luck's agin me!" He collapsed on his gripsack and commenced smoothing out the broadbrimmed hat.

. . . . . .

The Olga grated against the stone wharf, tied fore and aft. Swarms of porters clambered aboard. Passengers commenced filing down the narrow gangway. Two British officers, with their servants, met the Colonel and relieved him of all custom-house annoyances. Lykoff had a small satchel in his hand and was watching for his heavier baggage, which never appeared. He had almost decided to go ashore without his trunks when Gargarin took the satchel from him.

"I'll take charge of this—and of you!"

"Very good," assented Lykoff.

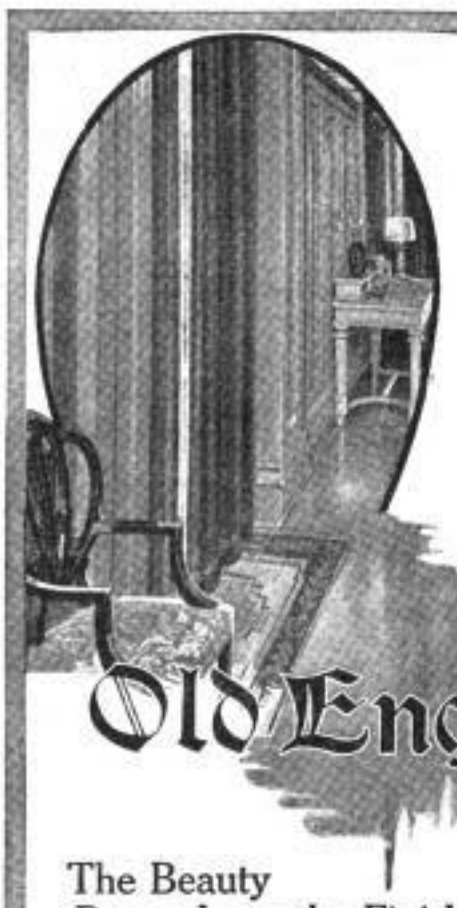
THE CITIZEN IN COURT

(Continued from Page 14)

he likes by what are called "false pretenses," provided those false pretenses do not relate to some present or past matter. If they relate to a future transaction they do not come within the law. And in certain jurisdictions the criminal has only to kill his victim and successfully hide the body, destroy it or sink it in the sea, and he cannot be punished unless some one actually saw him commit the murder or do some act that would naturally result in the death of his victim. The circumstantial evidence may be overwhelming, but if these two things are absent the criminal cannot be punished.

On the other extreme, one is often surprised at what appears to be extraordinary severity in the criminal law. A man receives a penal sentence for stealing a loaf of bread from a baker's window or ten years for taking a few coins from a pedestrian. The explanation does not lie in the amount of the loss.

In the first case, the point is that the person has broken into the baker's window in the nighttime—and that is burglary. The serious element here is the "breaking," with intent to steal. The law is very comprehensive in its definition of this word. Breaking has been held to include the lifting of a latch or the unfastening of a hook, and the like.



In the second instance, the crime is robbery; and the serious element here is not the value of the article taken from the person. It is what the law calls "putting in fear." Consequently one accomplishes all the elements of this crime by merely putting a person in fear and taking something of value from him, no matter how slight. When one compares the light sentence of an embezzler with the long sentence of a burglar or highway robber he must understand the elements of the crimes in order to make an intelligent comment. The law holds human life and safety of the greatest value—and the crimes of burglary and robbery threaten human life and safety; embezzlement does not.

Enemies of the People

The citizen, however, should remember that there are certain rights of which he is not deprived by the law. In surrendering the maintenance of order the citizen has retained the right to defend his house against attempts to enter it forcibly and the right to defend himself when his life is jeoparded—and he is not required to go first to any court or authority for permission to do so. He must always remember, however, that, though the state permits him this right, it retains the right to review his act and determine whether or not he was justified in what he did. He cannot do an unnecessary or wanton violence under these privileges. If he does he will be punished.

When the citizen comes into court as a juror, witness, or the like, he is constantly confronted with certain aspects of the law that seem difficult for him to understand, and that often lead him to conclude that its administration is strangely impracticable. He observes that a prisoner charged with crime has the right to refuse to make any explanation. He is astonished at this. The prisoner is primarily the one who really knows whether or not he is guilty. Yet the law, making every effort in all other directions to learn this fact, permits the person who is in possession of it to remain silent. This seems to the citizen to be precisely the reverse of a practical way of getting at the thing. If the man is innocent he ought to be ready and willing to make his explanation; and if he is guilty he ought to be forced to make it.

It must be admitted that, as our system of justice now stands, it is a fair question whether this ancient privilege of the law has not outlived its usefulness. One can readily see what an enormous benefit to society it would be if persons involved in criminal conspiracies could be questioned. Recent notorious criminal cases have brought this question very sharply to public attention. If a criminal thought to have accomplices could be interrogated the people would be spared enormous trouble and expense, and every guilty person might speedily be brought to justice. It must be remembered that the criminal is the enemy of society—

The Beauty of Your Floors and Woodwork Depends on their Finish

Old English Floor Wax will put a finish on your floors, furniture and woodwork that will be soft and rich and lustrous—the kind of effect that has been acknowledged as good taste for ages. You never tire of it.

Old English Floor Wax

The Beauty Depends on the Finish

You'll find Old English finish exceptionally durable as well as beautiful—due to the large proportion of solid waxes, especially of the hard, imported, costly wax—all of which makes Old English outlast and go farther than other waxes. Will not mar nor scratch. Try it—a 50-cent can will be enough for a large room. It is easy to apply.

Suppose Your Roof was a Slab of Stone!

You wouldn't think of putting paint or gravel on it to water-proof and preserve it.

You wouldn't worry about it rotting, rusting, drying out, melting or deteriorating in any way.

And you wouldn't be alarmed if sparks or burning embers from a fire next door fell on your roof.

J-M Asbestos Roofing is practically such a *stone* roofing. It consists of layer on layer of Asbestos (stone) Felt securely cemented together with Trinidad Lake Asphalt—two *indestructible* minerals.

J-M ASBESTOS ROOFING

is practically indestructible. This is proven by the fact that it is still in good condition on many buildings where it has been in service for more than a quarter century without paint, gravel or repairs.

It has withstood the fierce flames of a plumber's blow-torch for nearly an hour without injury or without the boards to which it was nailed being even scorched.

Half a century of roofing experience and our positive guarantee of satisfaction are behind J-M Asbestos Roofing.

This roofing is suitable for all kinds of buildings in any climate.

Your dealer sells J-M Asbestos Roofing—if not send your order to our nearest Branch.

Sample of Asbestos Rock, FREE

We want to send you a sample of the odd rock from which this roofing is made. Simply write our nearest house on a postal and ask for a piece of crude Asbestos and Book No. 1149.

1178

hence, unless there is some benefit to society in it, why permit him to stand dumb? And to the citizen, it seems difficult to realize how any injury to innocent persons could result from forcing a person to take the witness stand in his own behalf! Other nations, quite as enlightened as our worthy selves, do not grant their criminals this tender consideration.

It should be borne in mind that the law is primarily for the benefit of law-abiding persons and not the violators of it; and the average man may be right when he believes that a practical administration of justice demands the abolition of this ancient privilege.

He observes that the examination of witnesses in the trial of a cause follows a cut-and-dried method, which sometimes seems to him to go in a roundabout way to get at the truth. A great deal of care seems to be exercised to exclude from the witness' testimony any expression of his opinion. He is directed to give the fact only. In a great number of instances, however, the fact, after all, is merely the opinion of the witness, and the distinction becomes an attenuated refinement. The opinion of the witness is taken upon some of the most important facts of life—namely, the reputation of a man and the chastity of a woman; and why not to a certain practical extent in other matters?

Another thing which seems absurd to the average man is the method of examination of an expert witness. It is not permissible to ask the expert for his opinion directly upon the testimony in the case. He must be asked a hypothetical question of a supposed case which includes the elements of the testimony in the actual case. Now, to the layman, this is a distinction without a difference. It appears to be a childish subterfuge that does not, in fact, affect anybody. These matters, however, the citizen seems willing to leave to the machinery of the law to reform or correct as it may deem judicious.

The Crow That Jurors Pick

However, there are some aspects of the administration of justice of which he feels he has a right to complain. One of these things is the manner in which he is treated as a juror in capital cases. As the procedure now is in most jurisdictions, to be drawn as a juror in a case of the higher crimes means that one is locked up with eleven men, in the custody of an officer, for an indeterminate period. He is thereby sentenced to a term of close confinement with a number of other persons. In many respects the discomforts are greater than those attending a regular penal sentence; and if one were to choose between them upon the point of hardship and discomfort many men would accept the penal sentence rather than the jury service. It would seem that the courts must reform this procedure. The citizen demands that he be trusted, that he be permitted to go about his affairs, and that he be treated as though he were responsible. He maintains that the way to secure a high standard of honor and a high sense of responsibility is not to assume that one is dishonorable; but that it is by trusting to the honor and integrity of men that the high standard is gained. And it must be admitted that an answer to this argument is hard to find.

The citizen also complains of the manner in which he is treated as a witness. Because he happens to observe a crime or witness a controversy, he is often treated in a court of justice as though he were a felon. His personal history and affairs are intimately inquired into, though they have no relation to the subject-matter in controversy; but they are dragged in under the excuse of testing his credibility, and the like. He also complains that those engaged in the administration of justice, when he appears before them, violate his personal dignity and his self-respect in the conduct of their proceedings. He resents this. He asserts that he would permit no other institution of his Government thus to treat him when he is innocent of wrong and comes before it for the public good. He demands a reform along these lines. He would leave the legal profession to make it if it will—if not he will take a hand himself. And surely, in the vague clamor that has arisen for a revision of judicial procedure, for a recall of judges, and the like, there is something for the legal profession seriously to consider. One must beware how he forces his brother to reform him. Has not Tacitus said: "With more than brotherly hate!"

Cardinal Gibbons says:

I urge upon all Catholics the use of the

Manual of Prayers

A Beautiful Gift for Easter

Belle City Incubator Company, Box 77, Racine, Wisconsin

MULLINS STEEL BOATS CAN'T SINK

Because they are built like Government Torpedo Boats, of tough, puncture-proof steel plates, pressed to rigid form and so securely joined together that a leak is impossible. The Mullins Steel Boats are *guaranteed* against puncture—leaking—waterlogging—warping—drying out—opening seams—and NEVER REQUIRE CALKING.

MOTORS: The Lozier-Victor 4-Cycle and Ferro 2-Cycle. Light—powerful—simple—can be operated by the beginner—start like automobile motors—one man control—never stall at any speed—exhaust silently under water.

We also manufacture a complete line of steel hunting and fishing boats—row boats—cedar canvas-covered canoes.

Our beautiful book, illustrated in colors, is free.

THE W. H. MULLINS CO., World's Largest Boat Builders, 129 Franklin St., Salem, Ohio.

Three Immensely Important Facts

concerning the much-talked-of

United States TIRES

The first fact—and the biggest

UNITED STATES TIRES are made as no other tires in the world are made.

The co-operative method employed in their manufacture is unique in automobile tire manufacturing.

Here is the method:

In four of the largest and best-equipped tire factories in the world there are at work today four corps of tire Specialists, each of which formerly made a brand of tires which ranked among the world's *best* tires—Continental, G & J, Hartford and Morgan & Wright.

Each body of men formerly put into the tire of its particular manufacture enough of quality, enough of strength, enough of actual *wear* to cause the tire to become a *front-rank* tire—a tire that easily competed with all other single-factory tires.

Now—

In the same factories today these same tire Specialists are at work building tires not only as good as *they know how*, but—and mark this—as good as their knowledge, plus the knowledge of *three additional corps of tire-experts*, can make them.

Or, to put it another way—

It is precisely as if the motorist, desiring an *ideal* tire, should contract with four leading tire manufacturers to build a tire that would actually combine every element of strength and every secret of manufacture known to the four companies.

It is *inconceivable* that such a method of tire manufacturing should not produce a grade of tires that is *distinctly* better than could possibly have been produced by any one of the factories working single-handed.

The motorist who is also a manufacturer will *instantly* recognize this advantage.

It has been said that this co-operative system (employed *only* in the making of United States Tires) is nothing short of revolutionary in the history of tire-making; that it represents an *ability* to give *big tire value* to the motorist that has never before been *approached*.

But far more important to us—as well as to you—is the fact that motorists in every part of the country—on city boulevards and mountain roads—are getting from this *new method* of manufacture a quantity and quality of tire service that is the best possible proof of the *superiority* of the method.

Tests tell, and the service-test to which you can put United States Tires this spring and summer will demonstrate clearly to you that four immense factories, *working as a unit*, can produce a motor tire for you that is as unique in its service qualities as it is in its method of manufacture.

We frankly admit that we are proud to be the manufacturers of tires made as United States Tires are made.

America's Predominant Tires

(any style)

at no greater cost than other kinds

The second fact

YOU can buy United States Tires in any *style* you prefer.

Three styles of fastening—Dunlop (straight side), Quick Detachable and Clincher, and five different treads—Plain, Bailey, Nobby, Chain, Type Course and Steel Stud.

The United States line is *exceptionally* complete, and no motorist is compelled to seek elsewhere for this or that style to suit his particular fancy.

Thus the motorist who clearly recognizes our claim to his patronage on the basis of *manufacturing methods* is enabled to take advantage of our tires *regardless of personal choice* in the matter of fastening or tread.

If you are convinced that a certain style of fastening or tread can best serve your purpose, you can not only get it in a United States Tire, but—what is even more important—you can get it in a tire made as only United States Tires are made.

The third fact

UNITED STATES TIRES cost no more than you are asked to pay for other kinds.

This cost-no-more fact is responsible for a *big* increase in sales during the past year.

The opportunity to secure *extra value without extra cost* has naturally appealed to motorists who are wedded to no tire but the most *economical* tire it is possible to buy.

There is every indication that the spring season will witness thousands of motorists putting on one, two or more United States Tires for the *first* time—motorists who are convinced that, *at the same price*, tires made by our co-operative method most certainly *should* give exceptionally large mileage returns for their investment.

Knowing as thoroly as we do what our four-factory method of manufacture means in the production of superior grade tires, we frankly invite every motorist who, without prejudice, is looking for a *full* return on his tire expenditure, to use United States Tires as either partial or *exclusive* equipment during 1912.

NOTE—Membership in our Service Bureau is open to all motorists irrespective of the kind of tires they are using. The present enrollment is nearly 18,000. A complete Instruction Book on "How to keep down your Tire Expense" (48 pp) furnished to each member, and additional information on the subject is supplied from time to time. No charge. Merely send name, address and name of car.

Making a clean comfortable shave a certainty

The New Torrey Honing Strop has put comfortable, pleasant shaving within reach of all.

Even though you could never strop your razor with an ordinary strop, you can do it now—put a perfect edge on it—with this New Torrey Strop.

The virtue is all in the strop itself—the method is so simple anyone can do it.

The discovery of a wonderful new sharpening preparation by the head of our firm has made this possible.

This preparation is worked into the sharpening surface of the New Torrey Honing Strop and will not require renewal even after many years of use.

The finishing side of the strop is made of carefully selected and prepared leather.

Just draw your razor up and down the finishing side of a New Torrey Strop before and after shaving—once a week give it one or two strokes on the sharpening side—and your razor will shave you perfectly without a pull or a smart.

Get one of these wonderful New Torrey Honing Strops from your dealer and enjoy a cool, smooth, close shave, every day, in perfect comfort and without the slightest irritation of the skin.

Your dealer should sell these strops—if he doesn't, write to us direct. Prices, 50c, 75c, $1.00, $1.50, $2.00 and $2.50.

Every dealer who is not now selling the New Torrey Honing Strop should write to us at once for our special proposition.

THE RECORDING ANGEL

(Continued from Page 21)

has riven such a face with the thunderbolt of tears was far from his intentions.

"Er—yes, of course, Miss Percey. You may count upon me for tombstones as long as the quarry holds out," he exclaimed; "but the fact is, I am thinking of a few benevolences myself, and I was just wondering if you ladies will support me in mine if I do what I can to help you."

"Nothing will afford us greater pleasure, Mr. Bone!" she assured him, making good with a smile scalloped inside with two rows of perfectly white teeth.

"It's a bargain then?"

They clasped hands facetiously, and Mildred withdrew, smiling.

Soon after this Bone found a card upon his desk upon which were printed certain scriptures designed to arouse and stimulate the faculty of benevolence—such as "The Lord loveth a cheerful giver," "Feed my sheep," and so forth. At length the old sheep herself appeared. As he entered the office one morning after a short absence at the post-office he beheld Mrs. Martin seated at his desk. Her knees were far apart, her skirts spread out setting-hen fashion, her broad black belt supported a bright steel buckle in front. She had on a shallow black hat somewhat awry upon her head, and beneath it she wore the indomitable expression of one who knows she is about to do right and has prayed without ceasing for guidance—at your expense.

"Good morning!" said Mr. Bone.

"Good morning, Jim," she conceded.

"What is it?" he demanded.

"Jim, I am here in a good cause, and I want you to pay attention to me," she began.

"And what else?" he inquired.

"What else what?" She looked up.

"What else do you want me to pay besides attention?"

"Oh, I see the Lord has prepared your heart!" she exclaimed.

He did not admit it, but merely dropped his head lower, which increased his disagreeable horned expression.

"It's the missionary society. We are thirty dollars behind with the Bible woman's fund, and not another cent can I get out of this town for it. And if we don't pay it our Bible women in Korea will starve to death. I have prayed over it and I believe the Lord has directed me to come to you."

"I'll tell you what, Mrs. Martin. I'll contribute the thirty dollars, provided you agree to give me your support and the support of the church as far as you can influence its membership in my work in this town."

"What is the nature of it?" she demanded, thinking this a good chance to solve the mystery that continued to surround the Bone Building.

"It's redemptive, same as yours," he replied.

She hesitated. Mr. Bone clamped his jaws, lifted his head, and offered to dismiss the subject with a plain gesture.

"Well, if you are sure it's redemptive, I promise!" she consented.

"I am sure!" He grinned energetically as he sat down to write the check for her.

"Jim, are you sure you know what redemptive work is?" Mrs. Martin asked.

"Well, I never thought I did till I came back here," he answered, laughing; "but now I know I know what it is. You can trust me."

Thus he went on bribing and tying the citizens of Ruckersville, male and female, hand and heart and foot. He subscribed to their festivals, to the organ fund, to the fund Mrs. Fanning-Rucker was raising for the Colonial Dames, and even to a far-off band of King's Daughters to which Leonora Bell belonged. One of the few women who did not approach him in this sweet mendicant rôle was Sylvia Story. Either Sylvia did not care for benevolence and belonged to none of these organizations, or she was one of those women who do not need to ask.

Still, it was a fact that Bone had advanced old Clark Story a thousand dollars upon the cobalt expectations in his cow pasture; and that in consequence of this sudden good fortune Sylvia went to Atlanta once a week that autumn, where she took vocal lessons from Berilli, the most famous teacher in the South at that time.

THE SUFFRAGE IN MILLERSTOWN

(Concluded from Page 11)

"Except drink in them!" said Lizzie with a new quickness of thought.

Steiner would bring them good roads.

"But he is a bad man!" said Lizzie. "It is better to have bad roads. Will you promise not to vote for Steiner?" she asked.

"No!" shouted Alpheus. "Get up!"

It was half-past four when the children came home from school. Alpheus, the oldest, was twelve; Lizzie, who was next to the baby, was five; they were the most obedient children that ever lived. Their mother had risen now to a sitting posture. Seeing her, they hurried up the lane.

"You are to go to your Aunt Sally," she said. "You can go to your Aunt Sally till six o'clock."

The children stared at her and at each other; then they trotted off. Only little Alpheus looked back.

"Why do you sit on the cellar door, mom?" he called.

"Because I like it," said Lizzie.

From the earth beneath came a reproving voice.

"Ain't you ashamed, mom, to lie to children! Ain't you ashamed?"

"Will you promise not to vote for Steiner?" asked Lizzie with the same deadly monotony.

"No!" yelled Alpheus "I won't."

After a long time the clock in the kitchen struck five. The sound reached the cellar. In an hour the polls would close.

"That was six o'clock," said Alpheus.

"It was five," corrected Lizzie.

It seemed to Lizzie, shivering without, and to Alpheus, shivering within, that hours passed before there was another sound. Then Lizzie spoke once more:

"Will you promise not to vote for Steiner?"

To her amazement Alpheus returned a prompt "Yes."

"W-what?" faltered Lizzie.

"I said 'Yes,'" repeated Alpheus. To Alpheus' shame, be it said, Alpheus did not tell the truth. An expedient had occurred to him. If he could only get to the polls in time!

For all her weight and stiffness, Lizzie almost sprang from the door. It was at once lifted and Alpheus thrust up his head. Then he bounced out.

"You dare not make a man promise something when you have him penned up!" he shouted. "It says so in the law. I am going to vote. I——"

Alpheus paused. Up the lane came the children.

"What time is it?" Alpheus demanded furiously of his wife.

"It struck six already," she said heavily; "I thought I would give you another chance to do right, Alpheus."

"What!" began Alpheus—then paused.

Seeing the wild-looking creature before him, Alpheus was suddenly appalled. The recollection of his wrongs, of Steiner's probable rage, of his own little, unshepherded political flock, vanished from his mind; he saw instead those wild, window-smashing Londoners.

"Mom," said Alpheus, "are you going to parade like—like those others? Will you vote, mom?"

Solemnly Lizzie returned his gaze. She was stiff and sore in body and mind; she was a stranger to herself.

"I do not know yet what I will do," said she ominously.

Alpheus was distracted with fright. It would have made no difference to him now if Steiner had been plunged into the sea. He tried to take Lizzie's unwilling hand; he called to the children to "Come quick to mom!" Then he rushed into the kitchen.

"See, mom!" he cried. "Here is the baby—the little baby, mom! It cries for you, mom! See!"

Thankful for the fierce screams with which the baby resented being torn from his bed in the midst of sleep, Alpheus bore him forth and placed him in his mother's arms. Then, as the amazed and terrified children surrounded her, Lizzie returned—for the time at least—to woman's sphere. With a loudness which inspired a like demonstration from all her frightened offspring and made Alpheus declare that hereafter he would do everyth'ng she liked and nothing she did not like—with a heartiness that branded victory as a not unmixed satisfaction—poor Lizzie wept.

Prettier Walls

—don't *you* want to know about them?

Haven't *you* a room that's too dark or too ordinary-looking? Wouldn't you like to have an expert designer tell you how to make it seem larger and most attractive? For that very purpose we employ expert designers and furnish Color Plans—without any charge—of ceilings, side walls, frieze and stencils—the newest and best ideas. The Alabastine Book explains every detail of our special Art Service. Shall we send it?

Alabastine

The Beautiful Wall Tint

is noted for its perfect water color tints—exquisitely soft—always in harmony. They differ from kalsomine colors as real flowers differ from imitations. With Alabastine you may carry out a different color idea and design in each room, keeping complete harmony throughout. You may follow the best interior decorators' latest plans—at least expense. Alabastine is absolutely sanitary, easiest to use, goes farthest and lasts longest. No chipping, peeling or rubbing off when properly applied.

Alabastine Men

60,000 dealers, painters and decorators—in every part of the country—keep in close touch with our experts. They can give you the best work and the most correct. Ask The Alabastine Man in your town.

The One Car Built with a Faultless and Complete Electric System for Starting, Ignition and Lighting

Inter-State

THE Inter-State Electric System, on Models 40 and 50, performs all the hard work of starting, regulating and lighting the car, leaving the driver free for enjoyment, making motoring a pleasure instead of work, and a satisfaction instead of worry. The powerful Inter-State is handled by a woman as easily as an electric coupé. Without moving from the driver's seat or shifting gears she starts the engine with a turn of the switch; regulates the mixture by a simple movement of the lever on the steering column; lights any or all of the lights—front, side, rear—by merely turning a button. It is not even necessary to bend over to get the Inter-State under way and under perfect and absolute control.

The Inter-State has the greatest improvements, the greatest conveniences, the greatest luxuries in features and equipment ever brought together and built into a magnificent, powerful and reliable car. It is truly the *only* complete car.

Models 40, 41, 42—40 H.P., $2400 **Models 50, 51, 52—50 H.P., $3400**

Also two moderate priced cars with self starter and of Inter-State quality.
Model 30-A—40 H. P. . . $1750 Model 32-B—40 H. P. . . $1700
All Inter-State Models have the Long Stroke Motor

***Write today for Art Catalog**—which describes the famous Inter-State Models giving all details of their wonderful construction and perfect equipment.*

MEAD CYCLE CO. Dept. R-55 CHICAGO, ILL.

Substitutes for Wood

ONE of the standing problems in the Office of Wood Utilization is that of substitution. It is the hidden rock that has crippled more than one lumbering enterprise and has at times threatened the safety of almost the entire trade. And the principal peril of this rock of disaster is that it is always shifting its position. Consequently the Office of Wood Utilization is kept constantly busy recharting the trade situation so that lumbermen and manufacturers in wood may steer clear of Substitute Rock.

"Substitution of other materials for wood," says Mr. Sackett, "has made startling and sensational advances, especially in the last five years. You can hardly turn to a large industry that does not show the inroads of a substitute for wood. Very likely the cry that our forests are going fast is in a measure responsible for this wholesale substitution. Looking at this matter from an entirely economic and practical viewpoint, without any special prejudice in favor of wood, I am as yet unable to decide whether the benefits of this wholesale substitution outweigh its bad features or not; but this I do know: substitution is the skeleton in the closet of practically every lumberman and wood-manufacturer in the country. It is the secret peril of the entire wood-using trade.

"Only a few years ago, during the late panic, the whole talk of the lumber trade was pitched to this key: 'Just wait until the railroads begin to hand out orders again and then we'll come back into our own all right and make up for lost time.' The railroads, however, did not come back into the market again for lumber—at least not in the old sense of the term. The car shop that formerly used eighty million feet of wood came back for only ten million at most. The substitute had entered its appearance. The old-style Pullman car contained twenty thousand feet of wood; the present type contains only four hundred feet.

"Previous to the panic, it had been the policy of the railroads running west of Chicago to use timber in their bridges as well as in their depots, station platforms and wherever it could be used. They were expected to come back into the market for these, but they did not. Instead, they built concrete bridges, stations and culverts. In their platforms they used brick and cinders. The same change has been going on in the country districts. An old retail lumberman told me that he used always to sell the highway commissioners of his section timbers and lumber for the bridges and culverts of their territory; but suddenly they changed the policy of construction to concrete, and in self-defense he was forced to buy two brickyards.

"Small boats were formerly built entirely of wood; now they are very largely made of galvanized iron and steel. The same substitution is going on in agricultural-implement manufacture. The makers are using metal in the place of wood wherever they can. The reason they give for this is that the kinds of wood they need are becoming very scarce and dear. Wagon manufacturers are also making iron wheels and gearing to an increasing extent.

"Oddly enough, this problem of substitution is, to a very large extent, a question of advertising. How many wholesale lumbermen advertise in the popular magazines and periodicals? Not a single lumbering firm! One lumber association in the South, however, was shrewd enough to attempt to increase the use of its product by means of advertising directly to the consumer. What was the result? Why, the experiment was an immense success; and it is hardly an exaggeration to say that the use of this particular wood was multiplied by the publicity it received. On the other hand, all the building substitutes are floated by liberal advertising campaigns. There is not a patent roofing, building paper, stucco or plaster that is not sold almost exclusively on an advertising basis. Undoubtedly the lumbering interests must go into the advertising field if they are going to maintain a successful war against the encroachments of the building substitutes. Another way of meeting the assaults of the substitute is to find increased uses for each particular wood. Here is where the Office of Wood Utilization can be of greatest service and it is pushing this work as rapidly as possible."

Farm Investments

are claiming the attention of people of means in all vocations. The advantages of investing the savings of the salaried position in the land need not be urged. The good farm, rightly managed, continues and increases in value from year to year and forms a permanent asset, subject to fewer of the fluctuations of business and commerce than city real estate, stocks or bonds.

How May a Reasonable Income On Investments Be Assured?

The business of directing a farm to assure the largest net profit, as well as to conserve the fertility and provide for the upkeep of improvements, is the serious problem now confronting those who invest in farms. The problems of farm management, whether the owner resides upon the place or operates it through a farm manager or tenant, are the most critical problems now confronting American agriculture. The owner who lives at a distance from his farm is seriously handicapped and often sacrifices a part of his income by his being removed from his business enterprise. There are conspicuous examples, however, of farms that are run by proxy with excellent results, and without deterioration of the soil.

The Country Gentleman

will present articles dealing with the various aspects of farm management as a business enterprise. The editors wish to learn of those who have made investments in farms or farm lands, and who have operated them profitably for a term of years. Articles and photographs dealing with such experiences are desired, and when available, will be paid for at current rates. Address all communications to

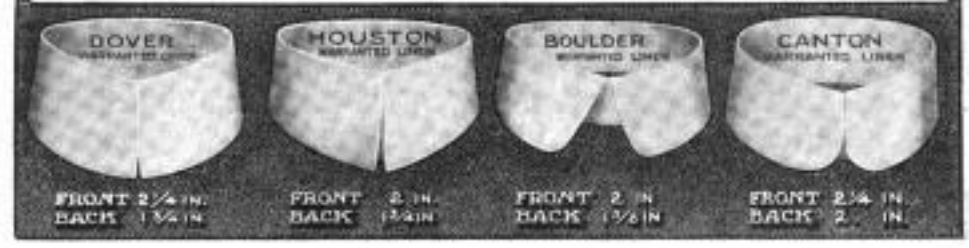
You Can Buy

REAL LINEN Collars

At the Same Price You Are Now Paying for the Other Kind

BARKER BRAND collars are made of genuine sun-bleached Irish Linen, in more than 100 styles and in quarter sizes, and are plainly stamped "WARRANTED LINEN." They are finer than cotton collars and wear longer, stand up better, and sell for the same price.

The BARKER Trade Mark, the Dog's Head, is easy to remember. Try a BARKER next time, and know the satisfaction and the economy of the genuine "WARRANTED LINEN" collar.



2 for 25c

BARKER BRAND "WARRANTED LINEN" collars will not shrink or stretch. In laundering they do not iron out of shape. The buttonholes are reinforced. The turn-down styles are fashioned to provide tie space without binding, and the wing styles are specially cut and sewn to prevent the corners from breaking.

Special Service—If you experience collar troubles and will write us, describing collar you are now wearing and in what respect it is unsatisfactory, we will tell you by return mail the name of the particular BARKER collar that will exactly suit you. If your dealer cannot supply you, we will send you eight BARKER "WARRANTED LINEN" collars upon receipt of $1. Our Collar Style Book is free for the asking.

This Year It's the COSMOPOLITAN

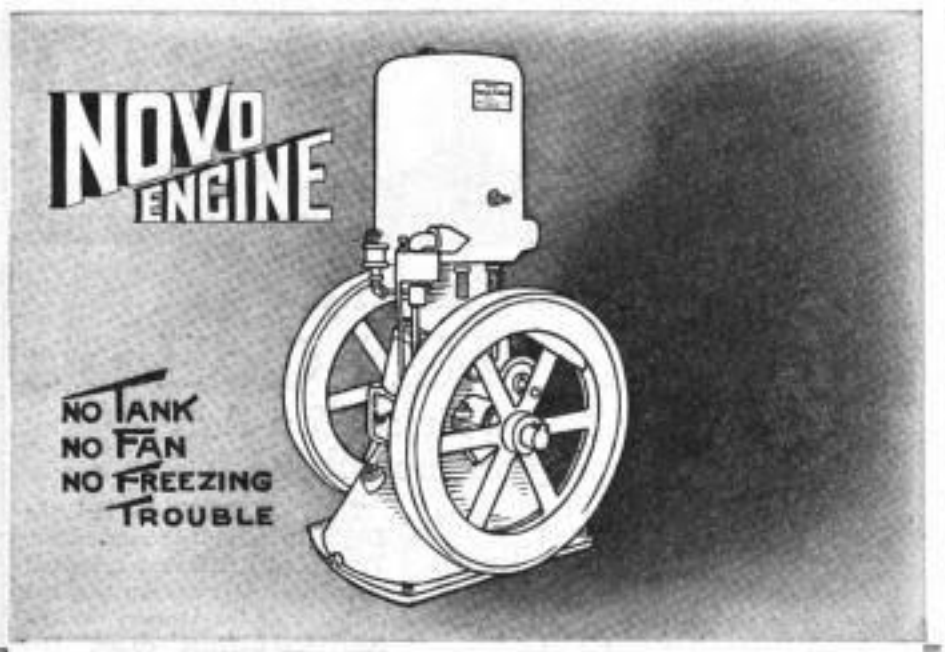
Because of the Men Who Make It

The Men who Make it—this is always the test of any magazine's merit. It is the whole secret of the enormous and ever growing popularity of the Cosmopolitan. Every number of the Cosmopolitan is a special number—each month the index page contains an all-star cast. Take the current issue:

Robert W. Chambers — **Charles Dana Gibson**
David Graham Phillips — **Howard Chandler Christy**
Jack London — **Harrison Fisher**
Gouverneur Morris — **James Montgomery Flagg**
Get-Rich-Quick Wallingford

Never before have so many brilliant writers, artists and essayists been brought together in a single publication; and not only brought together, but *kept* together, for *every* issue contains these or other equally great attractions—*every* issue, for its own particular month, dominates the whole magazine world.

SPECIAL OFFER



Cosmopolitan costs $1.50 a year, but by signing the coupon below, you may secure the next three issues for only 25 cents—in itself a saving of 33⅓ per cent—and at the same time securing the opening chapters of Chambers' new novel, "The Streets of Ascalon." Mail the coupon today to

This is the Engine for Your Business

A Novo Engine is the simplest, most economical power plant for every man who wants *reliable* power at low cost. It is the ideal engine for construction work, manufacturing, or country place use.

The Novo Engine is very easy to understand, start, and run. Anyone can operate it. It is entirely self-contained—fuel in the base, hopper-cooling system above. The Novo does away with all cumbersome tanks, piping, and circulating systems—combines the lightness of the air-cooled engine with the efficiency of the water-cooled type. It is the lightest engine for power developed. Working parts are protected from dirt and oiled by a splash system. The cooling system is guaranteed against freezing damage—either conditions do not affect the Novo. Made in eight sizes—1 to 10 H. P.

Contractors and engineers find Novo Outfits best adapted to their requirements for pumping or hoisting.

The best cement mixers in the country are operated by Novo Engines exclusively. They are used on all the best pumping and spray outfits made.

Novo Hoisting Outfits are made in four sizes, direct-connected Pump Outfits in nine, Trench Pump Outfits in five, Centrifugal Pump Outfits in any size up to 10 H. P. A big range of capacities.

Send for Novo Catalog and let us show you the possibilities of Novo Engines and Outfits. Tell us what machinery you have to run.

NOVO ENGINE CO., Clarence E. Bement, Sec'y and Gen'l Mgr., 210 Willow St., Lansing, Mich.

SENSE AND NONSENSE

The Final Score

THE Hon. Lemuel P. Padgett, of Tennessee, is chairman of the Naval Affairs Committee of the House of Representatives. Naturally the Navy men desire to remain in the good graces of Mr. Padgett, and naturally they are nice to him. The Navy League gave a dinner the other night, and Chairman Padgett was one of the very particular guests of honor. Captain Ward, now retired, was placed next to the statesman and assigned to see that Mr. Padgett was not bored by the proceedings.

Captain Ward was affable and attentive. He told stories and did his best to entertain Padgett. Finally, as the dinner was nearing its close, the great feature—moving pictures showing the football game between the Army and Navy at Philadelphia last fall—was introduced. Ward used to be a football player when he was at Annapolis. He was much interested and as the films unrolled commented on the game to Padgett. Padgett sat moodily in his chair.

Dalton kicked his famous goal and the Navy men all yelled. Ward, who had been growing more and more enthusiastic, leaned over to Padgett and shouted: "And, just think of it, the final score was three to zero!"

"Huh!" replied Padgett. "It was six below down at my home town yesterday!"

The Correct Designation

A TEN-TWENTY-THIRTY company was making a long road jump. The members were scattered all through the train, according to Harry Miner, the lithograph manufacturer. The conductor found the manager, who handed him the tickets for the whole outfit and left the conductor to pick out the actors and actresses for himself.

Asleep, curled up in a plush seat of the smoker, the conductor came on an elderly person in a fur-trimmed overcoat and tan gaiters. He shook him by the shoulder until the sleeper opened his eyes.

"Belong to the troupe, I s'pose?" said the conductor.

The traveler was wideawake instantly.

"No, sir!" he snorted indignantly—"coterie, sir; coterie!"

A Foul Advantage

JAY BRADY, manager of the Colonial Theater in Chicago, had a darky stagehand working for him who fancied himself a boxer. A match was arranged between the ambitious scene-shifter and a semiprofessional fighter, also a negro.

For a joke, Jay agreed to act as second of the Colonial's champion. Everything went well in the first round; but in the second the semiprofessional dealt his adversary a terrific blow on the side of the head. As the stagehand staggered back against the ropes he yelled out:

"Mistah Brady! Mistah Brady, you kin claim a foul on dat! Dat nigger done hit me a deliberit brain blow!"

The Latin of It

THERE is in a certain Florida city a lady librarian with a fondness for Latin phrases that sometimes require more than a knowledge of Latin to fathom. Recently a visitor to the library inquired pleasantly how she had spent her vacation, to which the lady librarian replied idly: "Oh, I just took a little jaunt up to New York via train and came home vice versa."

"You returned—how?" gasped the visitor.

"Vice versa," repeated the lady librarian blandly. "By steamer, don't you know."

Legislature Ethics

A CERTAIN saloonkeeper years ago was elected to the legislature of a Southern state at a time when there was important legislation pending. He accepted a thousand dollars for his vote on a certain measure. The deal was hardly closed when the opposition came round, offering him two thousand. The temptation was strong, but the new member shook his head.

"No gentleman as is a gentleman," he said, "will sell out twicet on wan proposition!"

Kelly-Springfield Automobile Tires

They have to be the best tires made to live up to the name that the Kelly-Springfield carriage tires made famous.

YOU want a guarantee of wear with your hose—naturally. But you want something else, too—perfect fit, permanent finish and color, and the correct modish touch of refinement. Your dealer now offers you these qualities, in the highest state of perfection yet attained, in this season's

Everwear TRADE MARK Guaranteed Hosiery

For Men, Women and Children

FIT PERFECTLY—Everwear hose is *knit* to size and shape—not stretched. It fits snugly around foot, ankle and limb—not only when you get it, but *always*.

ABSOLUTELY PERMANENT—The lustre and color are *in* the Everwear yarns—not just surface-applied. Repeated trips to the laundry leave Everwear hose bright, glossy and as elastic as when new.

RESIST WEAR—The Improved Everwear Hose minimizes wear to the least possible degree. This slight degree is taken care of by the Everwear Guarantee of specific service.

RIGIDLY GUARANTEED—All Everwear hose, purchased by the box, is guaranteed not to develop rips or holes for a specific period. (See price list below.) If any pairs ever need darning within the specified time, you will receive new pairs in their place absolutely *free*.

MEN'S PURE THREAD SILK—If you want a good weight, durable, pure thread silk hose, this season's Everwear will certainly appeal to you. Soft, sheer, glove-fitting—with High Spliced Heel for oxford wear—it is the best all-around hose investment you can make.

WHITE SILK HOSE for WOMEN—That's Dame Fashion's decree for the summer of 1912. Ask your dealer to show you the latest Everwear white silks, with High Spliced Heel, Double Sole, Double Toe and Garter Top. You'll say they are the most uniform, closely-woven, altogether tastiest creations you have ever seen at the price.

Pure Thread Silk

MEN'S— per pair . . . **50¢**

WOMEN'S— per pair . . . **75¢**

The New Everwear Silk for Men

High Spliced Heel. A gentle taper from heel thickness to regular thickness. Withstands the chafe of your oxford, but is not visible. Note also double toe and heel.

The New Everwear Silk for Women

Women's High Spliced Heel built on same principle and for same purpose as men's shown above. Other features: double toe, sole and heel—double garter top, not shown.

Victor

The greatest pleasure that comes from the possession of a musical instrument is to be able to hear at will the world's best music sung and played by the world's greatest artists.

And the Victor and Victor-Victrola bring you this exquisite music in all its beauty.

The actual living voices of the most famous singers, the superb art of the foremost instrumentalists, the entrancing music of the most celebrated bands and orchestras, the delightful humor of the cleverest comedians, are recorded on Victor Records absolutely true to life and with a musical tone of unequaled sweetness and purity.

And all this charming music gently floats from the Victor or Victor-Victrola just as clear and natural as it comes from the lips of the singers and the instruments of the musicians.

Such is the perfection of the Victor and Victor-Victrola, and only through their use in combination with Victor Records is it possible to secure the full, rich musical Victor tone which has become the ideal in the world of music.

Any Victor dealer in any city in the world will gladly play any Victor music you wish to hear and demonstrate to you the wonderful Victor-Victrola.

Kahn~Tailored~Clothes

Measure Up To The Big Moments In Your Life.

THEY give you that well-poised, at-ease, "forget-yourself" air, which is the *essence* of present-day style. They give you those curve-chumming, hip-hugging body-lines that differentiate *tailoring* from *clothing*. They bring out to the utmost degree *your* gifts and graces of physique and personality.

New Wool Right From the Sheep's Back

NOT just *pure wool*, but *new wool* is used for "Kahn-Tailored-Clothes." New wool right from the sheep's back means that the cloth is supple and full of "life," and that therefore it is more "*tailorable*" than old wool, no matter how pure. Over 500 pure-wool, new-wool Spring Patterns are ready for *your* survey at our Representative's.

At Once— Order Your Easter Clothes

GO *to-day* to our Authorized Representative in your town and be measured for your Easter Clothes—$20 to $45. Our seal, pictured below, is in his window and on our label. It guarantees our tailoring as though bond-backed. *Free* for a postcard—"The Drift of Fashion," the famous tailor-shop-in-print. Simply address

A REBUILT LIFE

By George Lee Burton

ILLUSTRATED BY HENRY RALEIGH

THE man's walk first attracted my attention as he passed up the aisle toward the front of the car with a certain precise tread which claimed recognition. Where had I seen it before? When he came back the individuality of his step again impressed me—and that haunting sense of having once known him. A quick inventory showed a thin, clean-shaven face, dark, nervous eyes, brown hair touched with gray, and a figure of medium height—active, though with shoulders slightly stooped.

Memory seemed playing me a trick: for, though his face assured me I had never before seen him, his walk, with its individuality, its set, half-marching precision that indicated the military which his bearing denied, contradicted that assurance and increased the baffling conviction that we had met somewhere—only I could not remember where or when. He caught me looking with interest at him and his watchful glance became fixed upon me in inquiry. It was the glance of a man constantly on guard against surprise, I thought, as I picked up my magazine.

We were on the same Pullman, as it happened, for two days and a night; and from time to time I again noticed his strangely familiar tread, though he did not always walk in that fashion. He seemed to have two habits of walking; at times there was nothing unusual about his step. When we were together in the smoker I offered a few conversational commonplaces to see whether the sound of his voice would help me to remember, for one often recalls an unchanged voice more readily than a changed face; but his brief answers came in unfamiliar tones. Incidentally his dress and manner both suggested that he was not accustomed to traveling very much on Pullmans.

"I Almost Shouted: 'In the Penitentiary!'"

In the late afternoon of the first day I saw him again passing up toward the front of the car, with that same unconscious, half-measured tread—a tread evidently fixed by long habit. Where had I seen it before?—when the car gave a lurch in going round a bend. Instantly his right hand flew up to the level of his shoulder and reached out into empty space directly in front; then he quickly let it drop and caught with his left at the back of a seat. Immediately it flashed upon me where I had seen that walk; at the same moment he turned quickly and caught the recognition in my eyes. His face flushed as he passed on forward.

The Strange Ways of a Fellow Traveler

INSTANTLY there had come to me a gray November day some years before, when I had visited a penitentiary in a distant state. Again I heard the clank of steel-barred doors as we passed along the prisoners' halls to a cell-house, with its stacks of narrow cavelike cells.

Again I went through high-walled courtyards into shops filled with workmen in black-striped clothing—zebra-coated for a purpose; then to the entrance of the dining hall, whither at the noon hour had come filing from different directions long serpentine lines of those black-striped figures, with the set tramp, tramp of their lockstep, each man's right hand on the right shoulder of the one in front, each pair of eyes surveying the attendant and me curiously, shamedly or defiantly, as the case might be, their faces for the most part evil-lined and hard.

Have you ever felt the constraint, the feeling of shrinking apology, which follows when you have come upon a man's spirit unawares, and you see that he knows you have looked too far in past his screens? The rest of the evening and the next morning we each took on, as well as we could, an ignoring, stranger's attitude.

I had for a time forgotten the man, when, on going into the dining car for luncheon the second day, I found the only vacant seat was at a small table facing him. He saw me as I entered and that the situation was purely accidental. To have retreated would have been pronounced avoidance; so we lunched together.

A remark or two about the flat country through which we were passing, and some casual comment on the service and the weather, made our slight conversation; but he seemed to appreciate my friendly silences. It was not until an hour later, when I was alone on the rear platform of the observation car, that he unexpectedly joined me.

"Excuse my butting in on your observation," he said tentatively, coming out but remaining standing.

"Certainly; this isn't a private view. Have a seat," I replied, motioning to one.

He sat down and was quiet a few minutes as we watched the steel tracks slip away between fields and farms and a little rambling village. Then, turning, he looked at me speculatively from those watchful eyes.

"Did you ever keep quiet so long you felt you just must talk to somebody?" he asked.

"Yes."

"Even about your own affairs?"

"I suppose every one feels that way sometimes," I answered slowly, watching the glittering track unwind behind our car.

An Unpremeditated Crime

"WELL, you don't know me and never will; but you look like you understand men; and I've been bottled up so long—with nobody to talk to—I'd like to tell you about myself and ask a question."

"Thank you. I'd be glad to hear," I replied; "but I don't know that I can help you."

"Maybe not; but the talking it out will—you understand?" he said earnestly, wistfully.

I tried to let him see the sympathy in my eyes as I nodded assent.

"I saw you watching me yesterday. You caught me offguard; you know where I got that walk. I don't walk that way always now; but sometimes, when I am tired or worried or thinking about bigger things, I forget and drop back into it—you understand?"

For answer I gave the slight double nod men often use to save words when they are much together.

"I'm going to tell you all about myself and ask you if I have a right to do now what I want to do. I am not sure—I'd like to talk it over with another man.

"I was in the pen nearly ten years—voluntary manslaughter. Yes, voluntary manslaughter, though maybe I don't look it now. I was married when it happened, with two baby girls, and clerked in the gents' furnishings of a big department store. The man was my wife's uncle and he boarded with us without half paying board. He wasn't a nice sort if he was her kin; but he didn't deserve what I gave him—I know that. One thing after another started between us until I got to hating him.

"He was just naturally mean and trifling and overbearing; and in those days I was just naturally hotheaded and conceited and self-willed—with a mean streak in me, too, I guess. I kept thinking about how mean he was until I couldn't see anything in him but meanness, and how disagreeable he was until I couldn't feel anything toward him but hate. It's bad for a man to think and feel that way; he loses all sense of balance. And it's bad for the man he's thinking about too—specially if he carries a gun.

"Yes, I had got into the habit of carrying a gun at night, as a sort of reaction from the tame ladies' atmosphere of the department store, I reckon; or maybe it was because some of the fellows I ran with before I was married carried guns. I was young then, only twenty-five—had married early, you see. Of course there was a quarrel; we got so we were always quarreling and I said everything I could to make him leave; but he got bullheaded about it and stayed on anyway. And as he didn't have any one else to look after him my wife kinder stood with hands off—only begging us all the time to behave.

"Her begging didn't do much good; and one night when I had been around a little with some of the old set I met him out too. We had a hot talk and blow-up, and my gun did the rest. I can see him now. I'd hate to be shot down in a saloon!

"Well, my wife never smiled at me or kissed me after that. She had lots of snap and spunk about her, and she had often begged me not to carry that gun; but she didn't say much except when I acknowledged to her what I had done.

"'Now you've done it you must suffer for it as you deserve,' she said; 'but you don't seem to care that the children and I who don't deserve it have to suffer for it too.'

Digitized by Google

"I tell you that got next to me! I thought of all the mean little things I had said to her and how disagreeable I had been at home for months before. I had got used to saying little mean things; and I wondered if she wasn't more than half glad to get rid of it all!

"But she was as fair and square a body as you ever saw. She sold what things she could spare and gave the money and the little we had saved up to my lawyer. When she found out it was mostly my fault she would not even try to get me acquitted: told the lawyer she didn't want me freed—only asked him to see that I get a fair show; that I did not get a worse sentence than I deserved; that I might have, if possible, the lightest sentence given for my crime—'his crime'; yes, she used those words.

"She didn't come near me during the waiting for trial, and wouldn't come or bring the babies to the courtroom when my time came. My lawyer insisted, but she refused flat; said she wasn't going to take her baby girls to that place to be stared at as a criminal's children—that she would leave the state first.

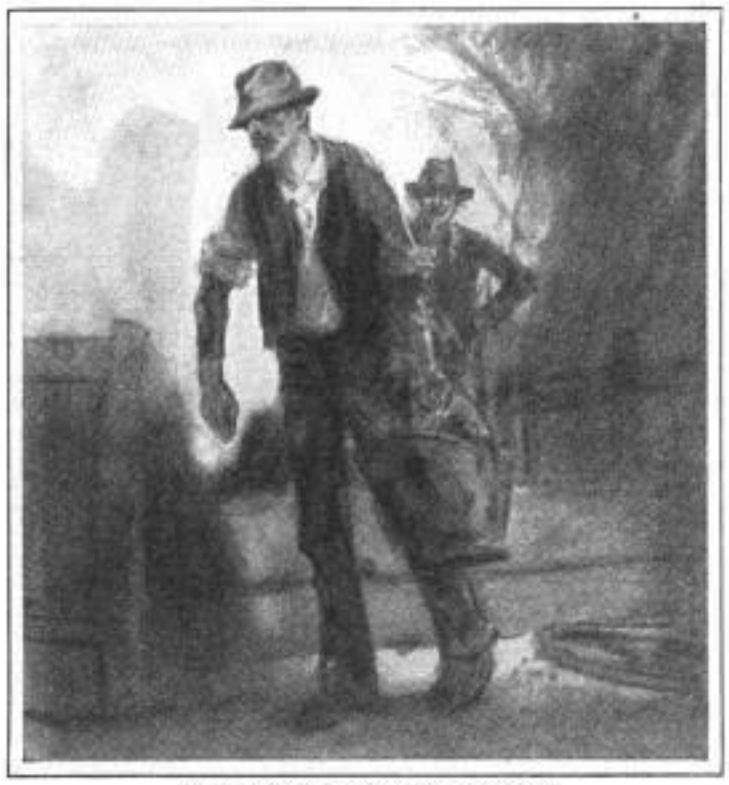
"I haven't seen her since that day she made arrangements with the lawyer—or the children since I first went to jail. She was a proud little thing and the disgrace nearly killed her. You needn't think it's only the rich who feel disgrace. Right after I went to the pen she got an absolute divorce on the ground of my being convicted of a felony. Then she sold out the rest of our things, took the babies and went to live at her father's, 'way off in another state. That all happened to me nearly fourteen years ago.

"I stayed in the pen almost ten years—a little came off for good behavior. Not much happened in there—nothing worth talking about. I never heard a word direct from her; but my lawyer wrote me every year or two, at first, when he heard anything. Her people were not well fixed; he wrote he had heard she was working and trying to raise the children right. I knew she'd do the best she could for them.

"I don't know what kept me up in there—kept me from getting any worse. Perhaps at first it was my conceit. In the gents' furnishings I had been particular about the way men dressed and held themselves; my own conceit may have made me more particular. The girls used to say I was good-looking and I believed it.

"I hadn't been exactly a fancy dresser—I couldn't afford that; but I had been a neat dresser, with a leaning toward fancy scarfs and handkerchiefs and socks. I had prided myself, too, upon my honesty with the store's time and money—I hadn't had much chance to be other than honest with either.

"Though I didn't exactly excuse my crime—God knows I couldn't!—I think maybe these things helped to make me feel above the men in the cells and shops about me—made me feel I was in a higher class. And something—this feeling, or my natural fighting disposition, or shame at the way my wife had taken it, or all put together—made me determine soon after I went there that when I got out I would stay out—would amount to something anyway; would show people I could still be a man."



Things Learned Behind the Bars

"IT MAY sound funny to you, but I believe nursing that determination through those years in that place where I had no chance—or thought I hadn't—made more of a man of me than the years before, when I had parted my hair so carefully and strutted about the store with my handkerchiefs and scarfs on exhibition.

"Don't imagine I forgot to think about what I was in there for. You don't know me, I know, and maybe you don't know much about the pen; but you get tired talking to your cellmate, even during the times you can talk to him, when you are with him month after month and neither gets out to learn anything new—and when you look down upon him as a sneaking, lying sort of rascal.

"Forget? Not on your life! I never was much of a reader, yet I took to reading in there; it helped some. But they turned the lights out early—we men had nothing to say about that; and you don't know how long those dark hours were, how much time there was to think. That was the worst of it, the time at night when I didn't sleep or when I slept and dreamed. I got so I used to see that fellow lying all limp and quiet so sudden after I fired. I don't know who you are or what you've been, but you don't know the worst of trouble unless you've lived in a walled-up part of hell with the thought of the dead man that put you there.

"That thought was all mixed up, too, with the feeling that everybody despised me; that nobody—nobody!—cared whether I lived or not; that my own wife and children were ashamed of me and hated me for bringing them to what I had. I loved my wife and was proud of her; she was good and pretty and sweet, though she wasn't the kind to be run over by anybody. I guess it was that spunk that made her get the divorce so quick. I couldn't exactly

"But I Was Glad to Get the Work"

blame her; but the thought of her cutting loose right away, and of her hating me and teaching the children to hate me, went almost as hard as the thought of the killing. Say, are you a married man?" he asked abruptly.

"No," I replied slowly; "but I think I understand."

He looked at me earnestly a minute and seemed reassured as I met his gaze sincerely. He was silent a few moments and then said slowly:

"I don't know whether the life in the pen or the thinking in there did more to make these streaks of gray hair, the wrinkles in my face and these shoulders. Oh, you needn't think I don't consider my looks, especially on this trip; though I'm not a good-looker any longer."

I waved a hand deprecatingly and was about to speak in reply, but he did not care to hear and proceeded with his story.

"Well, sir, when I got out I was shipped back to my own town, or rather the town from which I had been sent up. I was born five hundred miles from there; but my people had died when I was young and I had drifted in there when I was only sixteen years old—I guess that makes it my town after all. Now, at thirty-five, I was back there from the pen and I stayed there.

"Maybe that was a mistake. I guess it was harder for me; but I had that much fight left in me. I wanted to show people that there was still some man in me, even if I had spent ten years in the pen that I deserved to spend there. Besides, I wouldn't like to start off fresh in a new place and build up a little, and just as I got to going have somebody from my old home town come along and tell everybody that respected me that I was a murderer and an ex-convict and a lowdown sort of nobody.

"I believe after all I'd rather start in as I did, back where they thought that about me to begin with, and build up fresh from that. I wanted to live down the killing and those ten years—and I believe I've sorter done it. It may sound foolish, but—though I don't excuse all that, remember—I have got to sorter respect myself again, and I tell you it feels good!

"They didn't have prison reform in that state then, with an employment officer and a job all ready to help a poor devil start out again when he got back to freedom. They gave me a suit of clothes and five dollars and shipped me back to the town I came from, then turned me loose as an ex-convict to hump for myself like the other "exes," branded by those years of living in there.

"It certainly seemed strange to see the place again. There had been many changes in those years. I put up at one of these twenty-five-cents-a-night men's hotels, and took fifteen-cent meals—skipping one every day to make my five dollars last longer; and I commenced looking for a job.

"There didn't seem any need of more help anywhere. I tried many of my old acquaintances to see if I could get a place—I did not seem to have any friends left! I found ten years in the pen seemed to wipe out the claim of being even an acquaintance with most of them. They all looked at me curiously, as if I was a different brand of man—a cannibal, or Eskimo, or something.

"I'd rather they wouldn't have showed so plain they thought me dangerous or worse; yet I'd have swallowed that if they had only given me work. They didn't though; some of them weren't as cold with me as others, but none of them had anything for me.

"Of course I tackled all sorts of strangers, too, for work; but usually they didn't have any—and when they had they wanted references. I couldn't blame them; I guess I had a sort of pasty face and hangdog look.

"They had such a habit of asking: 'Where did you work last?'

"'I've been away a long time—have not worked here for several years,' I would say.

"'Where did you work while you were away?' came next.

"'I worked at broom-making part of the time,' I got to answering.

"Then, like as not, the boss would look at me suspiciously and say: 'No, I don't believe I need you just now; if I do I will let you know. Where do you live?'

"When I gave the number of the bum lodging house he would look as if that settled it; he had known all along I wasn't any good. And I felt so shamed and low down all the time I looked like he was right.

"Five dollars don't last very long, even with two meals a day. I got work one day on a wrecker's force, tearing down an old building; but the foreman drove his men hard and I wasn't used to real work anyway. I couldn't stand up to it, and—I'm ashamed to tell it even now—I fainted about four o'clock that afternoon.

"Another day I got a place with the gang working repairs on the street-railroad tracks; but the man in charge said I was too slow and not strong enough—had better get some different kind of work. As if I hadn't tried everything I could! He didn't pay me for a full day either—said I wasn't worth it; and the worst was that I knew he was right. I was about at the end of my rope when my money gave out, and I was looking so weak and shamefaced that I didn't stand any sort of a chance. I got to feeling desperate."

A Happy Home at Welcome Hall

"I REMEMBER that about this time I went in to answer an ad—'Man wanted as porter in well-established wholesale drug house.' The head of the place was a mild-mannered old man, who sat in the back office, but who always looked over the new men before they were employed. He began as usual:

"'Where did you work last?'

"'With the street-railroad gang,' I answered.

"'U-um! How long?'

"'One day,' I told him.

"'Ah!' he said, as if he had discovered something—'and before that?'

"'With a house-wrecking gang on Flint Street.'

"'Yes—how long there?'

"'Part of a day,' I said. 'I couldn't stand up to the work.'

"I thought he looked a little sympathetic then, but was not sure until he sniffed and asked the next question in a hard, thin voice:

"'And where before that?'

"I hesitated a moment; he looked at me more closely and said in that same tone:

"'Where?'

"I had been looked at and questioned so much that way and had got so raw about it that now I almost shouted: 'In the penitentiary!'

"'Why, bless my soul!' the mild little man gasped. 'No; I don't need you. Good day! Good day!'

"He looked so shocked and I felt so desperate that I could not help adding, while I looked at him hard:

"'I was put in for manslaughter too—voluntary manslaughter!'

"There wasn't any clerk in the room at the time.

"'Oh, oh, indeed!' he gulped out, rising and backing away, big-eyed and trembly. He got almost to the back window before I turned and left.

"Maybe I didn't feel bitter and like 'what's the use—what's the use of anything!' I don't know what would have happened—I guess I'd have starved to death or worse—if it hadn't been for the hoboes' hotel—Welcome Hall—'Headquarters for the Unemployed,' as it's advertised.

"You don't know about the place? Well, sir, it's a dandy!—at least, that's the way I think about it—and a good many others do too. The worst of the hoboes won't go there if they can help it—they'd rather bum a dime and get a bed for the night in one of those ten-cent places.

"This Welcome Hall is a sort of industrial kindling-splitting joint. You blow in there and saw and split kindling for a bed and meals—you give them six hours' work.

"You see, in that way you can live off of six hours' work a day and have some time left to look for a job. It's a good thing, and it's been a moneymaker too; it's the only charity I know of that's not a charity but a moneymaking concern. Of course people had to give it a place and start it; but it more than pays expenses, and at the same time helps to build up a man instead of making him a pauper or a deadbeat bum.

Digitized by Google

"I certainly was glad to find some place where I could at least earn my lodging and meals. I rested up some there and was glad I could just stay somewhere. Though I looked about for work a little, nearly every day, I lived along there for three weeks on my six hours a day of work—still out of a job. At last I guess my fighting blood got up again, I determined I would get a job of some kind, even if it was cleaning vaults. I decided no honest work was beneath me when it all seemed so far above me as to be out of reach.

"'If I keep my eyes open and am not too choosy I must find something to do,' I said to myself, and set out to look for it in earnest. It was Saturday morning, I remember, for I thought of the next day being Sunday, when I could not even hunt for work. I had walked a good way and asked for work at a lot of places without getting anything to do, when I saw an old negro man sweeping leaves off the sidewalk and washing off the front steps of a plain two-story house with a bucket of water and cloth.

"'I may not be much account but I sure can do that,' I thought, and asked him how much he got for it.

"'For dese here, boss, I gits ten cents; but when I wuks all de way roun' to de back do' I gits some dinner th'owed in,' he said with a grin.

"That wasn't so bad; and 'boss'!—how good that sounded! I went on down the street feeling almost like a man again and not a down-and-out ex-convict."

A Lot of Work for a Dime

"ABOUT a square away I began to ask at every house if they didn't want the leaves swept off and the front steps washed. Maybe I looked too much like a tramp or too much above one with that 'boss' still ringing in my ears—the first time I had been spoken to that way for more than ten years! Anyway I got turned down at first.

"At the tenth place, however, a two-story-and-attic red brick, they gave me a job. The woman asked me in a sharp voice, as if she were defending herself from being overcharged:

"'How much?'

"'Ten cents,' I answered, as meekly as I could.

"She seemed to think that was reasonable; and after waiting a minute, as if she wanted the work done and couldn't find any excuse for not letting me do it, she handed me a bucket and mop and broom and set me at it.

"I finished the job in about an hour; and I tell you I enjoyed that work! Beneath me? Why, it couldn't get beneath me—I was that low down in mind and living and even hope. I was just about all in, you understand; and I wasn't a plumb out-and-out fool.

"I have got that dime yet; see here," he said, holding out a brightly polished dime surrounded by a narrow gold band, which he wore as a charm on his watch-chain; "whenever I begin to feel ashamed of my work I look at that and get thankful, and remember how proud and happy I felt when that sharp-looking woman handed it to me. I had done a little extra work in cleaning up the yard, and she said as she gave it to me:

"'That looks a whole lot better! You certainly earned that dime.'

"I wouldn't have spent that money if I had had to go without food for two days! It seemed to put springs in my feet and I went down the street hustling for another job of the same kind. I found it before dinner; it was another ten-cent job with twenty cents' worth of work; but I sure was glad to get it.

"I felt that, so long as Welcome Hall was making money, I was earning my way by those six hours of work a day, and I stayed on there for some time longer.

"Monday afternoon I started out again looking for yard-and-step cleaning, but didn't have any luck. I walked enough and asked enough for work, and finally was convinced that Monday wasn't any yard-and-step-cleaning day.

"At last I felt desperate—my luck seemed all gone; and I asked at one house if there wasn't any kind—just any kind—of work they wanted done. It was a man I had to deal with there, an old man with a wooden leg. He thought a minute—it was getting late and cold—then said with a grin:

"'Why, yes; I'll give you a nickel if you will bring in the coal and get up the kindling for morning.'

"'I'm your man,' I answered. 'Where are the buckets?'

"He limped round and showed me, seeming to take it like a joke. I carried up seven buckets of coal and split about a bushel of tough kindling while he stood watching me; but I was glad to get the work. That nickel was all I made that day; and as I left he said:

"'You can come again and do this tomorrow if you want to.'

"I did—that tomorrow, and the next day, and the next.

"Tuesday I did more walking and asking, but I found Tuesday wasn't a good cleaning day either; and there seemed to be plenty of small boys and cooks to get the coal and kindling. Of course I did not try at the big houses on fashionable streets, where they kept a man-servant for such work.

"After about an hour of being turned down I was feeling pretty droopy in my mind, when I saw a darky at a corner drug store smearing something white over the show windows, then wiping it off and polishing the glass.

"It suddenly occurred to me that I had found more work I could do and I spent fifteen minutes watching and asking him questions, learning the easiest and best way to wash windows. Then I started up a new street, looking for a window-washing job.

"The first two or three persons I asked, when I stopped at the front doors of the houses, seemed to take it as an insult—a slam at them as housekeepers.

"'Do my windows look as dirty as all that?' one woman asked sharply.

"'Why, no, ma'am, I can't say they do. I was looking for work, and ——'

"'Well, you had better look at the windows first the next place you go to!' she snapped out, shutting the door in my face.

"I took her advice and passed on a block and a half until I came to a rundown-looking boarding house, with a sign in the front window. There could be no mistake about the need for a washing there. I called for the landlady and explained to her that I was a would-be window-washer, and if she thought she would like any work of the kind done soon I would be glad to do it.

"She looked me over suspiciously and asked:

"'Can you wash windows?'

"'I would like to show you a sample free,' I answered.

"'Well, that sounds cheap enough. You may try on the kitchen. Go round the house.'

"I went round and washed that window. I had not gotten any of the stuff the darky used, the rags she gave me weren't clean and the cook made fun of my clumsy efforts; but at last I got the window looking right.

"I thought I had gotten a job to wash all the windows in the house; but the landlady came back into the kitchen, said she thought the sample would be enough, and laughed with the cook as if she thought the joke was on me.

"Mad? I reckon I was; but between the work and the treatment I had gotten an idea. I went back to that drug store and invested ten cents of my fifteen-cent working capital—you see I didn't count my first dime, my starting piece, my hope-booster—in some of that white window-washing stuff. It seemed a risky thing to do. I don't believe I would have dared if I hadn't had Welcome Hall to back me; but I did it.

"Then I started out in a new way. I would go up to the front door and, as near as I could in my old store manner, explain to the lady of the house that I had a preparation for washing windows; that I would like to show her how well I could polish them up with this.

"'Let me do a sample for you free,' I would say; 'and if you like it I will wash your windows—inside and out—for three cents apiece.'

"That worked pretty well. I made thirty cents before it got dark that Tuesday, besides the coal-and-kindling nickel from the wooden-legged old man. I tell you that money and the feeling I could make more like it made me feel chesty, tired as I was. My arms ached, my back ached and my neck ached; but somehow I felt mighty good.

"The next day I got more window-washing to do; it was surprising how many people thought their windows needed washing when they found they could get all the front windows washed for fifteen cents. The windows looked nice, too, when I got through with them. The white stuff, mixed with a little ammonia water, saved a lot of work and time, and I soon got so I could polish them off pretty fast.

"I wasn't too choosy about my work—usually asked if they wanted any pavement or step cleaning or window-washing; and the rest of that week I did some of each kind of work. Saturday I had more step-and-walk cleaning than any other day.

"By Saturday night I had two dollars and eighteen cents saved up and had, of course, worked my six hours a day at Welcome Hall besides. I hated to put in all that time at the hall, but I thought I had better get more ahead before I cut loose.

"Monday I was going along asking for window-and-walk cleaning, when I saw a load of coal dumped on the sidewalk in front of a small tailor shop. It occurred to me that putting in that coal was work I could do and I asked the tailor; but he told me it belonged to the family that lived upstairs.

"So I tried there. The woman said no; she would make her old man put it in when he came home—though I offered to do it for fifteen cents. However, after that I kept my eyes open for coal work, too, and put in two loads before night—one in a cheap rooming house, where I had to carry it in a sack to the back porch on the second floor; the other load I put in the cellar of a small house that had no alley back of it, where I had to use a barrel to roll it in.

"It seemed hard work to me, but there wasn't so much of it—and it took a good hold of some muscles that the other work hadn't made much use of."

"She Laughed With the Cook as if She Thought the Joke was on Me"

Up Another Round

"AFTER that I got to putting in more and more coal; and I found there were many families, which did not keep a man, willing to pay a little to have the furnace looked after in the mornings and ashes put out for the ashman. This meant early morning work; but I got four furnaces on the same block and could do all four in an hour.

"By the end of that week I was nearly eight dollars ahead, and decided I could make more money away from Welcome Hall than I could staying on there. I was getting plenty of work to do, such as it was, and I felt that I could, at least, make an effort to live on what I made.

"So I hunted up a furnished room for a dollar and a half a week, got me a twenty-one meal ticket for two dollars and a half, said goodby to Welcome Hall, and started out in the world as a moneymaking, independent citizen once more. Citizen? No, not quite; that's what hurt. I was still an ex-convict and could not vote like other men.

"I felt that pretty keen too—hadn't realized how much it meant until I found out I was cut off from

Digitized by Google

it; but election day did not last all the year. I tried to forget it, like I tried to forget the cell and stripes and watching eyes.

"Before the winter was over I had many regular customers—if you want to call them that—for my work, and found I had more work than I could well manage. I had taken on the work gradually and gotten toughened up to it; but I was so anxious to make money and save some that I worked early and late, until I could hardly stand up under it. Every man who wants to feel he's getting ahead at all ought to have some money saved up; it gives him a feeling of confidence and backing that helps a lot.

"I wasn't making a lot of money, but I was doing pretty well, for I got to picking my people who knew good work and were willing to pay a little more for work done extra carefully and well by an honest, reliable man. Yes, I claimed to be that; and I was that—if I was an ex-convict who couldn't vote.

"One day I got to wishing I had two pairs of hands and feet—that I was twins—so I could get through all the work waiting for me, when the thought came: 'Why not hire a twin?'

"I thought about it the rest of the day and it seemed a good thing to do, provided I could find the man for a twin.

"I kept my eyes open and talked to some men, but didn't seem to find the right one. In doing this job work I hadn't found many men going round regular at it. I guess most men who were willing to work preferred a steady place somewhere—maybe felt this was too low down and scrappy for them.

"Finally I decided I would try to get a bright negro boy to help me. I didn't find one right away and the first five I found wouldn't do—one was too slow, two were so lazy they quit after the first day, one stole an overcoat where we were working and got arrested, and one was impudent and would not do what I told him.

"I kept on though; and the sixth boy turned out a good worker—reliable and a great help. I hired him by the

week—three dollars and a half a week at first, and more after I got him trained. Sometimes I washed windows while he scrubbed off the pavement; sometimes we worked together in putting in coal and taking out ashes.

"When spring opened up I added grass-cutting to my line of job work, and the coal-and-furnace people seemed glad to know I would be round regular to cut the grass. I had bought a light wheelbarrow some time before, and had mops, buckets, scrubbing brushes and cloths of my own. Now I added to my outfit a lawn-mower, rake, grass-shears, and a knife to take out weeds from between the bricks. Amos—that was my young darky's name—and I had all both of us could do.

"You see this business of mine just naturally grew. When one family saw me coming regularly to attend to the windows and grass and steps of the family next door, or across the street, they got to calling me over to do their work too. My work was my recommendation and the people I worked for spoke well of me With Amos I sometimes made as high as four dollars a day.

"But in August of that summer Amos quit me—got a place to go to the country as house-and-yard boy. I certainly did miss him, for I had more work than one man could do.

"I tried to find another Amos, but couldn't pick up one. At last I thought of a bright, hardworking white boy, the son of a machinist, who lived not far from where I had my room. He was an ambitious fellow, and was glad to earn money to help buy clothes and books for the next school term.

"Andy—that was his name—was quick and willing, and I soon trained him to help me as much as Amos had. Still, I had to turn down work or be behind my orders most of the time; and I asked Andy one day if he didn't have a brother just like him.

"He did not, but said there was a boy in his class at school he thought would do; and he got him for me.

Why We Need a Merchant Marine

A CASE WHERE CHARITY SHOULD NOT BEGIN ABROAD

By A. C. LAUT

DECORATION BY WILLIAM HARNDEN FOSTER

IF A CONGRESSMAN introduced a bill to make a present of a billion dollars to foreign nations to increase their maritime supremacy there would be so prompt an inquiry into that gentleman's sanity that he wouldn't have time for even a fleeting glimpse of his bill's speed to the Speaker's wastepaper basket. Failing a verdict as to his sanity, there would be a Congressional investigation into the size of the salary drawn by the said gentleman from those foreign nations. Yet that is precisely what the United States is doing in the matter of a merchant marine—making a clean-cut, free-for-all, take-it-all, hog-it-all gift of a billion dollars to foreign nations.
